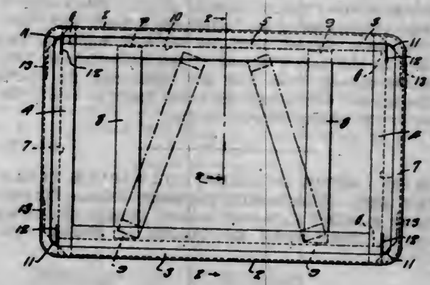
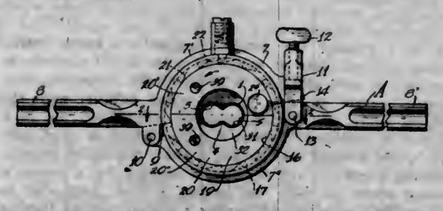
2. In combination, a valve having a rotatable stem, a cylindrical head fixed on said valve stem and provided with a slot and a pin recess, a key having a head provided with a cylindrical recess fitting over said stem head, a blade projecting from the bottom of the key head recess and fitting said slot, a pin projecting from the bottom of the key head recess and fitting the recess in the stem head, and a guide tube carried by the valve and surrounding the stem and its head, said tube being of a size to receive and guide the key head into position on the stem head.



1,629,798. COMPRESSOR. FRANK W. KNOWLES, Seattle, Wash. Filed Aug. 24, 1925. Serial No. 52,037. 5 Claims. (Cl. 230—31.)

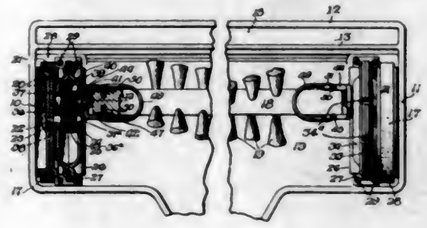
1. In a rotary compressor, a cylinder block embodying a pair of radial alined cylinders connected by a crank case, sleeves rigid with and projecting outwardly from the crank case in horizontal alined relation, means rotatably receiving the sleeves and supporting the latter and the cylinder block, a stationary shaft extending through the sleeves and about which the latter and the cylinder block are adapted to rotate, pistons reciprocable in said cylinders, a rigid guide frame to which the inner



ends of the pistons are fixed, an eccentric block slidable in said frame, and an eccentric rigid with the shaft and having a block revolubly fitted thereon.

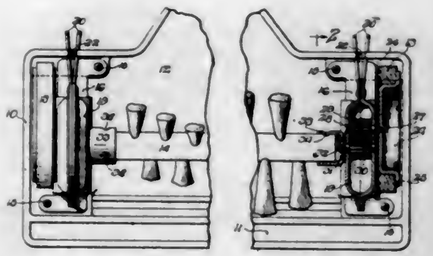
1,629,799. TABLE TOP. OAK LANDAW, Nappanee, Ind. Filed June 10, 1925. Serial No. 36,229. 2 Claims. (Cl. 45—31.)

1. In combination with a sheet metal table top having a flanged rim, a frame adapted to fit in the flanged rim, said frame comprising slidable side members, end members coacting with the side members, mitered, slotted and reduced ends on the end members whereby pressure is removed from the corners of the table top and exerted on the central portion of the ends thereof and transverse braces adapted to be forced between the slidable side members.



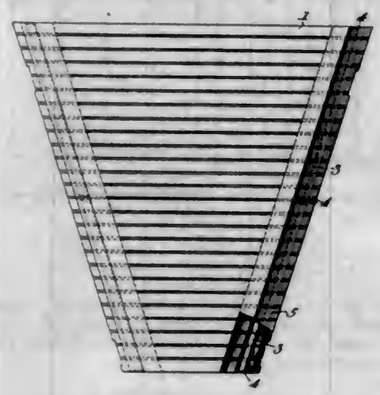
1,629,800. ELECTRICAL-TUBE-CONNECTER TWISTING DEVICE. WILLIAM J. LEACH, Burlington, Wis. Filed Mar. 9, 1925. Serial No. 14,342. 5 Claims. (Cl. 140—119.)

1. A tube twister comprising a body portion, a ratchet mechanism removably carried by said body portion, said ratchet mechanism comprising two sections hingedly se-



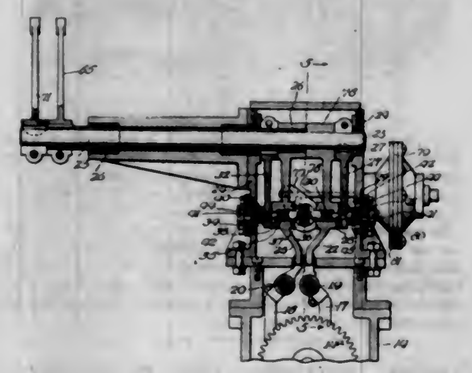
cured to each other, an arm carried by each section and extending outwardly, one on each side of said body portion, a die carried by each section, means for locking said dies together, and means for limiting the movement of said dies when said dies are disposed in said ratchet mechanism, said means being adapted to prevent the rotation of said dies with respect to said body portion.

1,629,801. BRUSH MOUNTING FOR VACUUM CLEANERS, ETC. WALDEMAR L. LINDGREN, Chicago, Ill., assignor to Alfred A. Norton, trustee, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,505. 10 Claims. (Cl. 15—8.)



1. In a device of the class described, the combination with a framework, of bearing supports having the central portion thereof provided with hollow spaces which dust cannot enter carried thereby, ground wheels secured on shafts journaled in said supports, a brush shaft having the ends thereof journaled in said supports, and gearing in the hollow spaces of the supports and fully protected thereby from dust and connecting the shafts of the ground wheels and the brush shaft to rotate the latter as the ground wheels revolve.

1,629,802. BRUSH MOUNTING FOR VACUUM CLEANERS, ETC. WALDEMAR L. LINDGREN, Chicago, Ill., assignor to Alfred A. Norton, trustee, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,506. 2 Claims. (Cl. 15—8.)

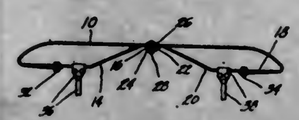


1. In a cleaner, the combination with a brush casing having vertical slots at each end with detent recesses in one side of said slots, of a downwardly projecting supporting bracket at each end extending parallel with the vertical slots, a bearing member adjustable on each bracket by rotating it about a center which is fixed relative to the bracket and having a shaft journaled therein, carrying a pinion, and forming a bearing for a brush, a ground wheel at each end having a shaft journaled in said bearing member and having a pinion secured thereto meshing with the brush pinion, one set of said shafts being located concentrically with the center about which the bearing member is rotated in adjusting it, while the others are located eccentrically thereof, and a spring arm secured to each of the bearing members and cooperating with the detent recesses in the slots as the bearing members are adjusted.

1,629,803. GRATE FOR BALL MILLS AND METHOD OF MAKING SAME. FRANK EARL MARCY, San Diego, Calif. Filed Nov. 22, 1926. Serial No. 150,072. 8 Claims. (Cl. 209—305.)

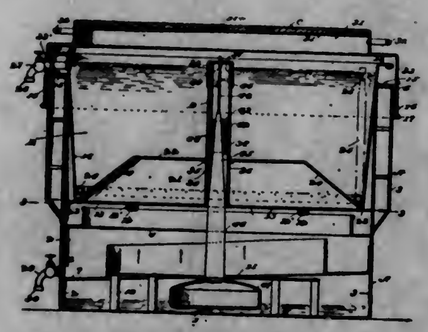
1. The method of uniting a plurality of grate bars, having a projecting lug at each end thereof into a rigid grate section, which comprises arranging the bars in parallelism with the projecting lugs at the respective ends of the bars in alignment, placing a metallic rod along the ends of the bars and resting on said lugs, and casting a steel binder along the ends of the bars and enclosing said rod.

1,629,804. CONTROLLING MECHANISM FOR VARIABLE-SPEED TRANSMISSIONS. LEE W. MELCHER, West Depere, Wis. Filed Jan. 7, 1926. Serial No. 79,752. 22 Claims. (Cl. 74—39.)



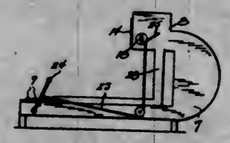
1. In propelling mechanism, the combination with a plurality of motors and variable transmission gearings driven by the motors respectively, of a manually operable gear shifting device, and means, controlled by one of the motors between said device and one of the transmission gearings whereby the device will be rendered effective or ineffective to shift the latter gearing.

1,629,805. RAIL-CAR TRANSFER. JAMES FRANCIS MCCARROLL, Baton Rouge, La. Filed Jan. 19, 1927. Serial No. 162,126. 9 Claims. (Cl. 104—48.)



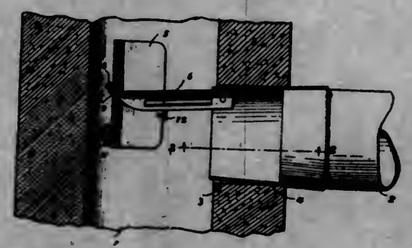
3. In combination with a car transfer and associated car tracks, slidable car track rails mounted on said car transfer, means for providing relative movement of said car track rails longitudinally to make contact with associated car tracks, and means for connecting the ends of said car rails to the ends of said associated car tracks to cause positive alignment therewith.

1,629,806. AUTOMOBILE COLLISION BUMPER. MONTGOMERY W. MCCONKEY, Ferndale, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1925. Serial No. 5,776. 1 Claim. (Cl. 293—55.)



An automobile collision bumper comprising vertically spaced substantially parallel impact bars adapted to extend across one end of an automobile, the ends of the upper bar being bent rearwardly and inwardly and downwardly and the ends of the lower bar being bent rearwardly and inwardly and upwardly, opposite ends of the two bars being relatively longer and additionally bent forwardly to terminate adjacent the center of the impact bars, the other ends of the two bars being relatively short and secured respectively to the longer ends of the opposite bars, the forwardly bent end portions of the bars terminating in hooked extremities, in combination with a channel member engaging said hooked extremities and means for clamping the channel member to the central portions of the impact bars.

1,629,807. WATER STILL. ERNON V. OLIVER, Portland, Oreg. Filed May 10, 1920, Serial No. 380,216. Renewed Oct. 6, 1924. 3 Claims. (Cl. 203—5.)

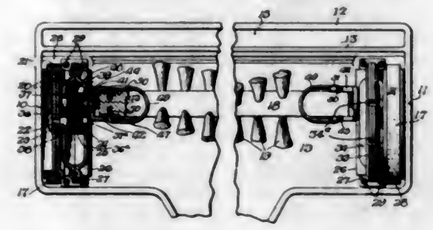


1. In apparatus of the class described, a receptacle, the lower portion of the interior of which constitutes a well for a liquid to be distilled, a trough within the receptacle extending about the walls thereof and spaced above the bottom of the well, the trough defining a space through which the vapors may rise from the well, a hollow condenser within the upper portion of the receptacle spaced bodily above the plane of the trough and having its condensing surfaces arranged to deliver the distillate to the trough, means for supplying water to the lower portion of the interior of the condenser, a tube extending upwardly within the condenser with its lower discharge end positioned above said space defined by the trough, the said tube having an inlet opening at its upper portion to provide for passage of water from the upper portion of the interior of the condenser through the tube and into the well of the receptacle, and means for regulating the flow of water into said tube, the said means comprising a cap rotatably fitted onto the upper end of the tube and having an opening for registration or partial registration with the opening in the tube in accordance with adjustment of the cap.

1,629,808. AMUSEMENT DEVICE. ARTHUR A. PAYNE, Humboldt, Kans. Filed Jan. 24, 1927. Serial No. 163,125. 6 Claims. (Cl. 273—41.)

1. In a counting head for games of the character described, a plurality of slidably mounted drops mounted for movement over the face of said head, a slot formed through said face behind the path of travel of each drop respectively, a shaft rotatably mounted within said head having an arm extending through each of said slots respectively for operative engagement with the respective drop and means for rotating said shaft to cause the arms to travel through said slots to lift the drops to the set position.

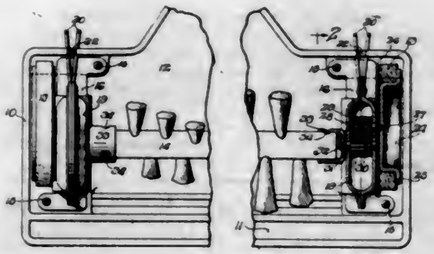
1,629,809. CHIMNEY ATTACHMENT. WILLIAM F. PHILLIPP, Yantic, Conn. Filed July 10, 1926. Serial No. 121,618. 4 Claims. (Cl. 126—285.)



1. In combination with a chimney having an opening to receive a smoke pipe, a baffle disposed within the chimney about in line with the upper portion of the smoke pipe opening and a deflector disposed lengthwise of the chimney and free of the walls thereof, and pivoted to the end of the baffle.

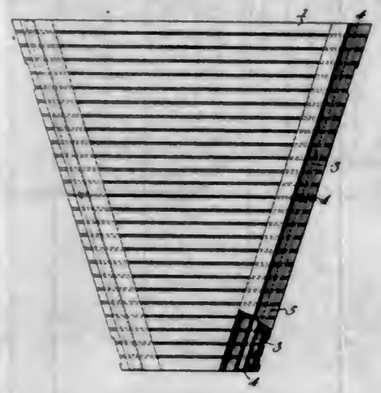
1,629,810. PROCESS OF PRODUCING GASOLINE. HORACE B. SETZLER, Coffeyville, Kans., assignor to The National Refining Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1916. Serial No. 102,651. 4 Claims. (Cl. 196—68.)

1. A process involving the separation of carbon from gas-oil to produce gasoline, which consists in subjecting the gas-oil to pressure-distillation in a volume maintained substantially constant under conditions involving a pressure of from 50 to 100 pounds, temperatures of from 700°



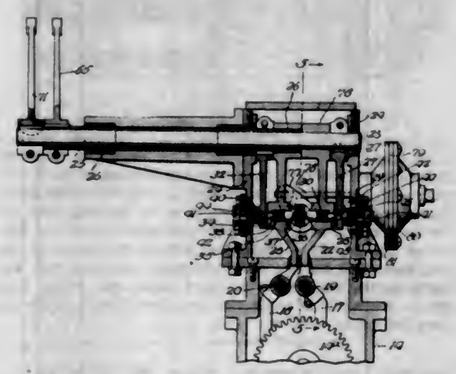
cured to each other, an arm carried by each section and extending outwardly, one on each side of said body portion, a die carried by each section, means for locking said dies together, and means for limiting the movement of said dies when said dies are disposed in said ratchet mechanism, said means being adapted to prevent the rotation of said dies with respect to said body portion.

1,629,801. BRUSH MOUNTING FOR VACUUM CLEANERS, ETC. WALDEMAR L. LINDGREN, Chicago, Ill., assignor to Alfred A. Norton, trustee, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,505. 10 Claims. (Cl. 15—8.)



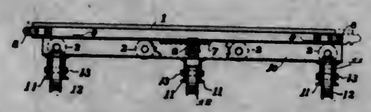
1. In a device of the class described, the combination with a framework, of bearing supports having the central portion thereof provided with hollow spaces which dust cannot enter carried thereby, ground wheels secured on shafts journaled in said supports, a brush shaft having the ends thereof journaled in said supports, and gearing in the hollow spaces of the supports and fully protected thereby from dust and connecting the shafts of the ground wheels and the brush shaft to rotate the latter as the ground wheels revolve.

1,629,802. BRUSH MOUNTING FOR VACUUM CLEANERS, ETC. WALDEMAR L. LINDGREN, Chicago, Ill., assignor to Alfred A. Norton, trustee, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,506. 2 Claims. (Cl. 15—8.)



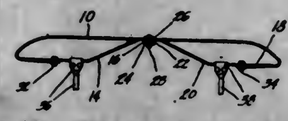
1. In a cleaner, the combination with a brush casing having vertical slots at each end with detent recesses in one side of said slots, of a downwardly projecting supporting bracket at each end extending parallel with the vertical slots, a bearing member adjustable on each bracket by rotating it about a center which is fixed relative to the bracket and having a shaft journaled therein, carrying a pinion, and forming a bearing for a brush, a ground wheel at each end having a shaft journaled in said bearing member and having a pinion secured thereto meshing with the brush pinion, one set of said shafts being located concentrically with the center about which the bearing member is rotated in adjusting it, while the others are located eccentrically thereof, and a spring arm secured to each of the bearing members and cooperating with the detent recesses in the slots as the bearing members are adjusted.

1,629,803. GRATE FOR BALL MILLS AND METHOD OF MAKING SAME. FRANK EARL MARCY, San Diego, Calif. Filed Nov. 22, 1926. Serial No. 150,072. 8 Claims. (Cl. 209—395.)



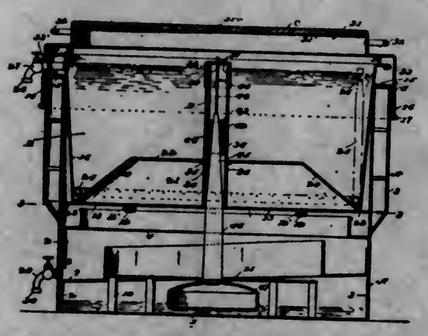
1. The method of uniting a plurality of grate bars, having a projecting lug at each end thereof into a rigid grate section, which comprises arranging the bars in parallelism with the projecting lugs at the respective ends of the bars in alignment, placing a metallic rod along the ends of the bars and resting on said lugs, and casting a steel binder along the ends of the bars and enclosing said rod.

1,629,804. CONTROLLING MECHANISM FOR VARIABLE-SPEED TRANSMISSIONS. LEE W. MELCHER, West Depere, Wis. Filed Jan. 7, 1926. Serial No. 79,752. 22 Claims. (Cl. 74—39.)



1. In propelling mechanism, the combination with a plurality of motors and variable transmission gearings driven by the motors respectively, of a manually operable gear shifting device, and means, controlled by one of the motors between said device and one of the transmission gearings whereby the device will be rendered effective or ineffective to shift the latter gearing.

1,629,805. RAIL-CAR TRANSFER. JAMES FRANCIS MCCARROLL, Baton Rouge, La. Filed Jan. 19, 1927. Serial No. 162,126. 9 Claims. (Cl. 104—48.)

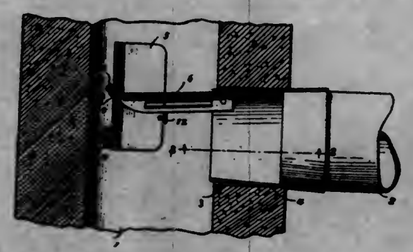


3. In combination with a car transfer and associated car tracks, slidable car track rails mounted on said car transfer, means for providing relative movement of said car track rails longitudinally to make contact with associated car tracks, and means for connecting the ends of said car rails to the ends of said associated car tracks to cause positive alignment therewith.

1,629,806. AUTOMOBILE COLLISION BUMPER. MONTGOMERY W. MCCONKEY, Ferndale, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1925. Serial No. 5,776. 1 Claim. (Cl. 293—55.)

An automobile collision bumper comprising vertically spaced substantially parallel impact bars adapted to extend across one end of an automobile, the ends of the upper bar being bent rearwardly and inwardly and downwardly and the ends of the lower bar being bent rearwardly and inwardly and upwardly, opposite ends of the two bars being relatively longer and additionally bent forwardly to terminate adjacent the center of the impact bars, the other ends of the two bars being relatively short and secured respectively to the longer ends of the opposite bars, the forwardly bent end portions of the bars terminating in hooked extremities, in combination with a channel member engaging said hooked extremities and means for clamping the channel member to the central portions of the impact bars.

1,629,807. WATER STILL. ERNON V. OLIVER, Portland, Oreg. Filed May 10, 1920, Serial No. 380,216. Renewed Oct. 6, 1924. 3 Claims. (Cl. 203—5.)

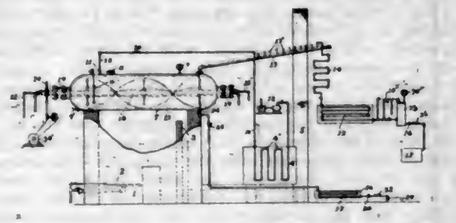


1. In apparatus of the class described, a receptacle, the lower portion of the interior of which constitutes a well for a liquid to be distilled, a trough within the receptacle extending about the walls thereof and spaced above the bottom of the well, the trough defining a space through which the vapors may rise from the well, a hollow condenser within the upper portion of the receptacle spaced bodily above the plane of the trough and having its condensing surfaces arranged to deliver the distillate to the trough, means for supplying water to the lower portion of the interior of the condenser, a tube extending upwardly within the condenser with its lower discharge end positioned above said space defined by the trough, the said tube having an inlet opening at its upper portion to provide for passage of water from the upper portion of the interior of the condenser through the tube and into the well of the receptacle, and means for regulating the flow of water into said tube, the said means comprising a cap rotatably fitted onto the upper end of the tube and having an opening for registration or partial registration with the opening in the tube in accordance with adjustment of the cap.

1,629,808. AMUSEMENT DEVICE. ARTHUR A. PAYNE, Humboldt, Kans. Filed Jan. 24, 1927. Serial No. 163,125. 6 Claims. (Cl. 273—41.)

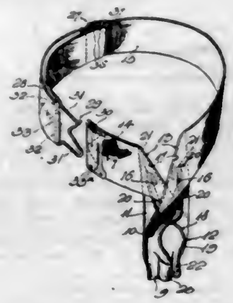
1. In a counting head for games of the character described, a plurality of slidably mounted drops mounted for movement over the face of said head, a slot formed through said face behind the path of travel of each drop respectively, a shaft rotatably mounted within said head having an arm extending through each of said slots respectively for operative engagement with the respective drop and means for rotating said shaft to cause the arms to travel through said slots to lift the drops to the set position.

1,629,809. CHIMNEY ATTACHMENT. WILLIAM F. PHILLIPP, Yantic, Conn. Filed July 10, 1926. Serial No. 121,618. 4 Claims. (Cl. 126—285.)



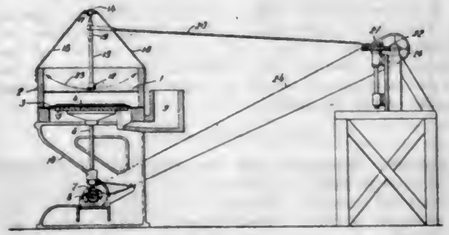
1. In combination with a chimney having an opening to receive a smoke pipe, a baffle disposed within the chimney about in line with the upper portion of the smoke pipe opening and a deflector disposed lengthwise of the chimney and free of the walls thereof, and pivoted to the end of the baffle.

1,629,810. PROCESS OF PRODUCING GASOLINE. HORACE B. SETZLER, Coffeyville, Kans., assignor to The National Refining Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1916. Serial No. 102,651. 4 Claims. (Cl. 196—68.)



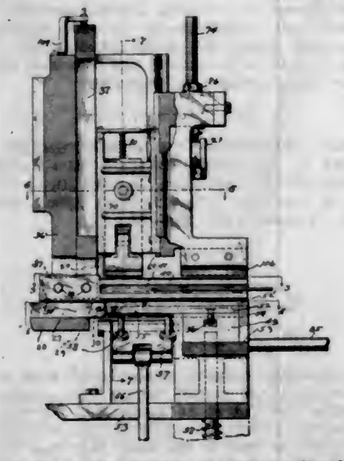
1. A process involving the separation of carbon from gas-oil to produce gasoline, which consists in subjecting the gas-oil to pressure-distillation in a volume maintained substantially constant under conditions involving a pressure of from 50 to 100 pounds, temperatures of from 700°

to 750° F., within a highly heated pressure space approximately equal to the volume of gas-oil under treatment; meanwhile subjecting the gas-oil to suitable means



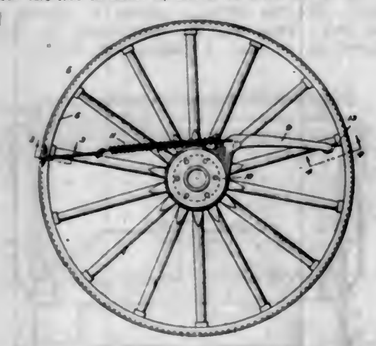
for concurrently scouring the bottom of the still and advancing the treated hydrocarbons to the point of withdrawal, substantially as set forth.

1,629,811. HOSE SUPPORTER. JAMES A. SKAER, Wichita, Kans. Filed Apr. 5, 1926. Serial No. 99,923. 4 Claims. (Cl. 241—6.)



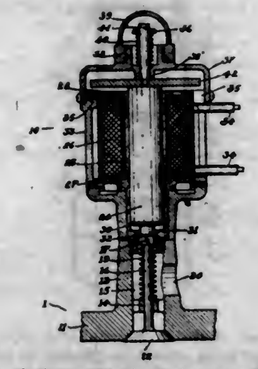
1. A hose supporter comprising a tab consisting of front and rear plies connected at their lower ends, a leg strap connected with the upper ends of said plies, said plies having pockets, spring means at the front of said tab connected with said plies to contract the leg strap and having hooks at its ends detachably booked into said pockets to detachably connect the plies and the spring means, and means for connecting hosiery to said tab.

1,629,812. APPARATUS FOR AND METHOD OF SCREENING PULP. JERRY W. STEVENS, Cloquet, Minn., assignor to Northwest Paper Company, Cloquet, Minn., a Corporation of Minnesota. Filed June 12, 1926. Serial No. 115,433. 9 Claims. (Cl. 92—32.)



1. In a mechanism of the character described, the combination of a screen over which the water suspension passes, a water spray device above the screen made up of a plurality of spray-heads spaced at intervals along the direction of flow of the water suspension on the screen each of said spray-heads being provided with two openings to direct the water in opposite directions parallel to the flow of pulp in water suspension on said screen, means for reciprocating said spray-heads across the screen in a plane perpendicular to the flow of the water suspension, and means for supplying water to said spray-heads.

1,629,813. PROCESS OF AND MACHINE FOR MAKING FERRULES. GEORGE M. STEVENSON, Baltimore, Md. Filed May 20, 1925. Serial No. 31,636. 13 Claims. (Cl. 113—34.)

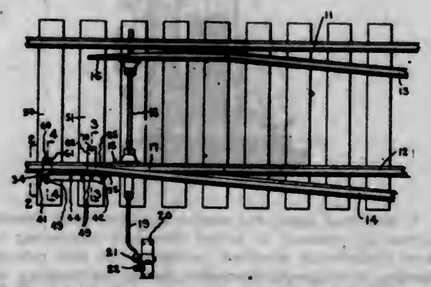


1. The steps in the process of forming ferrules for paint brush handles and the like which consist in preparing the ends of a blank for interlocking engagement, doubling the blank centrally of its length to bring the prepared ends into proximity, and moving the prepared ends into interlocking frictionally self-held engagement.

1,629,814. ROPE-TIRED WHEEL. ELIJAH N. TURNER, U. S. Army, Fort Wint, P. I. Filed Apr. 30, 1926. Serial No. 105,882. 4 Claims. (Cl. 301—41.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

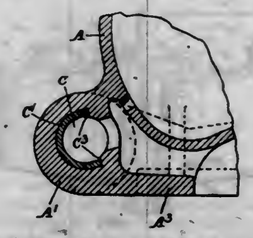
1. A wheel embodying a peripherally grooved felly provided with a pair of holes, a bent lever mounted on the hub of the wheel, a pivoted catch on the end of the lever adapted to engage the spokes of the wheel, a spring attached to the bent portion of the lever, a rope passed through one of the holes and knotted, said rope wound in the groove of the felly and the other end of the rope inserted through the remaining hole and secured to the spring.

1,629,815. MAGNETIC UNLOADER. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 23, 1922. Serial No. 570,819. 14 Claims. (Cl. 175—336.)



1. In an electropneumatic device, a valve, an electric circuit, movable means for holding said valve in one position and operable by a current of predetermined magnitude in said circuit to become ineffective with respect to said valve and a second movable means operable by a current of different magnitude in said circuit to impel said first movable means to hold said valve in said one position.

1,629,816. FLY AND INSECT TRAP. ALDER G. CARLSON, Moose Lake, Minn. Filed Apr. 24, 1926. Serial No. 104,441. 4 Claims. (Cl. 43—131.)



1. An insect trap comprising an elongated tray adapted to be arranged upon a window or other vertical support, and means for supporting the tray in a horizontal position, with its entire body in spaced relation with respect to the window or support so as to leave an elongated opening or passage between the tray and window or support.

1,629,817. SWITCH-POINT PROTECTOR. RALPH G. DEITMER, Hamilton, Ohio, assignor to The American Frog & Switch Company, Hamilton, Ohio, a Corporation of Ohio. Filed Sept. 25, 1925. Serial No. 58,674. 8 Claims. (Cl. 246—441.)

1. In combination, an upright wall, a riser wall and bracing means rigidly connected, said upright wall having an upright face arranged to be contacted by the end of the tread of a wheel, said bracing means arranged to be received in the side channel of the rail over which said wheel is arranged to ride and to coact with the walls of said side channel for bracing the rail, and said riser wall provided with a downwardly sloping end arranged to raise said tread with relation to said rail.

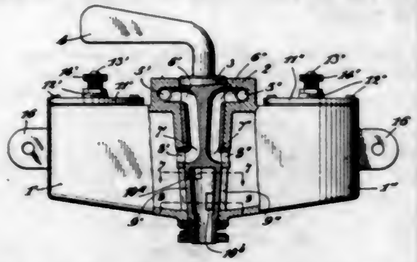
1,629,818. BUSHING. WALTER FERRIS, Milwaukee, and MATTHEW F. KEESE, South Milwaukee, Wis., assignors to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Dec. 2, 1921, Serial No. 519,359. Divided and this application filed Jan. 26, 1923. Serial No. 614,951. 4 Claims. (Cl. 74—32.)

1. In an articulated excavator chain: a link having a bushed eye; a bushing comprising a portion whose outer and inner surfaces are concentric semicylindrical surfaces; the portion so formed being extended into tangential portions formed integral therewith; and shoulders, formed in the aperture of the eye, and adapted to receive the abutting ends of the bushing.

1,629,819. WEED-DESTROYING COMPOSITION. HUGH EDWARD HUGHES, Berkeley, Calif., assignor, by direct and mesne assignments, to The Weed Control Company of California, Berkeley, Calif., a Corporation of California. Filed Sept. 16, 1924. Serial No. 738,004. 3 Claims. (Cl. 167—6.)

1. A weed destroying composition comprising an acidic aqueous solution of arsenic chloride.

1,629,820. CURTAIN BRACKET. WILLIAM W. HUYSER, Pueblo, Colo. Filed Apr. 26, 1926. Serial No. 104,744. 5 Claims. (Cl. 156—24.)

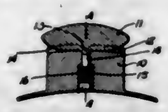


5. A curtain bracket comprising a shank and an arm extending radially from said shank, said shank being threaded and adapted to be screwed into a support and said arm having its outer portion folded back in spaced relation to its major portion to provide an open socket having side walls joined at their outer ends, the said side walls being formed with alined openings, one opening being circular and the other noncircular.

1,629,821. LIQUID-FLOW GOVERNOR. NICHOLAS H. JACOVATOS, New York, N. Y. Filed Apr. 5, 1924. Serial No. 704,425. 19 Claims. (Cl. 225—26.)

1. In a liquid flow governor, a chamber and a valve seat, a valve turnable in said seat and having a hollow open end, means for turning said valve, an entry port

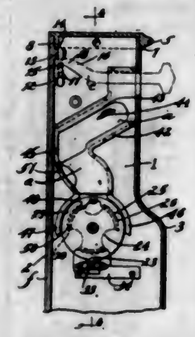
into said chamber through an opening in said valve seat, a passage way in said valve having an outlet adapted to register with said entry port as said valve is turned, means for conveying a liquid to said chamber through said passage way, an exit port from said chamber through a second opening in said valve seat, slots in the hollow end of said valve at various levels thereof and adapted to register with said exit port as said valve is turned, and means for conveying a second liquid to said hollow end of said valve when one of said slots registers with said exit port, said outlet and entry port being out of register when said exit port registers with one of said slots, and vice versa.



19. In a liquid flow governor, a multiplicity of chambers adapted to receive independent supplies of liquids, outlets from said chambers, and means for regulating the flow of said liquids from said chambers by controlling the hydraulic heads of said liquids and the effective areas of said outlets.

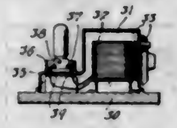
1,629,822. COLLAR BUTTON. SOLOMON KAUFMAN, New York, N. Y. Filed June 30, 1926. Serial No. 119,580. 4 Claims. (Cl. 100—5.)

1. A collar button comprising a body portion, a head revolubly connected to the body portion, and a detent adapted to releasably engage the head, to control the turning movement of said head.



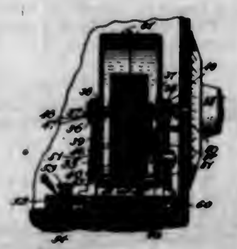
1,629,823. COLLAR BUTTON. SOLOMON KAUFMAN, New York, N. Y. Filed Sept. 4, 1926. Serial No. 133,636. 1 Claim. (Cl. 24—101.)

A collar button having a rounded base fitting the curvature of the neck, an elliptical shank joined thereto, the top of said shank being bevelled to receive a button substantially ellipsoidal in shape resting upon said shank, a series of indentations in said shank adapted to receive said button in a plurality of fixed positions and a spring connecting said shank and said button.



1,629,824. VENDING MACHINE. ORSON N. KELLY, Los Angeles, Calif. Filed July 2, 1925. Srial No. 41,082. 2 Claims. (Cl. 194—1.)

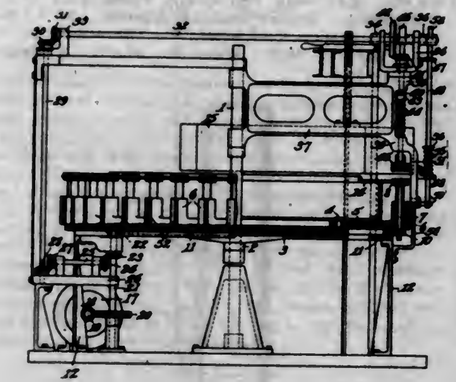
1. In a machine embodying a casing containing coin receiving mechanism, an entrance member to said casing, a narrow coin slot in the casing, a lock for said entrance member within the casing, a coin chute in alignment with the slot and lock, a key insertable through the



aligned slot and chute to actuate said lock, said slot and chute constituting guides for the key in its presentation to the lock.

1,629,825. RADIO APPARATUS. JOHN J. W. KENAN and WILLIAM M. CADY, Newark, N. J. Filed Mar. 28, 1925. Serial No. 19,022. 3 Claims. (Cl. 250—14.)

1. In apparatus of the character described, the combination with a plurality of electric circuit controlling devices, of a vacuous casing, a plurality of electricity conducting wires arranged within said casing and electrically connected to form a predetermined part of an electric circuit to include said circuit controlling devices, certain of said wires having their terminals sealed into and projecting from the walls of said casing in predetermined fixed positions to be connected to certain of said electrical circuit controlling devices.



1,629,826. RADIO APPARATUS. JOHN J. W. KENAN and WILLIAM M. CADY, Newark, N. J. Filed Mar. 28, 1925. Serial No. 19,023. 5 Claims. (Cl. 175—41.5.)

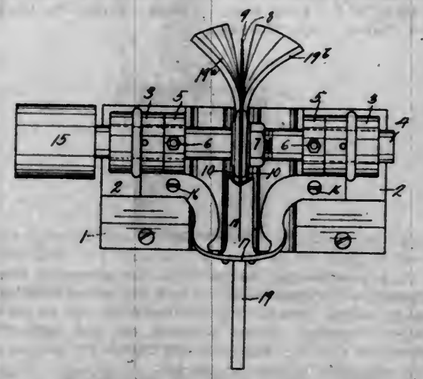
1. Electrical apparatus comprising a rotatable electrical conducting element, a second electrical conducting element pendulously mounted coaxially with said rotatable member to cooperate therewith, means for rotating said first-mentioned conducting element relatively to the second-mentioned conducting element, and cooperating magnetic elements one mounted on a fixed support and the other mounted on the second-mentioned conducting element to hold said second-mentioned conducting element against oscillation.

3. An electrical condenser comprising a rotatable casing including two cup-like sections having their edges secured together and formed with alined grooves opening through said edges substantially parallel with the axis of rotation of said casing, a plurality of spaced and parallel conducting plates fixedly mounted within said grooves, a plurality of spaced and parallel conducting plates pendulously mounted within said casing co-axially therewith in alternate relation to the first-mentioned plates, means for rotating said casing, and terminals for said plates extending through said casing.

1,629,827. MACHINE FOR FINISHING PRESSED-GLASS ARTICLES. RAYMOND T. KIMBLE, Cambridge, Ohio, assignor to The Cambridge Glass Company, Cambridge, Ohio, a Corporation of Ohio. Filed Oct. 30, 1925. Serial No. 65,770. 5 Claims. (Cl. 49—7.)

1. In a fire-finishing and polishing machine for articles of glassware, a rotary table, means for continuously rotating said table, ware supports borne by said table, a furnace for re-heating the ware during the advance travel of the latter, a re-pressing die, and automatic means for reciprocating said die into cooperative relation to the successively advancing supports for repressing the re-heated articles, and means for fire-finishing the re-pressed ware in the further travel of the table.

1,629,828. CAN. LOUIS KOLL, Peoria, Ill., assignor to Stuber & Kuck Co., Peoria, Ill., a Corporation of Illinois. Filed Apr. 11, 1925. Serial No. 22,470. 3 Claims. (Cl. 221—24.)

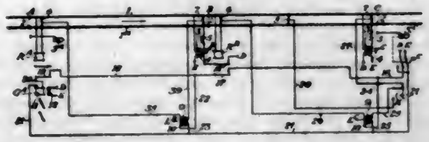


1. In combination with a receptacle for a liquid including an opening for discharge of the liquid, a separate spout or nossle invertible in position whereby to be suspended within the receptacle or to be erected upon the same, said nozzle including an annular extended flange at its base covering the opening, there being an air vent in said annular flange communicating with the interior of the receptacle through the said opening thereof, there being a depression in the outer wall of the nozzle extending longitudinally of the same substantially in line with the air vent, and means to secure the annular flange upon the receptacle.

1,629,829. EXTENSION RULE. CARL O. LINN, Salina, Kans. Filed June 9, 1925. Serial No. 35,934. 2 Claims. (Cl. 33—161.)

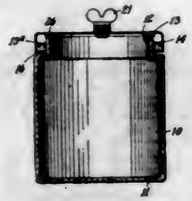
2. A rule comprising a plurality of longitudinally chambered sections, slidably telescoped one within the other, the chambers of each section, except the outermost, being formed in part by oppositely and inwardly-bent longitudinal flanges, the corresponding flanges of the different sections being in superposed relation, thus forming two sets of superposed flanges, one of the corresponding ends of one set being each recessed, there being adjacent the other ends of said set lugs projecting from the lateral edges of the flanges, the recess of each flange being laterally off-set with relation to those of adjacent flanges and the recessed ends being also provided with outwardly projecting lugs, each positioned to enter the recess of the adjacent superposed flange, when the sections are closed together, and with inwardly bent lugs, each adapted to abut against the lateral-edge lug of the inwardly adjacent flange when the rule is distended.

1,629,830. SHEET-RUBBER-SPLITTING MACHINE. LEON L. LYONS, Omaha, Nebr. Filed Oct. 19, 1925. Serial No. 63,421. 1 Claim. (Cl. 164—61.)



A sheet rubber splitting machine comprising a frame, upwardly extending brackets carried by said frame, an arbor rotatably mounted in bearings of said brackets, a toothed knife by said arbor, a transversely adjustable clamping member disposed beneath the knife and transversely adjustable in relation to the knife, and plates carried by said clamping member and extending upwardly at opposite sides of the knife and overlapping the knife.

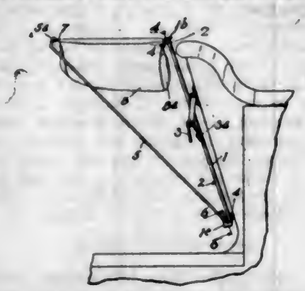
1,629,831. CRANBERRY-HARVESTING APPARATUS. HORACE B. MAGLATHLIN, Kingston, Mass. Filed Nov. 8, 1923. Serial No. 675,511. 8 Claims. (Cl. 56—330.)



1. In a berry picking machine or the like, a pair of spaced rotatable heads, means for rotating the same, a picking element mounted thereon, comprising a channel member so disposed as to constitute a support for picked berries when the element is in picking position and having a radial flange, and picker teeth adjustably mounted upon the radial flange of the channel member.

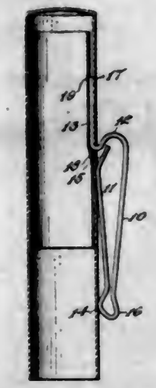
1,629,832. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1924. Serial No. 696,344. 3 Claims. (Cl. 246—34.)

1. In combination, a forward and rear section of railway track, traffic governing means for said rear section including a polarized relay, a track relay for said rear section, a second track relay for said forward section, a pole changer; a circuit for said polarized relay including a front contact on said first track relay, a front contact on said second track relay, said pole changer, and a winding of said polarized relay, and a transformer for supplying loop current to said rear section and having its primary winding connected in parallel with said polarized relay and the front contact of said first track relay.



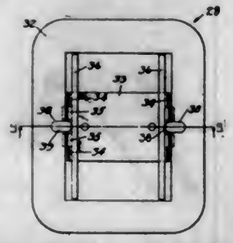
1,629,833. PRESERVER JAR. WILLIAM MENNE, Union City, N. J. Filed Aug. 11, 1926. Serial No. 128,532. 4 Claims. (Cl. 215—44.)

1. A preserve jar comprising a jar proper, a pair of diametrically opposed lugs on said jar, a cap elliptical in shape, ledges on said cap positioned on the major axis thereof, resilient fingers mounted on said ledges, and means on said lugs engaging said fingers for keeping said cap releasably in place on the jar.



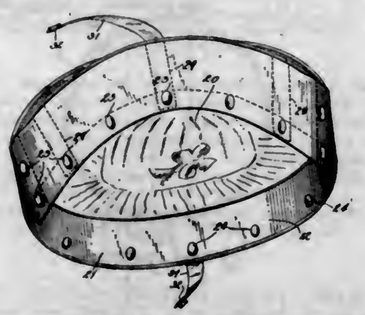
1,629,834. BABY CHAIR FOR AUTOMOBILES. MARTIN J. MILLER, Alhambra, Calif. Filed Apr. 8, 1925. Serial No. 21,459. 3 Claims. (Cl. 155—10.)

1. In a baby chair for automobiles, a pair of bars secured in spaced relation to each other, hook members secured on the normally back sides intermediate the ends of said bars, brace members pivotally connected at the normally lower ends of said bars and a flexible seat member provided with a frame at its upper edge readily and



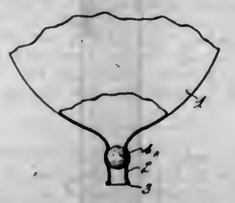
detachably connected at one side by said bars at their upper ends and at its other side pivotally connected to said braces.

1,629,835. CAP FOR FOUNTAIN PENS AND CLIP THEREFOR. ADOLPH MONTAN, Montclair, N. J., assignor to Eastern Tool & Mfg. Co., Bloomfield, N. J. Filed Mar. 15, 1926. Serial No. 94,653. 1 Claim. (Cl. 24—11.)



A fountain pen cap comprising a barrel with one end open and with a slit in its side, a clip passing through the slit with its exposed end bent to form a spring clasp and with its enclosed end adapted to lie against the inside of the barrel, and an open-ended sleeve of distortable metal softer than the barrel and forced into the barrel whereby the clip and the sleeve are both held in place.

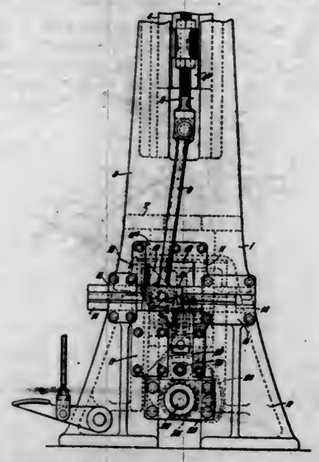
1,629,836. TRANSFORMER. THOMAS J. MURPHY, Astoria, N. Y. Filed Mar. 23, 1923. Serial No. 627,055. 7 Claims. (Cl. 175—356)



1. A shell type transformer having a laminated shell and a laminated core, the laminations of the sides of the shell having registering notches forming channels extending across the inside faces of the sides of the shell of the transformer, keys located in the channels and protruding therefrom for engaging the ends of the laminated core.

1,629,837. RECEPTACLE. EDWIN B. NATHAN, Yonkers, N. Y. Filed Nov. 23, 1922. Serial No. 602,677. 1 Claim. (Cl. 206—8.)

A receptacle of the character described comprising a pair of base members, a wall upstanding between said base members, said wall having a portion thereof cut away to provide an opening for the receptacle, said members and wall being formed of flexible, thin sheet material to permit collapsing the receptacle when not in use, a continuous relatively stiff shape-retaining structure fitted to extend along the interior side of the uncut portion of said wall for retaining said base members and wall in an effective expanded position, a closure flap permanently attached to one of said base members, spaced ribs secured to said flap serving as a shape-retaining reinforcement therefor, and means adjacent said ribs for detachably securing the flap to the wall and the other of said base members.



1,629,838. VALVE FOR TOY BALLOONS. MELVIN PERDUE, Shelby, Ohio. Filed May 18, 1925. Serial No. 31,033. 1 Claim. (Cl. 46—37.)

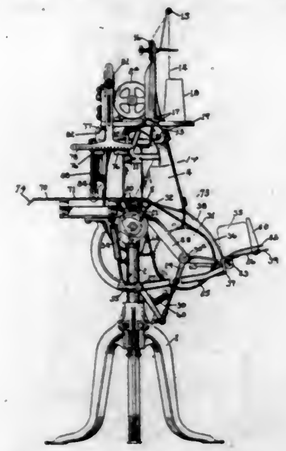
A toy balloon, comprising a body portion and a tubular neck or mouth piece both of expansible material, and a spherical shaped valve of non-resilient material and having a smooth external surface, said valve being loosely enclosed within said body portion and adapted to maintain the balloon in inflated condition by seating or lodging within and thereby closing the tubular neck or mouth piece thereof.

1,629,839. PRESS FOR DRAWING HOLLOW WARE OF SHEET METAL. CHARLES JOSEPH RHODES, Wakefield, England. Filed Feb. 20, 1926, Serial No. 89,572, and in Great Britain Feb. 24, 1925. 9 Claims. (Cl. 113—46.)

1. In a draw press, a die embodying a stationary member and a member movable relative thereto, a movable die cooperating with the stationary member of the first die to effect a drawing of work placed relative to said die, a movable carrier for the drawing member embodying a slidably mounted element, a slide movable transversely of the slidably mounted element of the drawing member carrier and normally positioned for engagement by said element to hold the drawing member carrier against movement, and a slidably mounted member operating in unison with the movable die to co-operate with

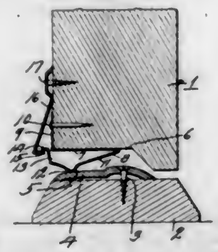
said transversely movable slide to move the same out of engagement with the slidably mounted element of the carrier to release the carrier and permit the carrier with the drawing member to participate in the movement of the movable die and recede relative to its co-operating stationary die member to effect the drawing of the work over said latter member.

1,629,840. COMBINATION MUFFLER HOLDER FOR COATS. HERMAN ROLNICK, New York, N. Y. Filed Nov. 22, 1924. Serial No. 751,488. 4 Claims. (Cl. 2—91.)



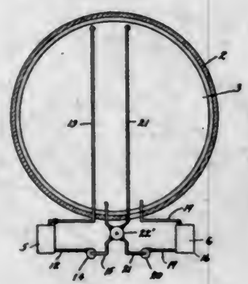
1. In combination, a coat and a muffler-guard flap stitched along one hinging edge only to the coat at the rear of the neck opening; means forming a slipway across the face of said flap and movable with said flap into each of two positions by swinging said flap on said hinging edge.

1,629,841. AUTOMATIC BUNDLE TIER. ALBERT H. SAXTON, Blissfield, Mich., assignor to National Bundle Tyer Company, Blissfield, Mich., a Corporation of Michigan. Filed July 18, 1924. Serial No. 726,708. 8 Claims. (Cl. 100—31.)



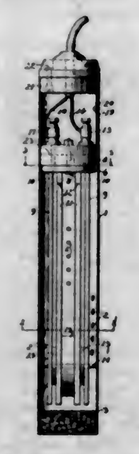
1. In a bundle tier machine, an actuating means, a wrapping and tying mechanism, a bundle moving mechanism, for moving a bundle to bundle tying and wrapping position, an arm operated by the weight of a bundle for connecting the actuating mechanism with the bundle

moving mechanism and means operated by the bundle moving mechanism for connecting the wrapping and tying mechanism with the actuating means when the bundle has substantially reached the bundle tying and wrapping position.



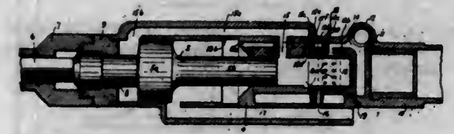
8. In a bundle cord wrapping and tying machine, an actuating means, a wrapping and tying mechanism, means for pressing the bundle substantially along the line of the cord for being wrapped and tied, means for shifting the bundle into wrapping position, means operated by the weight of the bundle for connecting the means for shifting the bundle with the actuating means, and means operated by the bundle shifting means for connecting the wrapping and tying mechanism and the bundle pressing means with the actuating means.

1,629,842. WEATHER STRIP. AUGUST C. SCHNAKE, Centralia, Ill. Filed May 5, 1925. Serial No. 28,116. 1 Claim. (Cl. 20—69.)



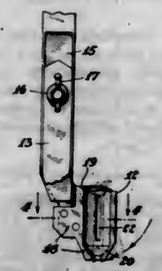
The combination with a door, a sill plate disposed beneath said door, of a weatherstrip, said weatherstrip comprising a member disposed in the channel of the door, said member at its inner end terminating in a downwardly, outwardly and upwardly extending flange, a downwardly struck longitudinally disposed bead carried by said flange within the door channel and frictionally engaging the sill plate, the outer end of the downwardly, outwardly and upwardly extending flange terminating in a vertically disposed flange to one side of the door adjacent the door channel, a horizontally disposed flange carried by the vertically disposed flange and extending outwardly, a member secured to the side of the door and inclining downwardly and outwardly, said last named member terminating in an inwardly extending horizontally disposed flange underlying the first mentioned horizontally disposed flange, and forming means for limiting the downward movement of the horizontally disposed flange when the door is in open position.

1,629,843. AIRCRAFT. JESSE W. SILVER, Tacoma, Wash. Filed Dec. 8, 1924. Serial No. 754,537. 1 Claim. (Cl. 244—3.)



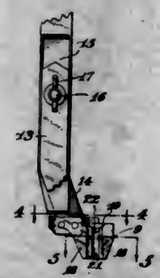
In an airship, or the like, comprising a flexible gas container, a heating device and a cooling device, each having a top and bottom connection with the container, a valve mechanism operable to control the circulation through the connections of both the cooling and heating devices, and means for forcing a circulation of gas from and back into the container through the connections of either of said devices.

1,629,844. WATER HEATER. FRANK SOTO, Sunnyvale, Calif. Filed June 12, 1926. Serial No. 115,568. 1 Claim. (Cl. 219—41.)



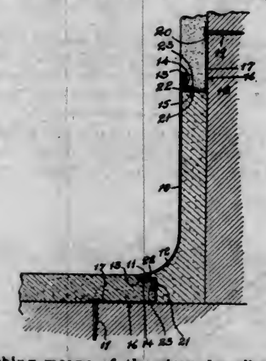
An article of manufacture comprising a tubular element provided with means to permit the flow of water therethrough, an insulating closure for one end thereof, spaced conducting plates mounted on said closure and extending into said tube, insulating means inserted between the ends of said plates remote from said closure to space the same and engaging the wall of said tube, and lying in parallel relation to said plates, a pin passing through said plates and insulating means and engaging the wall of said tube, means for connecting said plates in an electrical circuit, and an insulated cap mounted on said tube over said closure.

1,629,845. PNEUMATIC PERCUSSIVE TOOL. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed May 23, 1925. Serial No. 32,250. 11 Claims. (Cl. 121—18.)



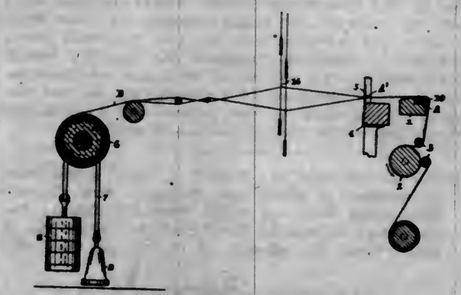
1. In a fluid pressure tool, a cylinder having a differential piston chamber, a piston reciprocable therein providing two pressure areas for driving it in one direction and a single pressure area for returning it, ports and passages controlled by said piston for admitting motive fluid to two of said areas, and a sleeve valve defining a portion of said piston chamber and moving in timed relation with said piston for controlling the admission of motive fluid to the other pressure area of the piston.

1,629,846. RIVETING-MACHINE POCKET. EDWIN B. STIMPSON and HENRY V. RAU, Brooklyn, N. Y., assignors to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed Apr. 2, 1926. Serial No. 99,207. 2 Claims. (Cl. 218—3.)



1. A pocket of the kind described comprising matching spring-pressed members formed to define between them a rivet-passage having a surrounding rivet-head ledge at its upper end and a contracting throat at its lower end, and with an open slot of such width extending the full length of the pocket as to permit the unrestricted entrance laterally into the pocket of rivet shanks whose lengths may be greater than the length of the pocket.

1,629,847. RIVETING MACHINE. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed Nov. 8, 1926. Serial No. 146,934. 1 Claim. (Cl. 1—3.)

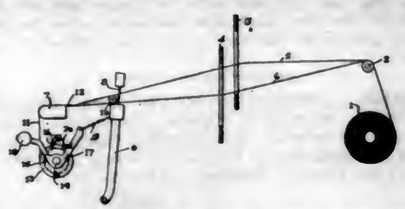


A pocket of the kind described comprising matching spring-pressed members formed to define between them a rivet-passage oblong in cross-section having a surrounding rivet-head ledge at its upper end and an outwardly flaring opening into the side of the passage, the passage providing end-walls for contact with the ends of an oblong rivet-head and side-walls for contact with the side-walls of the rivet head, said side-walls, below the ledge being grooved all the way to the lower end of the passage.

1,629,848. ATTACHING MEANS FOR BUILDING TRIMS. WINGATE S. THOMAS, Chicago, Ill., assignor to Knapp Brothers Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1926. Serial No. 129,160. 9 Claims. (Cl. 189—89.)

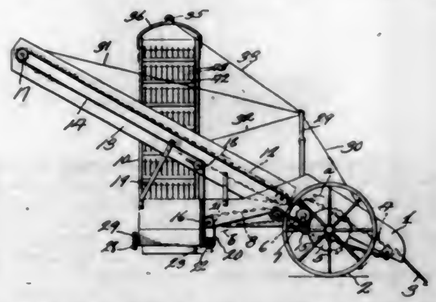
1. In attaching means of the class described, the combination of a trim having a channel formed in its attaching portion and an inwardly turned flange along the margin of said channel, a clip having a portion thereof entered into said channel, and a portion thereof formed to engage the inwardly turned flange, and means for attaching the clip, substantially as described.

1,629,849. LOOM. JOHN S. TODD, Hawley, Pa. Filed Oct. 2, 1926. Serial No. 139,026. 1 Claim. (Cl. 139—291.)



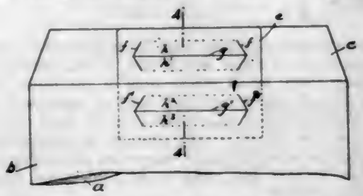
In combination, a fixed supporting structure including a breast-beam, a roller contiguous to and parallel with the breast-beam, let-off means back of the roller, take-up means beneath the roller, the sheet of warp and woven fabric being adapted to extend forward from the let-off means, around the roller and down to the take-up means, and elastic means yieldingly supporting the roller on said structure against the pressure of said sheet when the latter is tautened.

1,629,850. APPARATUS FOR WEAVING ASBESTOS CLOTH. EDWARD J. TRAINOR, Cohoes, N. Y., assignor to Asbestos Spinning and Weaving Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1922. Serial No. 593,684. 1 Claim. (Cl. 139—309.)



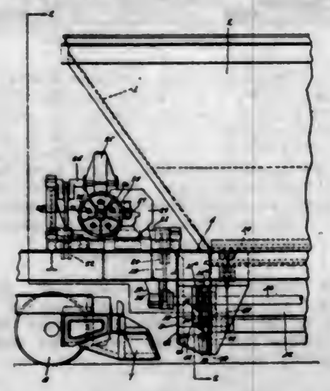
In a loom of the character described, a fabric take-up comprising a fabric roll, a ratchet secured to said fabric roll, a pawl engaging said ratchet whereby to prevent ro-

tation of said fabric roll under tension of the fabric, a bell-crank connected to and oscillatable about said fabric roll and provided with a weight at one end thereof, a lay,



a flexible connection between said lay and the other end of said bell-crank and a pawl secured to said bell-crank and engaging said ratchet to rotate the latter and said fabric roll forwardly upon the lowering of said weight.

1,629,851. POTATO ELEVATOR AND WEED CARRIER. THOMAS TUCHEK, Hemingford, Nebr. Filed Apr. 1, 1924. Serial No. 703,543. 2 Claims. (Cl. 55—51.)



1. A potato digging machine comprising a potato conveyor, an upwardly and rearwardly extending weed and vine conveyor in the plane of the potato conveyor, a rearwardly and downwardly inclined potato conveyor below the vine conveyor and potato conveyor, and onto which potatoes are deposited from the first mentioned potato conveyor, a transversely disposed and upwardly extending potato conveyor onto which the second mentioned potato conveyor discharges, said transversely disposed conveyor forming means whereby potatoes will be discharged to one side of the digging machine as a whole.

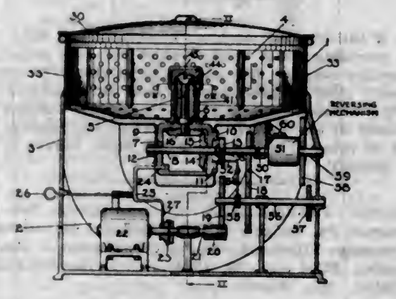
1,629,852. ENVELOPE. HOWARD A. WOLF, Elkins Park, Pa., assignor to Edwin Wolf, Benjamin Wolf, Clarence Wolf, Louis Wolf, and Albert Wolf, Philadelphia, Pa., Copartners trading as Wolf Brothers. Filed Jan. 2, 1924. Serial No. 683,901. 1 Claim. (Cl. 229—68.)

An envelope comprising front and back walls, a closing flap formed by an extension of the front wall and tabs formed in the flap by pairs of slits extending in an angular relation and a horizontal slit extending between the apices of the angles formed by said first mentioned pairs of slits, tabs formed in the front and back walls by aligning pairs of slits extending in an angular relation, and a horizontal slit extending between the apices of the angles formed by said pairs of slits, said tabs in the flap and walls of the envelope being adapted to overlie one another when said flap is in closing position and to be folded upwardly and downwardly against one of said walls to provide a three ply bearing surface for the fingers and secure said flap in closing position, respectively.

1,629,853. DUMP CAR. SAMSON D. WRIGHT, Cleveland Heights, Ohio. Filed Oct. 5, 1922. Serial No. 592,616. 15 Claims. (Cl. 105—250.)

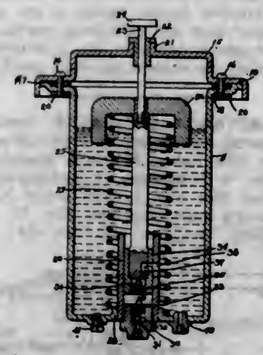
1. A dump car comprising a hopper body, doors for closing the bottom opening of said hopper, rollers connected to said doors, horizontally extending tracks for said rollers, means for operating said doors, and automatically movable means free of connection to said doors for preventing deposit of the contents of the car upon said tracks at all times.

1,629,854. ARTIFICIAL MARBLE. HENRY L. BATES, Greenfield, Mass. Filed Sept. 4, 1926. Serial No. 133,730. 5 Claims. (Cl. 106—24.)



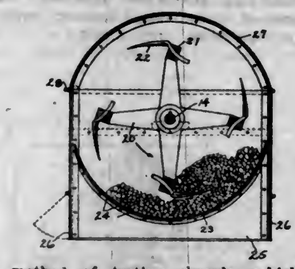
5. A composition of matter for forming artificial marble, brick, tiling, or the like comprising a magnesite substance, asbestos, an alum hardening substance, slaked lime, casein, powdered salt peter, a glue binding material, water and sand to form a pasty mass of a consistency suitable for molding purposes.

1,629,855. STRING-TUNING DEVICE. JOHN BERNARDINI, Cincinnati, Ohio. Filed Apr. 3, 1925. Serial No. 20,506. 1 Claim. (Cl. 84—304.)



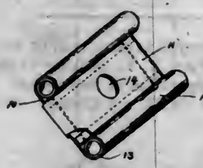
In a stringed instrument a string tensioning device therefor, consisting of a relatively stationary plate, a series of internally screw threaded nuts rotatively mounted in the plate and arranged for manual rotation, a string attaching externally screw threaded non-revolvable thimble mounted in each of the nuts and a second plate attached to the first mentioned plate for cooperation with non-revolvable thimbles when the unts are rotated whereby longitudinal reciprocation of the thimbles is secured.

1,629,856. WASHING AND DRYING MACHINE. SOLON J. BOUGHTON, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 21, 1920. Serial No. 418,570. 11 Claims. (Cl. 68—18.)



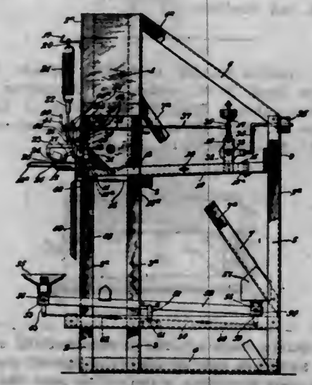
1. In a combined centrifugal wringer and cylinder washer, a cylinder formed of two parts, and a pair of axially aligned pivotal mountings, one on each part, said parts being disconnectible, whereby one only may be utilized for wringing.

1,629,857. PUMPING MECHANISM. CHESTER H. BRASELTON, New York, and FRED B. MACLAREN, Malba, N. Y.; said MacLaren assignor to said Braselton. Filed Feb. 20, 1922, Serial No. 537,681. Renewed Oct. 30, 1926. 8 Claims. (Cl. 103—28.)



1. The combination of a vibratory receiving tank; a pump adapted to pump liquid into said receiving tank as the latter is vibrated; a weight for aiding the pumping operation of the pump; and means whereby the amount of liquid pumped by a certain definite pumping movement of the moving parts of the pump is reduced as the liquid in the receiving tank reaches a level to exert a buoying force upwardly upon the weight.

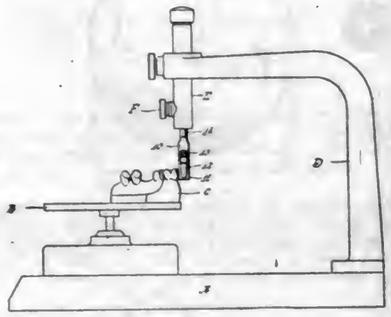
1,629,858. METHOD AND APPARATUS FOR TESTING SHOVELS. JOSEPH WALTER BROWNING, Piqua, Ohio, assignor to The Wood Shovel and Tool Company, Piqua, Ohio, a Corporation of Ohio. Filed Oct. 7, 1921. Serial No. 506,182. 9 Claims. (Cl. 70—51)



1. The method of testing shovels, which comprises causing the shovels to dig repeatedly through a quantity of material by force applied substantially as force is applied to a shovel in normal use, while recording the energy used in forcing the shovel through the material.

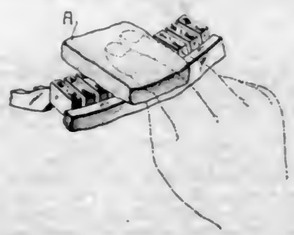
1,629,859. LOCK HOLDER. LOT F. BURKE, Schenectady, N. Y. Filed Mar. 2, 1926. Serial No. 91,823. 6 Claims. (Cl. 224—30.)

1. A holder for locks of the removable shackle type having a main portion, and upturned portions formed on the sides of said main portion adapted to receive the shackle of the lock, whereby the same can be locked in said holder.



1,629,860. BAG-FILLING MACHINE. EDWARD L. BUSHMAN, East Orange, N. J.; KENNETH L. CURTIS, New York, N. Y.; and JOSHUA WARD, Elizabeth, N. J., assignors, by direct and mesne assignments, to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed May 7, 1925. Serial No. 28,551. 6 Claims. (Cl. 249—60.)

1. In a valve bag filling machine the combination of a spring supported substantially horizontal valve bag filling spout adapted to extend into a bag, a discharge

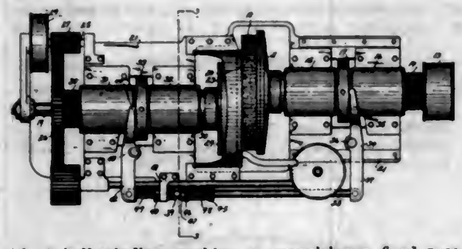


throat in register with said filling spout, and a scale provided with a bag supporting portion, said spout and scale jointly providing means for supporting a bag while it is being filled.

1,629,861. DENTAL MARKING DEVICE. JOHN M. CRAIGO, Hartford, Conn. Filed Jan. 21, 1927. Serial No. 162,610. 4 Claims. (Cl. 32—5.)

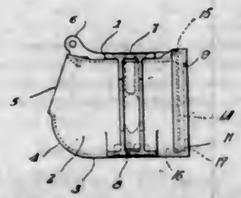
1. A marking device for surveying teeth including a thin blade, and a marking fabric attached thereto.

1,629,862. TYPE-CLEANING COMPOUND. EBERHARD L. FABER, New York, N. Y., assignor to Eberhard Faber Rubber Co., a Corporation of New Jersey. Filed May 8, 1925. Serial No. 28,831. 5 Claims. (Cl. 87—5.)



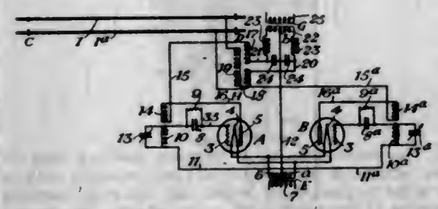
1. A composition of matter for cleaning type, consisting of a base of powdered inert mineral substance, plastic rubber, factice, a heavy mineral filler, a slightly volatile mineral oil, and emollient.

1,629,863. RAZOR-BLADE HOLDER. HENRY J. GAISMAN, New York, N. Y., assignor to Autostrop Patents Corporation, Dover, Del., a Corporation of Delaware. Filed Nov. 11, 1922. Serial No. 600,233. Renewed Sept. 18, 1926. 10 Claims. (Cl. 30—12.)



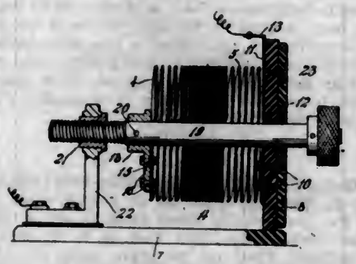
1. In a safety razor a blade of substantially rectangular shape having a cutting edge and spaced recesses at one of its ends providing a projection near the heel of the blade, and a projection spaced therefrom between said recesses, the first named projection being longer than the second named projection.

1,629,864. BALL-GRINDING MACHINE. WALTER B. GARDINER, Hartford, Conn. Filed Nov. 26, 1923. Serial No. 676,955. 5 Claims. (Cl. 51—130.)



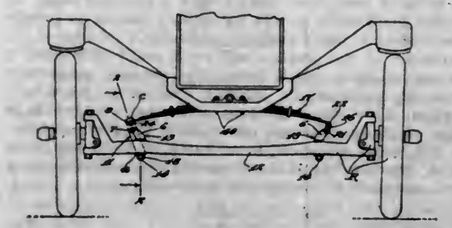
1. A ball-grinding machine, a comprising a fixed raceway providing a slot through which the balls project, an adjustable abrasive disk and an adjustable drive-ring on opposite sides of said raceway, and an equalizing connection between said disk and said ring, whereby adjustment of one toward the other and the raceway will tend to cause a movement of the other toward it and the raceway.

1,629,865. JOURNAL BOX. CHARLES GIBSON, New Kensington, Pa., assignor to Union Spring & Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1924. Serial No. 687,722. 1 Claim. (Cl. 308—39.)



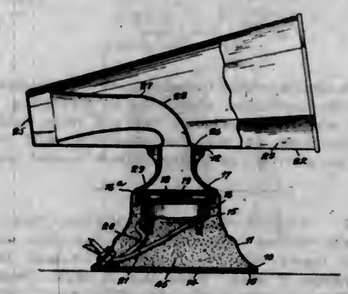
A journal box structure comprising a metal body having integral portions thereof forming a side wall of a dust guard pocket, and a separable metal plate cooperating with the said portions of the body to complete the said pocket, the body having spaced integral lugs for positioning the lower part of the plate therebetween, and the plate having integral lateral hooks at its upper edge adapted to extend over and detachably engage a portion of the body, whereby to hold the plate in cooperative position for completing the walls of the dust guard pocket.

1,629,866. ELECTRICAL APPARATUS. LARS O. GRONDAHL, Pittsburgh, and HARRY M. RYDER, Bradford, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Nov. 3, 1923, Serial No. 672,642. Divided and this application filed Nov. 10, 1926. Serial No. 147,528. 1 Claim. (Cl. 246—34.)



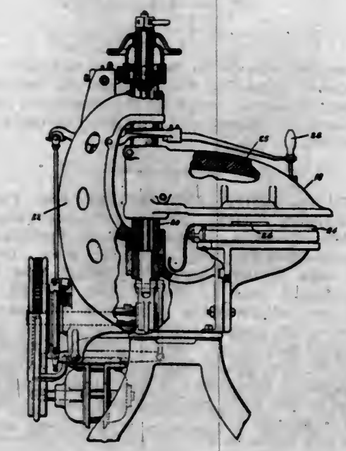
In combination, a stretch of railway track, and means for at times supplying the rails of the stretch with alternate impulses of alternating currents of different frequencies.

1,629,867. ELECTRICAL CONDENSER. HENRY F. HERMAN, Chappaqua, N. Y., assignor to Straitline Radio Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1925. Serial No. 18,472. 4 Claims. (Cl. 175—41.5.)



1. In an electric condenser, a spiral plate electrode having the convolutions spaced equidistant form each other and perpendicular to the axis of the spiral with an opening axially therethrough and arranged to be supported and connected in an electric circuit at one end and with the marginal portions of the convolutions of the plate having no physical connection with each other.

1,629,868. SPRING SUSPENSION FOR VEHICLES. WILLIAM HESSLINK, Ashland, Mass., assignor to Leroy F. Fuller, Springfield, Mass. Filed Aug. 2, 1926. Serial No. 126,421. 7 Claims. (Cl. 267—54.)

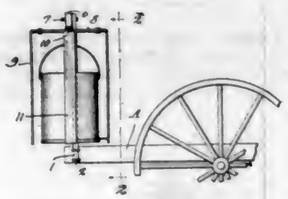


1. A spring suspension for a vehicle having in combination with an axle, a spring extending transversely of the body of the vehicle, a shackle having one end secured to one end of the spring and a perch having a bolt portion which rigidly secures the other end of the said shackle to the axle, the other end of the spring having a loose connection with the axle.

1,629,869. SOUND RECEIVER AND TRANSMITTER. FREDERICK W. HOCHSTETTER, Dayton, Ohio, and WALTER W. THORPE, New York, N. Y. Filed Mar. 26, 1923. Serial No. 627,760. 3 Claims. (Cl. 181—27.)

1. In a sound receiver and transmitter, the combination with a base having an outlet for supporting an amplifying horn, of a casing in the base, carrying a resonating diaphragm, and sound muffling material in the base with said casing embedded therein.

1,629,870. PRESS. PATRICK J. HORGAN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 6, 1924. Serial No. 730,461. 5 Claims. (Cl. 164—19.)

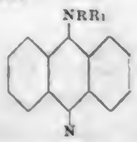


3. A presser member for clicking machines composed of an aluminum alloy having a high aluminum content.

1,629,871. SANITARY BOTTLE CARRIER FOR MILK BOTTLES. CHARLES W. HORNADAY, Sidney, Nebr. Filed Mar. 20, 1926. Serial No. 96,225. 10 Claims. (Cl. 215—100.)

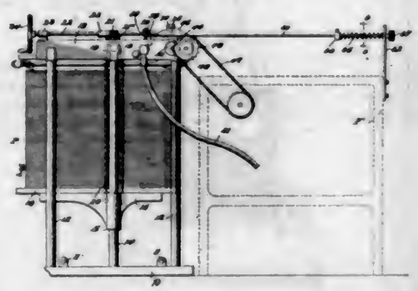
1. A sanitary bottle carrier comprising a cage conforming to the configuration of a bottle and open at the bottom to permit it to be placed over the bottle and provided at the top with resilient bottle clamping portions for engaging and supporting the bottle while the latter is being carried and extending upwardly above the bottle to provide a handle.

1,629,872. PLANT-DUSTING ATTACHMENT. GEORGE HUEBNER, La Grange, Tex. Filed Jan. 19, 1927. Serial No. 162,108. 5 Claims. (Cl. 43—145.)



1. A dusting attachment for vehicles including a cross beam, spaced depending fingers supported thereby, and a pendant container supported for oscillation between and against the fingers, said container having an apertured bottom.

1,629,873. ACRIDINE DERIVATIVES AND PROCESS OF MAKING SAME. HEINRICH JENSCH, Hochst-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Sept. 3, 1921, Serial No. 498,440, and in Germany July 8, 1919. 5 Claims. (Cl. 260—36.)

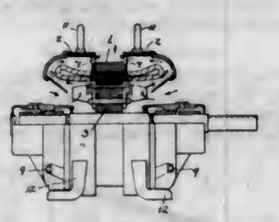


1. Process of preparing derivatives of meso-amino-acridines which comprises treating at elevated temperatures with a body of the formula $NHRR_1$, in which R and R_1 stand for hydrogen or aliphatic residues or both, acridines having a substituent in the 9-position thereof replaceable by the NRR_1 residue of said body, in the presence of a solvent.

3. As new products, the derivatives of 9-amino acridine of the general formula:

in which R and R_1 stand for hydrogen or aliphatic residues or both.

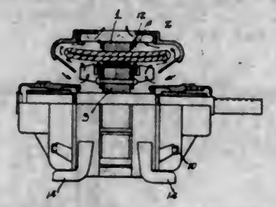
1,629,874. AUTOMATIC PILE-ELEVATING MECHANISM FOR SHEET FEEDERS. WILLIAM M. KELLY, Westfield, N. J. Filed Dec. 27, 1922, Serial No. 609,320. Renewed Nov. 18, 1926. 7 Claims. (Cl. 271—62.)



1. In a device of the character described, in combination, a vertically adjustable table adapted to support a pile of sheets, a shaft rotatably supported above said table, means whereby rotation of said shaft raises or lowers said table, a sheet feeding shaft in front of said first shaft and having sheet feeding means thereon, a third shaft extending at right angles to the other shafts, means rotatively connecting the first and third shafts, a member mounted for turning movement on said third shaft and adjacent said second shaft, a one-way motion transmitting device connecting said member and third shaft, means on said second shaft to oscillate said member, a rock shaft parallel with said third shaft and carrying a feeler adapted to rest on the top of the pile of sheets supported by said table, a releasable latch normally holding said member in one position, and means operated by turning said rock shaft to release said latch when the feeler falls and return it to normal position when the feeler is raised.

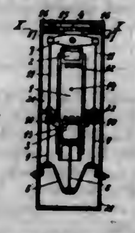
1,629,875. PIGTAIL CONNECTION FOR BRUSHES. JOHN F. KEELIN and HENRY J. ROSENHOFFER, Bradford, Pa., assignors, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 462,945. 10 Claims. (Cl. 171—326.)

1. The method of connecting a conductor securely and in intimate conductive contact with a frangible brush of limited malleability having an opening therein to receive the conductor, which consists in placing a portion of the conductor in the opening and permanently deforming a portion of the brush material into compact engagement with the conductor, by applying compressive force to a portion of the brush material of limited area which is situated to be sustained on all sides by other material of the brush not directly subjected to the compressive force, whereby fracture or crumbling of the brush during such operation of compression is avoided.



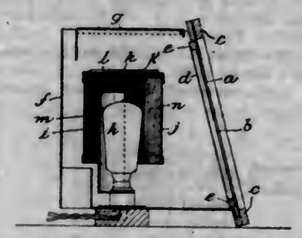
1,629,876. END FRAME RING FOR MOTORS. JAMES F. LINCOLN, Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 26, 1924. Serial No. 709,117. 4 Claims. (Cl. 171—252.)

1. In a dynamo-electric machine, the combination with the annular laminated stator; of a supporting frame therefor, said frame including two end rings, each ring being made from an elongated structural steel member formed into a circle and having its ends welded together.



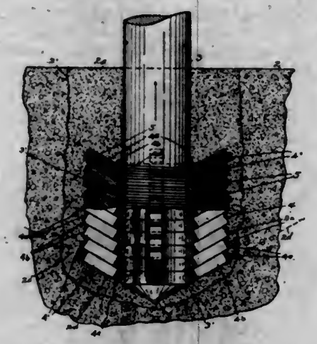
1,629,877. FRAME FOR DYNAMO-ELECTRIC MACHINES. JAMES F. LINCOLN, Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 3, 1924. Serial No. 710,840. 4 Claims. (Cl. 171—252.)

1. In a dynamo electric machine, the combination with the annular laminated stator; of a supporting frame therefor, said frame including two end-rings, each made from an elongated structural steel member formed into a circle and having its ends welded together, and cross-tie



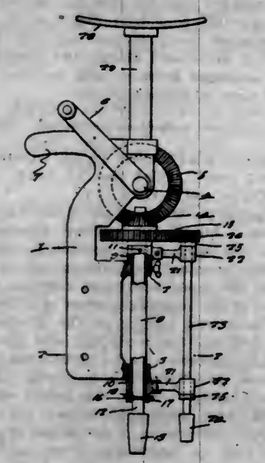
bars welded at their ends to said rings, respectively, said stator being secured to the inner faces of said cross-tie bars.

1,629,878. SCAVENGING PUMP OF INTERNAL-COMBUSTION ENGINE. OTTO MADER, Dessau, Germany, assignor to Hugo Junkers, Dessau, Germany. Filed Oct. 29, 1921, Serial No. 511,400, and in Germany Nov. 8, 1920. 12 Claims. (Cl. 123—51.)



9. In an internal combustion engine in combination, a crank case, a working cylinder, two working pistons in said cylinder adapted to move in opposite directions, a crank shaft and a connecting rod connecting said shaft with one of said pistons, a single acting scavenging air pump piston of larger diameter connected with said second piston, a cross-head beam arranged close to the rear face of said pump piston, a pair of connecting rods connecting said shaft with said beam, and a closed scavenging air pump cylinder surrounding said pump piston, an inlet and an outlet valve in one half of said pump cylinder and communication between said outlet valve and the inlet of said working cylinder through the other half of said pump cylinder and said crank case and a partition intermediate that part of said pump cylinder which is connected to the inlet of said working cylinder and said crank case offering passages for said pair of connecting rods.

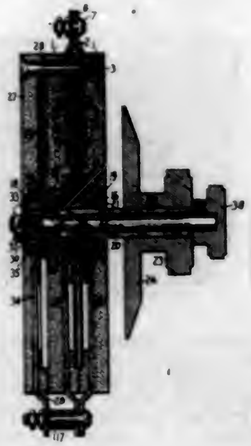
1,629,879. PICTURE. HORATIO MATTHEWS, Ealing, London, England. Filed July 30, 1926, Serial No. 126,067, and in Great Britain Dec. 10, 1925. 2 Claims. (Cl. 40—40.)



1. The combination with a picture intended to be viewed by transmitted light, of a coloured translucent stencil sheet applied to the back of the picture over those parts that are not to be intensively illuminated, a light diffusing screen located a short distance from the back of the picture, a source of light and a multicoloured rotating screen surrounding the source of light.

1,629,880. MEANS FOR ANCHORING BOLTS. RICHARD A. MIRZAN, Syracuse, N. Y. Filed Mar. 6, 1926. Serial No. 92,822. 10 Claims. (Cl. 72—105.)

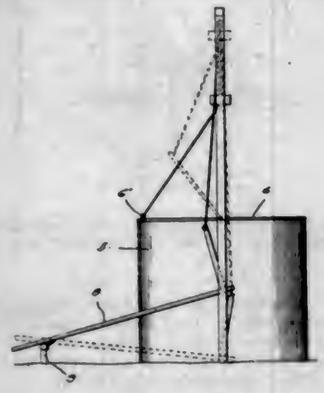
3. An anchor unit comprising a plurality of arms that radiate from a ringlike body portion, the latter being threaded for interlocking the unit to a bolt, said arms being correspondingly inclined upwardly relatively to the axis of the bolt, and corresponding parts of the bolt and said unit adapted to be embedded in concrete.



1,629,881. DRILL. WILLIAM R. PENSON, Sulphur Springs, Tex., assignor of one-half to John M. Foster, Kemp, Tex. Filed Sept. 11, 1924. Serial No. 737,109. 1 Claim. (Cl. 77—7.)

In a drill of the type in which a plurality of drills are operated by a single actuator, and in combination, a frame having apertured lateral projections spaced apart at one side of the frame and also having an end extension and a lateral handle and a breast plate on said extension, a sleeve disposed and supported in said apertured projections, collars fixed on said sleeve and disposed at opposite sides of said lateral projections, said collars provided with sockets, and arms detachably secured in said

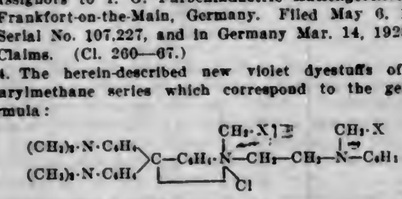
sockets and having coincident journal bearings, a tool carried in each of said sleeves and said journal bearings, respectively, and means on said frame adapted to operate said tools.



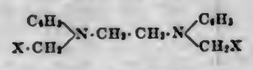
1,629,882. CONDENSER. WILLIAM H. PETIT, Dayton, Ohio, assignor to The Miami Radio Corporation Company, Dayton, Ohio, a Corporation of Ohio. Filed May 26, 1922. Serial No. 563,976. 7 Claims. (Cl. 175—41.5.)

1. In a condenser, a casing comprising two sections of insulating material rigidly connected one to the other and arranged to form a chamber between them, two condenser plates molded into the respective sections of said casing, and arranged side by side but spaced one from the other, a movable condenser plate mounted in said chamber for rotatory movement into and out of the space between the first mentioned plates, and sheets of dielectric material arranged between said movable plate and the respective first mentioned plates.

1,629,883. STOCK-WATERING TANK. FLOYD E. PIERSON, Oakland, Iowa. Filed Dec. 16, 1925. Serial No. 75,792. 1 Claim. (Cl. 119—76.)



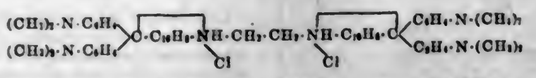
In a stock watering device of the class described, a receptacle having a hinged lid, vertical standards on opposite sides of the tank, a bar extending across the upper ends of the standard, a platform pivoted adjacent its outer end, the inner end being cut out to conform to the contour of the receptacle, arms extending upwardly from the inner end portion of the pivoted platform and disposed between the receptacle and the respective standards, cables connected to the upper ends of the arms of said platform and extending upwardly adjacent the standards, pulleys secured to the upper ends of the standards and over which the cables are trained, a weighted bar, the other ends of the cables being attached to said bar, and an additional cable connecting the weighted bar with the hinged lid, said weighted bar and said last mentioned cable cooperating to return the lid



to a closed position and simultaneously raise the inner end of the platform when pressure is relieved from the pivoted platform.

1,629,884. TRIARYL-METHANE DYES FROM TETRA-ALKYL-DIAMINO-BENZOPHENONE AND ARYL-ATED-ETHYLENE-DIAMINES. HEINRICH POLIKIER, Leipzig, and HERBERT HÄHLE, Dessau-Ziebigk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed May 6, 1926, Serial No. 107,227, and in Germany Mar. 14, 1925. 5 Claims. (Cl. 260—67.)

4. The herein-described new violet dyestuffs of the triarylmethane series which correspond to the general formula:

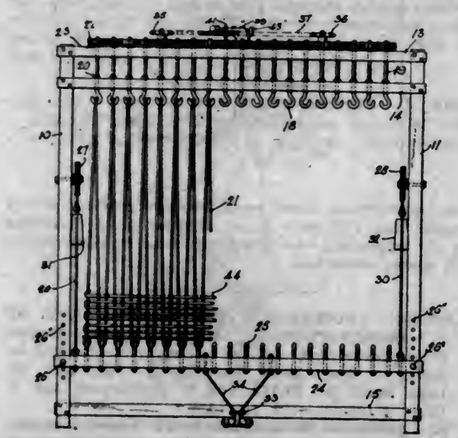


(X representing hydrogen, alkyl or phenyl), and which are substantially identical with the dyestuffs manufactured by condensing equal molecular proportions of tetramethyl-4.4'-diaminobenzophenone with a diphenylethylenediamine corresponding to the general formula:

(X representing hydrogen, alkyl or phenyl.)

1,629,885. TRIARYL-METHANE DYESTUFFS FROM TETRAALKYL-DIAMINO-BENZOPHENONES AND DI-1-NAPHTHYL-ETHYLENE-DIAMINE. HEINRICH POLIKIER, Leipzig, and HERBERT HÄHLE, Dessau-Ziebigk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed May 6, 1926, Serial No. 107,228, and in Germany Apr. 9, 1925. 2 Claims. (Cl. 260—67.)

2. The herein-described blue violet dyestuff of the triarylmethane series which corresponds to the general formula:



and which is substantially identical with the dyestuff manufactured by the reaction between di-1-naphthyl-ethylenediamine and tetramethyl-4.4'-diaminobenzophenone used in the proportion of 1 molecule of the former to two molecules of the latter.

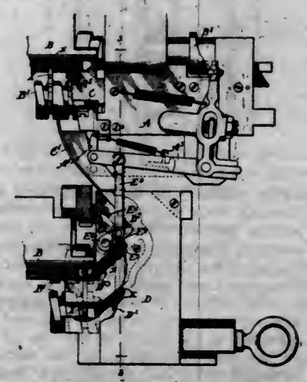
1,629,886. RUG-WEAVING MACHINE. JOSEPH F. PTACEK, Milwaukee, Wis. Filed May 20, 1926. Serial No. 110,371. 3 Claims. (Cl. 139—18.)

1. In a rug weaving loom, a frame composed of two uprights connected at their upper ends by parallel cross

beams each provided with a row of aligned holes, vertical shafts journaled for rotation one in a hole in each of said beams, the said shafts being provided each with a warp engaging hook at its lower end and with a pinion at its upper end, the pinions on the several shafts intermeshing, certain of said shafts being provided with sprockets, a

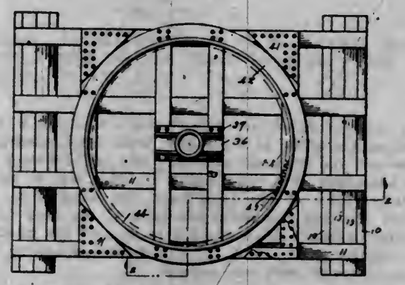
chain passing about the sprockets, a pivoted hand lever connected to one run of the chain, so that by vibration of the hand lever, the hooks are rotated in unison but alternate hooks in opposite directions to form the sheds, a lower cross bar provided with warp engaging hooks, and stops limiting the vibration of the hand lever to define the sheds.

1,629,887. PLUNGER FOR PRESSURE GAUGES OR SIMILAR ARTICLES. PHILIP E. PULVERMAN, Charleston, W. Va., assignor to The Visometer Corporation, New York, N. Y., a Corporation. Filed Aug. 2, 1920. Serial No. 400,752. 12 Claims. (Cl. 73—111.)



1. A pressure gauge plunger, comprising a cylindrical body portion, a split sleeve surrounding the body portion, and cooperative means carried by the sleeve and plunger for preventing relative movement of the parts.

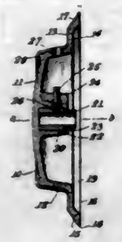
1,629,888. WASHBOILER RACK. GILBERT QUAALE, Weldon, Saskatchewan, Canada. Filed Apr. 28, 1925. Serial No. 26,461. 1 Claim. (Cl. 68—30.)



A drain rack comprising a basket formed of wire and including a reinforcing frame member extending entirely around the body of the basket above the bottom wall thereof, a pair of vertically disposed handle members located within and at opposite ends of the basket and having their lower extremities pivoted to the bottom wall of the basket and outwardly directed hook members carried by said handle members including horizontal portions passing above said reinforcing frame member and terminating in downward projections engageable with the outer side of said reinforcing frame member to limit inward swinging movement of the handle members, said hook members affording means for suspending the rack from the upper edge of a boiler or other receptacle in which the rack is used.

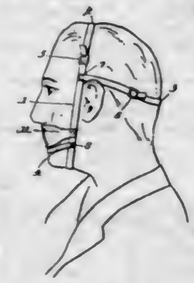
1,629,889. TYPOGRAPHICAL DISTRIBUTING MECHANISM. JOHN R. ROGERS, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Sept. 18, 1926. Serial No. 136,233. 14 Claims. (Cl. 199—41.)

1. In a typographical distributing mechanism comprising a distributor bar and a set of matrix conveying screws, the combination of an inclined guide means along which the matrices gravitate toward the screws, and an escapement device arranged to cooperate with the upper ends of the matrices, said device comprising a yieldable member for arresting the descending matrices, and means operated independently of said member for depressing the arrested members out of engagement therewith in effecting their escape, one at a time, into position to be picked up by the screws.



1,629,890. FRAME CONSTRUCTION FOR EXCAVATOR TRUCKS. GEORGE T. RONK, Fairfield, Iowa. Filed July 27, 1925. Serial No. 46,391. 1 Claim. (Cl. 180—9.1.)

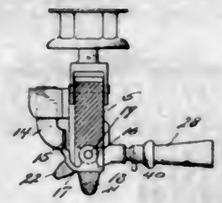
A frame for excavator trucks comprising a pair of tread supporting members spaced apart and parallel with each other, each of said tread supporting members comprising a pair of parallel channel irons spaced apart with webs supported in vertical planes, the inner face of said channels being provided with an angle iron, a series of H-beams mounted transversely on top of said channel, means for rigidly securing the lower flanges of said H-beams to the upper flanges of said channels and said angles, a series of I-beams mounted on top of said H-beams and having their lower flanges riveted to the upper



flanges of said H-beams, the ends of said I-beams being connected with channels to form a square frame located centrally above the said H-beams, the corners of the upper surface of said I-beams and the last said channels being connected with gusset plates, an annular frame on top of said square frame, and means for securing said annular frame to said square frame.

1,629,891. RADIODIAL. LOUIS E. SHAW, East Orange, N. J. Filed Apr. 30, 1925. Serial No. 26,931. 2 Claims. (Cl. 74—33.)

1. A one-piece molded dial knob comprising a substantially flat circular plate forming a flange portion, a hollow knob portion positioned centrally of the plate having its edges merging integrally into the plate, said hollow knob portion providing therein a clear annular space for accommodating contained mechanisms, said knob and said plate being substantially of uniform thickness, a bevel faced dial rim outlining said flange portion, and said knob having a diameter in the plane of the top of the plate greater than the maximum radius of the plate and rim, said rim having a thickness greater than the thickness of the flange to provide a strengthened peripheral edge to the flange.

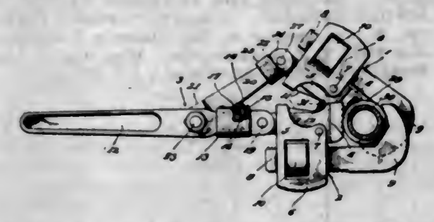


1,629,892. ANTI-MOUTH-BREATHING DEVICE. ROY BASIL STORMS, Indianapolis, Ind. Filed June 22, 1925. Serial No. 38,847. 6 Claims. (Cl. 128—136.)

1. An anti-mouthbreathing device comprising a head-harness including an adjustable main band adapted to pass over the head and under the chin of the wearer, and an adjustable back band having its ends fast to the respective sides of the main band and adapted to pass above the ears and about the back of the head of the wearer, a mouth piece adapted to fit over the mouth of the wearer, and means for detachably connecting said mouth-piece to said head-harness.

1,629,893. SECTIONAL INSULATOR OR CUT-OUT SWITCH. RICHARD A. SUPPES, Johnstown, Pa. Filed Aug. 29, 1924, Serial No. 735,030. Renewed June 24, 1926. 14 Claims. (Cl. 191—39.)

1. In a sectional insulator or cut-out switch of the class specified, the combination with longitudinally alined spaced conductors adapted to have feed wires connected thereto, of oscillating means disposed between the said conductors and carrying a conducting member and an insulating member for alternate interposition between the said conductors, the said oscillating means being movable upwardly and downwardly in planes at right angles to



the longitudinally alined conductors and provided with a handle that will serve as an indicator of the positions of the conducting and insulating members relatively to the spaced conductors.

1,629,894. PROCESS FOR THE MANUFACTURE OF 2:3-AMINONAPHTHOIC ACID. RICHARD TOBLER, Basel, Switzerland, assignor to Society of Chemical Industry of Basle, Basel, Switzerland. Filed Mar. 26, 1926, Serial No. 97,768, and in Switzerland Apr. 8, 1925. 3 Claims. (Cl. 260—109.)

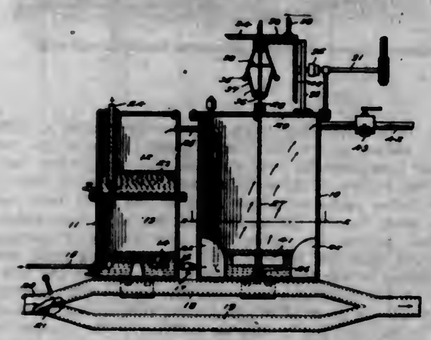
1. A process for the manufacture of 2:3-aminonaphthoic acid, consisting in heating 2:3-hydroxynaphthoic acid in a closed vessel with an excess of aqueous ammonia in the presence of a salt of a bivalent metal which salt is soluble in water in presence of an excess of ammonia.

1,629,895. DOUBLE WRENCH. MARKS J. TULLY, Long Island City, N. Y. Filed Nov. 18, 1925. Serial No. 69,888. 8 Claims. (Cl. 81—53.)

2. A tool of the character described comprising companion wrenches disposed in transverse spaced relation to each other, a handle pivotally connected with one wrench, for extending longitudinally therefrom, and a link extending diagonally of said wrenches with its forward and rear end portions offset with respect to its intermediate portion and substantially parallel to each other, the rear end portion of said link being pivotally connected with said handle and the forward end portion of the link being pivotally connected with the other wrench.

1,629,896. PUSH-BUTTON SWITCH. JOHANN VALERIUS, Breslau, Germany. Filed June 11, 1925. Serial No. 36,546. 2 Claims. (Cl. 200—159.)

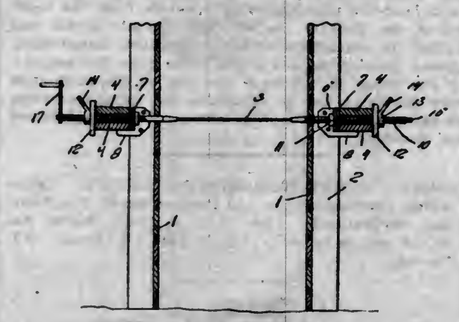
1. In a switch of the character described the combination of a closed switch casing, a pair of curved contact plates mounted in spaced relation on the bottom plate



of said casing and insulated from each other, a spring-controlled push button movably mounted in the top plate of said closed casing, a contact plate on the lower end of said push button, a central female clamping member in said bottom plate, an elastic male clamping member on the other contact element said clamping members being made to engage the one with the other when said push button is being depressed so that said contact plate is held in contact with said contact springs.

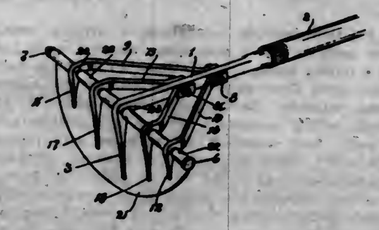
1,629,897. BRAKE-OPERATED CIRCUIT CLOSER. HERBERT WARRINGTON WEST, Roanoke, Va. Filed Apr. 9, 1924. Serial No. 705,284. 1 Claim. (Cl. 200—59.)

A foot pedal operated circuit closer comprising a plate mounted adjacent the foot pedal and having a pair of projections of unequal length, a pair of insulators one mounted on the extremity of each projection, a contact member of substantial U-shaped formation having one leg longer than the other and having its extremities fixed to said insulators, the longer leg of the U-shaped contact member being bent outwardly in a substantially U-shaped formation, and a contact member mounted on the shank of the brake pedal having an offset portion adapted to slidably engage the bent outwardly portion of the longer leg of the substantially U-shaped contact member.



1,629,898. CARBURETOR. WILLIAM H. K. WILLIAMS, Cottonwood, S. Dak. Filed June 26, 1926. Serial No. 118,770. 2 Claims. (Cl. 123—123.)

1. In a carburetor and in combination a casing, means for maintaining a predetermined liquid level within the casing, means for introducing air to the casing below the level of liquid therein, means normally submerged in the liquid for agitating the liquid and adapted to be driven from the shaft of the engine to which the carburetor is attached and means for partially withdrawing the agitating device from the liquid as the speed of the engine increases.



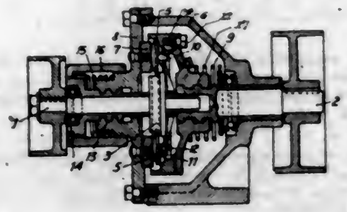
1,629,899. CONCRETE-FORM CLAMP. FRED WUSTHOLZ, Claytonville, Ill. Filed Oct. 13, 1926. Serial No. 141,376. 4 Claims. (Cl. 25—131.)

1. In a structure of the class described, in combination, a concrete form wall including boards arranged in edge-to-edge abutting relation together with vertical uprights, a bracket supported upon one of said uprights, a pair of vertically spaced horizontally disposed beams placed against the uprights, said bracket including means for

partially supporting the beams, a screw passing between said beams and cooperating with said bracket, and clamping means on the outer end of the screw also cooperating with said beams.

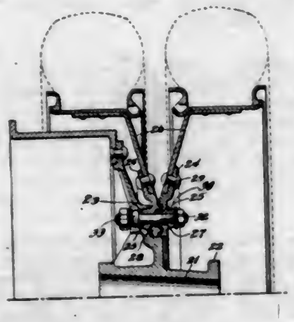
1,629,900. COMBINATION SCARIFIER AND CLEANER. WALTER YOUNGMAN, Winnipeg, Manitoba, Canada. Filed July 3, 1926. Serial No. 120,395. 6 Claims. (Cl. 15—104.16.)

1. A combination scarifying and cleaning tool comprising a handle, stationary rake teeth on the end of said handle and a pivoted gathering plate associated with the teeth and adapted to swing away from the teeth upon the tool being moved in one direction and to swing towards and engage the teeth upon the tool being moved in the opposite direction.



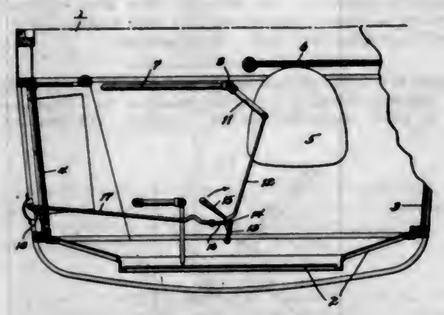
1,629,901. TIRE VALVE. FRANK M. AHEARN, Kinde, Mich. Filed Nov. 27, 1925. Serial No. 71,700. 1 Claim. (Cl. 152—12.)

In a tire valve of the character described, a hollow tubular shell adapted for association within the inner tube valve stem, a cup-shaped member disposed within the upper end of the shell and provided in the bottom wall thereof with a bore providing an air inlet and discharge orifice, a valve pin extending through the shell, a valve member carried by the pin beneath said orifice, the pressure of the air within the tire acting against the valve for maintaining the same in a seated position against the orifice, and additional means for holding the valve closed, said means comprising a cross plate ar-



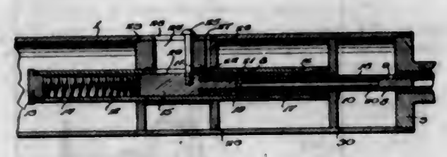
ranged within the lower end of the tubular shell, said cross plate being provided at diametrically opposite points with openings, and a central opening through which the lower end of the valve stem projects, upwardly disposed hook-like pins extending inwardly from the lower end of the shell at diametrically opposite points and adapted for engagement with the respective diametrically opposed openings formed in the cross plate, for supporting the latter, an abutment arranged on the valve stem below the valve, and an expansible coil spring encircling the valve stem and interposed between the cross plate and said abutment.

1,629,902. POWER-TRANSMITTING DEVICE. JAKOB ARTER, Oberengstringen, and EDMUND SCHELLING, Dietikon, Switzerland. Filed Aug. 4, 1925, Serial No. 48,150, and in Germany Aug. 7, 1924. 6 Claims. (Cl. 74—34.)



1. Friction gearing, comprising a driving member, a driven member and a non-rotary member, each provided with a rolling track, rolling elements, which are revolving between said three members and around the axis of the gearing, whereby the transmission of power is effected through rolling movement between said rolling elements and said three members, journals on said rolling elements, and a rotary element which does not participate in the transmission of power and in which the journals of the rolling elements are supported to prevent said rolling elements from rotating reversely or from tipping in a direction which does not coincide with the plane determined by the axis of the gearing and the axis of the respective rolling element or taking an undesired path.

1,629,903. VEHICLE WHEEL. HERSCHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, South Orange, N. J. Filed Mar. 28, 1925. Serial No. 18,932. 1 Claim. (Cl. 301—9.)

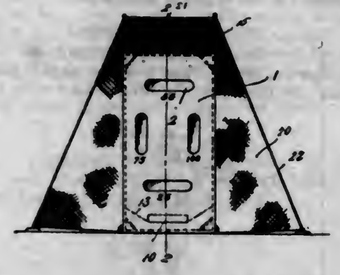


A disc wheel comprising a central plate of heavy material having hub engaging means thereon and a disc of lighter material secured thereto thereby providing a disc wheel having attaching means of greater strength than the disc.

1,629,904. PASSENGER VEHICLE. HERSCHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, South Orange, N. J. Filed July 10, 1925. Serial No. 42,698. 3 Claims. (Cl. 105—341.)

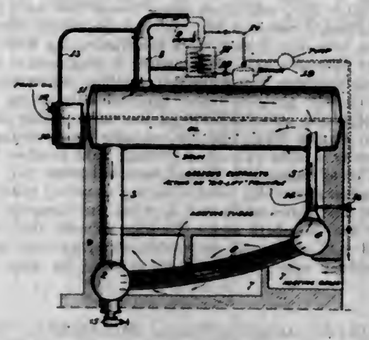
1. In combination with a vehicle having a driver's seat, an entrance door opposite the side of said seat, and a gate hinged adjacent the rear and afore-mentioned side of said seat with the free edge of said gate toward the entrance door, the hinging of said gate enabling the same to swing adjacent the seat so that entering passengers will be in proximity to the driver for collection of fares.

1,629,905. LIQUID-DISPENSING DEVICE. GUSTAV A. BJORKHOLTZ, Chicago, Ill. Filed Mar. 15, 1926. Serial No. 94,943. 5 Claims. (Cl. 221—94.)



1. In a dispensing device, a reservoir handle, a guide tube having an air inlet, a dispensing tube within the guide tube provided with air ports and a discharge port for the outflow of the material from the reservoir, one air port being opposite the air inlet of the guide tube and the other beyond the guide tube, and a plunger snugly fitting within the guide tube and having a portion slidable upon the inner end of the dispensing tube, and including an air supplying tube slidable within the inner end of the dispensing tube and having ports to register with the air ports of the dispensing tube in one position of the plunger and in another position of the plunger to move the several ports out of register to cut off the inflow of air and the outflow of the material from the reservoir.

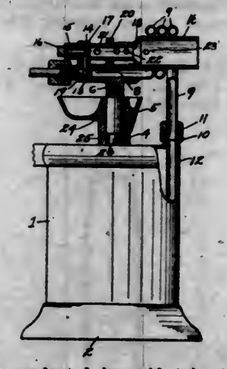
1,629,906. STABLE DIAZO COMPOUND AND PROCESS OF MAKING SAME. GUILLAUME DE MONTMOLLIN and GÉRALD BONHÔTE, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Aug. 29, 1924, Serial No. 735,042, and in Switzerland Sept. 21, 1923. 8 Claims. (Cl. 260—69.)



1. The process of making new stable diazo-compounds, which consists in treating diazo-derivatives of unsulfonated aryl and aralkyl ethers of o-aminophenol with sulfonic acids of the aromatic series which do not contain OH or NH_2 groups.

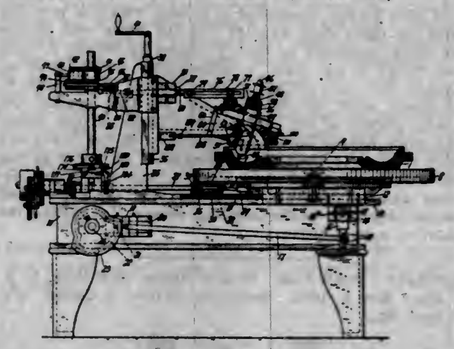
1,629,907. GAME APPARATUS. JERRY T. DWYER, Youngstown, Ohio. Filed Mar. 24, 1926. Serial No. 97,041. 4 Claims. (Cl. 273—103.)

3. A game apparatus comprising an apertured board, extension means adjustably connected with said board, guard means disposed above the board and carried by said extension means, and side wings of netting associated with the board and provided on their outer portions with weights for maintaining them in distended state.



1,629,908. PROCESS FOR CRACKING HYDROCARBON OILS. WARREN F. FARAGHER and WILLIAM ARTHUR GRUSE, Pittsburgh, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 15, 1921. Serial No. 437,480. 6 Claims. (Cl. 196—62.)

2. The method of cracking oils in a pressure still, which comprises circulating the oil from and to a drum through tubes heated to a cracking temperature and promoting the circulation of oil through the heated tubes of the still by introducing a current or currents of gas, acting on the "air-lift" principle, into the oil at a point in its passage upwardly between the tubes and the drum.



1,629,909. BLOWTORCH. HERBERT L. FISH, Springfield, Ohio, assignor to Harry C. Downey, Springfield, Ohio. Filed Dec. 26, 1924. Serial No. 758,059. 1 Claim. (Cl. 158—33.)

In a blow torch, a tank, a generator and a burner tube, means for supporting same by and immediately above the tank and in close proximity thereto, a fuel tube independent of said supporting means coiled about said burner tube immediately above said tank, one end of said fuel tube being connected with said generator and the other end of said fuel tube extended immediately downward from said coil and projecting into said tank in proximity to the lower portion of the interior thereof, said burner tube being provided with flame jet openings in proximity to said coil to heat said coil and cause

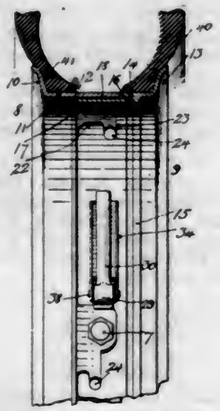
the heat to be conducted by said tube to the fuel in said tank, said fuel tube forming the sole means of conducting heat to said fuel.

1,629,910. MOLD-ENGRAVING MACHINE. ANDREW J. FLEITER and THEODORE A. MILLER, Akron, Ohio, assignors to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 30, 1926. Serial No. 98,478. 17 Claims. (Cl. 90—15.)

1. In a machine for cutting tire molds, a head which projects over the mold, a guide plate adjustable at varying angles on the head, a tool carrier movable upon the guide plate, a pivot for the tool carrier, and means for moving the carrier in a straight line upon the guide plate and then about said pivot in a continuous movement.

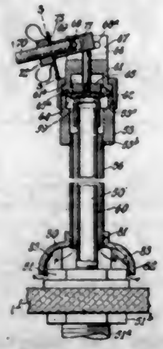
1,629,911. SPRING MEANS FOR ELECTRIC SWITCHES. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Mar. 10, 1923. Serial No. 624,141. 1 Claim. (Cl. 200—166.)

An electric switch construction comprising a box, a switch member within said box, a coiled operating spring connected at one end to said switch member, an anchor member having a flange portion engaged in the coils at the other end of said spring, said anchor member having a threaded neck, an externally operable adjusting screw passing through one wall of said box and into adjusta-



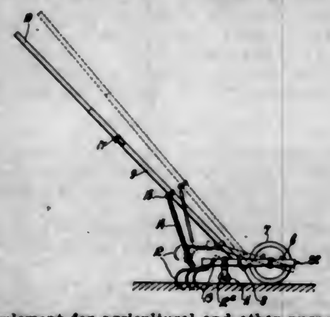
ble engagement in the threaded neck of said anchor member and having a head outside of said box and a lock nut for said adjusting screw inside of said box, the flange of said anchor member being rotatably adjustable in the coils of said spring without rotating said spring.

1,629,912. WELL BUCKET. PHARES E. GETZ, Neosho, Mo. Filed July 12, 1926. Serial No. 121,969. 1 Claim. (Cl. 294—72.)



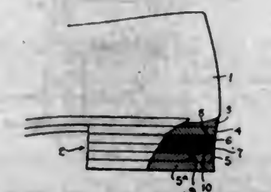
A well bucket comprising a bottom which is provided with an upstanding annular rib, the inner wall of the rib being continued to form a depending collar; a valve comprising a top plate, a compressible gasket abutting against the lower surface of the top plate and adapted to cooperate with the rib, a guide abutting against the lower surface of the gasket and slidable in the collar, the guide having means cooperating with the lower end of the collar to limit the movement of the valve as the valve is raised to an open position, and a securing element uniting the plate, the gasket and the guide; and means connected to the securing element for raising the valve to open position.

1,629,913. TIRE RIM. MORRIS GROSS, New York, N. Y. Filed Nov. 5, 1925. Serial No. 67,034. 1 Claim. (Cl. 301—35.)



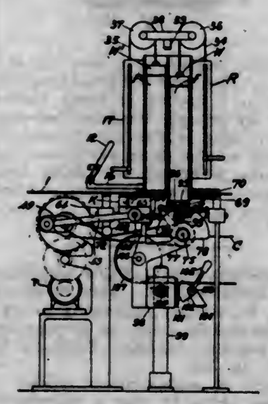
A detachable tire rim comprising a plurality of annular members adapted to be moved laterally into overlapping position to engage a portion of the tire between them, said members having pin and slot connections to secure them together laterally, and means for causing a relative circumferential movement of said annular rim members comprising a rocking gear having a lever arm for operating it, and carried by one of said rim members, and rack teeth on the other of said rim members with which the gear cooperates to force the rim members circumferentially in opposite directions.

1,629,914. INLET-VALVE MECHANISM. PHILIP HAAS, Dayton, Ohio. Filed Nov. 16, 1926. Serial No. 148,639. 16 Claims. (Cl. 137—104.)



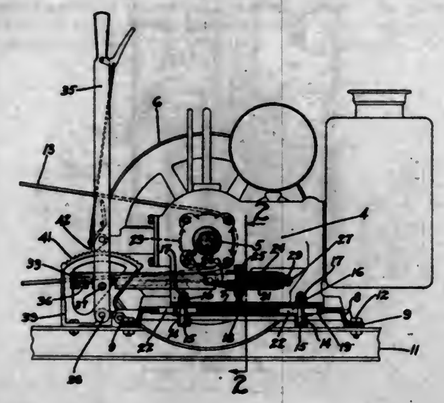
5. Inlet valve mechanism for flushing tanks, including an inlet valve casing formed of two separable members, one of said members being provided with a cylindrical bore and having a discharge aperture at its lower end, and threaded portions for connecting a discharge pipe thereto, a separately formed block polygonal in horizontal cross-section, and provided at its upper end with a valve seat, said block being forced into said bore and frictionally retained therein, and providing vertical apertures laterally of said block communicating with the discharge aperture, said block having a longitudinal bore and being provided with threaded portions for attaching thereto an inlet pipe exteading longitudinally of the discharge pipe, the other member of the valve casing being provided with a longitudinally movable valve engaging plug, having a stem extending through said member into position to be engaged by a float operated lever, and said members being provided with co-acting clamping portions, a flexible disc valve interposed between the clamping portions of said members and extending between the valve seat and said plug, and means for clamping said members together upon the marginal portions of said disc valve.

1,629,915. AGRICULTURAL IMPLEMENT. JOHN HAMPSON, London, England. Filed Feb. 20, 1925, Serial No. 10,678, and in Great Britain Nov. 7, 1924. 1 Claim. (Cl. 97—59.)



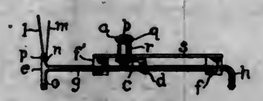
An implement for agricultural and other purposes comprising a longitudinally extending handle, an elongated U shaped framework formed from strip metal, between the limbs of which in an intermediate position the lower end of the handle is pivotally mounted, a running wheel pivotally mounted between the limbs of the U with its pivot parallel to the pivot of the handle and between this last mentioned pivot and the bend of the U, an operative tool carried by the limbs of the U between the free ends thereof and the pivot of the handle, means adjustably attached to the handle in an intermediate position to be gripped by the hands of the user, the whole arrangement permitting the upper end of the handle to be fulcrumed upon the shoulder of the user while pushing the tool in a forward direction for the purposes set forth.

1,629,916. CUSHIONED HEEL. MAURICE W. HIRSHFIELD, New York, N. Y. Filed May 17, 1923. Serial No. 639,651. 3 Claims. (Cl. 36—35.)



3. A tread member including a plurality of rubber lifts in superposed relation, leather lifts respectively superjacent and subjacent to said rubber lifts, the rubber lifts being secured to each other along contacting surfaces by a binder and to the adjacent leather lifts by metallic fastening means.

1,629,917. MATERIAL-DIVIDING MACHINE. JOHN HOHL, Lincoln Park, N. J., and OTTO J. MAURER, Wilkinsburg, Pa. Filed Jan. 18, 1923. Serial No. 613,364. 4 Claims. (Cl. 107—21.)

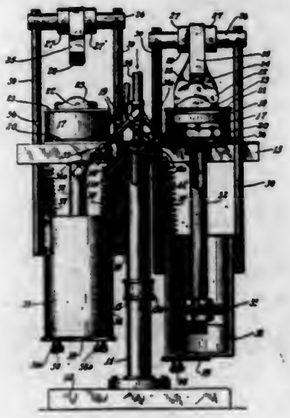


4. In a material slicing machine, in combination; a platform pivoted at one end, a bearing roller attached to the other end; a cam pivoted for rotation supporting the bearing roller and formed with a supporting peripheral portion; a freeing peripheral portion whereby the platform is freed and may swing upon its pivot, and a raising peripheral portion whereby the platform after being allowed to swing on its pivot downwardly is raised and then supported by the supporting portion of the periphery; a material receptacle positioned above the platform and having an orifice formed in its bottom, whereby the material therein rests upon the platform; means for rotating the cam and means for supporting the material in the receptacle while the platform is not being supported by the supporting peripheral portion of the cam.

1,629,918. SLIDING-BASE ENGINE. EDWARD L. KASTLER, Fairmont, Minn., assignor to Fairmont Railway Motors, Inc., Fairmont, Minn., a Corporation of Minnesota. Filed Apr. 17, 1925. Serial No. 23,991. 5 Claims. (Cl. 308—11.)

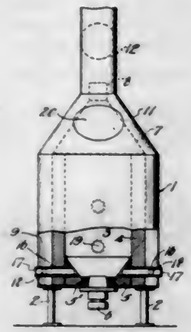
1. A slidable engine base, a shaft journaled therein and having a pulley, a belt around the pulley, a barrel on said base, translatably adjustable by rotation and closed at one end, a plunger slidable in the barrel, a compression spring between the plunger and closed end, said plunger having a stem traversing the closed end passing through the spring and having a nut at the outer side in threaded engagement therewith, for varying the tension of the spring, a control lever pivoted independently of the bearing on the same side with the belt runs, a detent and rack for the lever, said lever having a pin, and a link pivoted to the plunger and having notches engageable over the pin of the lever, whereby tension upon the belt can be yieldably applied by movement of the base, and whereby the pivotal connection of link with the lever can be had to obtain maximum lever swing.

1,629,919. FOOT ACCELERATOR. HENRY W. LANE, Ione, Calif. Filed June 19, 1926. Serial No. 117,105. 4 Claims. (Cl. 74—81.)



1. A foot accelerator including a foot lever fulcrumed near the forward part of the toe board and adapted to move in a plane parallel therewith, a shaft rigidly secured to and extending substantially at right angles from the foot lever, a sector provided with rack teeth and rigidly secured to said shaft, a substantially horizontal shaft carrying a beveled pinion meshing with the teeth of the sector and provided with an arm lever from which a connection leads to the carbureter throttle, and an arm having an over running connecting means with the hand throttle.

1,629,920. APPARATUS FOR MAKING RUBBER FOOTWEAR. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 669,745. 3 Claims. (Cl. 12—37.)

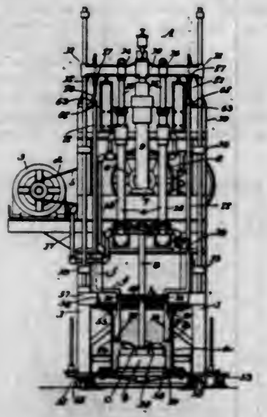


2. Apparatus for making footwear, said apparatus comprising a support, a turret mounted thereon, a plurality of presser members mounted on said turret, each of said presser members being adapted to compact shoe parts as-

sembled upon a last, a fluid-pressure cylinder, carried by said turret, for each of said presser members, means for actuating said cylinders in different rotary positions

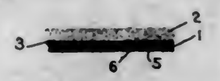
of said turret, and means associated with said cylinders for pressing a last with shoe parts thereon against the respective presser members.

1,629,921. FURNACE FOR SUPPLYING DRYING GASES. DANIEL E. MANSFIELD, Weehawken, N. J., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 13, 1926. Serial No. 94,562. 10 Claims. (Cl. 34—18.)



1. A furnace for supplying drying gases comprising a combustion chamber, a gas heating jacket surrounding the same, a burner at one end of the combustion chamber, an exhaust passage directly communicating with both the combustion chamber and heating jacket, means for supplying gaseous fluid under pressure to the jacket, and means for equalizing pressure in the jacket and combustion chamber.

1,629,922. PIPE-MAKING MACHINE. GEORGE C. MARTIN, Los Angeles, Calif. Filed Oct. 11, 1926. Serial No. 140,813. 10 Claims. (Cl. 25—36.)



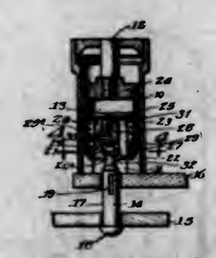
6. A device for forming pipe having mold elements and a rotary packer adapted to act upon pipe-making material, including means for stopping any rotation induced in said pipe-forming material by rotation of said packer.

10. A device of the character disclosed, including an outer mold and an inner mold forming therebetween an annular space, a rotary packer head above the inner mold, means for directing any pipe-making material to said packer head in static condition relative to the plane

of rotation of the packer head, and means for moving the inner mold, packer head and the first named means during formation of the said pipe.

1,629,923. FELT FABRIC. THOMAS S. MCDERMOTT, Franklin, Mass., assignor to Clark-Cutler-McDermott Co., Franklin, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,082. 2 Claims. (Cl. 19—147.)

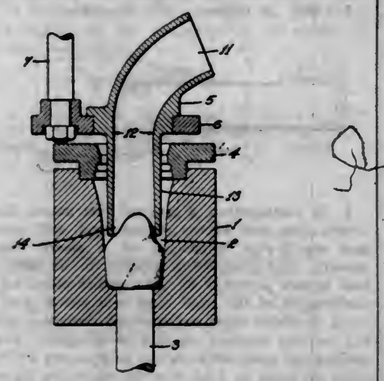
1. A felt fabric comprising a base ply of woven or knitted fabric, a body ply of felt attached to the base ply, the latter having a coating of sizing applied thereto, and a barrier ply or layer interposed between the base ply and the felt body, said barrier ply having a quality of absorbing any surplus sizing which soaks through the base ply, thereby preventing said sizing from passing into the felt body, whereby the latter will not have its resiliency reduced by being partially saturated with sizing.



1,629,924. PROCESS FOR MAKING MOLDED RUBBER ARTICLES FROM LATEX. JOHN MCGAVACK, Jackson Heights, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Mar. 24, 1926. Serial No. 97,023. 14 Claims. (Cl. 18—50.)

7. The process of making rubber articles from latex which comprises adding to latex a vulcanizing combination and a substance capable of modifying its natural protective colloid to form a gel, disposing the latex while still fluid in a mold, after setting partially drying the object at substantially room temperature, and completing the drying and curing at a higher temperature.

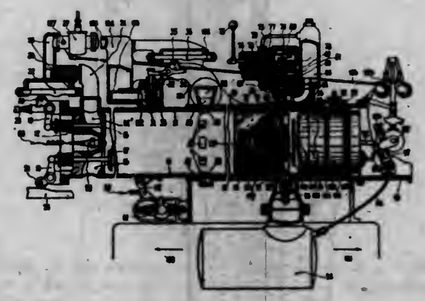
1,629,925. PLATE-BOLTING-UP MACHINE. FRED CUSHING MOORE, Spokane, Wash. Filed Aug. 29, 1924. Serial No. 734,869. 4 Claims. (Cl. 29—84.)



1. In a machine of the class described the combination comprising a gripping device having gripping jaws, a bolt having a body with a head at one end, the body being reduced near the other end and having an auxiliary head at said last named end, which is of substantially the same diameter as the body, the base of said auxiliary

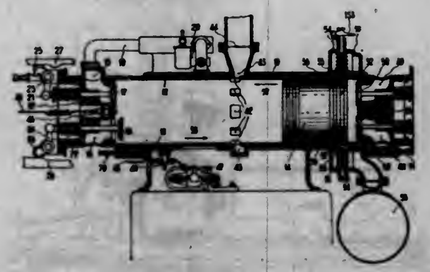
head being formed to provide a shoulder inclined at an angle less than a right angle to the length of the bolt, and the gripping jaws being provided with gripe formed

to engage the reduced part of the bolt body, having similarly inclined parts adapted to automatically engage with the inclined shoulder at the base of said auxiliary head, and means for causing the jaws to grip the bolt.



1,629,926. MOLD-CHARGE GUIDING DEVICE. KARL E. PHILBA, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed May 2, 1925. Serial No. 27,442. 6 Claims. (Cl. 49—14.)

1. In combination with a glass shaping mold, a guiding member adapted to be projected into the mold cavity in spaced relation with the walls and bottom thereof to deposit a mold charge in the bottom of said cavity and prevent contact between the charge and the upper wall of said mold.

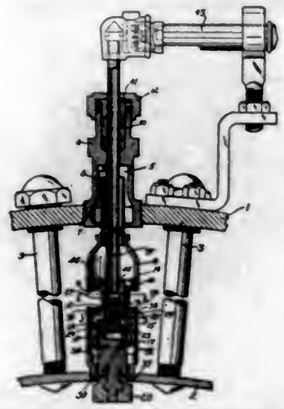


1,629,927. MOTOR-COMPRESSOR UNIT. RAUL PATERAS PESCARA, Paris, France, assignor to The Pescara & Raymond Corporation, Dover, Del., a Corporation of Delaware. Filed June 5, 1925, Serial No. 35,249, and in France June 11, 1924. 22 Claims. (Cl. 230—32.)

1. In an apparatus comprising a cylinder and a piston reciprocating in said cylinder the combination of means for permitting expansion of burnt gases down to a pressure approximately that of the surrounding atmosphere; means for sucking in from the atmosphere a certain quantity of pure air which enters the cylinder in the proximity of the combustion chamber and is drawn along in the wake of the burnt gases; means for injecting at a low pressure, in the wake of the pure air previously introduced, a suitable quantity of carburetted air, in such a way that on the one hand the burnt gases remaining at this moment in the machine are separated from the carburetted air by a cushion of pure air, and on the other hand that the carburetted air can never reach the exhaust ports of the machine; means for simultaneously expelling the burnt gases from the cylinder, which expulsion is produced both by the speed acquired by the burnt gases, as they follow the movement of the piston and also by the return motion of this latter which terminates said expulsion; means for compressing, at a low

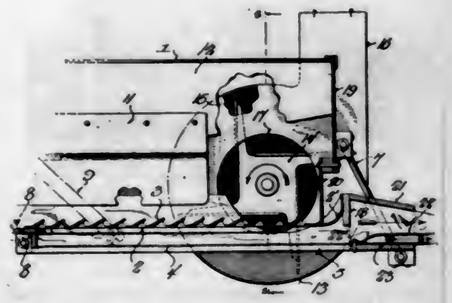
pressure, and discharging from the cylinder a part of the fresh gas previously admitted, a storing reservoir into which said fresh gas is discharged at a low pressure, whose contents, suitably carburetted, are used to produce the injection of carburetted air at the aforesaid low pressure; means for compressing the gases remaining in the cylinder and means for electrically igniting the compressed mixture.

1,629,928. MOTOR-COMPRESSOR APPARATUS. RAUL PATERAS PESCARA, Paris, France, assignor to Pescara & Raymond Corporation, Dover, Del., a Corporation of Delaware. Filed June 5, 1925, Serial No. 35,250, and in France June 11, 1924. 25 Claims. (Cl. 230—32.)



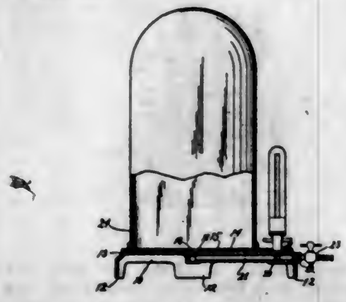
1. An apparatus comprising a frame, a closed cylinder, a mechanically free piston reciprocating in said cylinder, said cylinder being mechanically free to reciprocate with respect to said frame in the direction of its axis and means cooperating with the piston and cylinder to cause them to simultaneously reciprocate in opposite direction relative to one another.

1,629,929. LOW-WATER ALARM. FRANK M. ROBY, Cleveland, Ohio, assignor to Herman B. Thurston, Cleveland, Ohio. Filed Mar. 19, 1925. Serial No. 16,626. 10 Claims. (Cl. 122—504.1.)



1. The combination with a boiler structure including a fire box and a crown sheet, of a low water alarm, said alarm comprising a signal, a member having a passage

for conducting steam from the boiler to the signal, a fusible metallic plug normally closing said passage, a cage for housing the plug and forming part of the passage, a portion of the cage extending to the fire space and arranged to conduct heat therefrom to the plug, an insulat-



ing jacket surrounding the conducting portion of the cage and having a closed connection with the cage at one end and a threaded connection with the crown sheet of the boiler at the other, there being a passage between the cage and jacket communicating with the firebox.

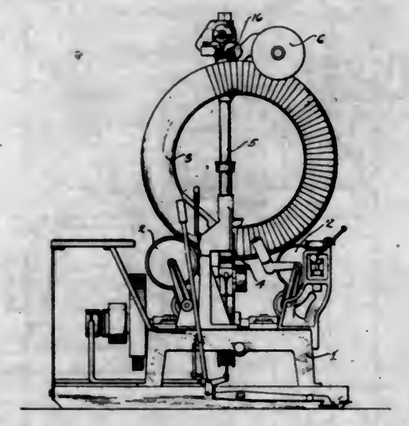
1,629,930. SHAKER TROUGH FOR CORN HUSKERS. AUGUST ROSENTHAL, West Allis, Wis., assignor to Rosenthal Mfg. Co., West Allis, Wis. Filed Aug. 31, 1926. Serial No. 132,771. 11 Claims. (Cl. 209—257.)

1. In a corn husker the combination of a main compartment for the reception of cut material, a shaker trough closing the bottom of said compartment and having forwardly and upwardly extending projections provided with apertures through which the kernels from the corn may fall, a sifting screen mounted below said main bottom, a fan housing having an opening adjacent the forward end of the shaker trough and opening into said main compartment and having a delivery chute extending upwardly from adjacent the forward side of the fan, a rotary fan located within said casing and a hollow delivery head opening into the space between the main bottom and the sifting screen.

1,629,931. PLATE FOR VACUUM PUMPS. HERMAN PAUL SACHSE, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 49,731. 2 Claims. (Cl. 154—43.)

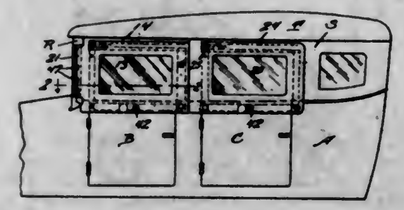
1. A plate for vacuum pumps comprising a metallic base provided with a rough plane surface and a facing adapted to receive a bell jar secured to said surface, the securing bond being characterized by having been formed by a molding operation under conditions of heat and pressure.

1,629,932. MOUTHPIECE ADJUSTER. EARL L. SIMPSON, Baltimore, Md. Filed May 12, 1924. Serial No. 712,595. 3 Claims. (Cl. 84—383.)



1. In combination, a musical instrument mouth-pipe, a mouth-piece and means of securing said mouth-piece to said mouth-pipe consisting of, a sleeve cylindrical externally and provided internally to fit said mouth-pipe, and means provided on said mouth-piece to permit the adjustment of the same over said sleeve, the said means being provided with an external clamping means operating on the exterior of said mouth-piece, and means of making the joint between the said means and said mouthpiece air-tight by said external clamping means.

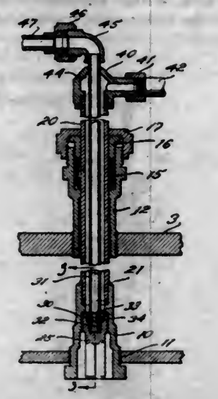
1,629,933. COUNTER. FRANK P. STEIL, Cudahy, Wis. Original application filed Oct. 9, 1924, Serial No. 742,563. Divided and this application filed Aug. 23, 1926. Serial No. 131,010. 2 Claims. (Cl. 36—68.)



1. A counter for stitchdown shoes having inwardly-extending side flanges and an outwardly-extending rear flange.

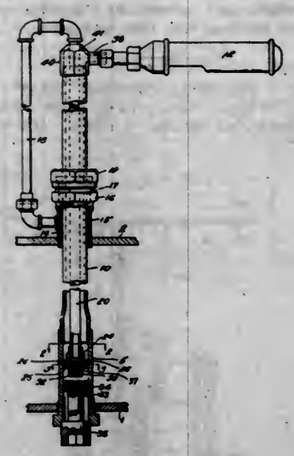
1,629,934. WRAPPING MACHINE. EMIL STERN, Chicago, Ill. Filed Apr. 5, 1926. Serial No. 99,746. 14 Claims. (Cl. 101—38.)

1. In combination, a mechanism for advancing an article and applying a wrapping thereto, and means adapted to be brought into contact with the article to print desired indicia on the wrapping as the article is advanced in said mechanism.



1,629,935. AUTOMOBILE TOP AND CURTAIN CONSTRUCTION. RUDOLPH HENRY STOBBE, St. Clairsville, Ohio. Filed Jan. 20, 1925. Serial No. 3,622. 1 Claim. (Cl. 296—140.)

In a curtain structure of the class described, a frame comprising a horizontal portion and a vertical portion, a curtain swingably attached to the vertical portion, a hinge bar attached to and extending longitudinally of the horizontal portion, a second hinge bar extending longitudinally of and fixed to the upper edge of the curtain, the ends of the hinge bars adjacent the vertical portion being pivoted together, a pair of arms pivoted at their lower ends in spaced relation to the lower edge of the curtain and having their upper ends bifurcated, the bifurcated ends of the arms being adapted to receive the hinge bar on the curtain.

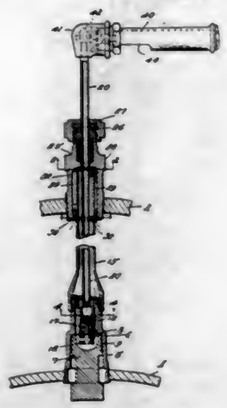


1,629,936. LOW-WATER ALARM. HERMAN B. THURSTON, Cleveland Heights, Ohio. Filed Mar. 24, 1924. Serial No. 643,512. 10 Claims. (Cl. 122—504.1.)

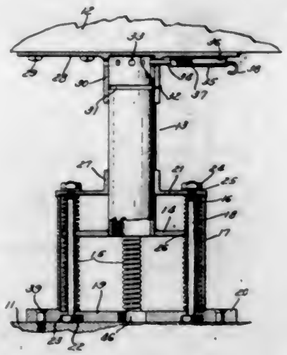
1. The combination with a steam boiler of two conduits, one surrounding the other, readily fusible material forming an annulus about the inner end of the smaller conduit and having a portion extending transversely of the annulus for normally closing communication between the smaller and the larger conduit, one of said conduits ex-

tending to the exterior of the boiler and being provided with a signal, and the other conduit being in communication with the steam space of the boiler.

1,629,937. LOW-WATER ALARM. HERMAN B. THURSTON, Cleveland Heights, Ohio. Filed Mar. 24, 1924. Serial No. 701,598. 14 Claims. (Cl. 122—504.)



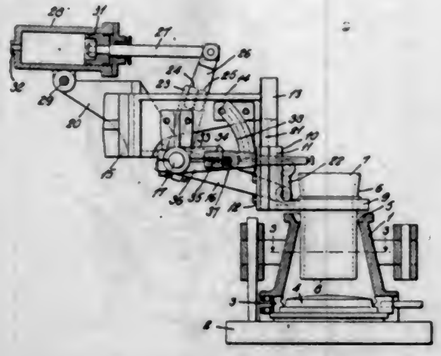
1. In a low water alarm for a boiler, the combination of a conduit leading to the exterior of the boiler and including a sleeve having threaded engagement with the crown sheet of the boiler, a pipe within said conduit, an inwardly extending portion of said sleeve having threaded engagement wth said pipe, a passage through said inwardly extending portion allowing communication from the pipe to the conduit, a threaded plug normally closing said communication and having an opening filled by fusible material, and another plug below the first, closing the lower end of said sleeve.



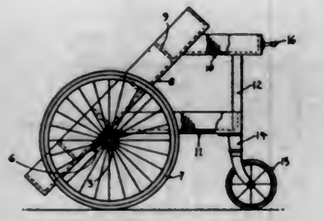
1,629,938. LOW WATER ALARM. HERMAN B. THURSTON, Cleveland, Ohio. Filed July 18, 1924. Serial No. 726,711. 9 Claims. (Cl. 122—504.1.)

1. In a low water alarm in combination a hollow member adapted to be secured to the roof sheet of a boiler and in open communication with the interior thereof, a

tube projecting into said member and means for separating the exterior surfaces of the tube from the interior of said member to form a passage from the steam space to within the tube, a cage adapted to be secured to the crown sheet of the boiler and to said tube, said cage having a passageway leading to said tube, an upwardly extending pipe communicating with said passageway and extending through said member and adapted to communicate with a signal device, and a fusible plug of metal secured within said passage and normally closing communication between said tube and pipe.



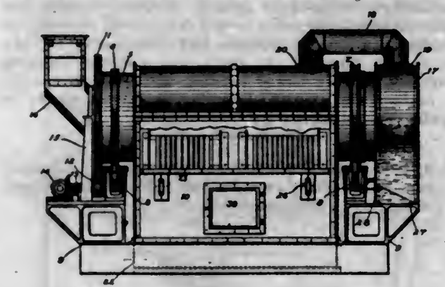
1,629,939. SHOCK-ABSORBING SEAT SUPPORT. JOHN Y. TURNER, Ocean Park, Calif. Filed June 20, 1925. Serial No. 38,536. 1 Claim. (Cl. 155—52.)



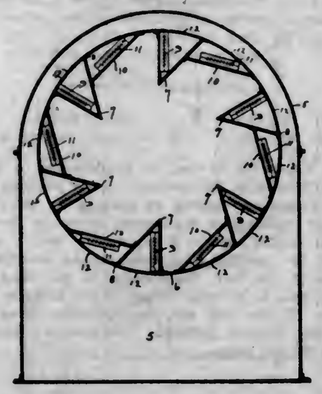
A shock-absorbing seat support comprising: a weight-transmitting post provided with means for its attachment beneath a seat and with a piston-like enlargement at its lower end; a plurality of stationary guide bolts extending through said enlargement; a plurality of compression springs disposed beneath said enlargement; an apertured plate for holding said post in substantial parallelism with said bolts; resilient depressing means disposed above said enlargement; and a housing to enclose said springs, said housing being provided with a bottom and with an apertured cover engageable by said compression springs, between which bottom and cover said enlargement is retained,—the mentioned enlargement, bottom cover and springs being held in their assembled relationships by said guide bolts.

1,629,940. MOLD-CHARGE-DELIVERY FUNNEL. DAVID P. WEAVER, Bridgeton, N. J., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Oct. 3, 1925. Serial No. 60,164. 9 Claims. (Cl. 49—14.)

1. In combination with a glass shaping mold, a guiding member adapted to be projected into the mold cavity and in spaced relation with the walls and bottom thereof to deposit a mold charge in the bottom of said cavity and to prevent contact between the charge and the upper wall of said mold, and means for adjustably limiting the downward movement of said member.



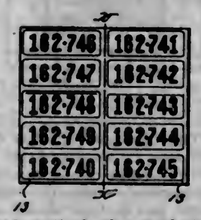
1,629,941. BOOK RACK. PAUL W. WIPPERMAN, Decatur, Ill. Filed May 6, 1926. Serial No. 107,225. 1 Claim. (Cl. 280—50.)



A book rack of the class described, including an elongated inclined box-like structure, brackets on the box-like structure, an axle in the brackets, wheels on the axle, a second box-like structure extending rearwardly at an oblique angle from the first box-like structure, a third box-like structure extending rearwardly and at an oblique angle from the first box-like structure in parallelism with the second box-like structure, a standard between the second and third box-like structures, a caster wheel mounting depending from the third box-like structure, and a caster wheel thereon.

1,629,942. DRYING APPARATUS. LOUIS H. ZEUN, Baltimore, Md., assignor to John B. Adt Company, Baltimore, Md. Filed Dec. 23, 1924. Serial No. 757,648. 5 Claims. (Cl. 34—6.)

1. In a drying apparatus, a support, a housing mounted on said support, a rotary drum having a material inlet and air outlet at one end, a material outlet at the opposite end, said drum mounted in said housing, a heating unit mounted in said housing directly beneath the drum, means for delivering air into said housing and said drum, and means for conducting said air from said drum through said air outlet.



1,629,943. ELECTRICAL HEATING UNIT FOR DRYING APPARATUS. LOUIS H. ZEUN, Baltimore, Md., assignor to John B. Adt Company, Baltimore, Md. Filed Mar. 25, 1925. Serial No. 18,096. 3 Claims. (Cl. 34—5.)

1. A drying apparatus including a housing, a rotating drum mounted in said housing, a plurality of electrical heating units formed integral with the interior of said drum, and said drum provided with heat outlets opposite each of said electrical heating units.

1,629,944. METHOD OF MANUFACTURING AUTOMOBILE LICENSE PLATES. STEPHEN S. ADAMS, St. Louis, Mo. Filed Nov. 21, 1924. Serial No. 751,384. 4 Claims. (Cl. 101—426.)

1. An improved method of manufacturing automobile license plates consisting in forming a sheet of enameled metal, embossing thereon at one operation a complete series of groups of numbers or characters, each group representing a single plate, said groups being arranged in predetermined numerical relation with each other, coating all of the embossed numerals or characters in one operation with an appropriate color, severing said sheet transversely into plates corresponding to said groups and perforating during said severing operation the contiguous sides of the plates operated upon.

1,629,945. GYMNASTIC TOY. MANUEL ALARCON, Gallup, N. Mex. Filed Apr. 13, 1926. Serial No. 101,629. 3 Claims. (Cl. 46—40.)

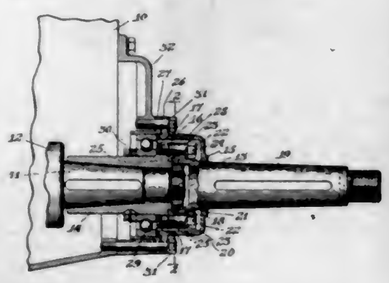
1. A toy comprising substantially vertical arms, a cross support attached to said arms and disposed between the extremities thereof, said vertical arms being provided with elongated slots, adjustable blocks engaging the elongated slots, means on said blocks for retaining the latter in an adjusted position, a flexible member attached to said adjustable blocks, and a figure threaded on said flexible member, said flexible member being adapted to be actuated by movement of the ends of said arms to impart acrobatic motion to said figure.

1,629,946. COLUMN PARLOR-FLOOR LAMP. HARRY ANGEL, Los Angeles, Calif. Filed Jan. 4, 1926. Serial No. 79,133. 3 Claims. (Cl. 240—81.)

1. A parlor floor lamp comprising a vertical pedestal having a base thereon, said pedestal comprising a plurality of corner members, spaced partition members ar-

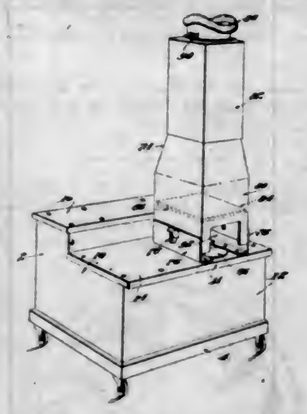
ranged along said pedestal, said partition members being opaque, a plurality of transparent panels mounted on said corner members, a lamp disposed on each of said partition members, a lamp extending above the top of said pedestal, means to supply electric current to said lamps on said partitions and other means to supply current to said top lamp.

1,629,947. MEANS FOR SINKING CONCRETE PILES. MAURICE BLUMENTHAL, Brooklyn, N. Y. Substitute for application Serial No. 354,386, filed Jan. 27, 1920. This application filed May 1, 1925. Serial No. 27,329. 7 Claims. (Cl. 61—57.)



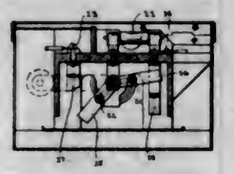
5. The combination with a pile shell adapted to be driven into the earth and to contain a quantity of concrete material, of a separately formed paper liner for said shell, and said shell and liner having parts cooperative to provide an air passage longitudinally of the shell.

1,629,948. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Filed May 7, 1919. Serial No. 295,374. 3 Claims. (Cl. 200—132.)



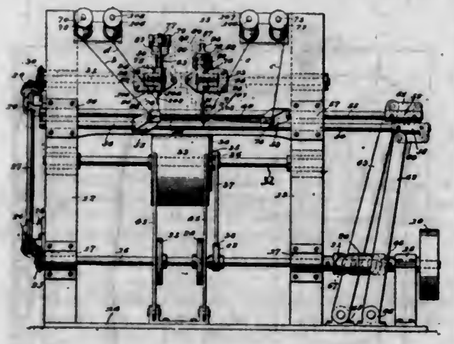
1. In a fuse, a casing, a cap, a cap holding member attached to the casing, having an aperture thru which a fuse link may be passed, a plug adapted to be wedgewise positioned in and to substantially close said aperture and having an outer face over which a link may be bent, and co-acting means on cap and cap-holding member adapted to press a fuse link toward the plug and the plug toward the aperture.

1,629,949. POWER TAKE-OFF FOR ENGINE CRANK SHAFTS. RALPH D. CAFFARELLO, Chicago, Ill. Filed Aug. 13, 1925. Serial No. 49,890. 4 Claims. (Cl. 64—89.)



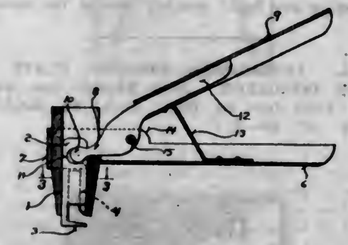
1. The combination with an engine having a crank shaft, of a sleeve fast on the crank shaft and having an annular end flange provided with an annular shoulder, a propeller carrying and driving shaft projected to surround the end of the crank shaft and having a complementary end flange and annular shoulder, radially disposed registering keyways in the flanges and crossing the shoulders, keys in the keyways, and bolts passing through the flanges, whereby the sleeve and propeller carrying shaft are securely locked together in a manner directly to connect the propeller carrying shaft and sleeve in coaxial relationship.

1,629,950. X-RAY APPARATUS. CHARLES E. CAMPBELL, Lynn, Mass. Filed June 12, 1920. Serial No. 388,436. 1 Claim. (Cl. 250—34.)



X-ray apparatus having, in combination, a cabinet, a source of X-rays in the cabinet, a hood pivotally mounted on the cabinet and having an opening for reception of a foot to be examined, a fluorescent screen in the hood, an electrical circuit for the X-ray source, and a switch located in the opening in position to be actuated by the insertion of the foot, the opening in the hood being of sufficient size to permit tilting of the hood so that the structure of the foot may be examined from different angles and without affecting the pressure placed upon the foot by the body.

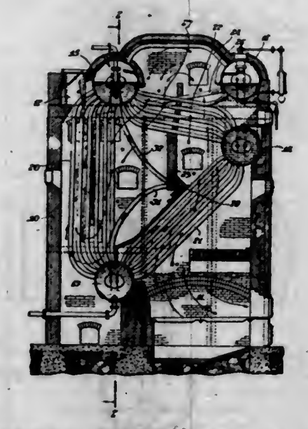
1,629,951. STARTING BOX FOR CONTROLLING THE ELECTRIC CURRENT TO MACHINE MOTORS. HARRY E. CAMPBELL, Milwaukee, Wis., assignor to Union Electric Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1922. Serial No. 594,106. 2 Claims. (Cl. 200—8.)



1. In a controlling device of the class described, a casing, two sets of switch contacts mounted within the casing, a set of switch blades cooperating with each set of contacts, a drum mounted within the casing, connections between the drum and switch blades for moving the latter into engagement with said contacts and means for normally urging the drum in a direction to normally urge the switch blades from engagement with the contacts.

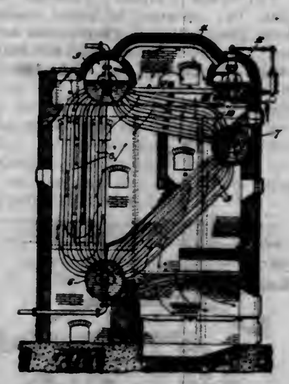
1,629,952. FABRIC-WEAVING MACHINE. JOHN E. FEPPEL, Bridgeport, Conn., assignor of one-half to Frank J. Hoey, New York, N. Y. Filed May 29, 1926. Serial No. 112,505. 14 Claims. (Cl. 139—124.)

1. In a fabric weaving machine, warp feeding means, weft feeding means including a weft carrying element adapted to be projected between sheds of the warp, and selvage feeding means including a selvage carrying element adapted to produce loops in such selvage thread through which the weft thread is passed.



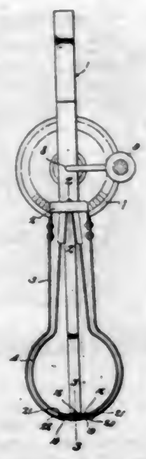
1,629,953. COTTER-PIN AND STAPLE PULLER. FLORIAN FOOTE, Oakwood, Wis. Filed Sept. 16, 1926. Serial No. 135,842. 2 Claims. (Cl. 29—86.2.)

1. A device for withdrawing staples, cotter-pins, or similar members, comprising a main head having a longitudinally extending aperture therethrough, a crosshead slidably mounted within said aperture and having a lower finger adapted to engage the eye of the staple or cotter-pin, a lever rigidly secured to said main head, a second lever pivoted to said first-mentioned lever and having a projecting end, said cross-head having a recess in its upper portion for the reception of said projecting end, said finger being adapted to be withdrawn into said main head when said levers are caused to approach each other.



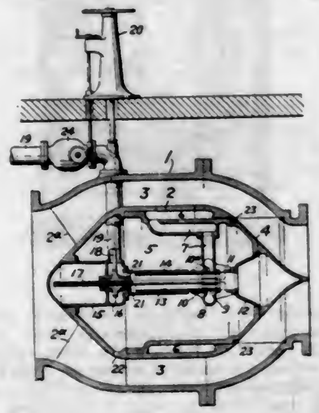
1,629,954. STEAM BOILER. EDGAR KIDWELL, Milwaukee, Wis., assignor to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 5, 1923. Serial No. 661,017. 4 Claims. (Cl. 122—302.)

1. A water tube boiler comprising a setting having a combustion chamber therein and an off-take for the products of combustion, a mud drum, a steam and water drum, water circulating tubes connecting the mud drum to the steam and water drum, a baffle forming serial passes for the gases between the combustion chamber and the off-take, a hollow water cooled support for said baffle, water circulating connections between the mud drum and the hollow support in the path of the gases, and water circulating connections between the hollow support



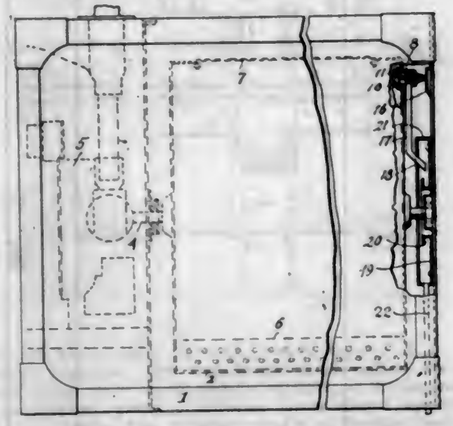
and the steam and water drum also in the path of the gases and in a hotter portion of the pass than the connections between the hollow support and the mud drum.

1,629,955. STEAM BOILER. EDGAR KIDWELL, Milwaukee, Wis., assignor to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 4, 1923. Serial No. 678,408. 3 Claims. (Cl. 122—302.)



1. A steam boiler having a continuous main water circulation path and a supplemental water circulation path, said main path including a steam-and-water receptacle wherein the steam is disengaged from the water, and said supplemental path comprising a steam-and-water receptacle from which the steam is discharged, said latter receptacle being outside the main path of circulation, and said supplemental path also comprising two tube connections between the water spaces of the two receptacles, one of said connections being inclined upwardly in its path from one receptacle to the other, and the other connection being horizontally disposed between the two steam and water receptacles and being of such cross-sectional area as to permit the flow from said other to said one receptacle of a volume of water substantially equal to that of the forced flow of water through the inclined connection.

1,629,956. SANITARY EGG BEATER. ANNA A. KOPENHAVER, Stockton, Calif. Filed Aug. 9, 1926. Serial No. 128,250. 3 Claims. (Cl. 259—131.)

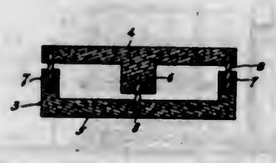


1. A device of the class described comprising a frame, a beater detachably journaled on the frame, an anchor whereon the beater is journaled, a keeper on the anchor, and a latch carried by the frame and cooperating with the keeper to hold the anchor on the frame.

1,629,957. PLUNGER VALVE. CHESTER W. LARNER, Philadelphia, Pa., assignor, by mesne assignments, to I. P. Morris Corporation, a Corporation of Delaware. Filed Nov. 18, 1920, Serial No. 424,855. Renewed July 28, 1925. 23 Claims. (Cl. 137—139.)

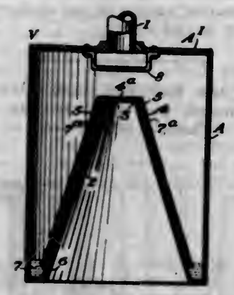
9. The combination with a conduit casing having a fixed internal body and a contracting portion forming a valve seat, of a plunger cooperating with said seat and shaped to form with said body a plurality of fluid pressure chambers, and means for controlling the fluid pressures in all of said chambers comprising a valve means carried within said conduit casing adapted to separately control fluid pressure connections to said chambers in all positions of the plunger.

1,629,958. WASHING MACHINE. HARRY W. MITCHELL, Cleveland, Ohio, assignor to G. F. Mitchell & Son, a Partnership consisting of George F. Mitchell, George R. Mitchell, and Harry W. Mitchell, Cleveland, Ohio. Filed July 18, 1924. Serial No. 726,857. 5 Claims. (Cl. 68—18.)



1. A washing machine having a rotatably mounted substantially fluid tight drum forming a container for a body of cleansing liquid and articles to be cleansed, a pressure relief valve carried by the drum, means for operating the valve during rotation of the drum to permit escape of gases therefrom, and means associated with the valve for collecting any liquid escaping through the valve.

1,629,959. AUTOMOBILE LICENSE PLATE AND THEFT INDICATOR. JONS NELSON, Los Angeles, Calif. Filed June 18, 1923. Serial No. 646,126. 6 Claims. (Cl. 40—22.)

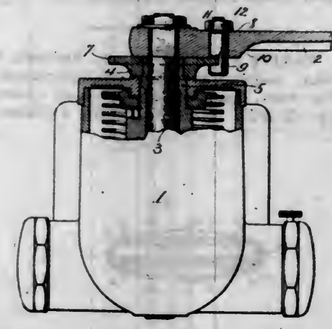


1. A license number display member comprising: a plate member upon which the figures constituting the license number are arranged, a central portion of said plate of sufficient area to include the lower portions of the upper row of figures and the upper portions of the lower row of figures being removable by the driver when leaving the automobile upon which said display member is mounted, to indicate that any subsequent use of the automobile is unauthorized, said removable portions being circular in form; and means operative through relative rotation for removably securing said removable portion.

1,629,960. CONCRETE BUILDING BLOCK. EDWARD S. NICHOLAS, Roscoe, Ill. Filed May 23, 1925. Serial No. 32,312. 7 Claims. (Cl. 72—44.)

1. A building block comprising a T section and a U section, said sections being arranged with the leg of the T between the arms of the U while the cross portions thereof are disposed in substantially parallel relation.

1,629,961. CHECK VALVE. HOWARD M. NICHOLSON, Pittsburgh, Pa. Filed June 19, 1925. Serial No. 38,183. 1 Claim. (Cl. 251—127.)



A valve comprising a casing provided at its top with an outlet opening, an upstanding conical seat in the casing having an inlet opening in its top, a mass of mercury in the casing surrounding the base of the seat, and a frusto-conical cap having a flat top adapted at times to engage the top of the seat and having side walls parallel throughout the length af the cap to the walls of the seat but spaced from the seat by an annular air gap, the lower edge of the cap being immersed in the mercury when the cap rests upon the seat.

1,629,962. METHOD OF TREE TREATMENT. JAMES S. PERRY, Covina, Calif.; Elsie W. Perry special administratrix of James S. Perry, deceased. Filed Nov. 10, 1925. Serial No. 68,218. 1 Claim. (Cl. 47—58.)

A method of treating diseased bark conditions in trees which consists in first removing the diseased area of the bark down to the cambium, then applying a germicidal solution to the exposed cambium, then placing a cover about and spaced from the cambium while in a moist condition, and finally leaving the covering in position until new bark has been grown.

1,629,963. DOOR CLOSER. ROBERT S. POTTER, Greenwich, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 27, 1926. Serial No. 144,574. 1 Claim. (Cl. 16—65.)

The combination with a door-closer including a spring-actuated spindle, and a spring-winder sleeve, of a lever carried by the spindle, a plate carried by the sleeve, a stud mounted in the lever and having a notch engaging

the edge of the plate, and means for securing the stud and effecting binding engagement between the same and the plate.

1,629,964. FUEL MIXER. CHARLES D. PRICE, Baraboo, Wis. Filed Sept. 30, 1926. Serial No. 138,779. 3 Claims. (Cl. 48—180.)

1. A device for breaking up particles of liquid fuel preliminary to the entrance of such fuel into the engine, the same comprising a flat body having a centrally disposed opening, and a gauze screen fitted in the opening of the body and comprising oppositely disposed pockets facing in the same direction and separated by a diametrical opening, the outer walls of the pockets curving from the circumference of the opening of the body towards one another and the inner walls being approximately perpendicular to the body.

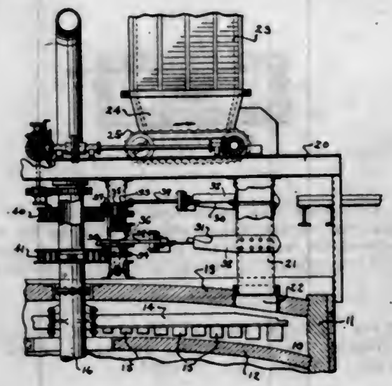
1,629,965. CLEANER. FLORENCE V. RALSTON, New York, N. Y. Filed Nov. 13, 1925. Serial No. 68,803. 2 Claims. (Cl. 15—114.)

1. A cleaner comprising a plurality of resilient metallic strips and cleaning elements rotatable therebetween and means for supporting said cleaning elements adjacent

each other, said means comprising bifurcated plates arranged one at each side of one of said elements, each said plate being provided with a plurality of projections receiving said forked member therebetween.

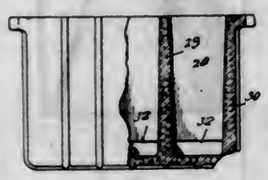
1,629,966. VANITY CASE. PHILIP A. REUTTER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 15, 1925. Serial No. 2,487. 4 Claims. (Cl. 132—83.)

1. In a vanity box, the combination of a bottom, a cover, both having similar convex walls, and an annular intermediate compartment hingedly secured in position and formed to support a mirror and a powder compact, and having a side wall conforming in convexity to the bottom and cover, the walls of the bottom and cover bearing against the upper and lower edges of the wall of the compartment and abutting in frictional engagement with the compartment wall when the box is closed.



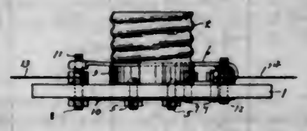
1,629,967. FINGER-NAIL TRIMMER. RALPH KANAGA REX, Cleveland, Ohio. Filed Nov. 15, 1926. Serial No. 148,523. 3 Claims. (Cl. 132—73.)

1. A finger nail trimmer comprising a head having one end sheared off at an acute angle to the end walls of the head, said head being provided with a passage extending transversely of the head and with the end of one passage opening through the outer free end of the head, and a blade located at the periphery of the opening.



1,629,968. METALLURGICAL-FURNACE-FEEDING MECHANISM. ADELBERT HARRY RICHARDS, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 24, 1923. Serial No. 664,377. 7 Claims. (Cl. 214—35.)

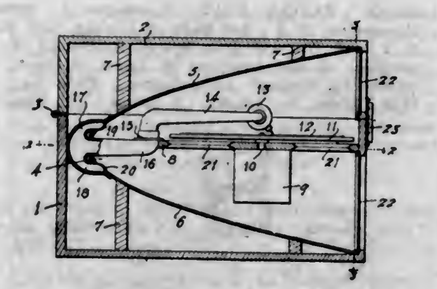
1. In a furnace having a feed chute with a plurality of feed gates therein for feeding charges to said furnace, a drive shaft having a wheel for each gate, each wheel having an operating sector and a non-operating sector and a separate device for opening and closing each gate,



each of said devices being operated by the operating sector of the respective wheel and not operated by the non-operating sector of said wheel.

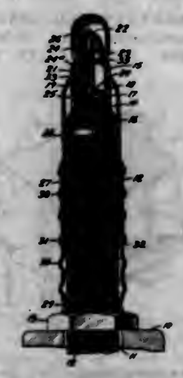
1,629,969. GLASS BATTERY BOX. JAMES K. ROBINSON, Jr., Altoona, Pa. Filed Jan. 16, 1926. Serial No. 81,763. 2 Claims. (Cl. 206—2.)

2. As a new product of manufacture, a storage battery box made entirely from glass, said box being of general oblong configuration in top plan view, being provided with transverse upwardly tapered partitions dividing it internally into transversely elongated cells, transversely located longitudinally spaced ribs at the bottom of said cells forming intervening sediment collecting pockets and supporting means for grid plates, outstanding supporting flanges at the top of the end walls of the box, and external reinforcing ribs formed on the bottom, side and end walls of said box.



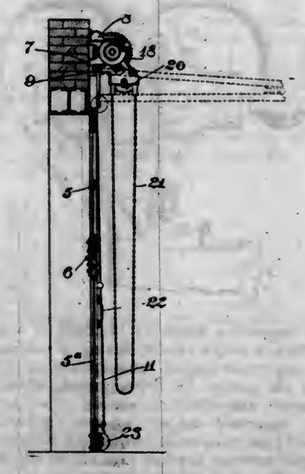
1,629,970. LAMP-BULB SOCKET. EARL H. ROLLINSON, Lyons Farms, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 25, 1922. Serial No. 603,186. 3 Claims. (Cl. 173—342.)

1. In a bulb socket, the combination of a socket shell having a diametrical slot in the bottom thereof, an insulating base for said shell, a line terminal connected to



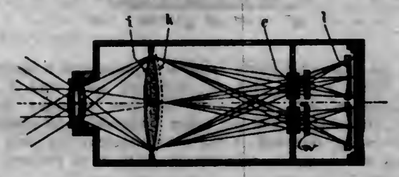
the shell, a flat spring secured to said base by a dead end connection and extending through said slot, and a contact point upon the said base, beneath the free end of said spring and adapted to be engaged thereby when the same is depressed by the insertion of a bulb into said shell.

1,629,971. SOUND-REPRODUCING INSTRUMENT. HARRY B. ROOK, Newark, N. J. Filed July 7, 1921. Serial No. 482,909. 6 Claims. (Cl. 274—2.)



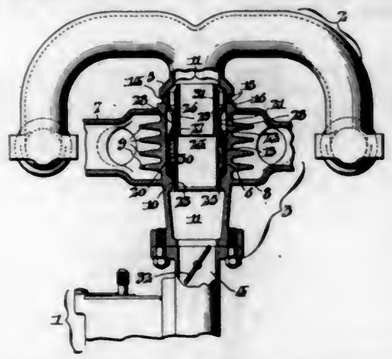
6. In a sound reproducing instrument, the combination of a horn-like sound discharge member, a perforate partition disposed within and substantially longitudinally of said sound discharge member to permit passage of sound waves from one side to the other of said partition, a sound reproducer to discharge sound waves inwardly through the small end of said sound discharge member so that the sound is directed outwardly through the large end of said sound discharge member, and means mounted on said perforate partition for controlling operation of said sound reproducer.

1,629,972. AUXILIARY VALVE FOR PNEUMATIC-TIRE VALVE STEMS. WILLIAM R. ROYER, Wilkes-Barre, Pa. Filed Aug. 30, 1923. Serial No. 660,066. 2 Claims. (Cl. 152—12.)



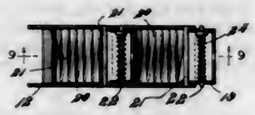
2. In a valve for pneumatic tires, a tubular member carrying a valve and adapted to be attached to the outer end of a valve casing, and having a reduced end-portion provided with an end-opening and a circumferential shoulder adjacent thereto; and a cap of spring metal mounted over the reduced end-portion having inwardly turned spring fingers around its edge to seat under said shoulder and permit removal by lateral pressure.

1,629,973. DOOR AND OPERATING MECHANISM THEREFOR. ALBERT RUSH and RALPH H. GREGOR, Columbus, Ohio, assignors to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 1, 1922. Serial No. 604,281. 2 Claims. (Cl. 20—20.)



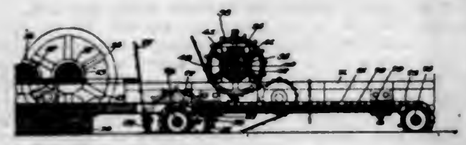
1. A door for a building including upper and lower sections hinged together, and stationary pins on the building and slotted pivoting members on the upper portions of the upper section slidingly engaging said pins, said connection permitting swinging movement of said upper section as well as planewise movement thereof in all positions thereof.

1,629,974. OPTICAL APPARATUS, AS PHOTOGRAPHIC CAMERA, FOR REPRODUCING THE OBJECTS WITH THEIR NATURAL COLORS. GIOACCHINO RUSSO, Catania, Italy. Filed Oct. 26, 1921, Serial No. 510,668, and in Italy Feb. 24, 1921. 2 Claims. (Cl. 88—1.)



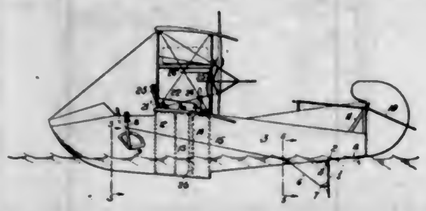
1. In an optical system for taking or reproducing photographic views of still or moving objects in their natural colors comprising in combination a casing, primary object lens mounted in the front part of the casing, means at the rear end of the casing for mounting a photographic plate, a plurality of secondary object lenses in the casing between the primary object lens and the plate, different colored screens in operative relation with each of the secondary object lenses and corresponding in color to the colors of the main object, a collective lens arranged in the casing between the primary and secondary lenses near the plane of formation of the primary image for deflecting the rays of light coming from the object lens toward the secondary lenses so that the rays will ultimately be impressed on the photographic plate in the form of a plurality of separate images corresponding to the number of secondary lenses, and the secondary lenses being arranged inside the luminous cone formed by the collective lens.

1,629,975. DEVICE FOR VAPORIZING UNATOMIZED FUEL. JOHN W. SMITH, Philadelphia, Pa. Filed July 26, 1921. Serial No. 487,811. 11 Claims. (Cl. 48—180.)



1. A vaporizing device in the form of a branched pipe connection, a sleeve conduit fitting in the connection having an apertured portion intermediate its ends, means for heating the device; an insert tubular element seating in the conduit and affording a main axial passage for the readily vaporized content of the admixture; and the aforesaid pipe connection providing a concentric relatively restricted annular passage exterior to the sleeve conduit wherein the unvaporized portion of the admixture is trapped and vaporized for commingling with the main flow beyond said outlet of the conduit aforesaid.

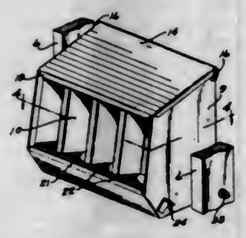
1,629,976. EXPANSIBLE BRACELET. JOHN SMITH, Jr., North Attleboro, Mass., assignor to J. J. Sommer & Co., a Firm comprising John J. Sommer and Edmond T. Sommer, North Attleboro, Mass., Copartners. Filed Mar. 20, 1926. Serial No. 96,184. 5 Claims. (Cl. 59—79.)



1. An extensible chain structure comprising a series of box links, a slide link in each box link, and a pin mounted in said slide link for free endways movement, the ends of said pin being detachably and pivotally connected to one end of the next adjacent box link and means for retaining said pin in position to connect the box link.

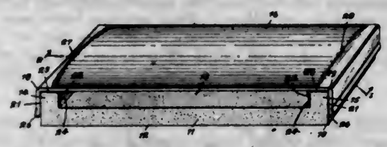
1,629,977. BLOCK-FEEDING MECHANISM FOR MATCH MACHINES. EUGENE SNYDER, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1926. Serial No. 120,260. 4 Claims. (Cl. 144—242.)

1. In block-feeding mechanism for match machines, the combination with block feed rolls, supporting and operating elements therefor, and a block-supply trough leading to said rolls, of block-impelling means including an endless conveyer having its active run extending longitudinally of the bottom of the trough, a transverse shaft overhanging the trough in advance of said rolls, a feed roll loosely mounted on said shaft, a frictional connection between said roll and shaft, means for concurrently driving said shaft and conveyer at a higher speed than the block-feed rolls, and means for yieldingly raising the active run of the conveyer and pressing the blocks into engaging relation with the frictionally connected feed roll.



1,629,978. FLYING BOAT. LAWRENCE B. SPERRY, Massapequa, N. Y.; The Bank of America, New York, N. Y., and Winifred Allen Sperry, Hempstead, N. Y., executors of said Lawrence B. Sperry, deceased, assignors to Winifred Allen Sperry. Filed July 26, 1918. Serial No. 246,832. 6 Claims. (Cl. 244—2.)

1. A flying boat comprising a hull, rearwardly inclined aerial supporting surfaces attached to said hull, a vertical rudder for steering the same while in flight, and means attached to the rear part of said hull for causing said boat to turn into a position in which it may be driven forwardly by the wind when floating on the water.

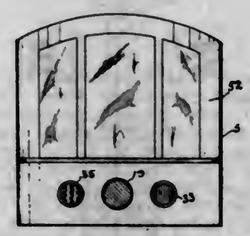


2. In a flying boat, a hull containing the aviator's seat and controls, aerial supporting surfaces, an engine, partitions in said hull for forming certain of the walls of a fuel container, said hull forming the remaining walls of said container, means connected with said container for elevating the fuel to said engine, a valve adjacent the bottom of said container, means for actuating said valve, and means for compressing air in said container for forcing the fuel out through said valve.

1,629,979. POULTRY-FEEDING DEVICE. EDWARD P. STEINBACK, Bloomington, Minn. Filed Mar. 24, 1926. Serial No. 96,980. 1 Claim. (Cl. 119—52.)

A feeding device comprising a box having a transverse vertically corrugated rearwardly inclined partition dividing said box into a storage compartment and a feeding compartment and affording a plurality of individual pockets opening into the feeding compartment, said feeding compartment being in the form of a trough below the bottom of said storage compartment, the bottom of said storage compartment being inclined and arranged to discharge into the feeding compartment, and a rail at the front ridges of said partition and spaced from the front wall of the feeding compartment.

1,629,980. RAZOR HONE AND STROP. WALTER M. TIETZ, Newark, N. J. Filed Apr. 27, 1925. Serial No. 26,098. 2 Claims. (Cl. 51—181.)



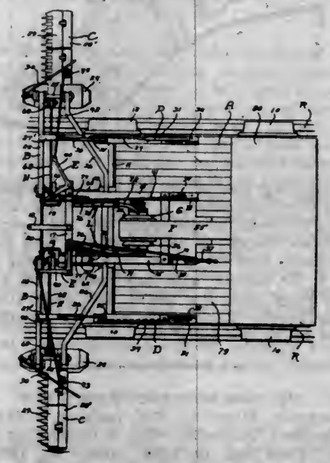
1. A razor hone and strop, comprising a relatively flat substantially rectangular honing stone having spaced stone flanges protruding from one of its faces, a honing strap disposed upon the free edges of the flanges and extending across the space therebetween in spaced relation to the stone, and means under the end portions of the strap removably fastening it to the flanges and transversely curving the central portion of the strap between its lengthwise edges away from the stone.

1,629,981. GOLF TEE. EARL P. WEBSTER, Niagara Falls, N. Y. Filed July 24, 1926. Serial No. 124,577. 8 Claims. (Cl. 273—33.)

1. A tee for use in golf comprising a prong having a flat face, a tongue formed as an extension of said face and bent at an angle thereto, this tongue lying wholly at one side of the axis of said face and forming a support for the golf ball, and wings extending from the edges of said face, these wings being bent toward each other to a position beneath said tongue and serving to reinforce the said flat face.

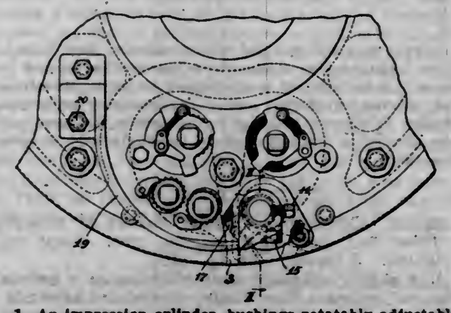
1,629,982. AUTOMATIC SIGNAL. WILLIAM E. WULFHORST, Cincinnati, Ohio. Filed July 1, 1924. Serial No. 723,493. 6 Claims. (Cl. 177—352.)

6. In a car, a plurality of signal lamps of different colors, a press button in said car, means adapted to automatically extinguish one of said lamps when said button is pressed and to automatically light another of said lamps and means adapted to automatically extinguish said last lamp and light another of said lamps when the velocity of said car is slackened.



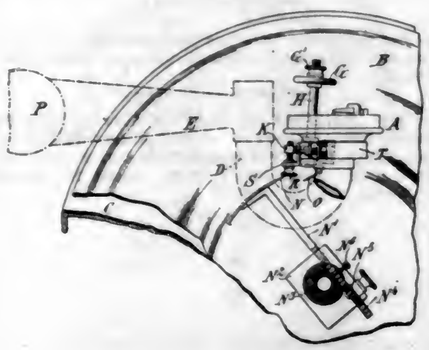
1,629,983. BELT FASTENER. LARS JOHAN ANDERSSON, Halmstad, Sweden. Filed Mar. 22, 1921. Serial No. 454,379. 4 Claims. (Cl. 24—37.)

3. In a belt fastener, in combination, a casing having a plate with an opening therein through which the ends of the belt are adapted to extend, said casing also having a spaced plate, a friction plate interposed between



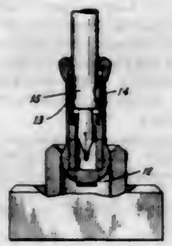
said first mentioned plate and said spaced plate, and a rib on said friction plate adapted to engage adjacent ends of the belt.

1,629,984. RAILWAY MOWER. WALTER S. ANDREWS, Eustis, Nebr., assignor of one-half to Charlie N. Johnston, Curtis, Nebr., and one-fourth to Carl W. Johnston, Taft, Calif. Filed Feb. 1, 1926. Serial No. 85,285. 5 Claims. (Cl. 56—232.)



1. In a railway mower, a track car embodying longitudinally extending supporting beams arranged in parallel spaced relation at the longitudinal center of the car and at a substantial distance inwardly of the track wheels of the car, mower riggings pivotally supported at their inner ends upon the beams and extending laterally to each side of the car forwardly of the front wheels of the car, and a mower unit pivotally connected to the outer end of each mower rigging.

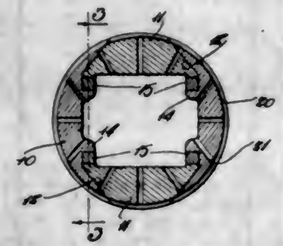
1,629,985. TYMPAN CLAMP. HOWARD M. BARBER, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Nov. 13, 1925. Serial No. 68,821. 5 Claims. (Cl. 101—415.1.)



1. An impression cylinder, bushings rotatably adjustable therein, a tympan clamp having trunnions eccentrically mounted in said bushings, lock plates carried by the bushings and means for locking the plates and thereby the bushings in their operative positions.

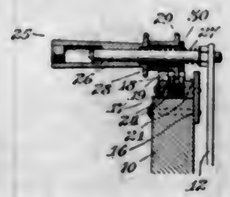
1,629,986. REPEATING MECHANISM FOR TALKING MACHINES. SUMTER B. BATTEY and BRYAN M. BATTEY, New York, N. Y. Filed Dec. 5, 1919. Serial No. 342,790. 6 Claims. (Cl. 274—15.)

4. A repeating mechanism for talking machines comprising a frictional wheel, a shaft therefor, means for connecting the shaft to the sound box and comprising a hinge member adapted in one position to hold the wheel out of contact with the record, and in another position to hold it in contact with the record, and actuating means rotating with the record and cooperating with said hinge member to bring the wheel into contact with the record to lift the sound box.



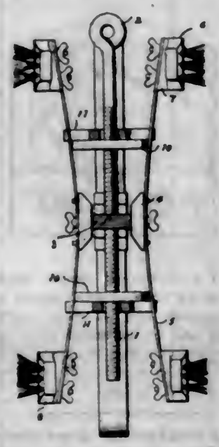
1,629,987. HOLDER FOR FOUNTAIN PENS. HORACE L. BLACKMAN, Janesville, Wis., assignor to The Parker Pen Company, Janesville, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1926. Serial No. 130,115. 9 Claims. (Cl. 120—108.)

1. In a desk set provided with a ball and socket joint, a pen holding device, comprising a base portion secured to the ball, a plurality of spring fingers extending therefrom and curving outwardly, and a pen receiving receptacle adapted to fit over the fingers and engage the base portion secured to the ball, and be yieldingly held in position thereon.



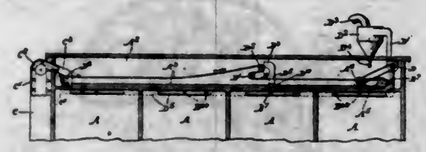
1,629,988. EXPANSION PISTON. GEORGE W. BOOKSH, Grosse Tete, La. Filed Oct. 20, 1926. Serial No. 142,937. 5 Claims. (Cl. 74—108.)

1. A piston including a body consisting of a pair of side wall segments diametrically opposed and having inside edge surfaces inclined on each segment towards the corresponding surfaces of the other segment, said body having wedge wall segments each fitted between a corresponding pair of said inclined surfaces and dovetailed thereto, said side wall segments having lugs thereon spaced from the lateral inner edge portions of the edge wall segments, wedges extending longitudinally of the piston between said lugs and lateral edge portions, and means



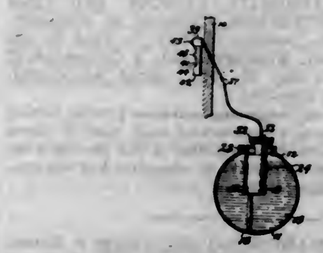
to adjust said wedges longitudinally and thereby force the wedge wall segments apart whereby to spring the edge portions of the side wall segments outwardly.

1,629,989. REVERSE CONTROL FOR MOTORS. MAX BROWN, Chicago, Ill. Filed Aug. 22, 1925. Serial No. 51,885. 4 Claims. (Cl. 74—39.)



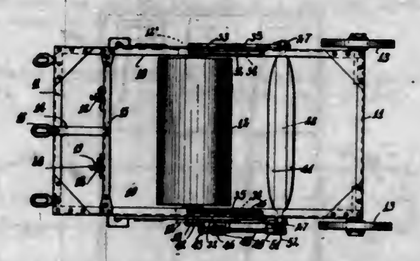
1. In a reverse control for motors, the combination with the control box and lever, of an independently movable operating handle carried by the lever, and a guide plate disposed on the box including means for interrupting the continuous movement of the lever and yieldingly locking it in neutral position against accidental displacement in all directions.

1,629,990. ADJUSTABLE CHIMNEY CLEANER. FERDINAND BUCHHOLTZ, Jim Falls, Wis. Filed June 30, 1926. Serial No. 119,709. 2 Claims. (Cl. 15—162.)



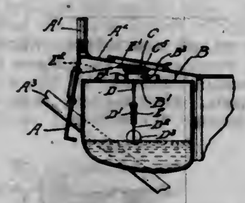
1. In combination a threaded rod, a spider mounted upon the rod intermediate its ends, flat springs attached to opposite sides of the spider, cleaning elements at the outer ends of the springs, intermediate flat springs attached to opposite sides of the spider, the one having its ends recurved and the other provided with cleaning elements, a spreader threaded upon the rod and engaging the first mentioned springs and an auxiliary spreader loose upon the rod and adjustable with the spreader threaded to the rod and adapted to adjust the said intermediate springs.

1,629,991. BIN-FLOOR DUST-COLLECTING SYSTEM FOR GRAIN ELEVATORS AND THE LIKE. THOMAS D. BUDD and WILLIAM R. SINKS, Chicago, Ill. Filed Jan. 15, 1925. Serial No. 2,499. 13 Claims. (Cl. 209—147.)



1. In a grain elevator, a bin having a closed apertured top, means for discharging grain through said aperture and means operative in unison with the grain discharging means, for withdrawing the dust laden air from the bin and for separating the dust from such dust laden air.

1,629,992. LIQUID GAUGE. ALICK L. CARTER, Kenmore, N. Y., assignor, by mesne assignments, to The Grolan Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 6, 1922. Serial No. 541,268. 3 Claims. (Cl. 73—54.)

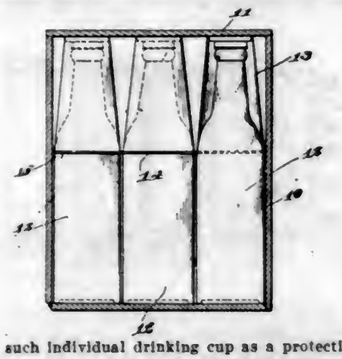


1. A liquid level gauge comprising a primary liquid chamber to receive liquid, said chamber being closed at its upper end to form an air cushion above the level of liquid, a secondary liquid chamber having its lower end flush with the lower end of the primary chamber and its upper end extending above the upper end of the primary chamber and communicating with the atmosphere and having its lower part communicating with and receiving liquid from the lower part of said primary chamber, a primary transmitting tube passing through the bottom of said primary chamber and adapted to project with its lower end into the body of liquid to be gauged and having its upper end engaging the top of the primary chamber and provided with an opening whereby the upper ends of the primary tube and chamber are in constant communication, a secondary air transmitting tubular connection having an open lower end projecting downwardly into the upper part of said secondary liquid chamber and having a downwardly projecting open upper end, and a transparent tubular body surrounding the open upper end of said secondary transmitting tubular connection and having a closed lower end and adapted to contain an indicating liquid and communicating at its upper end with the atmosphere.

1,629,993. SUGAR-BEET-HARVESTING MACHINE. HELIODORO CHAVEZ, Toledo, Ohio. Filed Apr. 22, 1926. Serial No. 103,751. 2 Claims. (Cl. 55—107.)

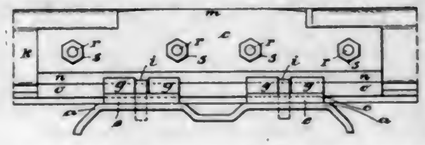
1. A device of the class described comprising a main supporting frame, a roller having an axle thereof journaled in said supporting frame, a bevel gear attached to said axle, an adjustable frame mounted on said main supporting frame having horizontal arms thereon, a rod journally mounted at one end on one of said horizontal arms and supported at its upper portion by attachment to said supporting frame, a cutting member journaled on the ends of said horizontal arms; a worm on the lower end of said rod, a worm wheel secured to said cutting member adapted to be driven by said worm for rotating said cutting member, a pinion journally mounted on said main frame meshing with said bevel gear adapted to be rotated thereby when said roller is turned, and clutch mechanism connected with said pinion and with said rod for transmitting motion from said pinion to said cutting member, said cutting member being rotatable to various inclinations for suitably positioning a blade therein.

1,629,994. GASOLINE GAUGE. HAROLD M. COOPER, Marshalltown, Iowa. Filed Apr. 5, 1926. Serial No. 99,726. 6 Claims. (Cl. 73—82.)



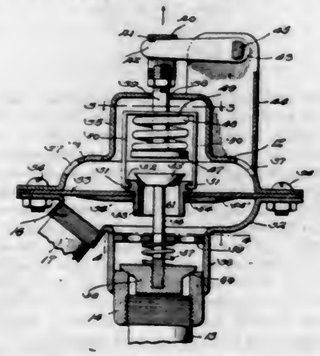
1. A dash gasoline gauge for automobiles, adapted to indicate the level of fuel in the gas tank thereof, comprising a gauge member on the dash board, an indicator member movable in relation thereto, a removable closure for said tank, a float lever support downwardly depending therefrom, a float lever pivoted to said support, a float on said lever and a flexible connection between said lever and said indicating member, said float lever support being axially apertured to permit the passage therethrough of said flexible connection, said support being provided at its lower end with an off-set portion to which the float lever is pivoted, the inner end of the float lever, to which the flexible connection is secured, being aligned with the apertured portion of said support.

1,629,995. METHOD OF PACKAGING BREAKABLE ARTICLES. JOHN H. COUGHLIN, Clinton, Mass. Filed Apr. 16, 1924. Serial No. 706,849. 1 Claim. (Cl. 206—65.)



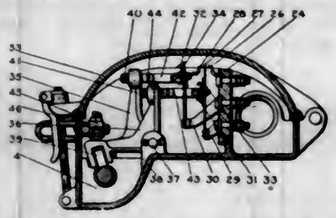
That improvement in the art of packaging breakable articles which consists in utilizing a container adapted to hold a predetermined number of bottles in ranked

formation, fitting each bottle with an individual drinking cup to enclose and protect the mouth of such bottle, and



utilizing such individual drinking cup as a protecting and separating device to hold each individual bottle separate and out of actual contact with adjacent bottles.

1,629,996. RAIL-BUTT CONNECTION WITH FISH-PLATE. HEINRICH DEIDERS, Helmstedt, Germany. Filed Jan. 21, 1925, Serial No. 3,750, and in Germany Jan. 5, 1923. 5 Claims. (Cl. 238—210.)

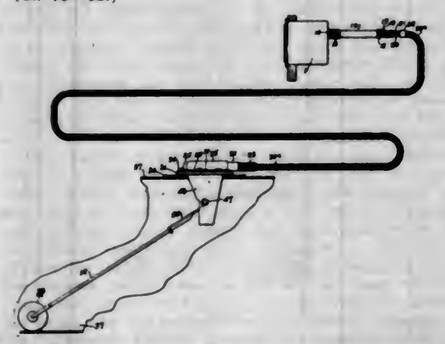


1. In a rail-butt connection, a base plate having a hook on its upper side and an L-shaped fish plate having an extension on its vertical leg flush with the top surface of the rail, the horizontal leg of the fish plate having a rounded rib on its outer edge pivotally engaging said hook.

1,629,997. AIR BRAKE FOR MOTOR VEHICLES. DORSEY G. DUTY, Pennsboro, W. Va., assignor to The Duty Air Brake Company, Janelew, W. Va., a Corporation of West Virginia. Filed Oct. 23, 1924. Serial No. 745,384. 2 Claims. (Cl. 303—54.)

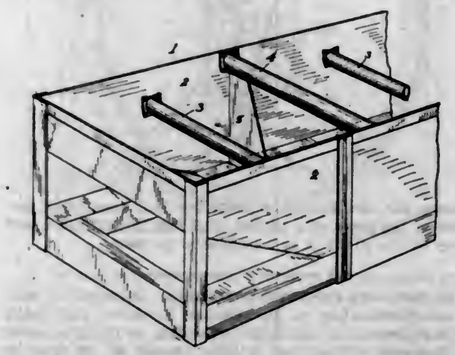
1. A control valve for braking systems of the class described composed of a casing divided by a diaphragm, one side of the casing being opened to the atmosphere and the other side with passages communicating with several units of the system, a valve seat upon one side of the diaphragm and in alignment with one of said passages, a valve stem passing through said seat and provided with a head for closing the same, a head upon the other end of the stem for closing the aligned passage within said casing, means connected to the valve seat for moving said diaphragm within said casing, and said diaphragm adapted during its movement to cause said valve to close the seat carried thereby and the aligned passage at different periods.

1,629,998. SWITCH CIRCUIT CONTROLLER. OSCAR S. FIELD, Roselle, N. J., assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1924. Serial No. 696,839. 3 Claims. (Cl. 200—5.)



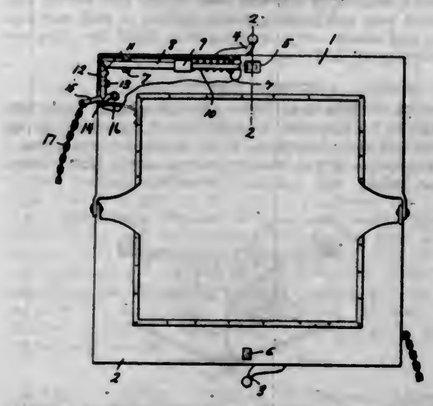
2. A switch circuit controller comprising a case, an insulating contact carrying member in said case, contacts carried by said insulating member, some of which are fixed and others of which are movable, a sliding member for operating said contacts, rocker arms provided with rollers adapted to engage said sliding member, means for mechanically connecting said rocker arms to said movable contacts, formations on said sliding member whereby upon movement of the same said rocker arms are caused to operate the contacts selectively in accordance with the direction of movement of the sliding member and means whereby said contacts can not be operated unless others of said contacts have properly functioned.

1,629,999. LOW-VISCOSITY LACQUER AND FILM PRODUCED THEREFROM. EDMUND M. FLAHERTY, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 23, 1921. Serial No. 471,931. 16 Claims. (Cl. 134—79.)



13. A composition comprising cellulose nitrate having an inherent viscosity characteristic such that at above 20% concentration in mixed solution it will provide a solution below 25,000 centipoises in viscosity, and comprising also a resin and a solvent.

1,630,000. LIQUID-LEVEL GAUGE. WALTER N. FRANK, Dayton, Ohio, assignor to The Grolan Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 7, 1924. Serial No. 691,222. 14 Claims. (Cl. 73—82.)

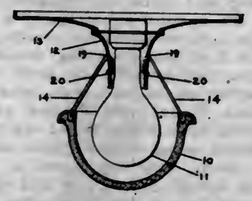


1. In a liquid level gauge, a tank, an indicator, a communicating means connected to said indicator, a float and float arm, an inclosing bracket mounted in said tank, means to mount said float arm in said bracket, means connecting said float arm and communicating means, a part of said connecting means being inclosed by said bracket, means to guide and protect said communicating means, means to inclose one end of the communicating means and the upper end of the connecting means at their point of union, whereby tampering with said communicating means and said connecting means is prevented.

1,630,001. CAR CONSTRUCTION. KENNETH C. GARDNER, Greenville, Pa., assignor to The Greenville Steel Car Company, Greenville, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1927. Serial No. 160,615. 11 Claims. (Cl. 105—406.)

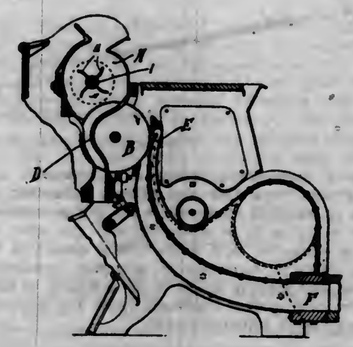
1. An article of the character described, comprising an elongated sheet metal member formed with an edge of substantially semi-circular cross section and having substantially flat side portions over the greater portion of its length approaching each other at their lower edges, flanges formed at the respective ends of said member and means for securing said member to opposite parts of a structure to be supported.

1,630,002. POCKETBOOK-FASTENING DEVICE. DAVID N. GRAY, Pittsburgh, Pa. Filed July 26, 1926. Serial No. 125,025. 2 Claims. (Cl. 292—164.)



1. In a pocketbook fastening device of the class described, in combination, a pair of hingedly connected frame sections, one of which is provided with an opening, a keeper carried by the other section and cooperable with said opening, a sliding locking pin carried by the first named section and adapted for reception in said keeper, a spring for moving the pin in a direction to disengage it from the keeper, a pivotally mounted lever carried by said first named section, the carrying chain being adapted to be connected with said lever, and means controlled by said lever for moving said pin in a direction against the action of said spring.

1,630,003. PONTOON. IZYDOR GREBOWIEC, Homestead, Pa. Filed Oct. 15, 1926. Serial No. 141,837. 3 Claims. (Cl. 114—53.)

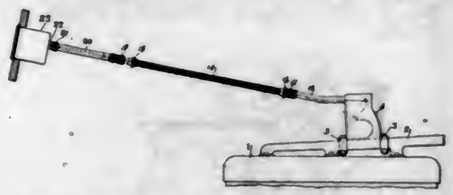


1. A pontoon of the class described including a hollow body, a piston slidable in the body, said body provided at one end with an opening and a closure therefor so that powder may be stored therein, buffer means at the other open end of the pontoon and catch means at said last-mentioned end.

1,630,004. BOWL-SUPPORTING MEANS FOR LIGHTING FIXTURES. EDWIN F. GUTH, St. Louis, Mo. Filed Oct. 10, 1925. Serial No. 61,637. 6 Claims. (Cl. 240—149.)

1. A bowl supporting means for lighting fixtures, comprising a plurality of supporting members formed with hooks on each end; a shoulder on the lower hook, faced toward the inturned end of the hook; grooves in the bowl to receive the lower hooked members of the supports; means to attach the upper hooks to the fixture.

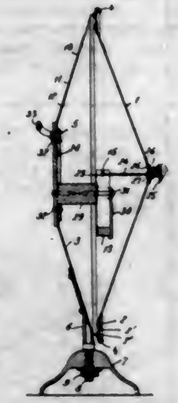
1,630,005. GIN. NELSON B. HENRY, Atlanta, Ga. Filed Mar. 3, 1926. Serial No. 92,035. 2 Claims. (Cl. 19—55.)



1. In a gin, in combination, a roll box; a saw cylinder and ginning ribs, all as usual; bearings in the end walls of the roll box; an integrator shaft having projecting fingers and end bearing-pivots, projecting into and closely fitting the end wall bearings and supported by the bearings for rotation in a fixed axial line along the length of the roll box, without contact of the roll with the roll box.

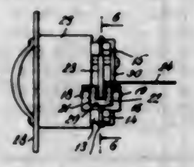
1,630,006. DEVICE FOR APPLYING TIRE CHAINS. JACOB F. HERRING, Staunton, Va., assignor of one-half to William Spector, Staunton, Va. Filed July 14, 1926. Serial No. 122,407. 13 Claims. (Cl. 152—14.)

8. In a skid chain applying device, a yoke, wheel-gripping means carried by said yoke and adapted cooperably to grip a wheel from opposite sides, said wheel-gripping means including normally retracted spurs projectable into engagement with the wheel, means for biasing said wheel-gripping means toward said wheel, means co-acting with said yoke for normally maintaining said wheel-gripping means away from said wheel against the tension of said biasing means, a skid chain, forward and rearward hooks attached to said skid chain, said forward hooks being carried by said wheel gripping means, means operable at will for presenting said wheel-gripping means operatively to the wheel, first tire-actuated means for simultaneously releasing the means that inhibits the action of said biasing means, and positively projecting said spurs into engagement with said wheel, second tire actuated means operative sequentially of said first tire actuated means for releasing said wheel-gripping means from said presenting means, means detachably holding the rearward chain hooks, yieldably resisting the paying out of said chain upon said wheel through rotation thereof, said forward and rearward hooks interlocking upon completion of one revolution of said wheel-gripping means with said wheel, said rearward hook holding means being constructed to release said rearward hooks through pull of said skid chain immediately upon completion of the interlocking act of said forward and rearward hooks.



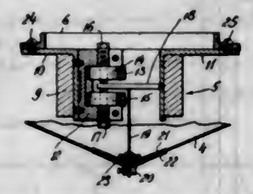
1,630,007. TEMPERATURE INDICATOR. REUBEN HILL, West Hartford, Conn., assignor to The Grolan Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 14, 1925. Serial No. 69,185. 6 Claims. (Cl. 73—118.)

1. In a temperature measuring instrument, a contracting and expanding temperature actuating means one end of which is connected to the means the temperature of which is to be measured, and the other end of which is connected to a lever, a wire connected thereto and an indicator connected to said wire remotely from the lever, and yielding means in the indicator to maintain said wire taut and to yieldingly resist the movement of the temperature actuated means.



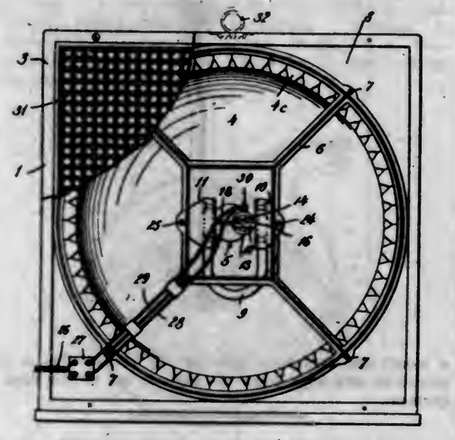
1,630,008. CONE-TYPE LOUD SPEAKER. MARCUS C. HOPKINS, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Hopkins Corporation, a Corporation of Delaware. Filed June 1, 1925. Serial No. 34,255. 26 Claims. (Cl. 181—31.)

1. A loud speaker comprising a large conical vibratory diaphragm made of light weight and stiff fibrous material with a relatively narrow peripheral portion formed by at least one forwardly projecting reverse bend disposed at an oblique angle to the axis of the cone, and supporting



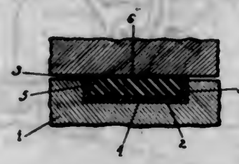
means for the diaphragm engaging said peripheral portion in the plane of a reverse bend and throughout a part only of the width of said peripheral portion.

1,630,009. TRANSLATING DEVICE. MARCUS C. HOPKINS, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Hopkins Corporation, a Corporation of Delaware. Filed June 6, 1925. Serial No. 35,425. 15 Claims. (Cl. 179—108.)



1. In a translating device, the combination of a permanent magnet, a resilient reed supported at one end by a pole of said magnet and polarized thereby, two poles of a speech magnet on opposite sides of the free end of said resilient reed and between which the end of said reed projects, and means for translating into sound the vibratory movements of said reed.

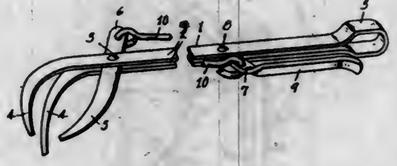
1,630,010. ELECTRICAL TRANSLATING DEVICE. MARCUS C. HOPKINS, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Hopkins Corporation, a Corporation of Delaware. Filed June 11, 1925. Serial No. 36,562. 20 Claims. (Cl. 179—108.)



1. In a translating device, the combination of a magnet, a face plate for one pole of said magnet, a polarized reed supported by said face plate and disposed substantially at right angles thereto, a speech winding operatively positioned to flex said reed, and means connected to said reed intermediate its ends for translating into sound the movements of said reed.

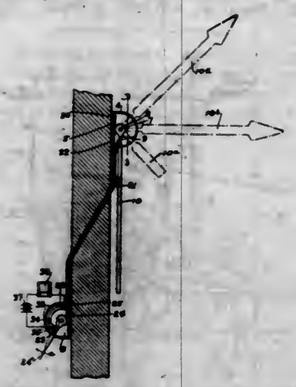
1,630,011. LOUD SPEAKER. MARCUS C. HOPKINS, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Hopkins Corporation, a Corporation of Delaware. Filed June 11, 1925. Serial No. 36,563. 15 Claims. (Cl. 181—81.)

1. In a translating device, a conical fibrous sound producing diaphragm tensioned radially, and a support, said diaphragm having a rim secured to said support for a part only of its width and flexibly connecting the diaphragm to the support to give the cone relative freedom for axial movement.



1,630,012. ART OF ATTACHING RUBBER-SEAL RINGS IN METAL CONTAINERS. ELY C. HUTCHINSON, Oakland, Calif., assignor to The Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed Aug. 25, 1925. Serial No. 52,371. 2 Claims. (Cl. 286—7.)

1. In a hydraulic turbine comprising relatively moving parts positioned with cooperating surfaces in opposing relation and one surface provided with a continuous groove, the combination with a sealing ring construction within said groove and comprising a nonmetallic elastic flexible body projecting beyond the edge of the groove into close proximity to the opposing surface, and a one piece nonmetallic channel shaped body mounting said flexible body and within which said flexible body is vulcanized, said channel shaped body disposed with its side walls extending outwardly from said groove beyond the surface of the grooved part and in contact with the side walls of the flexible body for reinforcing the same, said channel shaped body being rigidly and permanently seated within said groove.

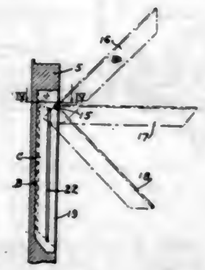


1,630,013. TONGS. CHARLES D. HYATT, Coldwater, Mich., assignor to Homer Furnace Company, Coldwater, Mich. Filed Mar. 13, 1926. Serial No. 94,558. 2 Claims. (Cl. 294—11.)

1. In a pair of tongs, the combination of a handle comprising a pair of bars disposed in spaced parallel relation and terminating in curved diverging fixed jaws, said bars being united at their outer ends by a loop providing a hand grip, a coacting movable jaw pivoted between said bars in opposed relation to said fixed jaws with its upper end projecting above the handle, an actuating lever pivotally mounted between the said bars adjacent their

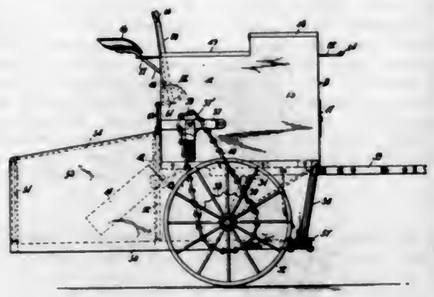
outer ends and having a hand-piece opposed to said grip portion of said handle, and a link connecting the upper end of said swinging jaw to said lever, said link being disposed between said bars.

1,630,014. DIRECTION INDICATOR. CHARLES H. JOHNSON, Sacramento, Calif. Filed Apr. 14, 1926. Serial No. 101,851. 3 Claims. (Cl. 116—47.)



1. In a direction indicator of the character described, a casing comprising a pair of parallel, interspaced plates, an arm pivoted at one end on a horizontal axis between said plates, means for swinging said arm about the horizontal axis to assume different signalling positions, a collar on the arm, a lug on one of the side plates and a lug on the collar engageable with the side plate lug to rotate the arm one-quarter revolution upon its longitudinal axis, said collar engaging the inner faces of the casing plates and normally securing the arm against turning movement upon its longitudinal axis.

1,630,015. DIRECTION INDICATOR. CHARLES H. JOHNSON, Sacramento, Calif. Filed Sept. 16, 1926. Serial No. 135,719. 2 Claims. (Cl. 116—52.)



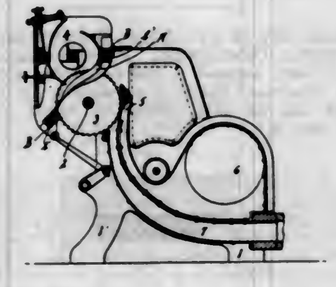
1. The combination with a door of an automobile, said door having an elongated slot formed in its outer surface, of a housing adapted to be inserted in the slot, said housing extending from end to end of the slot and being U-shaped in cross section, a pair of face flanges on the housing, one on each side thereof and extending from end to end of the slot, said flanges adapted to lie flush with the outer surface of the door, means whereby the housing is secured in the slot, said housing being open in its outer surface from end to end, an arm pivoted at its upper end in the housing and adapted to be swung into

and out of the housing, a cover plate on the arm forming a closure for the housing when the arm is swung into the housing, said face flanges being recessed to receive the

cover plate and thereby permitting the cover plate to lie flush with the face flanges in the upper surface of the door.

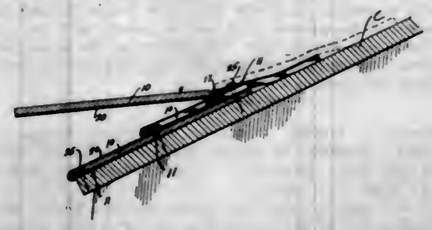
1,630,016. BOLL-WEEVIL EXTERMINATOR. JOHN W. KISSELBURG, Purcell, Okla., assignor of one-half to Lafayette A. Reeves, Pauls Valley, Okla. Filed Oct. 26, 1923. Serial No. 670,928. 1 Claim. (Cl 43—128.)

In a device of the class described, a vehicle having a platform, a bracket depending from the forward end of said vehicle and having its ends out turned and disposed horizontally and relatively close to the ground, side bars disposed beneath said vehicle and hingedly connected at their forward ends to said out turned portions of the bracket, a pair of yoke members arranged in inverted position in spaced relation beyond the rear of said vehicle and having their lower ends secured to said side members, a rod connecting the upper portions of said yoke members together, a hood supported by said yoke members and rod, aprons depending from the sides of said vehicle and secured at their lower ends to said side bars, a lever on said vehicle, a connection between said lever and one of said yokes, and fume producing apparatus on said vehicle to direct fumes into the forward end of said hood.



1,630,017. CLOTHESPIN. JOHN LARSON, Littlefork, Minn. Filed Sept. 21, 1925. Serial No. 57,685. 1 Claim. (Cl. 24—139.)

A clothes pin formed of a single piece of resilient material comprising a pair of spaced non-crossed side members forming elongated jaws adapted to come together upon the garment, a loop connecting said side members and receiving the garment and the clothes line, and an enlarged hook at the end of one of said side members, the free end of said hook being contiguous to the other side member and forming jaws together therewith, the bite of said jaws being in spaced relation to the aforesaid elongated jaws, the entire space between said jaws forming

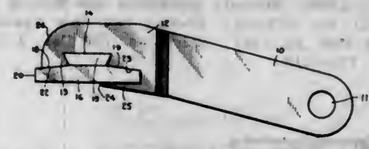


a mouth for said hook whereby the clothes line is admitted to said hook when the same is not in use upon a garment.

1,630,018. RIB RAIL FOR COTTON GINS. ISAAC LEECH and THOMAS HERBERT BRADLEY, Oldham, England, assignors, by mesne assignments, to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Jan. 17, 1927. Serial No. 161,542. 3 Claims. (Cl. 19—62.)

1. In a cotton gin, cross rails for ginning rib support, slotted longitudinally to adjustably receive rib-securing bolts from the ribs, those bolts, to clamp the several ribs in adjusted position along the rails.

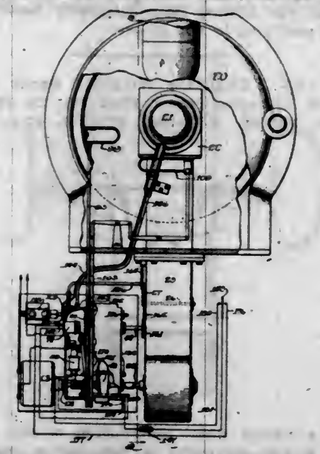
1,630,019. SHINGLES AND ROOFING. FRANK P. LEONARD, Troy, N. Y. Filed Dec. 5, 1925. Serial No. 73,410. 8 Claims. (Cl. 108—7.)



1. As an article of manufacture roof covering comprising integral body and attaching portions of flexible material having directly opposed grooves at opposite sides thereof extending along the juncture of the attaching and body portions to provide a reduced hinge joint thereat.

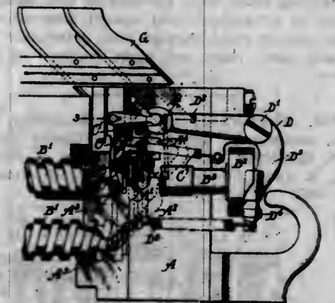
1,630,020. AUTOMATIC GOVERNING DEVICE FOR FLUID-DISPLACEMENT METERS. THOMAS J. LOFTUS, Castella, Calif., assignor of one-half to Harmon Bell, Oakland, Calif. Filed Oct. 7, 1925. Serial No. 60,977. 6 Claims. (Cl. 73—37.)

1. A variable speed and discharge fluid meter comprising a housing, a movable measuring member mounted therein, a valve within the housing regulating the amount of fluid delivered to the measuring member, and means actuated by the speed of the measuring member for automatically changing the position of the valve with relation to said member to vary the amount of liquid delivered to the measuring member in inverse ratio to the speed of the measuring member.



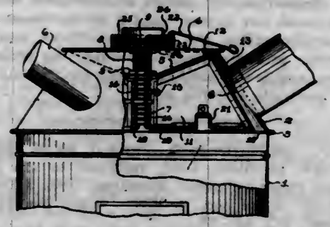
1,630,021. CENTRIFUGAL HAMMER. GEORGE P. LUCAS, Jersey City, N. J. Filed Aug. 1, 1924. Serial No. 729,464. 2 Claims. (Cl. 83—11.)

1. A hammer for a centrifugal mill comprising a shank portion provided at one end with an opening for suspension, the opposite end of said shank being enlarged in at least two dimensions, said enlarged end portion having a recess bounded on its opposite faces by wedge-shaped walls, the median line of said recess extending transversely to the direction of length of said shank and a tip member comprising a body portion extending at its oppositely disposed ends to serve as tips and further comprising a wedge-shaped extension on one side of said body portion and disposed symmetrically relative to said tips, said wedge-shaped extension being arranged to be received within and retained by said oppositely disposed wedge-shaped walls.



1,630,022. AUTOMATIC CONTROL FOR OIL BURNERS. FRANK A. LUNDQUIST, Chicago, Ill., assignor to New Process Burner Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1924. Serial No. 695,699 21 Claims. (Cl. 236—9.)

1. In a furnace control mechanism, a motor, a thermostat and connections for starting the motor into operation, devices moved by the motor for conveying oil to a point of combustion in the furnace, and means controlled by the thermostat for shutting off the supply of



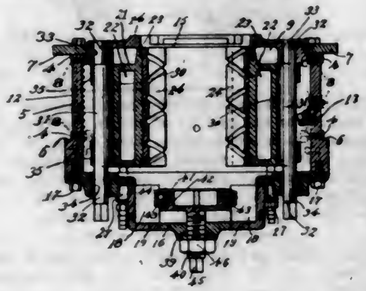
oil when room temperature rises above a predetermined point such shutting off being independent of the operation of the motor.

1,630,023. TYPOGRAPHICAL DISTRIBUTING MACHINE. JAMES G. MCNAMARA, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 15, 1926. Serial No. 94,657. 17 Claims. (Cl. 199—42.)

1. In a typographical distributing mechanism comprising a distributor bar and set of matrix conveying screws, the combination of guide means along which the matrices gravitate toward the screws, and an escapement device arranged to cooperate with the upper end of the matrices and acting solely to control their passage one at a time into position to be picked up by the screws.

1,630,024. HOT-AIR FURNACE. WILLIAM S. MARTIN, Rochester, N. Y. Filed Jan. 17, 1927. Serial No. 161,495. 7 Claims. (Cl. 126—105.)

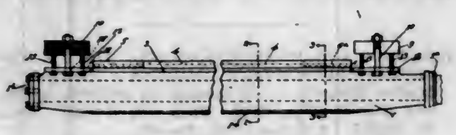
1. In a furnace, an inwardly projecting flange near the top of the furnace, a bearing depending from the top



and formed with annular grooves, a plurality of partitions having outer edges resting on the inwardly projecting flange, and bearing rings detachably bolted to said partition and lying in said grooves.

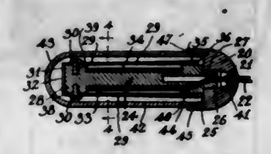
1,630,025. TRACTOR WHEEL. HENRY STEPHEN OSTDIEK, Lawrence, Nebr. Filed Feb. 23, 1927. Serial No. 170,308. 2 Claims. (Cl. 301—52.)

2. In a tractor wheel construction of the class described, a hub comprising a tube having outstanding flanges at its opposite ends, a plurality of radiating circumferentially spaced yoke members, each yoke member being formed from a single strap of metal, a pair of outer rings, a pair of inner rings, the end portions of the bight of each yoke being fastened to the outer rings, the central portion being arched inwardly and fastened to the inner rings, the end portions of the straps being directed outwardly and bent upon themselves to provide anti-slipping lugs and attaching arms, the free ends of the attaching arms being fastened to said flanges, and a plurality of circumferentially spaced diagonally disposed traction bars of right angular form detachably connected with said outer rings and bight portions of said yoke members.



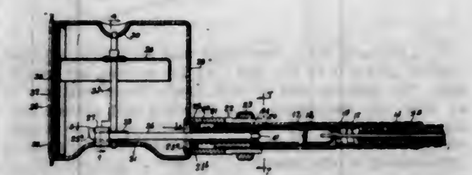
1,630,026. JOURNAL BOX. JOHN H. REEDY, Hamilton, Ohio, assignor to The Champion Coated Paper Company, Hamilton, Ohio, a Corporation of Ohio. Filed Aug. 8, 1924. Serial No. 730,799. 5 Claims. (Cl. 308—65.)

5. A journal for the spindle of a calender roll comprising a journal box having bearing blocks therein adjustable laterally within the box, said blocks being formed with water passages, means for supplying water to said passages, and a supporting member for the box provided with a vertically aligning guide.



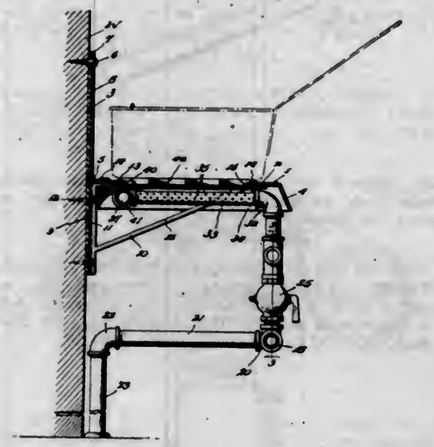
1,630,027. SUCTION BOX. JOHN H. REEDY and THOMAS A. CAPE, Hamilton, Ohio, assignors to The Champion Coated Paper Company, Hamilton, Ohio, a Corporation of Ohio. Filed Apr. 7, 1925. Serial No. 21,409. 10 Claims. (Cl. 92—51.)

1. A suction box for paper machines comprising a hollow casing, open at one end for attachment to a suction line, a lengthwise opening in said casing, and slidably mounted screen engaging means protecting said opening,



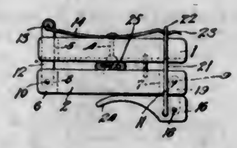
said screen engaging means having slideways at the ends thereof, and passage closing means slidable in said slideways.

1,630,028. EAR PHONE. DR ELBERT A. REYNOLDS, Yonkers, N. Y. Filed Jan. 15, 1925. Serial No. 2,555. 12 Claims. (Cl. 179—107.)



1. In a telephone receiver for partially deaf persons, a container for insertion within the ear cavity and electrically operated means for vibrating said container to thereby effect audition by the user by contact of said container with an inner portion of the ear of the user, said vibrating means comprising a plurality of vibrating elements disposed within said container and electromagnetic means for vibrating said vibrating elements.

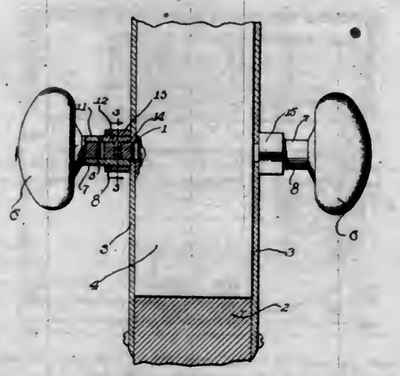
1,630,029. LIQUID-LEVEL INDICATOR. EDWARD V. RIPPINGILLE, Detroit, Mich., assignor to The Grolan Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Nov. 8, 1923, Serial No. 673,403. Divided and this application filed June 16, 1924. Serial No. 720,178. 1 Claim. (Cl. 116—118.)



In a gauge equipment, an indicator consisting of an open-ended housing, a shaft journalled therein, an indicator drum on said shaft, means for closing the open end of the housing and constructed to expose a portion of said drum to render readings on the drum visible, a rack, means struck up from said housing wall to guide and support said rack, a split tube carried by said housing into which one end of said rack projects, spring means put under tension when said rack is moved in one direction, whereby the rack may return to its initial position when the tension of the spring means is released, and means on said shaft for operatively engaging with said rack.

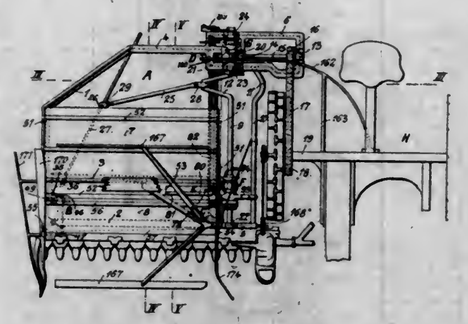
1,630,030. GAS COOKSTOVE. BRAXTON F. RODGERS, Dallas, Tex. Filed Nov. 10, 1925. Serial No. 68,216. 2 Claims. (Cl. 26—39.)

1. A cook stove comprising a utensil supporting plate having a burner opening therein, a horizontally disposed U-shaped burner disposed below the opening, a back plate integral with the supporting plate for attachment to a wall, and hooks secured to the supporting plate and engaged with the bight portion of the burner.



1,630,031. UMBILICAL-CORD CLAMP. SAMUEL LYLE ROGERS, Washington, D. C. Filed Apr. 19, 1926. Serial No. 103,087. 3 Claims. (Cl. 128—346.)

1. An umbilical cord clamp provided with a lever spring swung from a shackle at one end and yoke at other, and said yoke exerting tension on the spring by its eccentric pivot action through a single lever hinged to one of the compression jaws.

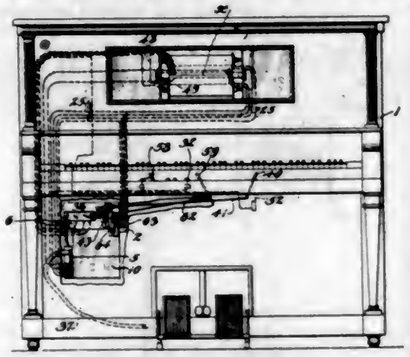


1,630,032. DOORKNOB. CHARLES F. ROOD, Sutherlin, Oreg. Filed June 29, 1926. Serial No. 119,499. 1 Claim. (Cl. 292—352.)

A device of the character described comprising a spindle, a handle including a threaded shank formed with a socket open along one side and at its outer end, said spindle being fitted into said socket, a filler removably fitted into the open side of said socket, and interlocked with the spindle to prevent movement longitudinally thereof, said filler having threads forming a continuation of the threads of the shank, and a securing nut

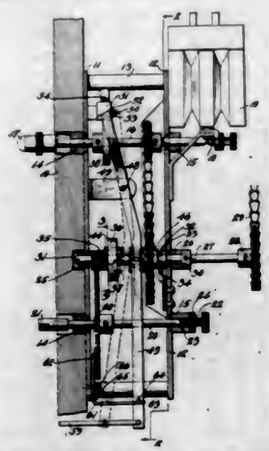
screwed upon said shank and filler to hold the filler in place and retain said handle in engagement with said spindle.

1,630,033. MOWING AND REAPING MACHINE. JOHANNES RUDLAND, Nordre Fron, Gudbrandsdalen, Norway, assignor to Interessentskapet Johs. Rudlands Selvbinder, Lillehammer, Norway. Filed Feb. 15, 1924, Serial No. 693,089, and in Norway July 15, 1922. 21 Claims. (Cl. 56—178.)



1. The combination with a mowing machine, including a finger bar, of an auxiliary frame suspended from the mowing machine, a grain gathering mechanism movable on the auxiliary frame behind the finger bar, means for periodically arresting the movement of the cut straw into the path of the grain gathering mechanism, binding, knotting and ejecting mechanisms carried by the auxiliary frame, and means operable by the movement of the mowing machine for actuating the above named mechanisms.

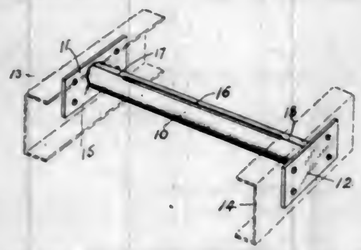
1,630,034. AUTOMATIC PLAYING INSTRUMENT. JOHN T. RYDBERG, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Supreme Player Action Corporation, a Corporation of New Jersey. Filed June 18, 1921. Serial No. 478,691. 17 Claims. (Cl. 84—24.)



1. In controlling mechanism for instruments of the class described having a suction device and a player action, the combination with a direct passage between the suction device and the player action having a valve

port therein to admit atmosphere directly into said passage and a valve therefor normally closed, of means connected to said valve and operable by the normal tension

in said passage to effect venting of the port to thereby immediately vary the effective operation of the player action.

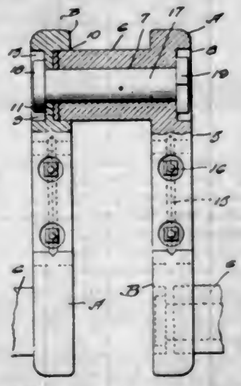


1,630,035. TRANSMISSION MECHANISM FOR PLAYER ACTIONS. JOHN T. RYDBERG, Harrison, N. J., assignor, by direct and mesne assignments, to Supreme Player Action Corporation, a Corporation of New Jersey. Filed Mar. 11, 1924. Serial No. 698,442. 5 Claims. (Cl. 84—126.)

1. In a mechanism of the class described, a power shaft, driving shafts for independent rolls, transmission means on said power shaft operatively connected to said driving shafts, an overrunning clutch device shiftable upon the power shaft to engage either transmission means, and a member upon said means to yieldingly engage the face of said clutch to permit feeding of a roll independent of the power shaft when in driving relation.

1,630,036. FLEXIBLE AUTOMOBILE FRAME AND TUBULAR CROSSBAR THEREFOR. LLOYD RAYMOND SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed May 11, 1923. Serial No. 638,415. 3 Claims. (Cl. 280—106.)

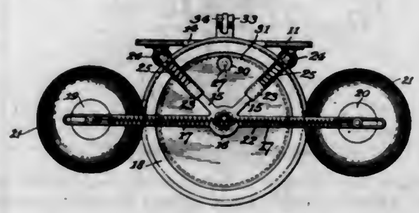
1. In a vehicle frame, the combination of channel side bars, and a tubular cross bar extended between and connected to the same, the said cross bar being provided with integral end plates entered in the said channels, the line of shearing strain between the cross bar and its end plates having a length equal to the circumference of the cross bar, and the tubular cross bar provided with a longitudinally extending open section intermediate its



ends, whereby the stresses incident to the torsional strains upon the frame are absorbed in such open section of the tube.

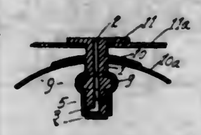
1,630,037. ELECTRICALLY-WELDED BUBBLE TOWER. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,719. 6 Claims. (Cl. 219—10.)

1. In a bubble tower, a plurality of tubular sections arranged end to end and transversely arranged interior shelves in the line of the meeting ends of the tubular sections, and welded at such meeting lines into an integral structure.



1,630,038. CRANK SHAFT. OLE W. THOMPSON, Durkee, Oreg. Filed Apr. 29, 1925. Serial No. 26,698. 1 Claim. (Cl. 74—38.)

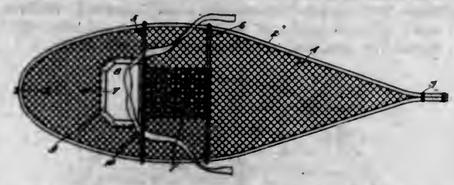
In a crank shaft, a crank segment including two parallel spaced portions, each portion comprising a pair of sections disposed in end to end relation, one section



being provided with a bearing and the other section being provided with a recess for receiving a bearing, a bolt passing through the bearing and the recess for holding the portions assembled, the abutting edges of the sections being V-shaped in formation, one having a ridge and the other a groove for the reception of said ridge, and bolts passing transversely through the sections at an angle to the intermediate portion of the V-shaped edges therethrough for securing the sections together.

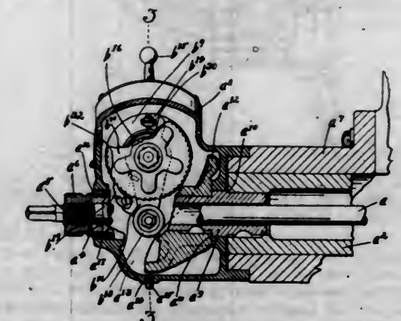
1,630,039. LENGTH RECORD AND AUTOMATIC MACHINE FOR MAKING SAME. FREDERICK B. VONOHLE, Easton, Pa. Filed Aug. 31, 1921. Serial No. 497,810. 22 Claims. (Cl. 33—129.)

1. As a new article of manufacture produced in the measurement of pieces of goods, a length-record consisting of a suitable medium such as tape presenting three parallel rows of markings, the markings of one row being equidistant to constitute a scale whose successive uniform spacings are each of a length that bears a fixed ratio to a standard unit of length, the markings of the second row being separated by uniform spacings each of a length that corresponds at that same ratio to a fixed multiple of said standard unit, and the markings of the third row being separated by spacings whose successive lengths are respectively proportional at that same ratio to the successive lengths of the different pieces constituting the entire goods measured.



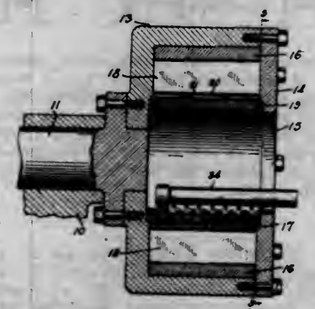
1,630,040. VALVE. FRANK A. VOGT, ELMER FLEISCH, and HUGO GOLDSMITH, Cincinnati, Ohio, assignors to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 22, 1926. Serial No. 82,888. 1 Claim. (Cl. 273—65.)

A valve for inflatable articles comprising a stem portion having an open ended air passage extending longitudinally thereinto, said stem having a closed inner end, walls of said stem having a slit extending laterally therethrough adjacent said closed end, and a resilient member supported by said stem enclosing the outer walls of said stem in the slitted portion, said stem being stretchable whereby pressure applied with an inserted piece within said air passage bearing against said closed end will stretch said stem and unseal said slit with relation to said enclosing member.



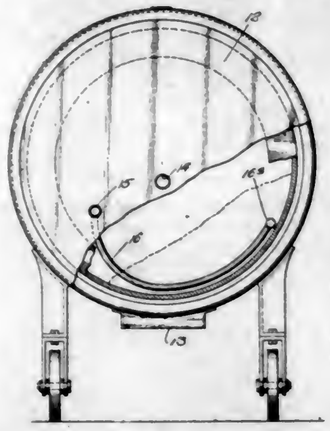
1,630,041. SNOWSHOE AND PROCESS OF MANUFACTURING SAME. EDWIN W. VOSS, Beverly, Mass. Filed Aug. 22, 1922. Serial No. 583,464. 7 Claims. (Cl. 208—184.)

1. A snow shoe comprising a metal frame, and a filling consisting of a woven wire, fabric having its edges secured to said frame, said fabric being woven prior to its attachment to the frame, and the principal wire strands



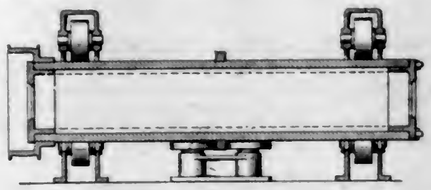
of said fabric extending diagonally with reference to the median line of the snow shoe.

1,630,042. CROSS-FEED MECHANISM FOR MACHINE TOOLS. ALBERT K. WATCHER, Cincinnati, Ohio. Filed Nov. 22, 1920. Serial No. 425,714. 12 Claims. (Cl. 74—54.)



12. A shaper feed comprising a drive shaft, a driven shaft mounted for arcuate movement about the drive shaft, a cam on the drive shaft, the cam having an operating face all portions of which extend in substantial parallelism with the axis of the driven shaft, and a member mounted on the driven shaft and adjustable toward and away from the operating face of the cam for variable contact with the cam face for imparting variable and intermittent movement to the driven shaft.

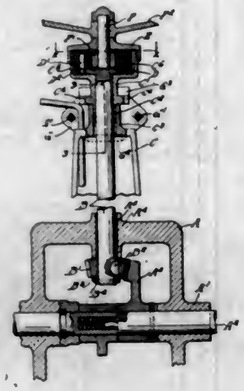
1,630,043. CENTRIFUGAL CASTING. CHARLES P. WETMORE, deceased, Milwaukee, Wis., by Augusta M. Wetmore, executrix, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed June 5, 1925. Serial No. 35,233. 11 Claims. (Cl. 22—65.)



6. In a centrifugal casting machine, a rotatable mold, a liner therein to determine the diameter of the casting, and means for effecting contraction of the liner into engagement with the casting to prevent disintegration of the metal under centrifugal action during solidification.

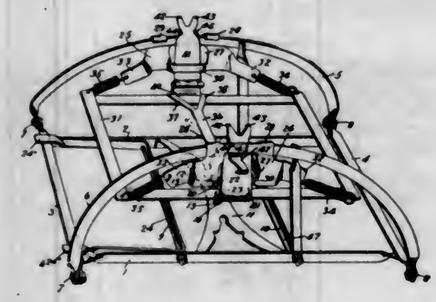
1,630,044. FURNACE FOR THE TREATMENT OF SPENT FULLER'S EARTH. ROBERT E. WILSON, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Feb. 23, 1924. Serial No. 694,776. 2 Claims. (Cl. 263—33.)

1. A rotary furnace comprising an inclined rotatable shell, means for rotating the shell, means for supplying spent fullers' earth at the upper end thereof, means for supplying heat internally within said shell, an air conduit leading into the shell and a distributing pipe leading from said conduit to the lower side of the shell and thence in close proximity to the wall thereof in the direction of rotation of the shell, said distributing pipe being provided with perforations in the portion normally covered with the fuller's earth.



1,630,045. CENTRIFUGAL CASTING OF METALS. LUCIEN I. YEOMANS, Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 17, 1924. Serial No. 726,445. 9 Claims. (Cl. 22—212.)

4. The process of metal casting, which comprises the operations of pouring molten metal into a mold, withdrawing the casting after the temperature has reached the point of congelation, and restoring the normal temperature of the mold by the application therein of a measured quantity of water which in its evaporation will abstract from the mold the heat units imparted thereto by the molten metal.

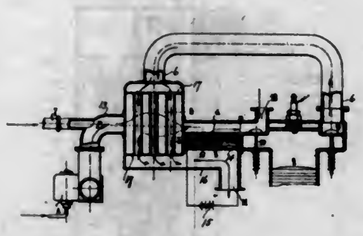


1,630,046. STEERING GEAR. WILLIAM C. ANTHONY and WILLIAM B. MACKINTOSH, Streator, Ill., assignors to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed June 27, 1925. Serial No. 39,878. 6 Claims. (Cl. 74—79.)

1. In combination with a steering column having a casing other than circular in cross section a steering gear adapter a reduction means including a shaft, and an adapter for such shaft including a generally tubular portion, a cup-shaped enlargement having gear teeth on its interior, planetary gearing mounted partially on said shaft and located within said cup-shaped enlargement

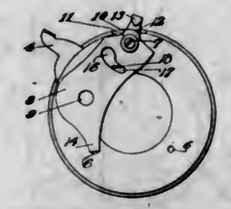
and a clamp provided with portions corresponding in shape to the steering column and such tubular adapter, and adapted to engage the two to prevent relative movement.

1,630,047. MERCHANDISE CARRIER. HUBERT ARNOLD, Calgary, Alberta, Canada. Filed Jan. 2, 1926. Serial No. 78,889. 5 Claims. (Cl. 220—1.)



1. A merchandise carrier comprising a rectangular main frame, a ball member swung at each side of the main frame, a cradle support resiliently mounted between the ball members, and gripping jaws carried by the cradle support and adapted to be forced into contact with the article carried by the cradle support by its weight upon such support.

1,630,048. PROCESS FOR UTILIZING HYDROCARBONS IN INTERNAL-COMBUSTION ENGINES AND APPARATUS THEREFOR. DMITRY BALACHOWSKY and PHILIPPE CAIRE, Paris, France. Filed July 1, 1924, Serial No. 723,570, and in France July 9, 1923. 3 Claims. (Cl. 196—52.)

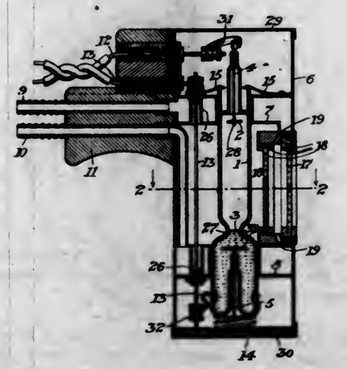


1. A process of utilizing heavy oils as fuel for internal combustion engines, comprising the steps of feeding a mixture of heavy oil and air to a catalyzing chamber, and

simultaneously passing the exhaust gases from an engine through a multitude of hollow metallic catalyzing elements in said chamber, so that the current of exhaust gas will be split up into a multitude of separate, relatively-fine streams which will heat the catalyzing elements during their passage therethrough, while the mixture of oil

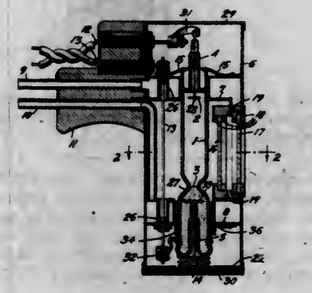
and air will be split into small streams by said elements during its passage through the catalyzing chamber and will be decomposed catalytically by direct contact with the bare, heated metal surfaces of said elements; and then delivering the decomposed mixture into the cylinder of the engine for ignition therein.

1,630,049. PHOTOGRAPHIC SHUTTER. CARL BORNMANN, Binghamton, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed May 16, 1924, Serial No. 713,774. Renewed Mar. 31, 1927. 7 Claims. (Cl. 95—59.)



1. A photographic shutter including blades, actuating means therefor, and a diaphragm having a light defining aperture and an irregular opening and provided with a finger piece, said irregular opening cooperating with said actuating means for controlling the speed setting of said actuating means in accordance with said aperture.

1,630,050. PROCESS FOR THE MANUFACTURE OF UREA FROM CYANAMIDE. JOSEPH BRESLAUER and CHARLES GOUDET, Geneva, Switzerland, assignors to Société d'Etudes Chimiques pour l'Industrie, Geneva, Switzerland, a Company of Switzerland. Filed Jan. 27, 1923, Serial No. 615,375, and in Switzerland Feb. 4, 1922. 3 Claims. (Cl. 260—125.)

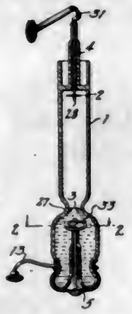


1. A process for the manufacture of urea from cyanamide consisting in treating a solution of cyanamide at a temperature of approximately 70° C. and at a pressure approximating 7 atmospheres by an acid catalyzer in a quantity less than 10% of the quantity of acid necessary for the fixation of the whole urea as a salt of urea.

1,630,051. ELECTRIC LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 12, 1922. Serial No. 551,768. 15 Claims. (Cl. 174—177.)

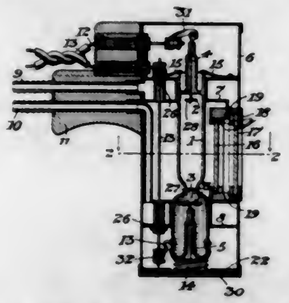
1. A lamp outfit comprising a double wall jacket, a lamp in said jacket, annular extensions of said jacket in proximity to the terminal portions of said lamp, and means for circulating a cooling medium through the jacket and the extensions thereof.

1,630,052. WATER-COOLED LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, a Corporation of New Jersey. Filed Sept. 20, 1923. Serial No. 663,917. 11 Claims. (Cl. 174—177.)



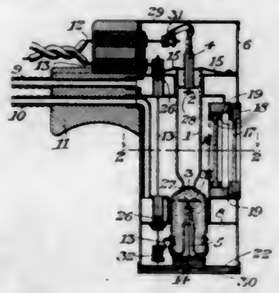
1. A lamp outfit comprising a jacket, a lamp in said jacket, extensions of said jacket in proximity to the terminal portions of said lamp, adjustable means interposed between said lamp and said jacket for controlling the heat conductivity between said lamp and jacket and means for circulating a cooling medium through the jacket and the extensions thereof.

1,630,053. VAPOR LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Original application filed Apr. 12, 1922, Serial No. 551,768. Divided and this application filed Sept. 27, 1923. Serial No. 665,246. 10 Claims. (Cl. 176—42.)



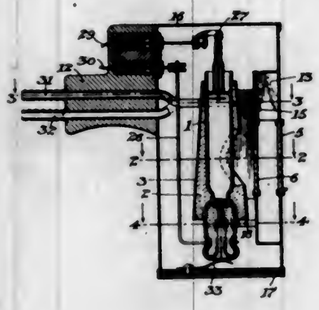
1. A vapor electric arc lamp having an envelope, an anode sealed through the wall thereof, a cathode terminal

sealed through the wall thereof, mercury in said tube at and about said cathode terminal and a stricture in



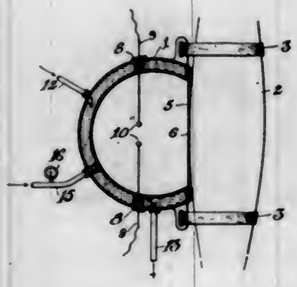
and about the envelope wall at the level of said mercury extending for a length not greater than the diameter of the envelope at said stricture.

1,630,054. WATER-COOLED LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Original application filed Apr. 12, 1922, Serial No. 551,768. Divided and this application filed Oct. 3, 1923. Serial No. 666,285. 8 Claims. (Cl. 174—177.)



1. A lamp outfit comprising a jacket, a lamp in said jacket extensions of said jacket in contact with the terminal portions of said lamp.

1,630,055. WATER-COOLED LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Original application filed Apr. 12, 1922, Serial No. 551,768. Divided and this application filed Dec. 10, 1923. Serial No. 679,809. 10 Claims. (Cl. 174—177.)

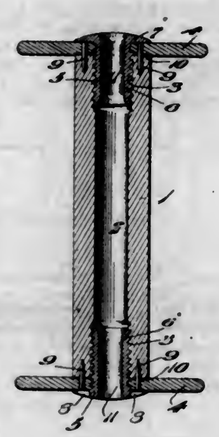


1. A therapeutic lamp housing providing two spaced apart casings and two spaced apart lenses for circulation of a liquid between the casings and between the lenses and a lamp in the inner casing.

1,630,056. WATER-COOLED LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 5, 1924. Serial No. 724,343. 15 Claims. (Cl. 174—177.)

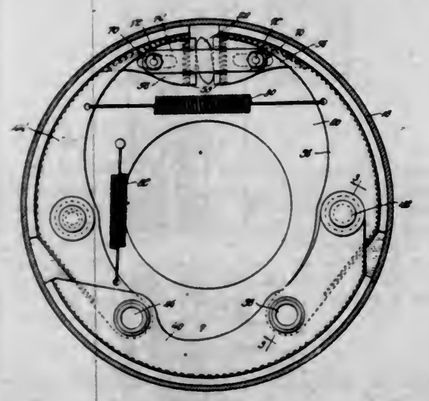
1. In a water cooled lamp, in combination, a lamp holding tube, a water cell, heat conducting means between said tube and said cell, a light passageway between the ends of said tube and light shielding means adjacent the ends of said tube.

1,630,057. THERAPEUTIC LAMP. LEROY J. BUTTOLPH, Grantwood, N. J., assignor to Cooper-Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 29, 1924. Serial No. 752,996. 5 Claims. (Cl. 174—177.)



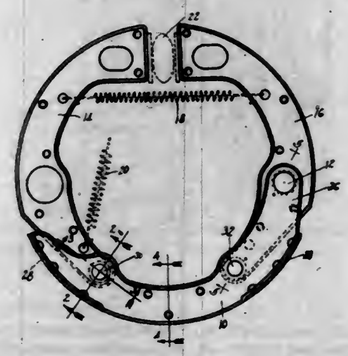
1. A therapeutic apparatus including a holder member having an aperture for application to the part to be treated, a source of ultra-violet light within said holder and means for applying a gas under pressure to the part to treated at the area confined by said opening.

1,630,058. FIBER-HEAD SPOOL. CLARENCE E. CUNDEY, Philadelphia, Pa. Filed May 8, 1924. Serial No. 711,758. 1 Claim. (Cl. 242—124.)



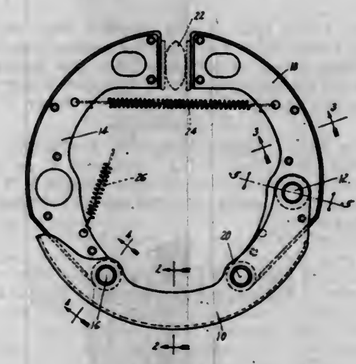
In a spool of the character stated, a tubular barrel having internal threads in the terminal portions of the bore thereof, a removable terminal fiber head at each end of said barrel having a central aperture in alignment with the bore of said barrel, locking pins passing through each of said fiber heads and into the terminals of said barrel, a metallic bearing thimble at each end of said spool having an externally threaded tubular portion extending

through the central aperture in the respective fiber head and extending into and threadedly engaging the internally threaded terminal portions of the bore of said barrel and having an external terminal flange formed integrally with the tubular portion of said thimble over-



hanging and engaging the inner peripheral edge portion of the respective fiber heads to clamp the same endwise to the barrel and overlapping and locking the outer terminals of the respective pins, and a resilient washer interposed between each end of said barrel and the corresponding fiber head.

1,630,059. BRAKE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1925. Serial No. 23,763. 18 Claims. (Cl. 188—78.)

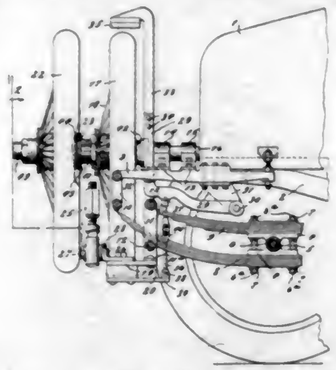


1. A brake comprising three shoes, the central shoe being channel-shaped at least at its ends and the two end shoes extending into the channel of the central shoe to cause the three shoes to overlap.

1,630,060. BRAKE. MONTGOMERY W. MCCONKEY, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1925. Serial No. 60,990. 15 Claims. (Cl. 188—78.)

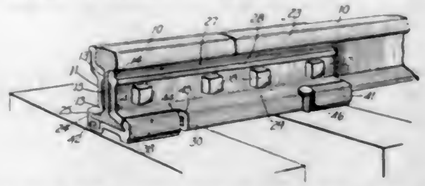
1. A brake comprising, in combination, a central shoe T shaped in section at its center and having spaced flanges at each end, and end shoes, each of which extends between the spaced flanges at one end of the central shoe, beyond the end of the friction face of the central shoe.

1,630,061. BRAKE. LUDGER ELIZE LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1925. Serial No. 60,991. 18 Claims. (Cl. 188—78.)



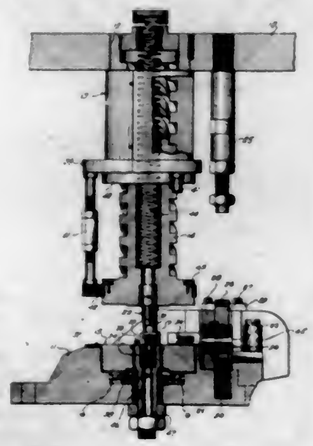
1. A brake including a pair of jointly-operable shoes, one of channel form and the other T-shaped in cross-section and extending a substantial distance into the channel of the first.

1,630,062. VEHICLE. THOMAS J. FAY, Brooklyn, N. Y. Filed Nov. 2, 1923. Serial No. 672,246. 32 Claims. (Cl. 267—18.)



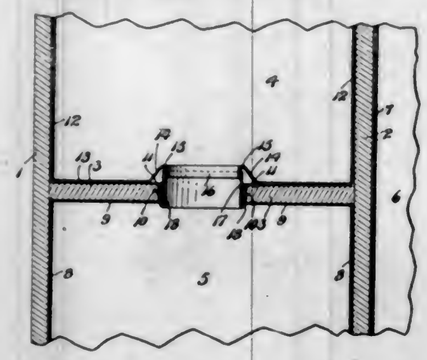
1. In a vehicle having a chassis frame and axle, a pneumatic device supported by the chassis frame, a part moving with the axle and cooperating with said device to yieldingly resist relative movements between the axle and chassis frame, a lever hinged to the chassis frame, and an element moving with the axle and connected to the lever to oscillate it upon relative movements between

the axle and chassis frame, the movements of said lever being resisted by said pneumatic device during the rela-



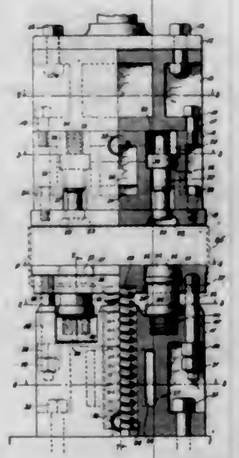
tive movements of the chassis frame and axle which are unresisted by the said part and the pneumatic device.

1,630,063. RAIL JOINT. NED G. FRANKLIN, Independence, Mo., assignor of one-half to I. A. Smith, Independence, Mo. Filed Sept. 20, 1926. Serial No. 136,535. 7 Claims. (Cl. 238—193.)



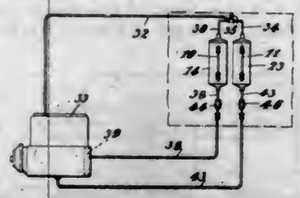
1. In a rail joint, a pair of angle bars, each comprising a base flange and a locking member engaging the base flange of one of said angle bars, said locking member having interengaging, curved, hook-like flanges thereon to interlock said member and said base flange.

1,630,064. METAL-BENDING MACHINE. HUGO FUCHS, New York, N. Y., assignor of one-half to Chauncey M. Sincerbeaux, Jackson Heights, N. Y. Filed Feb. 1, 1924. Serial No. 689,881. 11 Claims. (Cl. 153—40.)



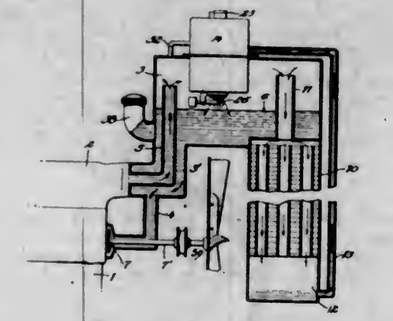
1. In a metal bending device, a rotatable member for holding and bending the work, a worm nut movable toward and from the rotatable member along the axis of rotation thereof, and a worm member separate from the rotatable member and adapted to engage therewith and to be rotated by the movement of the worm nut toward the rotatable member.

1,630,065. REFRIGERATOR-FLUE CONSTRUCTION. HARRY C. LEONARD and WALTER H. WHITTIER, Grand Rapids, Mich., assignors, by mesne assignments, to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1923. Serial No. 681,070. 2 Claims. (Cl. 62—89.)



1. In a refrigerator, a horizontal partition having an opening therethrough, a sleeve extending through the opening and above the partition, a lining over the upper side of the partition having an opening therethrough, the metal surrounding the opening being first raised above the plane of the lining and thence bent downwardly within said sleeve, said sleeve being secured to said down turned portion of the lining, and a lining below the partition having an opening through which said sleeve extends.

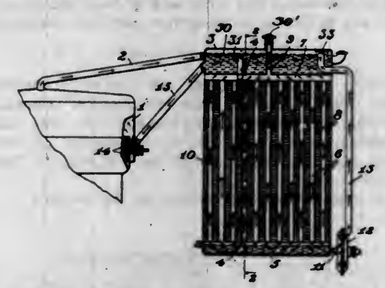
1,630,066. BRICK DIE. JESSE C. MARTIN, Jr., San Francisco, Calif. Filed Aug. 16, 1926. Serial No. 129,448. 9 Claims. (Cl. 25—102.)



1. A brick die having a recess for the formation of a boss upon a brick, a collapsible bottom for said recess and means to press said bottom into the recess for separation of the formed brick from the die surfaces.

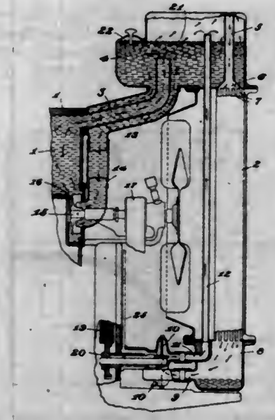
1,630,067. OIL-TESTING APPARATUS FOR MOTOR VEHICLES. FRANK B. MASON, New Providence, N. J., assignor of one-fourth to Frank A. Urner, Scotch Plains, N. J.; one-fourth to Elmer A. Ford, Westfield, N. J.; and one-fourth to Arthur H. Serrell, New York, N. Y. Filed Mar. 26, 1926. Serial No. 97,503. 10 Claims. (Cl. 265—11.)

7. In an apparatus of the class described, a set of receptacles, a corresponding number of liquid containers, means establishing communication for transferring a liquid from each container to a corresponding receptacle until the receptacle is filled and permitting the liquids to then drain from the said receptacles, and means for observing the comparative rates at which the liquids drain from the said receptacles.



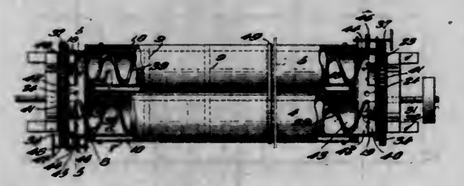
1,630,068. COOLING SYSTEM. WELLINGTON W. MUIR, Lockport, N. Y. Filed Nov. 28, 1921. Serial No. 518,379. 18 Claims. (Cl. 123—174.)

1. The process of cooling internal combustion engines which consists in providing a liquid cooling circuit about the engine having a liquid and vapor chamber at the upper portion, positively drawing the vapor from said chamber downwardly through a radiator to condense the same in a liquid chamber at the base of said radiator and positively returning the liquid from said liquid chamber directly to the top of the liquid and vapor chamber in said first mentioned circuit.



1,630,069. COOLING SYSTEM. WELLINGTON W. MUIR, Lockport, N. Y. Filed Aug. 16, 1922. Serial No. 582,218. 10 Claims. (Cl. 123—174.)

1. In a cooling system for internal combustion engines the combination of a jacket; a tank; a connection between said jacket and tank; a second tank; a connection between said first and second named tanks; a pump; a connection between said pump and said second tank; a connection between said pump and said first named tank; a cooling means located above said second tank having vapor condensing tubes communicating with the latter

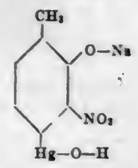


and a second connection including a pump between said first named tank and said jacket, substantially as described.

1,630,070. PROCESS OF AND APPARATUS FOR COOLING INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y. Filed Aug. 16, 1922, Serial No. 582,220. Renewed Apr. 8, 1927. 7 Claims. (Cl. 123—174.)

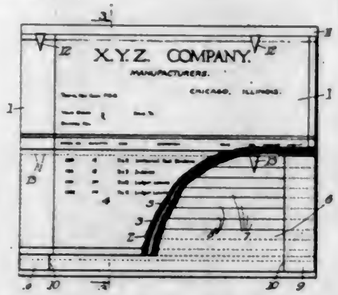
1. In a cooling system for an internal combustion engine the combination of a jacket; a radiator; a tank closed to the atmosphere associated with said radiator; means for passing fluid under pressure from said jacket to said tank; means for passing fluid under pressure from said tank into said radiator; means for drawing fluid from said radiator and forcing it under pressure back into said tank; and means for returning fluid from said tank back into said jacket, substantially as described.

1,630,071. COOKING AND DRYING APPARATUS. CHRISTOPHER OFFENHAUSER, Philadelphia, Pa. Filed Jan. 19, 1924. Serial No. 687,398. 5 Claims. (Cl. 87—13.)



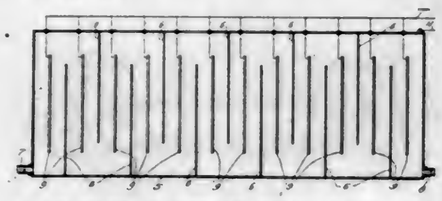
1. In a cooking and drying apparatus, two steam jacketed cylinders, end members forming chambers of communication between said cylinders, conveyor mech-

anism to cause the material being treated to continuously circulate through said casings and chambers, drainage conduits communicating with each of said end chambers, and means to introduce steam into said end chambers.



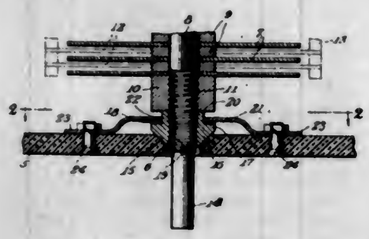
1,630,072. MANUFACTURE OF MERCURI-MONONITRO-ORTHO-CRESOL AND ITS SALTS. GEORGE W. RAIZISS, Philadelphia, Pa., assignor to The Abbott Laboratories, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1923. Serial No. 641,502. 5 Claims. (Cl. 260—13.)

1. A new product represented by the formula



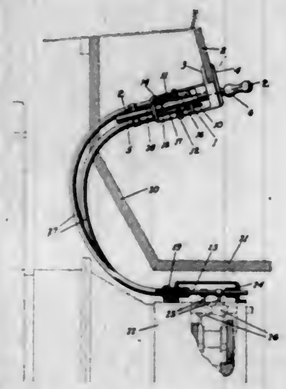
which crystallizes in long prisms, is reddish brown in color, soluble in hot water and in methyl alcohol and insoluble in ether.

1,630,073. BOOKKEEPING FORM. HOWARD W. READ, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Mar. 22, 1924. Serial No. 701,037. 4 Claims. (Cl. 282—29.)



1. In bookkeeping forms, a collective entry sheet, a block of overlapping individual item slips of greater width than a line space on the entry sheet secured together along the side margins of the block and having exposed faces arranged to register with the entry spaces on such entry sheet, and impression transfer means between said entry sheet and said block of slips.

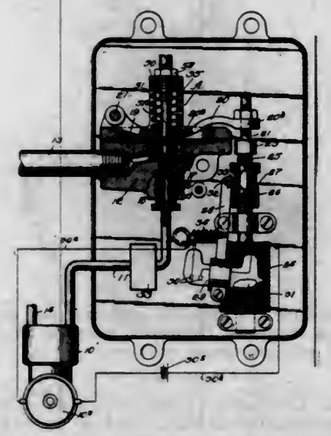
1,630,074. TREATING SLUDGE ACID. FRANCIS M. ROGERS and FRANK V. GRIMM, Whiting, Ind., and GERALD L. WENDT, Chicago, Ill., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Aug. 14, 1924. Serial No. 731,995. 5 Claims. (Cl. 204—24.)



1. The method of removing organic matter from refinery sludge acids which comprises passing an electric current therethrough to form elementary oxygen and hydrogen by dissociation, thereby effecting oxidation of organic matter and causing the same to be raised to the surface of the treated acid by the action of the released gases, and separating the organic matter.

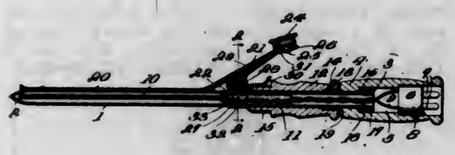
1,630,075. ROTOR-PLATE SPINDLE MOUNTING FOR VARIABLE CONDENSERS. ERNEST ROSS, East Orange, N. J., assignor to U. S. Tool Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed Feb. 23, 1926. Serial No. 89,846. 3 Claims. (Cl. 308—161.)

1. A spindle bearing comprising a support plate through which one end of the spindle projects, a conical metallic sleeve threaded on said spindle and rotatably mounted in the plate, and a spring attached to said support plate, said spring having an opening through which a part of said sleeve extends to press its conical portion into a bearing in the support plate.



1,630,076. HAND-OPERATED GEAR-SHIFT MECHANISM. BENJAMIN F. SCHMIDT, Los Angeles, Calif., assignor to Gillette Schmidt Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed June 17, 1926. Serial No. 116,574. 5 Claims. (Cl. 74—39.)

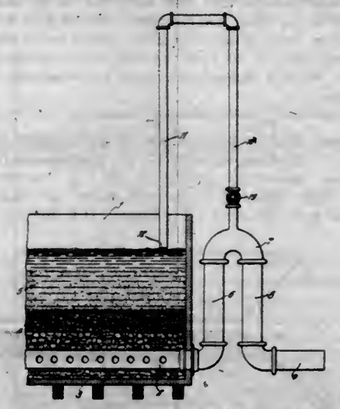
1. In a motor vehicle the combination with the dashboard, motor bulkhead and transmission structure under the floor of the vehicle, said structure including a gear shift fork movable longitudinally of the vehicle; a mechanism for moving said fork including a rigid tubular housing extending from ahead of the dashboard through the bulkhead and down under the floor to a termination adjacent the transmission structure in substantial longitudinal alinement with the fork, a flexible element extending through and closely guided by said housing, means operatively connecting the element with the fork, a shaft extending and movable longitudinally of the vehicle, means for supporting said shaft and the adjacent end of the housing from the dashboard, a handle on said shaft to



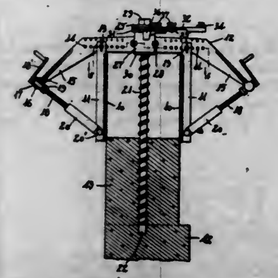
the rear of the dashboard, power increasing means attached to the adjacent end of the element and mounted in said supporting means, and means for operatively connecting the shaft to the power increasing means.

1,630,077. REFRIGERATING APPARATUS. FRANK W. SCHWINN, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,384. 1 Claim. (Cl. 62—4.)

In refrigerating apparatus; an electrically driven compressor; a condenser; an expansion valve; a temperature responsive element exposed to changes in temperature in the compartment cooled by said refrigerating apparatus; and means, controlled by said temperature responsive element, for automatically mechanically controlling said expansion valve in accordance with changes in temperature in said compartment, and automatically electrically controlling the operation of said compressor in accordance with said changes in temperature.



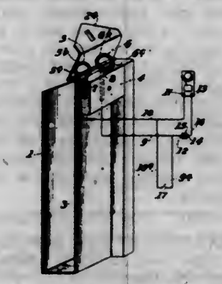
1,630,078. CURLING IRON. ALVA T. SMITH, Winsted, Conn., assignor to The Fitzgerald Mfg. Company, Torrington, Conn., a Corporation of Connecticut. Filed Sept. 17, 1924. Serial No. 738,232. 8 Claims. (Cl. 219—24.)



6. In a curling iron, a shell, a handle mounted on the shell, a tong, a stirrup pivoted to said tong and having a pip thereon adapted to be received in an aperture of the shell, a tong spring, and means in conjunction with said handle to keep said spring under a normal tension to hold said pip in said aperture.

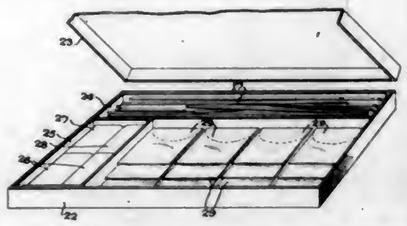
1,630,079. FILTER. JAMES E. SPALDING and ROBERT L. ARCHER, Collinsville, Ill. Filed June 20, 1924. Serial No. 721,169. 13 Claims. (Cl. 210—124.)

1. In a sand bed filter having a bed in which a quantity of liquid is contained, an ascending outlet conduit leading from said bed, and a descending conduit connected with said first conduit at the normal height of the liquid in the bed, and an adjustable vent for admitting the atmosphere above the liquid in said first conduit in order to prevent draining the liquid from said bed.



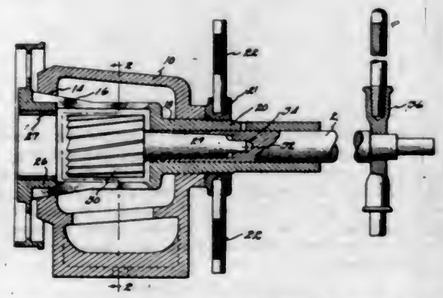
1,630,080. WALL-MOLDING APPARATUS. WALTER THEODOR FELS, New York, N. Y., assignor to Felstone Fireproof Construction Company, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Mar. 17, 1926. Serial No. 95,293. 5 Claims. (Cl. 25—131.)

1. In a wall molding apparatus, a supporting member having a circular head with a diametrical opening, a side plate mounted for swinging movement, a member extending loosely through said opening and having portions bearing against the head to swivel said member in said opening for oscillatory motion, and a member pivotally connected with said plate, said members having a screw connection.



1,630,081. MAIL-BOX COVER-ACTUATED SWITCH. ANTON FLEKSTEIN, Detroit, Mich. Filed Apr. 12, 1926. Serial No. 101,304. 2 Claims. (Cl. 200—57.)

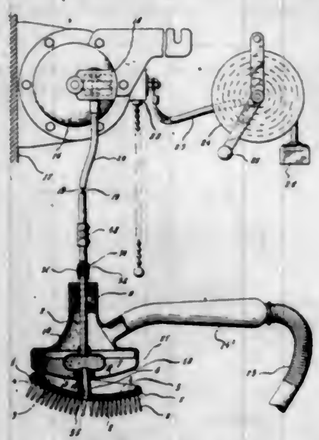
2. In a device of the character described, the combination of a box having a longitudinal depression in its reverse side, an insulating block in said depression ter-



minating substantially flush with the top of said box and having openings therein, spring contacts held between said reverse side and said insulating block, said contacts being bent rearwardly and having free ends adapted to move in said openings, and a cover hinged on said box adapted to open against the rearwardly bent portions of said contacts to form a connection between the latter.

1,630,082. PLANT AND FLOWER MODELING OUTFIT. TOM C. GRAHAM, Albany, N. Y., assignor to The Embossing Company, Albany, N. Y., a Corporation of New York. Filed May 20, 1925, Serial No. 31,585. Renewed Apr. 12, 1927. 4 Claims. (Cl. 35—12.)

1. An outfit for making plant models, comprising a plurality of plant elements of light relatively stiff material, and permanently plastic modeling material for securing the plant elements together in simulation of nature and permitting disassembly of the plant elements for re-use.



1,630,083. REAMING MECHANISM. BURTON C. HINCKLEY, CHARLES J. THOMAN, and GEORGE E. HOLTON, Jackson, Mich., assignors to The Hinckley-Myers Company, Jackson, Mich., a Corporation of Michigan. Filed Feb. 2, 1925. Serial No. 6,234. 4 Claims. (Cl. 77—2.)

2. In a reaming device, a frame having a base provided with a pair of upright standards and a hollow casing supported thereby, a collet mounted within said casing having a tapered split head mounted within a tapered bearing in one wall of the casing and a shank mounted in a concentric bearing in the opposite wall of the casing, a reaming tool having a cutting head mounted within the work holding head of the collet and a shank extending through and having a bearing in the collet shank, a handle rotatably threaded on the collet shank to move the same longitudinally relative to the casing, and means engaging the shank of the reaming tool to advance the same through the work holding head of the collet and the work carried thereby.

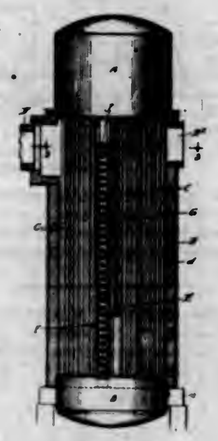
1,630,084. CLEANING DEVICE. JOHN HOLTZMAN, New York, N. Y. Filed Nov. 23, 1921. Serial No. 517,409. 5 Claims. (Cl. 15—129.)

1. In a cleaning device the combination of a container having holes for the discharge of a fluid, means to discharge the container with a fluid, a second container rotatably mounted within the first container, a tubular

brush below the first container, and connecting means between said brush and the second container for rotating the brush with the second container.

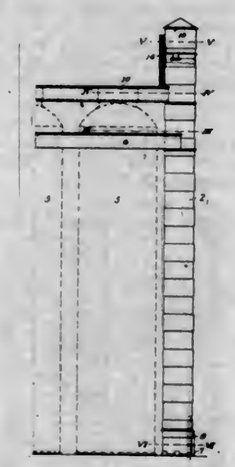
1,630,085. LINOLEUM FLOOR COVERING AND PROCESS OF MANUFACTURE. CHARLES F. HUMPHREYS and JOHN CLARENCE MCCARTHY, Lancaster, Pa., assignors to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1925. Serial No. 74,731. 7 Claims. (Cl. 154—26.)

3. In the process of making molded inlaid linoleum, the steps which consist in applying to a backing a layer formed of granular linoleum mixes so disposed as to form the desired inlaid color pattern, consolidating the granular linoleum material into a sheet consisting of varicolored inlays having irregular lines of juncture, and thereafter indenting certain of the inlays, the marginal lines of the indentations substantially coinciding with the lines of juncture between the depressed and undepressed inlays.



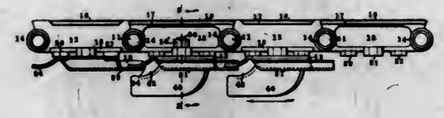
1,630,086. WRINGER ROLL. GEORGE R. KELTIE, Woonsocket, R. I., assignor to American Wringer Company, Inc., a Corporation of Rhode Island. Filed Jan. 6, 1927. Serial No. 159,378. 3 Claims. (Cl. 68—33.)

1. In a wringer roll, a shaft, a cylindrical rubber body on the shaft, members encircling the shaft and bodily embedded within the rubber body and close to the end face of the body, and projections upon the members at a distance from the shaft and disposed substantially parallel thereto and terminating substantially in the end face of the body.



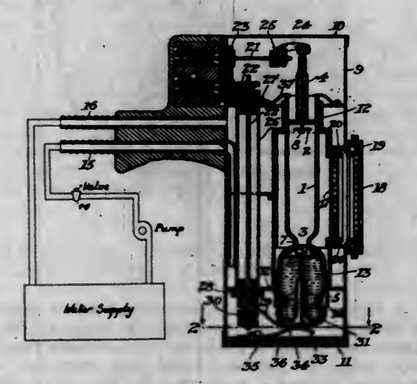
3. As a new article of manufacture, a bearing member for a wringer roll, comprising a collar, a disk upon the collar, a flange upon the disk parallel with and directed oppositely to the collar, and projections on the flange extended parallel to the cylindrical surface of the flange and beyond the free end of the latter.

1,630,087. SUPERHEATER BOILER. WALTER FRANCIS KEENAN, Jr., Pelham, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1925. Serial No. 23,783. 6 Claims. (Cl. 122—476.)



1. The combination with a boiler comprising a vertical shell and vertical water tubes and a centrally disposed baffle providing up and down heating gas passes, of a vertical row of horizontal superheater elements parallel to and alongside said baffle and having their ends extending through said shell and vertical inlet and outlet headers external to said shell and to which the opposite ends of said elements are connected.

1,630,088. ELEVATOR TOWER FOR BLAST-FURNACE STRUCTURES. JULIAN KENNEDY, Pittsburgh, Pa. Filed Apr. 4, 1925. Serial No. 20,753. 7 Claims. (Cl. 266—1.)

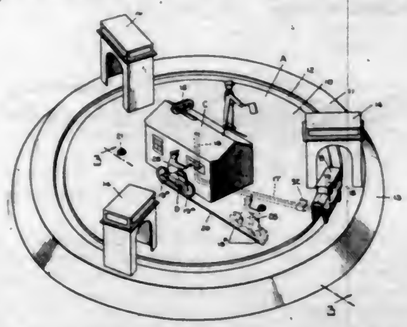


1. The combination with a blast furnace structure, of an auxiliary vertical tubular elevator tower having a bracing connection with the furnace and closed throughout its length and having openings at its bottom and top, and having a gas-excluding door for at least one of said openings, substantially as described.

1,630,089. TRACK CHAIN FOR TRACTORS. THOMAS C. LEAKE, New York, N. Y., assignor to Bear Tractor Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1921. Serial No. 506,639. 9 Claims. (Cl. 305—10.)

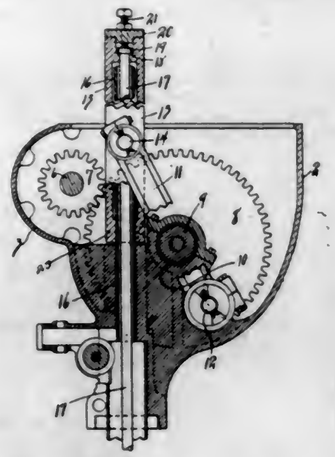
4. In a flexible traction tread, in combination, a link having a pair of side plates adapted for articulation with the side plates of an adjacent link, a tread plate, spaced protuberances arranged in triangular formation and rising from an edge of one of said side plates and together providing a seat for said tread plate, complementary lug formations on said tread plate and on certain of said protuberances and including a projecting lug and complementary seat adapted to interengage for positioning the tread plate on the side plate in operative position and for resisting bodily edgewise movement of the tread plate in any direction, another of said protuberances being provided with an opening adapted to be brought into registry with an opening in said tread plate by assembly of said lug and seat, and a securing bolt seated in said registering openings.

1,630,090. ELECTRIC-LAMP OUTFIT. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 20, 1922. Serial No. 576,256. 5 Claims. (Cl. 174—177.)



1. A lamp outfit comprising a jacket, a lamp in said jacket, extensions of said jacket in proximity to the terminal portions of said lamp, means for circulating a cooling medium through the jacket and the extensions thereof and means in said circulating means for varying the rate of flow of said cooling medium.

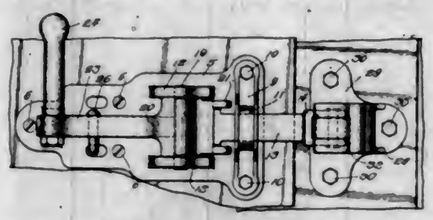
1,630,091. ROUNDABOUT TOY. LOUIS MARX, Brooklyn, N. Y. Filed July 19, 1926. Serial No. 123,288. 14 Claims. (Cl. 272—31.)



10. In a device of the class described, a vehicle movable in a predetermined path, a motor operating said vehicle, a figure normally held in a retracted position and

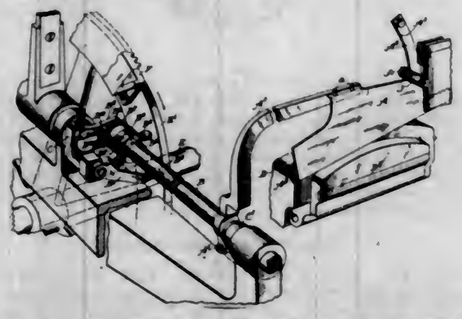
movable into a position adjacent the path of movement of said vehicle, mechanism for stopping the movement of said vehicle and means operable for releasing said figure

and causing the same to move into cooperation with said vehicle and for simultaneously actuating the stop mechanism to stop the movement of said vehicle.



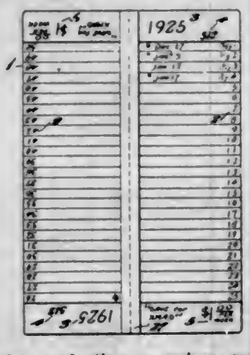
1,630,092. PUMPING MECHANISM FOR WINDMILLS. OSCAR E. MCCASKILL, Fort Worth, Tex. Filed Sept. 2, 1926. Serial No. 133,242. 5 Claims. (Cl. 184—4.)

1. In a windmill mechanism provided with a casing and a vertically movable piston rod; a crosshead for said piston rod, a tubular guide for said crosshead rigid with said casing and having a liquid tight connection therewith and forming a passageway for the piston rod and forming a guide for a crosshead and preventing lubricating material from touching said piston rod, and means for lubricating said crosshead.



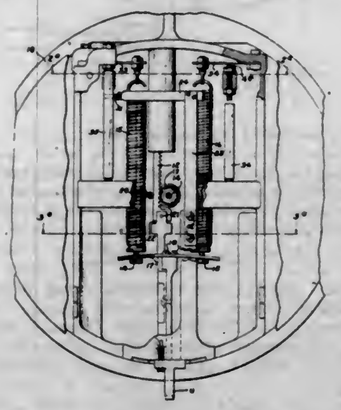
1,630,093. LATCH MECHANISM. STEPHEN E. MCPARTLIN, Chicago, Ill. Filed Feb. 4, 1925. Serial No. 6,742. Renewed Apr. 4, 1927. 1 Claim. (Cl. 292—174.)

Latch mechanism comprising a support, a latch-bar moveable on said support, a keeper for engagement by said latch-bar, a spring urging said latch bar into engagement with said keeper, a lever pivotally supported between its ends on a vertical axis, said latch-bar presenting a surface facing toward said keeper for engagement with one end of said lever, said lever when operated actuating said latch-bar against the resistance of said spring and out of engagement with said keeper, the other end of said lever being adapted to be grasped by the operator for actuating it, said latch-bar being adapted to move in



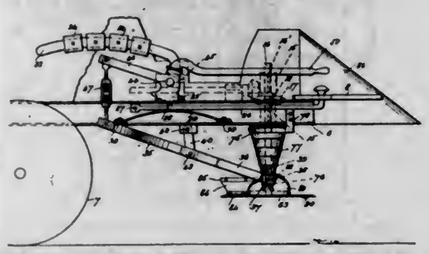
opposition to its spring when riding against said keeper without actuating said lever, and a push rod movable crosswise of the path of movement of said latch-bar and engaging said lever for actuating the latter.

1,630,094. SLUG-CASTING MACHINE. ISIDORE T. REMAS, Woodhaven, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,196. 15 Claims. (Cl. 199—62.)



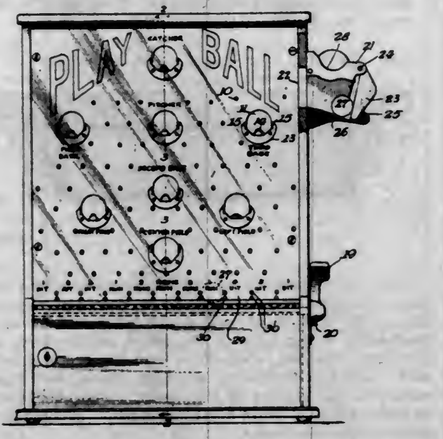
1. In a slug casting machine, the combination of a melting pot having a mouthpiece, a wiper blade arranged to swing back and forth across the face of the mouthpiece, guiding means to support the blade against lateral displacement during its movements, and means for imparting the to-and-fro movements to the wiper blade.

1,630,095. SAVINGS SYSTEM. WILLIAM A. RINGLER, Philadelphia, Pa. Filed Apr. 18, 1925. Serial No. 24,005. 3 Claims. (Cl. 283—57.)



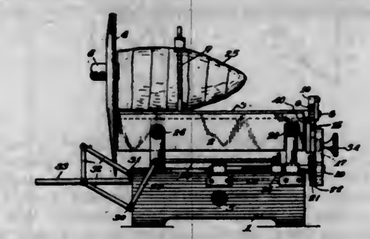
1. Means for conducting a savings system, comprising a deposit receipt in the form of a folded strip having on one outer face a column of consecutively numbered spaces and on its other outer face a column of consecutively numbered spaces reading in a reverse direction to the numbers of the first column, and a bank filing card having on one face columns of consecutively numbered spaces, one column of which reads in a reverse direction to its other column, whereby when one edge of the bank card is inserted and nested in the folder one of its columns will be covered and the spaces in its other column will register with correspondingly numbered spaces of the deposit receipt to enable the stamping of duplicate dates, and when the bank card is reversed and its opposite edge inserted into the folder, only the numbered spaces reading in a reverse direction will be visible and will register with the visible correspondingly numbered spaces of the deposit slip to enable the stamping of duplicate dates.

1,630,096. SCALE. JOHN W. ROCKEFELLER, Jr., New York, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1926. Serial No. 103,775. 14 Claims. (Cl. 265—69.)



1. In a scale, the combination with a load support, of means opposing the load on said support, an indicator having an operative connection with said load support, and temperature responsive means between said opposing means and the load support for compensating for any tendency of the indicator to move from its no-load position with temperature change.

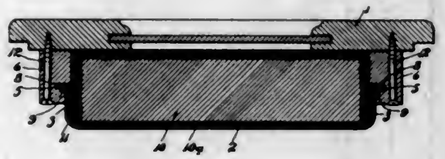
1,630,097. SUGAR-CANE HARVESTER. HENRY O. SCRANTON, Jeanerette, La. Filed June 19, 1925. Serial No. 38,191. 14 Claims. (Cl. 56—102.)



1. In a harvester, a supporting frame, a vertical driving shaft journaled in the frame and provided with a cutter, a pivoted lever for raising and lowering the cutter, a toothed segment pivoted to the frame and provided with a rearwardly projecting arm, means for connecting the said arm with the pivoted lever, an operating lever connected to the said segment and projecting forwardly of it, and a spring-controlled catch lever pivoted to the frame and provided with a tooth which normally engages with the said segment, the free end portions of the said levers being arranged conveniently adjacent to each other.

1,630,098. AMUSEMENT DEVICE. PERCY C. SMITH, Chicago, Ill., assignor to John F. Meyer, Chicago, Ill. Filed Mar. 11, 1926. Serial No. 93,844. 2 Claims. (Cl. 273—138.)

1. An amusement device of the class described comprising a cabinet having a glass front, a panel behind said front and having a plurality of openings therein, a frame fastened to the panel at the bottom of each opening, projections on said frame at the bottom and at the sides of the opening, the side projections extended outwardly and engaging the glass front to direct the token into proper registration with said opening, the bottom of the opening in the panel being inclined inwardly and downwardly and the bottom projection of the frame being inclined to correspond with the bottom of the opening, a token chute on the cabinet, and a snapper arm adapted to be operated to propel the token into the space between the glass front and the panel at the top thereof.

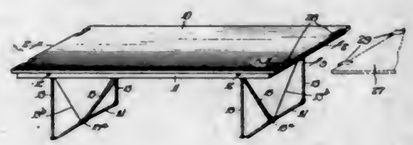


1,630,099. SLICING MACHINE. WILHELMUS ADRIANUS VAN BERKEL, Rotterdam, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Nov. 11, 1926, Serial No. 147,665, and in Germany Oct. 10, 1925. 6 Claims. (Cl. 146—94.)

4. In a slicing machine, a support for material to be sliced, means for periodically feeding said support to bring portions of said material into position to be sliced, said feeding means being adjustable to vary the thickness

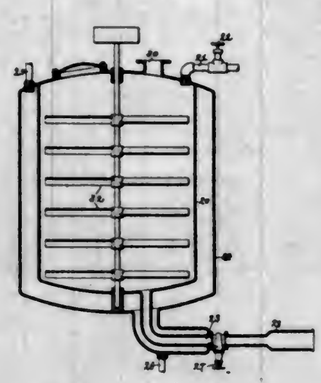
of slices, a slice receiver, adjustable means for shifting said receiver to accommodate additional slices as they are formed, and connection between the adjustable means for feeding said material support and the adjustable means for shifting said slice receiver to effect corresponding adjustments of said feeding means and said shifting means so that the movement of said slice receiver will be commensurate with the thickness of slices.

1,630,100. REFRIGERATOR DOOR. WALTER H. WHITTIER, Grand Rapids, Mich., assignor, by mesne assignments, to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1926. Serial No. 80,482. 5 Claims. (Cl. 20—35.)



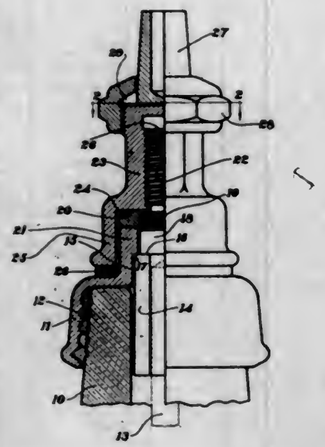
1. In a construction of the class described, a door panel, a border frame adapted to be secured to the inner side of the door panel, said frame being grooved on its inner sides, a metal facing member of pan like form telescopically arranged interiorly of said frame and provided with out-turned flanges at the edges thereof, said flanges seating in the grooves of the frame, and heat insulation material disposed between said door panel and the lining and surrounding frame.

1,630,101. RUSTPROOFING OIL. ROBERT E. WILKIN, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Mar. 13, 1925. Serial No. 15,357. 2 Claims. (Cl. 134—1.)



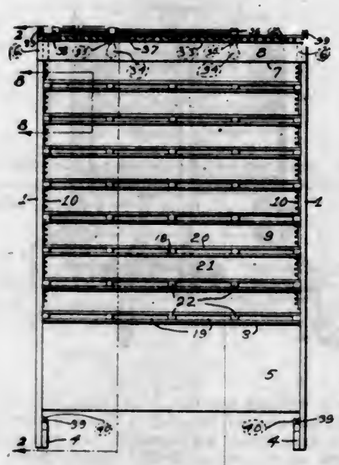
1. The method of protecting ferrous metal surfaces against rust and corrosion which consists in applying to the surface thereof a thin film of a hydrocarbon oil, heavier than gas oil, containing upwards of 3% of soaps of oil soluble sulfonic acids derived from the treatment of petroleum oils with strong sulfonic acid.

1,630,102. FOLDING TABLE. ARNOLD W. ZIMMERMAN, Chicago, Ill. Filed Sept. 14, 1925. Serial No. 56,172. 2 Claims. (Cl. 45—11.)



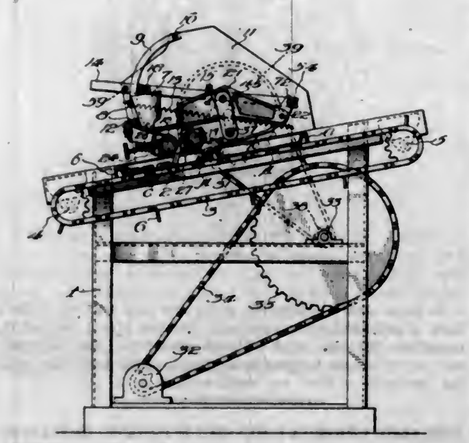
1. In a folding table, the combination of a top, latch means on the under side of said top, a plurality of table legs pivoted to said top and connected in pairs at the bottom thereof by bowed base members, a rigid brace rod attached to each of said base members, said latch means comprising metallic straps, each of said straps having one end bent and apertured and receiving the free end of one of the brace members and having the other end bent to form a spring adapted to engage said brace member to hold it in engagement with the first-mentioned end when the legs are in table-supporting position.

1,630,103. CELLULAR BODY OF ASPHALT AND METHOD OF PRODUCING THE SAME. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1926. Serial No. 147,112. 8 Claims. (Cl. 18—47.5.)



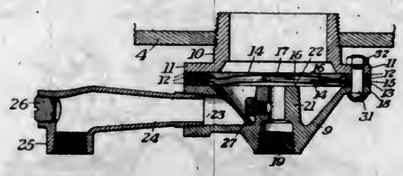
1. The method of treating asphalt to convert it from a non-cellular into a cellular condition, which consists in subjecting the non-cellular body to external pressure of a gas soluble in asphalt, and then reducing the external pressure upon the asphalt to permit the gas within the asphalt body to form bubbles therein.

1,630,104. CONDUCTOR TERMINAL FOR BUSHINGS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 2, 1922. Serial No. 579,135. 10 Claims. (Cl. 173—353.)



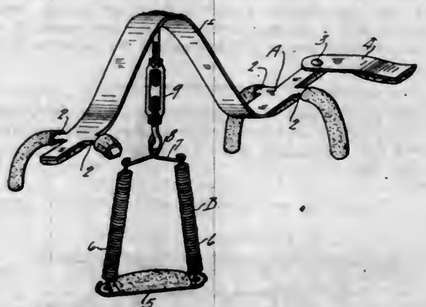
1. An insulator bushing having a conductor extending therethru, differential threads of the same direction on said conductor and a pair of holding members meshing respectively with the different threads on said conductor to prevent removal of one of said members by removing the other.

1,630,105. RACK. THOMAS THEODORE BERNARD, St. Louis, Mo. Filed June 29, 1925. Serial No. 40,433. 5 Claims. (Cl. 211—14.)



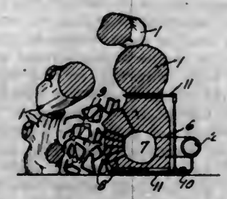
1. A rack of the character described comprising a series of shelves disposed at different heights and provided with respective flanges on their forward edges, some of the flanges being vertical transversely and others being inclined from a vertical position so as to present their respective outer faces approximately at a normal to the line of sight of an observer.

1,630,106. METHOD OF AND MACHINE FOR MOLDING ROLLS. HENRY S. BILDERBACK, Elk City, Okla., and CHARLES A. FRANKE, Little Rock, Ark. Filed Sept. 14, 1925. Serial No. 56,119. 13 Claims. (Cl. 107—8.)



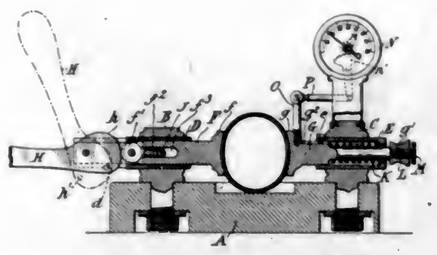
1. The method of forming a roll or the like having a parting therein, which consists in rolling out a piece of dough and at the same time forcing into it, between the rolled faces, a member partially to divide the same.

1,630,107. GAS STEAM RADIATOR. GEORGE W. BLACKMORE, Edgewood, Pa., assignor to Automatic Gas Steam Radiator Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1926. Serial No. 150,746. 6 Claims. (Cl. 236—26.)



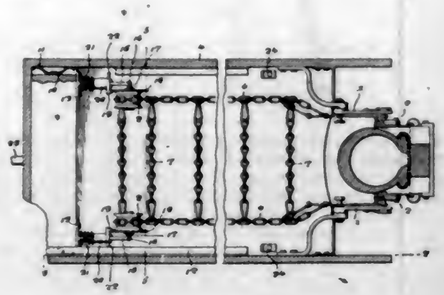
1. A pressure valve for radiators and the like, including a pair of flexible metal disks, a separating washer between the disks, a flexible arm on the washer, a button on the arm of a thickness substantially equal to the spacing between the disks, and a supporting structure for the disks.

1,630,108. SURGICAL OR ORTHOPEDIC APPLIANCE. JOHN BUCKOWITZ, St. Louis, Mo. Filed Feb. 27, 1926. Serial No. 91,116. 2 Claims. (Cl. 128—85.)



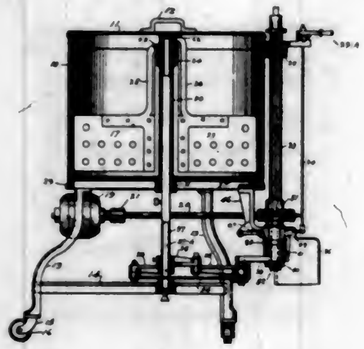
2. A surgical or orthopedic appliance including a rigid brace bowed intermediate its ends, adapted for application upon the body in operative location relatively to a limb and a joint thereof, and a sling comprising a carrier connected at an end to the brace at the crown of its bow, a pair of spaced elastic springs having connection at an end with the free end of the carrier, and a seat having connection with the free ends of the springs and adapted for engagement with the limb at said joint.

1,630,109. RADIANT GAS LOG. DEAN CHANDLER, London, England, assignor to South Metropolitan Gas Company, London, England. Filed Oct. 11, 1926, Serial No. 140,955, and in Great Britain Mar. 19, 1926. 2 Claims. (Cl. 126—92.)



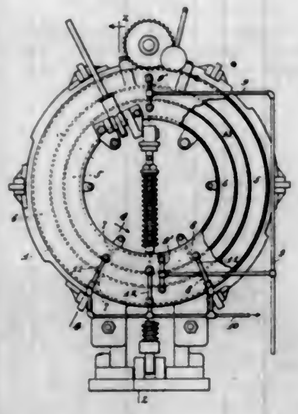
1. In a radiant gas log device, means for introducing through said log a mixture of gas and air to produce non-luminous flames and means for introducing through said log gas unmixed with air which is burned at points adjacent the non-luminous flames to produce luminous flames.

1,630,110. SQUASH-BALL TESTER. PHILIP GILLETT COLE, Forest Hills, N. Y., assignor to A. Schrader's Son, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 30, 1925. Serial No. 26,905. 5 Claims. (Cl. 73—111.)



1. A device of the character described, having means for deforming by compression an inflated member, comprising a plunger which is movable a predetermined distance in the direction of compression of the member, spring-pressed means exterior of the member adapted to aid the compressing action and to be moved because thereof, and a gauge operable by the movement of said spring-pressed means for indicating the pressure within the member.

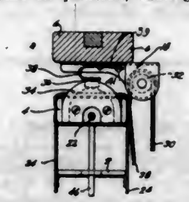
1,630,111. TIRE-CHAIN APPLIER. EARL E. CRONENWETH, Glendale, Calif. Filed May 17, 1924. Serial No. 714,119. Renewed Nov. 15, 1926. 3 Claims. (Cl. 152—14.)



1. In combination with an automobile having means on the drive wheels thereof to engage with and to fasten there-around the ends of anti-skid chains, and housings disposed below the running boards having angle pivotally supported means on the sides thereof connected to one of the end links of the anti-skid chains, in combination with means for bodily moving the housings to arrange first one end of the anti-skid chains to engagement with the means on the wheels, and thereafter on the turning of said wheels to wind the chains around the wheels and to bring the second ends thereof into engagement with the said means on the wheels; of means for holding and guiding the chains in the housings, comprising each a follower block, frictional means between the ends of the block and the sides of the housing, rollers pivotally associated with the followed block, means holding the rollers at right angles to the follower block to arrange the same in a position to receive the side elements of the anti-skid chain therearound, and means for releasing said holding means to permit of the swinging of the rollers and the movement of the chain therefrom prior to the arrangement of the last side links on the wheel.

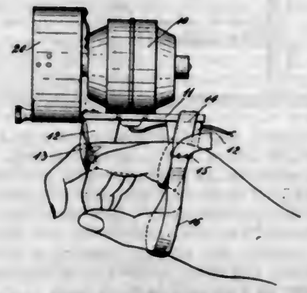
1,630,112. WASHING MACHINE. JOHN M. DEAGLE, Cataract, Ontario, Canada. Filed May 24, 1922. Serial No. 563,434. 6 Claims. (Cl. 259—132.)

1. In a washing machine, a circular tub, two paddle blades reciprocatingly rotating in opposite directions and having a fixed arcual displacement, two concentric vertical shafts rigidly mounting said blades, means adapted for rotatably supporting said shafts, and means adapted for actuating said shafts.



1,630,113. TIRE-VULCANIZING MOLD. PETER DE MATTIA, Passaic, N. J., assignor to De Mattia Brothers, Inc., Garfield, N. J., a Corporation of New Jersey. Filed Sept. 8, 1926. Serial No. 134,279. 2 Claims. (Cl. 18—38.)

1. In a steam jacketed mold for vulcanizing rubber tires a plurality of concentric, circular steam chambers, partitions dividing each of such chambers into independent sections and independent steam inlets and independent drainage outlets for each section.



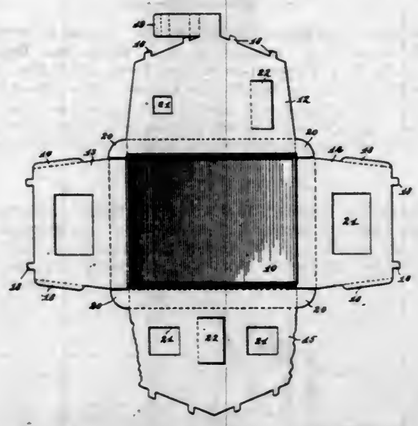
1,630,114. VENETIAN BLIND. WALTER E. DUNCANSON, New York, N. Y., assignor to The J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed July 7, 1925. Serial No. 41,944. 17 Claims. (Cl. 156—17.)

13. A Venetian blind comprising a tilting bar, slats connected with the tilting bar, means for pivotally supporting the tilting bar, cords connected with the tilting bar for tilting the same, and a brake for the tilting bar for holding the same in position, arranged to vary the

braking effect to compensate for the variations in leverage produced upon pulling the tilting cords with the bar in different positions.

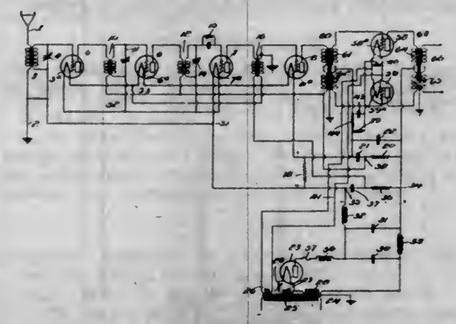
1,630,115. MASSAGE VIBRATOR. LOUIS JOSEPH DUPREY, Dorchester, Mass., assignor of one-half to Hubert S. James, Brookline, Mass. Filed Sept. 23, 1925. Serial No. 58,075. 2 Claims. (Cl. 128—35.)

1. A massage vibrator comprising in combination an electric motor, a rigid shaft for said motor, an arm rigidly attached directly to said shaft at right angles thereto, a weight, means for securing said weight to said arm in adjusted radial position to regulate the degree of vibration, and means for applying said motor to the back of the operator's hand.



1,630,116. APPARATUS FOR TESTING ELECTRIC CIRCUITS. WILLIAM ELMENTHALER, Cleveland, Ohio. Filed Aug. 16, 1923. Serial No. 657,681. 8 Claims. (Cl. 175—336.)

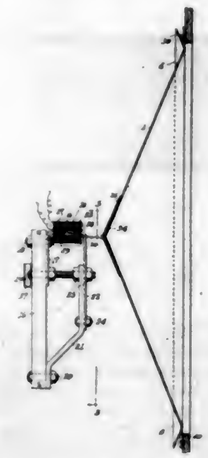
1. An apparatus of the character described, including, a sleeve and a winding thereon, a base abutting one end of said sleeve, a washer abutting the other end of said sleeve, an armature supported on said base, a core having a head on one end thereof and threaded into said base at the other end thereof, and said washer and said base held against said sleeve by said head and the threaded engagement between said base and said core.



1,630,117. COMBINATION CANDY BOX AND TOY HOUSE. DAVID C. FAULKNER, New York, N. Y., assignor to The Moore Press, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,314. 2 Claims. (Cl. 46—37.)

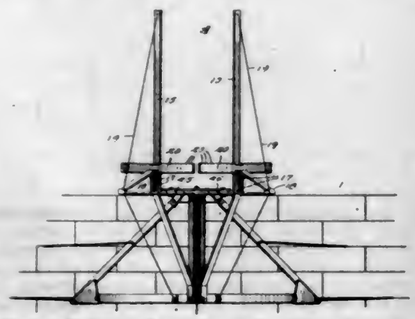
1. A candy box and toy house, comprising a rectangular blank having an extension at each side and having score lines at the junction of the extension with the body portion to permit the extensions to be folded to form a box body and the walls of a house, said extensions having score lines to permit them to be folded over the box body and provided with tabs at their edges and with openings representing doors and windows when extended to form walls of the house, one of the extensions being provided at the center of its outer edge with an angular

flap adapted to be folded to represent a chimney, and a second blank having a score line to permit it to be folded to overlie the extensions and to rest on the upper edges of the said extensions to form a roof, said roof blank having openings to receive the tabs of the said extensions and having at the point of folding an opening through which the angular chimney flap projects.



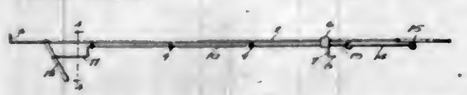
1,630,118. ELECTRON-TUBE AMPLIFYING APPARATUS. ROY S. FISHER, Philadelphia, Pa., assignor to Timmons Radio Products Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 6, 1925. Serial No. 41,635. 7 Claims. (Cl. 179—171.)

1. An amplification system comprising in combination a plurality of electron tubes each having a cathode, an anode and a control electrode, an input circuit for each of said tubes including said cathode and control electrode, an output circuit for each of said tubes including said anode and cathode, means interlinking the output circuit of each of said tubes with the input circuit of a succeeding tube, circuit connections to a source of alternating current, means for rectifying said current, a resistance net-work, connections including a filter system between said resistance net-work and said rectifying means, a pair of electron tubes having divided input circuits coupled with the output circuit of the last electron tube of the series, a series circuit including the cathodes of said first



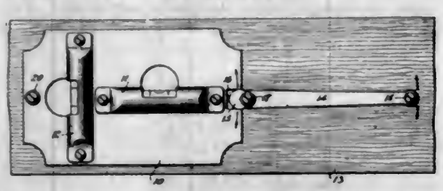
mentioned electron tubes and a portion of said resistance network in shunt with the space discharge path of said pair of electron tubes, connections for heating the cathodes of said pair of electron tubes from alternating current, and means connected in series with the control electrodes of said pair of electron tubes for eliminating the hum of alternating current in said receiving system.

1,630,119. TELEPHONIC SPEAKER. CLYDE J. FITCH, Brooklyn, N. Y., assignor to C. J. Fitch, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 20, 1926. Serial No. 96,153. 19 Claims. (Cl. 179—119.)



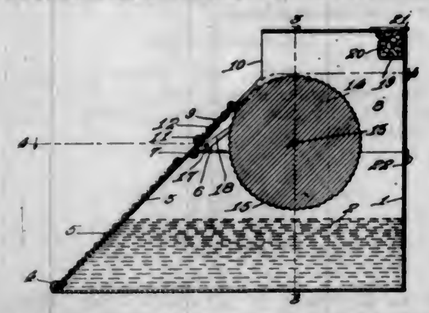
1. In combination, a permanent bar magnet, a polar projection extending from one end of said magnet, a rigid magnetic bracket secured to the opposite end of said bar magnet, a yieldable magnetic strip secured to said rigid bracket and having a polar projection opposed to the first polar projection, a magnet winding associated with said polar projections and a sound reproducing member connected with the flexibly supported polar projection.

1,630,120. COMBINATION GUIDE. CHARLES D. FREY, Charlotte, N. C. Filed Aug. 18, 1926. Serial No. 129,998. 8 Claims. (Cl. 33—85.)



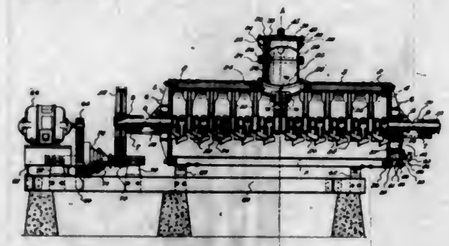
1. A device of the class described having upper and lower angle brackets to engage the corners of a wall, uprights securing said brackets together, means carried by the upper bracket to rest on the wall and support the device, said uprights having laterally offset portions, bars rising from said portions, and means carried by said bars to hold leads.

1,630,121. HOE. AMOS B. GARRETT, Tyler Woods, Pa. Filed Nov. 30, 1923. Serial No. 677,924. 2 Claims. (Cl. 15—104.16.)



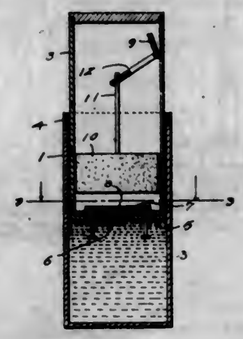
1. In a hoe of the class described, a bar, a blade hinged to one end of the bar, a rod, means for slidably mounting the rod alongside of the bar, links at one end of the rod, said links being connected to the blade, and a lever pivoted at one end to the bar and intermediate its ends to the rod all in the manner and for the purpose specified.

1,630,122. SPIRIT LEVEL. VICTOR EDWARD IVARSON, New Rochelle, N. Y. Filed Nov. 24, 1925. Serial No. 71,195. 1 Claim. (Cl. 33—214.)



In a level, a base plate having a rectangularly shaped notch therein at one end, means at the other end whereby to pivotally mount said plate on a level body, a lever, means adapted to fulcrum the same pronouncedly nearer one end than the other end to provide a longer lever arm and a shorter lever arm, said shorter arm being provided with a rounded end portion cooperating with the sides of the notch, and means adapted to detachably secure the longer arm to the level body.

1,630,123. MOUSE TRAP. FRED KESEL and GORDON NICHOLS, Honeoye Falls, N. Y. Filed Dec. 10, 1926. Serial No. 153,933. 1 Claim. (Cl. 43—71.)



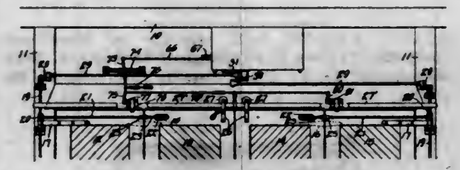
A mouse trap including a liquid receptacle having an inclined front, a frame thereon, a wire mesh having its edges secured in the frame, a top hingedly secured to the front of the receptacle and having depending flanges to embrace the sides and rear of the receptacle, said top having its front at the upper portion thereof open and the lower portion arranged at the same angle as the front of the receptacle, a frame on the closed front of the top, a mesh having its edges secured in said frame, a corrugated cylinder journaled in the top, and of a size to be projected above the closed front of the top, and partly into the receptacle, a horizontal partition between the closed front of the top and the cylinder, pivotally mounted dogs engaging the cylinder for holding the same from turning in one direction, and a flanged bait box removably received in the rear upper corner of the top and having a reticulated outer face.

1,630,124. COOKER. WILLIAM LAABS, Milwaukee, Wis., assignor to The Allbright-Nell Company, Chicago, Ill. Filed Mar. 20, 1926. Serial No. 96,314. 13 Claims. (Cl. 87—13.)

1. A pressure cooker comprising a drum including two open ended cylinders forming a jacket between them and having reinforced heads covering the ends of the jacket and cylinders, brackets integral with said heads extending in opposite directions endwise of the drum, horizontal shelves supported by said brackets and substantially spaced from said heads, a shaft extending longitudinally through said drum and journaled in bearings supported on said shelves, agitators secured to said shaft, stuffing boxes separate from the heads having portions projecting substantially through openings in said heads and adapted to provide packed pressure tight joints between said shaft and each of said heads, said openings being appreciably larger in diameter than the portions of the stuffing boxes projecting thereinto, means to rotate said shaft, means to supply steam to said jacket, and means to lead away vapors from said drum.

1,630,125. SHOCK ABSORBER FOR VEHICLE SPRINGS. JAMES T. LENN, Newburgh, Ind. Filed July 3, 1926. Serial No. 120,325. 3 Claims. (Cl. 188—88.)

1. A shock absorber for vehicle springs, comprising a cylinder containing a liquid, a hollow cylindrical plunger operating through an open end of said cylinder and provided with an opening communicating with said cylinder, a valve to seat in said opening and having an opening therethrough, a vent valve in said plunger, and float controlled means for actuating said vent valve.



1,630,126. CAP OR SOCKET FOR INCANDESCENT ELECTRIC LAMPS AND THE LIKE. ANTOINE JEAN BAPTISTE MARSAT, Verrieres-le-Buisson, France. Filed Jan. 26, 1925, Serial No. 4,849, and in France Feb. 6, 1924. 2 Claims. (Cl. 176—32.)

1. In electric incandescent lamps and the like, a plug in two parts, the interior one being fixed with respect to the bulb and having a spherical part, whereby the parts can be inclined in all directions to one another, the exterior one being cylindrical and carrying means by which

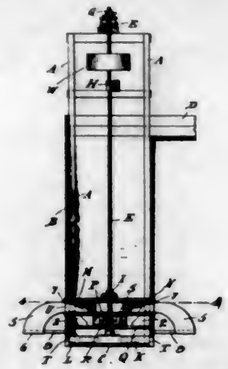
it may be secured in position, the exterior part having openings adapted to receive the solder or brazing mixture for connecting the exterior part with the interior part.

1,630,127. ELECTRIC DOOR OPENER. CHARLES A. MARTINDALE, Anderson, Ind., assignor to The Reliable Machine Company, Anderson, Ind., a Corporation of Indiana. Filed Jan. 30, 1926. Serial No. 85,039. 9 Claims. (Cl. 268—63.)

1. The combination of a door frame, a door section hinged thereto, a track, a door section slidably connected to said track, hinges connecting the door sections, a rockarm at the outer side of the door extending at an angle to the plane of the door, a link connecting said rockarm to the second-named door section, a second rockarm rigidly connected to the first, a motor operatively connected to the second rockarm, a normally open circuit controlling the motor, and a manually operable switch in said circuit, substantially as set forth.

1,630,128. INCANDESCENT LAMP. OSCAR V. MAUREE, East Cleveland, Ohio. Filed July 17, 1925. Serial No. 44,365. 3 Claims. (Cl. 176—166.)

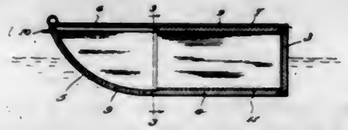
1. An incandescent lamp bulb having a filament consisting essentially of tantalum and an atmosphere consisting predominantly of argon and containing oxygen and nitrogen only in quantities too small to measure.



1,630,129. PROCESS OF PRESERVING FRUIT. REX DE ORR MCDILL, Winter Haven, Fla. Filed Oct. 21, 1921. Serial No. 509,394. 7 Claims. (Cl. 99—8.)

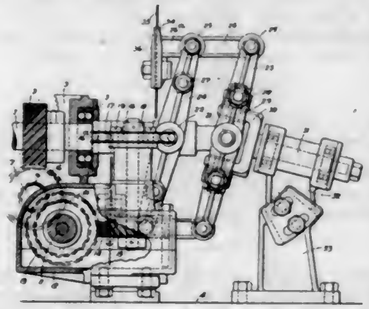
1. The process of preserving fruit consisting in forming an encasing film thereon by applying thereto a mixture of paraffine and a volatile solvent of paraffine.

1,630,130. ROTARY PUMP. SIDNEY LAWRENCE MENGE, New Orleans, La. Filed Sept. 4, 1926. Serial No. 133,690. 1 Claim. (Cl. 103—104.)



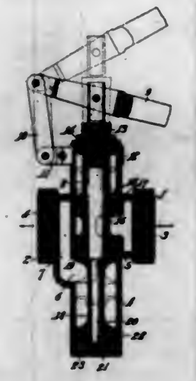
A rotary pump comprising a pump box, a pump chamber therebeneath and in communication with the pump box, a pump in said pump chamber, inlet chambers for the water above and below said pump chamber and communicating therewith, said upper inlet chamber being cruciform and water inlet boxes forming units and coupled detachably at the sides of said pump box, said

water boxes having small ends connecting with the ends of said cruciform chamber and having wider bell ends ex-



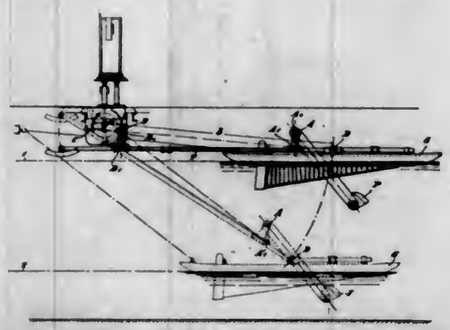
tending downwardly at a lower level than said pump, and arms extending from the pump box to said wider bell ends.

1,630,131. MINNOW BOX. GEORGE M. MESSINGER, Morganza, Pa., assignor of one-half to Harry A. Roat, Manchester, N. Y. Filed Nov. 4, 1925. Serial No. 66,784. 4 Claims. (Cl. 43—56.)



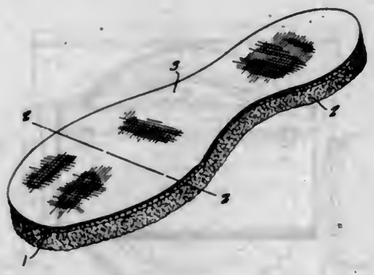
1. A minnow box of elongated form having the forward portion of its bottom deflected upwardly and forwardly and provided with a plurality of openings and having a door controlled opening in its top opposite the deflected end portion of the bottom, the rear portion of the box having its walls imperforate to retain water when the box is arranged in upright position.

1,630,132. CIGARETTE-MAKING MACHINE. WALTER EVERETT MOLINS, London, England. Filed Sept. 15, 1925. Serial No. 56,520, and in Great Britain Oct. 1, 1924. 16 Claims. (Cl. 131—37.)



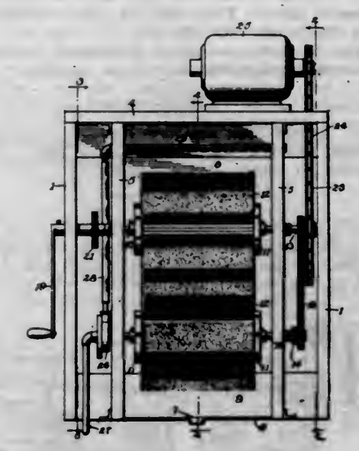
1. A cutting device for severing an axially moving rod into lengths comprising a shaft secured against axial displacement, a blade carried by and revolving about the axis of the shaft, and means, whose effective operation is dependant upon the revolution of the blade about the axis of the shaft, for moving the blade in the direction of the axis of the shaft.

1,630,133. PISTON VALVE. DANIEL R. MURPHY, Newark, Ohio. Filed Nov. 5, 1926. Serial No. 146,868. 4 Claims. (Cl. 251—75.)



1. A valve of the reciprocating piston type, comprising a cylindrical casing having inlet and outlet ports therein, said ports being spaced apart lengthwise of said casing, a rod shiftable longitudinally through an end of said casing, an annularly channeled member carried by said rod, packings at opposite ends of said member, a sleeve threaded upon said rod and movable therewith through said end of the casing, said sleeve being adjustable for compressing said packings, said channeled member in the closed position of the valve being in register with the inlet port with one of said packings separating said ports, and being movable with said rod to an opposite position in which communication between said ports is opened, and means for shifting said rod.

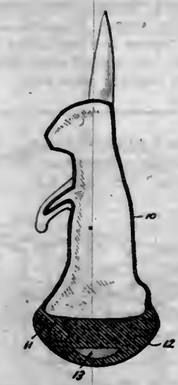
1,630,134. FLOW INTEGRATOR AND RECORDER. CORRADO PUCCIONI, Rome, Italy. Filed Dec. 28, 1923, Serial No. 683,240, and in Italy Sept. 8, 1923. 6 Claims. (Cl. 235—61.)



1. An improved apparatus for indicating the flow of water in channels comprising a fixed frame-work, a float connected with the frame-work, a blade mechanically connected with the float in such manner that the position of the float substantially controls the depth of the immersion of the blade, said blade being adapted to receive deviations corresponding to the speed of the water striking, calculating devices associated with the blade and float, and means for transmitting deviations of the blade and the movements of the float to the calculating devices, said calculating devices being designed to allow for the known shape of the channel and functioning to automatically indicate the quantity of water flowing in the channel.

1,630,135. INSOLE. CHARLES A. ROBERTS, Butte, Mont. Filed July 30, 1926. Serial No. 126,043. 1 Claim. (Cl. 36—44.)

An inner sole of the class described comprising a top layer of cork, fabric covering the upper face of the cork and a lower layer of sponge rubber, the lower layer being of much greater thickness than the cork layer.

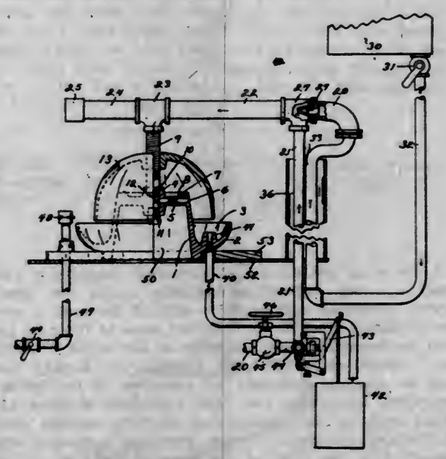


1,630,136. VEGETABLE WASHER. PHILLIP A. ROSS, Bradford, Pa. Filed July 21, 1926. Serial No. 124,028. 3 Claims. (Cl. 146—201.)

2. A vegetable cleaner comprising a supporting frame, rotary brushes carried thereby, a pipe for delivering water to the brushes, a pump mounted on the frame and adapted to supply the said pipe with water, power transmitting means for the pump and brushes, and a main frame enclosing the supporting frame, brushes, pump and power transmitting means and having openings in its front and back for the passage of the vegetables to be cleaned.

1,630,137. GRAVITY-OPERATED FIGURE TOY. FRANK B. RUWWE, Eagle Lake, Tex. Filed July 21, 1925. Serial No. 45,101. 1 Claim. (Cl. 46—40.)

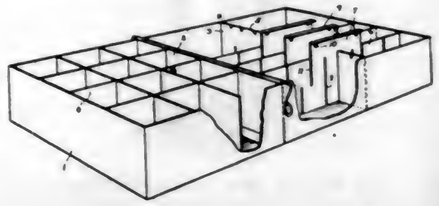
As an article of manufacture, a toy consisting of a relatively thick solid base formed of sponge-like rubber with a lower spherical globular surface, a weight having a similar bottom surface eccentric to the first bottom surface, said base in cross section having a substantial diameter and having an edge extending around the greater diameter of the base, said edge being arcuate in cross section, and a light hollow upstanding figure forming an integral part of the base, the hollow figure



being of less diameter than the greater diameter of the base, whereby the weighted base will maintain the figure always in an upright position.

1,630,138. LINER. ADAM E. SCHERTZ, Norwood, Pa. Filed June 23, 1924. Serial No. 721,855. 1 Claim. (Cl. 22—203.)

The herein described method of forming nozzles without the use of a core or core box and comprising in first forming a liner in the shape of the passage desired and then casting the body around the liner.

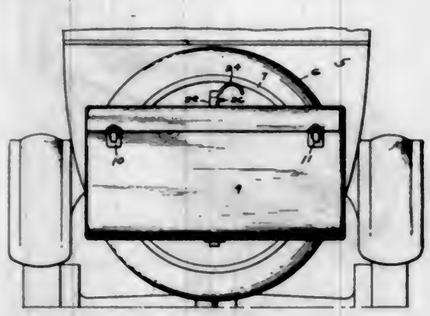


1,630,139. HYDROCARBON BURNER. HERMANN A. SEKOWSKY, Milwaukee, Wis. Filed May 11, 1925. Serial No. 29,399. 9 Claims. (Cl. 158—56.)

1. A hydrocarbon burner comprising a hollow tapered member provided with an annular encircling channel and a spider-shaped top portion having radially extending ducts, a fuel supply pipe leading downwardly into the

spider-shaped top portion and communicating with said radial ducts, a bell-shaped regulating member having threaded engagement with said fuel supply pipe and vertically adjustable thereon, the lower margin of said bell-shaped member being disposed above said annular channel, and means for supplying hydrocarbon fluid to said pipe across the heated zone produced by burning fuel escaping from beneath said bell.

1,630,140. BAKING RECEPTACLE. HENRIETTA G. SIBBALD, Duluth, Minn. Filed Dec. 20, 1924. Serial No. 757,092. 1 Claim. (Cl. 53—6.)

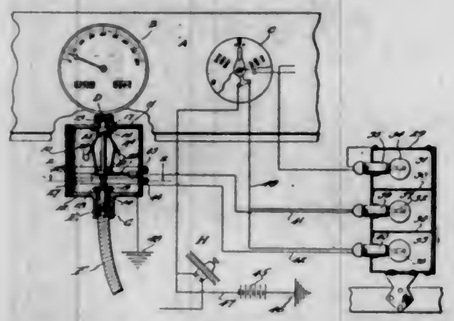


The combination with a baking receptacle of the character described having adjustable partitions with spaced slots therein, of a partition greater in width than said adjustable partitions having slots therein for interlocking engagement with said adjustable partitions, and also slots therein for wholly straddling said adjustable partitions.

1,630,141. EXIT LATCH. JOHN OTTO SOEMER, Newark, N. J. Filed Nov. 22, 1924. Serial No. 751,486. 6 Claims. (Cl. 292—92.)

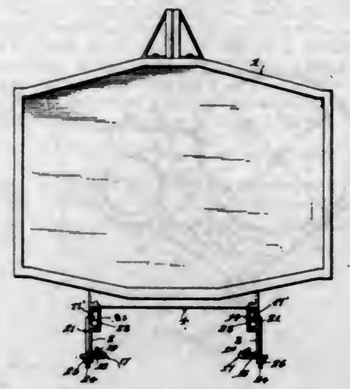
1. Latching mechanism for exit doors, comprising two operating rods extending vertically across the door, latches connected with opposite ends of the rods, a center housing into which the adjacent ends of the rods extend, an operating instrumentality on the center housing, and connections within the housing for moving the rods in opposite directions on actuation of the instrumentality, comprising two links connected at their adjacent ends to one another and at their opposite ends to the rods to form a jointed lever and a pivoted arm connected to the joint of the lever at the free end of the arm to permit swinging movement of the joint in a direction transverse to the direction of movement of the ends of the lever while constraining the joint against movement in the direction of movement of the heads.

1,630,142. DETACHABLE TRUNK FOR AUTOMOBILES. WILLIAM RUSSELL SPAULDING, Independence, Kans. Filed Oct. 4, 1926. Serial No. 130,401. 9 Claims. (Cl. 224—29.)



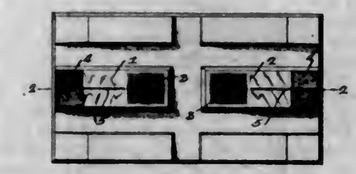
1. The combination with a trunk or like container, of complemental gripping means movable back and forth across the rear face thereof and having parts projecting perpendicularly to the back of the trunk adapted to engage the spare tire structure of an automobile at substantially opposed diametric points of the latter.

1,630,143. FLOUR IMPROVER. ELIZABETH J. SULLIVAN, Minneapolis, Minn. Filed Aug. 26, 1926. Serial No. 131,819. 5 Claims. (Cl. 99—10.)



1. A flour improver consisting of calcium acid phosphate, ammonium choloride and calcium sulphate.

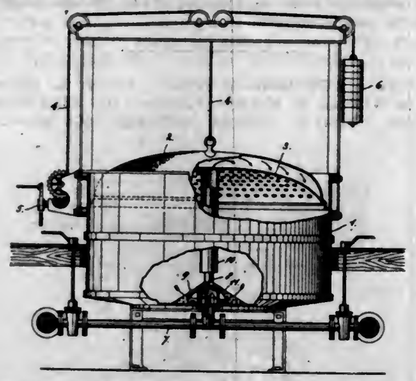
1,630,144. AUTOMATIC SIGNAL DEVICE. JAMES R. TOLLIVSON, Camden, Ark. Filed Oct. 19, 1925. Serial No. 63,460. 1 Claim. (Cl. 200—80.)



In a speed responsive mechanism, a shell formed of metallic end walls and a side wall of cylindrical shape and of insulating material, a shaft journaled axially of said casing, means for rotating the shaft, a plurality of contact rings recessed into the wall of the casing and flush with the inner surface thereof, binding posts extending radially from said rings and through the shell, binding nuts upon said last named members, a collar fixed upon said shaft, ears carried by said collar, arms pivoted upon said ears and terminating in flyballs, a collar slidably and non-rotatably mounted upon the shaft and provided with ears, arms pivotally connected with said second named ears and with said first named arms, and an arm member carried by the second named collar and terminating in a contact brush adapted to engage said contact rings.

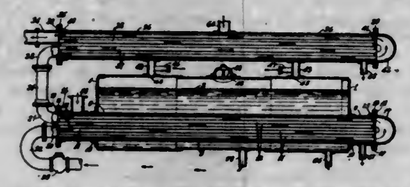
1,630,145. TRUCK-BODY MOUNT. SIMEON E. TRAVIS, Jr., Hattiesburg, Miss. Filed Mar. 17, 1926. Serial No. 95,331. 2 Claims. (Cl. 296—35.)

1. A truck body mount comprising in combination, a chassis, a truck body supporting structure mounted thereon, spaced coupling members positioned against the bottom of each side of the chassis, each of said members straddling the inner side edge and projecting from the outer side edge of that bottom with which it is associated, connecting bars extending into the sides of said supporting structure and each having means at its upper end for connecting it to such structure, each of said bars depending from the supporting structure and extending through that portion of a coupling member extended from the chassis, and means mounted on the lower ends of said bars and abutting against said members for clamping the members and bars together.



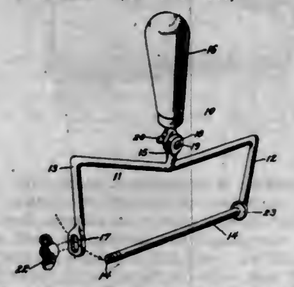
1,630,146. HÆMACYTOMETER. SIMEON TRENNER, Philadelphia, Pa., assignor to the Firm of C. A. Hausser & Son, Philadelphia, Pa., consisting of Carl Adolph Hausser and Anthony Adolph Hausser. Filed Aug. 25, 1925. Serial No. 52,366. 9 Claims. (Cl. 88—40.)

1. A hæmacytometer counting chamber including a ruled area, a clearly defined and immediately distinguishable surface for focusing, and distinctive guide means extending from said surface in the direction of said ruling.



1,630,147. PROCESS FOR EXTRACTING THE PURE CELLULOSE FROM THE BAGASSE OF SUGAR CANE. ERNEST CHARLES HEMMER VALET, Mexico City, Mexico. Filed Aug. 9, 1926, Serial No. 128,305, and in Mexico June 14, 1926. 5 Claims. (Cl. 92—9.)

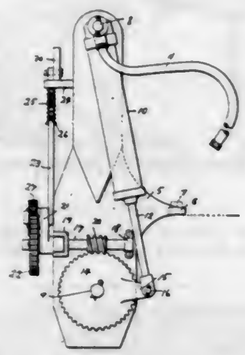
1. A process for extracting the pure cellulose from the bagasse of sugar cane, which consists in first treating the bagasse with a solution of 3 to 5% of lime, in boiling it afterwards under pressure in a solution of about 6% of caustic soda combined with a solution of 2 to 3% of sodium salts until all the foreign matter has been dissolved and separated from the cellulose, in cleaning the



cellulose thus obtained with fresh steam after having drawn off the solutions, and in bleaching the pure cellulose.

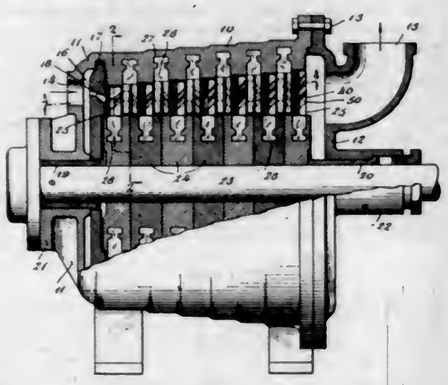
1,630,148. HEAT-EXCHANGE APPARATUS. AQUILINO R. VILA, Habana, Cuba, assignor to Compania Cubana Economizadora de Combustible S. A., Habana, Cuba, a Corporation of Cuba. Filed Oct. 25, 1924, Serial No. 745,796, and in Cuba Oct. 2, 1924. 2 Claims. (Cl. 257—240.)

1. A heat exchange apparatus which comprises a tank adapted to receive a supply of cold liquid to be heated, a tube heater longitudinally arranged throughout the lower part of the tank, a second tube heater arranged outside the tank means for admitting a heating fluid to the space around the tubes of each heater, a pipe connecting the outlet from the tubes of first heater to the inlet to the tubes of the second heater, and a pump interposed between the tank and the first heater to cause the cold liquid from the tank to circulate first through the tubes of the heater inside the tank and then through the tubes of the heater outside the tank.



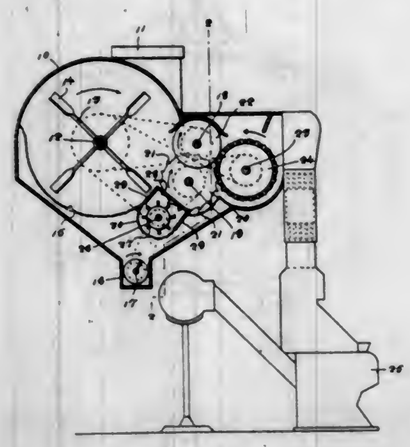
1,630,149. MASSAGE APPARATUS. WILLIAM WAHRT, Brooklyn, N. Y. Filed Apr. 1, 1925. Serial No. 19,922. 2 Claims. (Cl. 128—57.)

1. A massage apparatus comprising a frame formed of a pair of pivotally connected sections, a spindle on one of said sections, rollers carried by said spindle adapted to



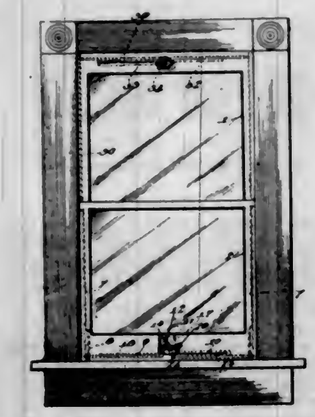
swing in the same plane, the free end of said other section engaging the end of said spindle, and a retaining nut removable from the free end of said spindle for holding the rollers thereon.

1,630,150. AUTOMOBILE PUMP. AUGUST L. WELSCH and WILLIAM H. WELSCH, Valmeyer, Ill. Filed July 6, 1926. Serial No. 120,723. 3 Claims. (Cl. 230—27.)



1. A device of the class described including a frame, a pump, mechanism for driving the pump, a gear operatively associated with said mechanism, an arm rockably mounted on the axis of said gear, a stub shaft carried at the free end of said arm, a second gear rotatably on said stub shaft meshing with the first gear, a bracket projecting from the frame, a rod slidable through an opening in the bracket and engaged with the arm, a pin projecting through the rod, a spring disposed about the rod impinging against the pin and the bracket.

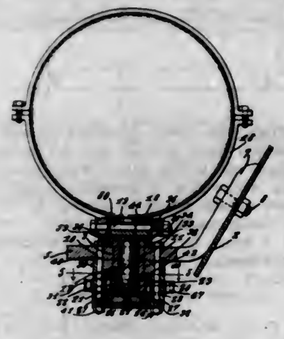
1,630,151. TURBINE. HERMANN T. WERBER, Brooklyn, N. Y. Filed Oct. 27, 1923. Serial No. 671,190. 5 Claims. (Cl. 253—69.)



1. In a turbine, a plurality of stator and rotor elements each consisting of a plurality of blades arranged in spaced relationship, each of said blades having a pair of radially extending walls inclined to each other and to the longitudinal axis of said turbine, means extending from one of said walls to the adjacent blade and forming therewith an expansion chamber, and means extending from the other of said walls and forming therewith a plurality of inclined nozzles.

1,630,152. CLEANING MACHINE. ALVIN LUKE WILLIAMS and MELFORD OWEN WILLIAMS, Lufkin, Tex., assignors to R. B. Cozart, Lufkin, Tex. Filed Apr. 11, 1925, Serial No. 22,382. Renewed Mar. 23, 1927. 6 Claims. (Cl. 19—35.)

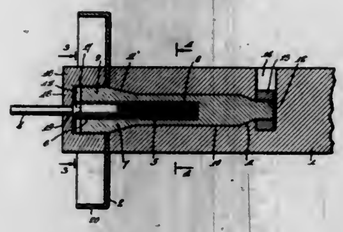
1. A cotton cleaning machine comprising a casing, a hopper communicating therewith adjacent one end thereof, a conveyor operating within the casing for feeding the cotton longitudinally thereof, said conveyor including a plurality of spirally arranged beater arms, a series of spaced rotating saws against which the cotton is beaten by said arms, a series of rotating disks operating between the saws and cooperating therewith to extract the cotton from the burrs, means whereby the conveyor and said saws and disks are rotated in one direction, and means for removing the cotton from the saws onto the belt of a gin.



1,630,153. SASH FASTENER. JOHN THOMAS WILLIAMS, Los Angeles, Calif. Filed Jan. 13, 1925. Serial No. 2,205. 2 Claims. (Cl. 292—40.)

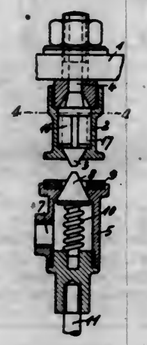
1. A sash fastener comprising in combination a vertically slidable sash, said sash having a vertical channel in a side bar thereof and having a horizontal channel in a horizontal bar thereof opening at one end into

the vertical channel, a vertical ratchet bar partially received in said vertical channel, said ratchet bar having a vertical series of teeth on its inner face, each of said teeth having a flat horizontal upper face and a sloping lower face, a latch bolt axially movable in said horizontal channel, a spring urging said latch bolt to position to engage with said teeth to prevent downward movement of the sash when the latch bolt is in contact with the upper face of any one of said teeth, and a handle disposed in countersunk relation to the inner face of said top bar of the upper sash and operable to move said latch bolt axially out of engagement with said teeth.



1,630,154. CONTROLLING MECHANISM FOR HEADLIGHTS. ADAM B. WILSON, Philipsburg, Pa. Filed Nov. 26, 1926. Serial No. 150,889. 5 Claims. (Cl. 240—62.)

5. A controlling mechanism for a pair of dirigible headlights for motor vehicles, the combination with a pair of rotary headlight posts connected at their upper ends to the headlights, a bearing sleeve for each of said posts, bearing means carried by said sleeves for the headlights, stationary housings enclosing said sleeves and posts, a gear loosely surrounding each of said posts below a sleeve, a reciprocatory rack element common to said gears for revolving them, a controlling spring surrounding each post and interposed between a sleeve and a gear and anchored at one end to the post and at its other end to a housing, said posts and gears having coacting elements for detachably connecting the posts and gears together when the gears are revolved to provide for the rotating of the posts in such a manner that the headlight on that side towards which the vehicle is steered will be turned in the direction of steering when the other headlight is revolved to retain its normal or straightahead position, said coacting elements surrounded by said gears, and means connected directly to said rack element and operated from the steering mechanism of the vehicle for reciprocating the rack element to provide for the operation of the gears.

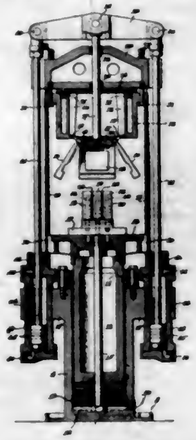


1,630,155. CARPET SPOOL. WILLIAM H. WILSON, Burlington, Vt., assignor to Vermont Spool & Bobbin Company, Burlington, Vt., a Corporation of Vermont. Filed Dec. 31, 1926. Serial No. 158,313. 6 Claims. (Cl. 242—123.)

1. A carpet spool comprising a body, a pair of heads and means for holding the heads in place, each of said means comprising a supporting shaft, a nut for each shaft for locking the respective shafts to the body, each of said shafts having a bore extending inwardly from one end, a journal pin associated with each shaft, each of the journal pins having an enlargement whereby the respective enlargements may fit into the bores of the respective shafts, a spring arranged in each of the bores for urging the respective pins outwardly, and a

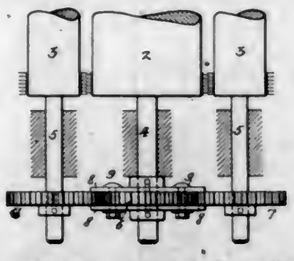
clamping nut screwed onto the outer surface of the end of each of said supporting shafts for clamping the respective heads to the body, each of said nuts being formed with an apertured end, said ends being positioned to guide and support the respective pins and limit the outward movement of the pins.

1,630,156. DEVICE FOR CHARGING AND DISCHARGING COMPRESSED-AIR CONTAINERS. AUGUST ABEL, Leipzig, Germany, assignor to the Firm Atlas-Werke Pohler & Co., Leipzig-Stotteritz, Germany. Filed Apr. 23, 1926, Serial No. 104,240, and in Germany Mar. 17, 1925. 6 Claims. (Cl. 12—37.)



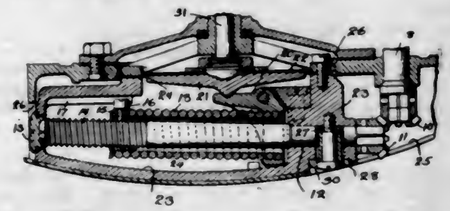
2. In a charging and discharging device for a group of movable compressed air containers, a combined inlet and outlet valve on each of the containers, a supply valve separate therefrom and adapted to be moved in relation thereto, and means to first partly and then fully press the supply valve against the said inlet and outlet valve so as to first exhaust and then refill the container.

1,630,157. MOLDING APPARATUS. JOHN M. AHLGREN and JOSEPH V. BRETAUD, Detroit, Mich., assignors to American Rubber Products Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 26, 1926. Serial No. 104,641. 4 Claims. (Cl. 18—19.)



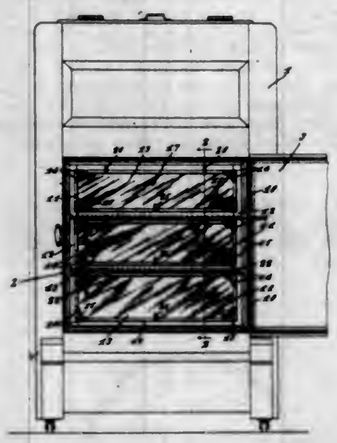
2. A molding and vulcanizing apparatus comprising a reciprocable ram, a heated stationary open bottom mold above said ram, a heated core on said ram and adapted

to be moved into and out of said mold, shiftable liners adapted to form a mold cavity in said mold, and means



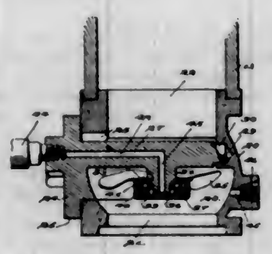
operatable adjacent said ram and independent of said ram adapted for shifting said liners in and out of said mold.

1,630,158. GARNETT MACHINE. THOMAS W. ALLEN, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 19, 1927. Serial No. 162,163. 6 Claims. (Cl. 19—97.)



1. The combination in a garnett machine, of two cylinders, each cylinder having two sets of teeth, one set of teeth being of less height than the teeth of the other cylinder, and the teeth of one cylinder extending into the spaces beween the long teeth of the other cylinder.

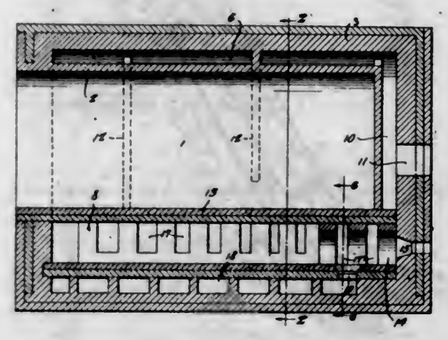
1,630,159. TORPEDO. LOUIS J. BARRY, Newport, R. I. Filed Mar. 17, 1924. Serial No. 700,195. 5 Claims. (Cl. 114—25.)



1. In a torpedo, in combination, a diaphragm for closing one side of an air chamber of which a second side is in metallic contact with the shell of the torpedo, means connecting said diaphragm with the horizontal rudder and means whereby said air chamber is completely surrounded by the water in which the torpedo travels.

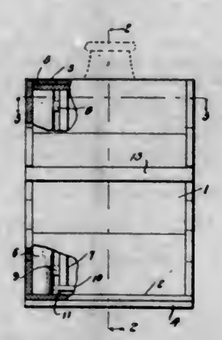
1,630,160. REFRIGERATOR. BENJAMIN W. BAYLESS, Louisville, Ky. Filed Sept. 8, 1926. Serial No. 134,211. 7 Claims. (Cl. 62—31.)

1. In a refrigerator, means for retaining cold air within a storage compartment thereof and preventing the entrance of warm air to the latter when the refrigerator door is open comprising a normally closed removable, hinged closure corresponding in contour to the shape of the storage compartment and including a transparent member and a frame of flexible material extended laterally from said member.



1,630,161. FUEL MIXER. HENRY BORNHEIM, Boston, Mass. Filed May 26, 1925. Serial No. 32,985. 6 Claims. (Cl. 48—180.)

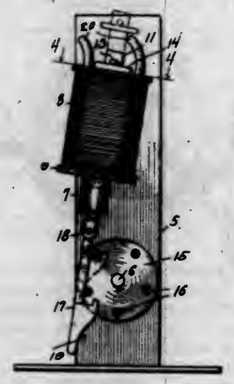
1. A fuel mixer comprising a casing forming a section of an intake manifold having an opening in its wall, a fan support insertable through the opening and having a flanged portion forming a closure for the opening, a boss depending from the support and a fan mounted for rotation on the boss and means for supplying auxiliary air to the interior of the casing adjacent the fan.



1,630,162. FURNACE. JAMES BOUCEK and JAMES HALICK, Cleveland, Ohio, assignors of one-third to Joseph Trefney, Cleveland, Ohio. Filed Nov. 5, 1926. Serial No. 146,424. 4 Claims. (Cl. 263—42.)

1. A furnace of the class described comprising an oven having its sides and top and back spaced from the interior walls of the furnace, a combustion chamber below the oven and having its front end in communication with the space between the oven and the interior walls of the furnace, baffles in the said space for causing the products of combustion to pass in a zigzag path to the rear of the oven, exhaust means at the rear of the furnace in communication with the space at the rear of the oven, a combustion space at the rear of the combustion chamber, means for introducing fuel into said space, an air chamber below the combustion chamber having its rear end in

communication with the combustion space, a passage extending from the front end of the air chamber through the rear of the furnace for admitting air into the air chamber and means for controlling the entrance of air into said passage.

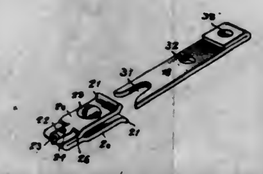


1,630,163. CARBOY. RICHARD H. BRADFORD, JOEL S. LA BARR, and PAUL H. THOMPSON, Paulsboro, N. J. Filed July 7, 1923. Serial No. 650,100. 2 Claims. (Cl. 217—54.)

1. In a shipping box for carboys, a plurality of resilient skeleton corner frames, composed of uprights of triangular cross-section having resilient spacing blocks, secured to the inner, flat faces of said uprights at their upper and lower ends, and resilient inner strips having their upper and lower ends secured to said spacing blocks and having their inner walls corrugated for contacting with the carboy.

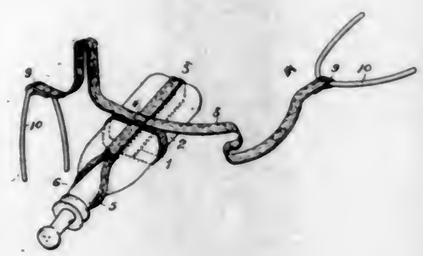
1,630,164. MECHANICAL MOVEMENT. ELMER BRYANT, Lexington, Ky. Filed May 8, 1926. Serial No. 107,751. 6 Claims. (Cl. 74—54.)

1. A mechanical movement for converting reciprocating movement into step by step rotary movement, a rotatable shaft, a wheel fixed on said shaft and provided with spaced rigid laterally projecting pins, a reciprocating motor arranged above the axial center of the wheel having a reciprocable plunger normally arranged at one side



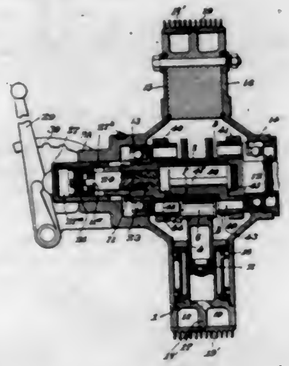
of the axial center of the wheel, and a ratchet pawl pivoted to the plunger for successive engagement with the pins.

1,630,165. TOY ANIMAL. RUBY A. BUTLER, St. Louis, Mo. Filed May 8, 1926. Serial No. 107,728. 2 Claims. (Cl. 46—40.)



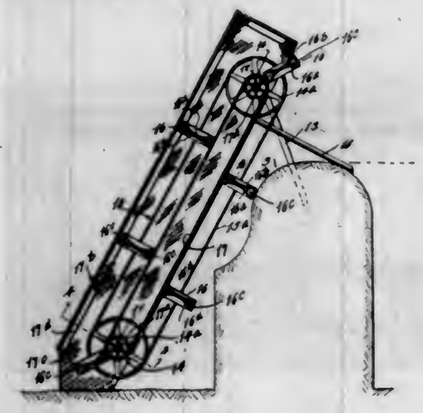
2. A toy animal comprising a stuffed envelope having body, leg and head portions, yarn strands, and strips carrying the yarn strands and secured to the envelope, two of said strips being secured together end to end along the upper side of the back portion of the envelope and having the strands carried thereby extending down along the sides of said portion of the envelope.

1,630,166. CONNECTER. HOYT CATLIN, Fairfield, and GEORGE B. THOMAS, Bridgeport, Conn., assignors to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 13, 1922. Serial No. 552,099. 4 Claims. (Cl. 173—332.)



1. A connecter comprising an insulating body recessed to afford a plurality of contact chambers with guide slots opening thereto from one end of said body, contacts arranged in said chambers, each of said contacts comprising a strap of sheet metal folded back upon itself to form a pair of jaws spaced to receive between them an inserted jack terminal, together with a clamping screw passing through said jaws to clamp them upon the inserted jack, the body being apertured in register with said clamping screw to afford access thereto.

1,630,167. NURSING-BOTTLE HOLDER. PHILIP CARDARELLA, Kansas City, Mo. Filed Mar. 20, 1922. Serial No. 545,212. 1 Claim. (Cl. 248—65.)



In a bottle holder of the kind described, a flexible band adapted to encircle a bottle, a second band adapted to embrace the bottom and sides of the bottle and attached to the first band at opposite sides thereof, the second band being attached transversely to the first band at one side thereof only at the edges of the latter, whereby at this point the two bands form a loop, and a strap slidably extending through said loop and adapted to have its ends attached to opposite sides respectively of a crib.

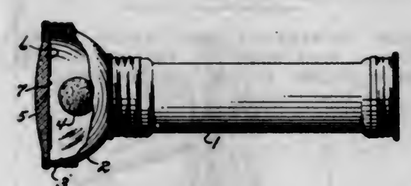
1,630,168. POWER TRANSMISSION BY HYDRAULIC MEANS. RAYMOND CAUT, Clichy, France. Filed Mar. 31, 1921, Serial No. 457,468, and in France Feb. 25, 1920. 5 Claims. (Cl. 103—38.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a pump the combination with the crank pin thereof, of a slide for controlling the eccentricity of the pin including a screw having a steep pitch directly connected with the end of the crank pin and an internally threaded sleeve operating on the screw, a slidably mounted tight cylinder, a piston head connected with the sleeve and dividing the cylinder into two chambers, one of which is adapted to contain a non-compressible fluid and the other air, a pivotally mounted lever, a stop carried with the lever and bearing against the outer end of the cylinder and a locking sector with which the lever is associated.

1,630,169. FISH ELEVATOR. JOHN H. COLEMAN, Hanford, Calif. Filed Aug. 11, 1925. Serial No. 49,677. 6 Claims. (Cl. 61—21.)

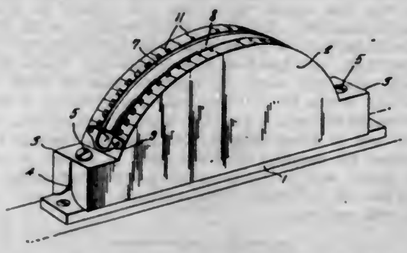
2. A device for carrying fish over a barrier, comprising an elevator adapted to be operated by the water flowing over the barrier, and means adapted to direct the fish into the elevator.

1,630,170. WASHBOARD. GEORGE W. COOK, Doniphan, Mo. Filed June 8, 1826. Serial No. 114,488. 3 Claims. (Cl. 68—29.)



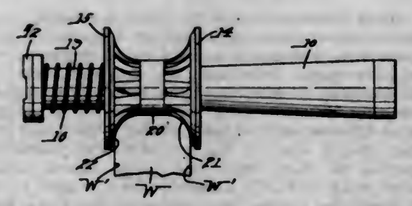
1. A washboard comprising a base frame including a baseboard, side bars forming guides, a separate rubbing board seated on said baseboard, and having its edges disposed in said guides, a clamping member for the upper end of the rubbing board having an angular flange forming the bottom of a soap receptacle, another clamping member for the bottom edge of the rubbing board and enclosing the bottom edge of the baseboard, and rods engaging the side bars and the clamping members to hold them in position.

1,630,171. LUMINOUS BODY. GEORGE M. CORAM, Utica, N. Y. Filed July 16, 1926. Serial No. 122,936. 1 Claim. (Cl. 240—1.)



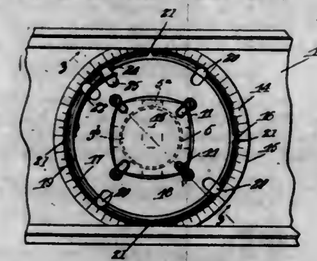
A device for the purpose set forth, comprising a body having a reflector on the outer end thereof, a globular

member centrally seated in the reflector and treated with a luminous substance, a lens on the outer face of the reflector and said lens having its inner face provided with



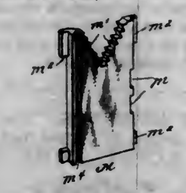
a circular strip of luminous substance and the center of the lens which is not treated with said substance being disposed opposite the globular body.

1,630,172. INCLINOMETER. CHARLES W. CUSTER, Quinter, Kans. Filed Aug. 16, 1926. Serial No. 129,524. 1 Claim. (Cl. 33—212.)



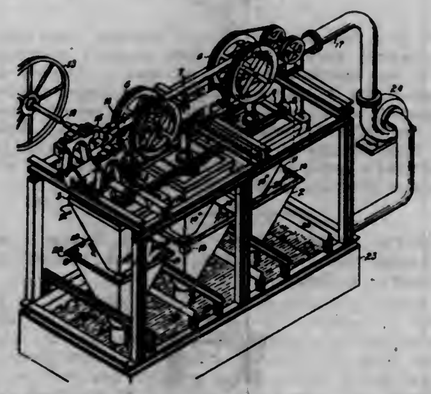
A device of the class described comprising a base plate, a casing having an arc-shaped upper edge, with extensions at its ends, one end being split, with the walls of the split curving outwardly to engage the corners of the plate, screws passing through the extensions and into the plate, a spring on the screw which passes through the split end extension for holding this end extension against the head of the screw, an arc-shaped bubble glass in the groove and the faces of the arc-shaped part at the sides of the groove being graduated with degrees of a circle.

1,630,173. DOUBLE CARVING CUTTER. JOSEPH DUMONT, Gardner, Mass. Filed Nov. 6, 1926. Serial No. 146,787. 5 Claims. (Cl. 144—134.)



1. As an article of manufacture, a double cutter comprising a pair of rotary cutting members for molding the opposite edges of a piece of wood or the like, one of said cutters being fixed on its shaft to rotate therewith and the other being free, said cutters being connected with each other so as to cause both to rotate positively with the shaft but to permit one to slide thereon, yielding means for forcing the free cutter toward the fixed cutter, and a cylindrical guiding surface between the cutters for engaging substantially the center of a surface of the work between the edges that are to be molded.

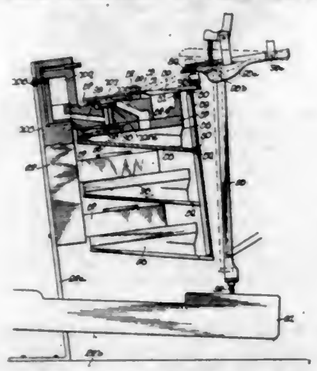
1,630,174. COMBINED LEVEL AND PLUMB. EDWARD J. ELSAS, Kansas City, Mo. Filed June 8, 1925. Serial No. 35,683. 1 Claim. (Cl. 33—211.)



In a device of the character described, a body portion having an opening extending therethrough, a ring member having graduations formed thereon positioned within the opening, a disk-like member having a central opening adjustably secured to said ring member, a hollow body portion removably supported within the opening of the disk-like member, said hollow body portion containing a fluid, a bubble, and a movable solid body within the hollow body portion, and means for adjusting the disk-like body portion with respect to the ring member.

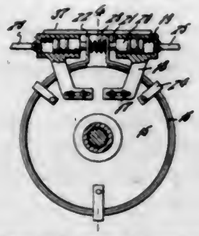
1,630,175. MATRIX FOR TYPOGRAPHICAL MACHINES. HERMAN R. FREUND, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 8, 1924. Serial No. 730,897. 6 Claims. (Cl. 199—64.)

3. A matrix for use in typographical machines having a groove in a side wall thereof which is curved from top to bottom of the body of the matrix.



1,630,176. LIQUID RHEOSTAT. BERTRAM GRAY and ROBBINS CURTIS, Johannesburg, Transvaal, South Africa. Filed Jan. 5, 1925, Serial No. 625, and in Union of South Africa Jan. 11, 1924. 11 Claims. (Cl. 201—57.)

2. In a multi-phase liquid rheostat, the combination of downwardly tapered electrodes forming containers for the electrolyte, said container electrodes being fixed and

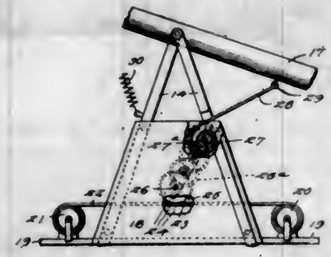


insulated, a plurality of corresponding uninsulated electrodes, a beam to which the uninsulated electrodes are attached, a plurality of rotatable pulleys, flexible means supporting the beam and wound on said pulleys, and means for rotating the pulleys simultaneously whereby the beam is raised and lowered parallel with itself.

1,630,177. PLAYER PIANO. CHRISTIAN GULBRANSEN, Chicago, Ill., assignor to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1920. Serial No. 400,080. 2 Claims. (Cl. 84—69.)

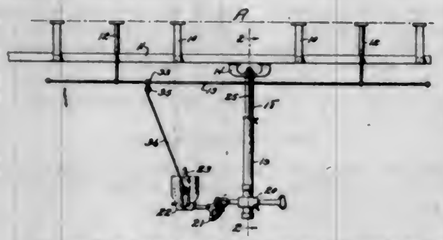
1. In a player piano, a striking pneumatic having a hinged board, a hinged actuating lever, a rigid connecting member having flexible portions at its ends secured to said board and lever respectively, the entire connection between said member and said board and lever being completed through said flexible portions.

1,630,178. BRAKE MECHANISM. JOHN C. HARRINGTON, Manchester Depot, Vt. Filed July 13, 1925. Serial No. 43,340. 3 Claims. (Cl. 188—152.)



3. In a fluid operated brake, a rotatable brake drum, a relatively stationary brake band normally disengaged from and surrounding the drum, spaced outwardly extending ends for the band, fluid operated means including oppositely movable pistons positioned upon opposite sides of the outwardly extending ends of the band, means to force the pistons relatively inward to contract the band and a spring positioned between spaced ends of said band to yieldingly resist contraction.

1,630,179. BOTTLE CAP. MILTON T. HASEK, Cedar Rapids, Iowa. Filed Oct. 13, 1925. Serial No. 62,313. 1 Claim. (Cl. 215—51.)

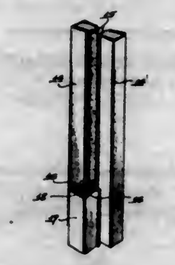


A milk bottle cap of circular formation having its under surface provided with a single centrally arranged groove extending from edge to edge, and a group of grooves extending across the central groove from edge to edge of the bottle cap and at right angles to the central groove.

1,630,180. SURVEYOR'S INSTRUMENT. ROBERT LEE HUFFMAN, South Miami, Fla. Filed Oct. 28, 1926. Serial No. 144,756. 1 Claim. (Cl. 33—66.)

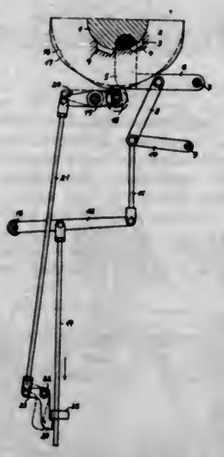
In a surveying instrument for measuring distances, a sight tube, a second sight tube connected to and spaced from the first named sight tube and pivoted to swing upon its axis in a plane including the axis of the first named sight tube whereby said sight tubes may be converged upon an objective, a rotatable cam means connecting said cam with the shiftable tube to shift the same and means for rotating said cam including a shaft upon which the cam is mounted, a gear train driving said shaft and a longitudinally shiftable belt having perforations for coaction with the teeth of a gear of said gear train, said belt having graduations providing an indication of the distance to the point upon which the tubes are converged.

1,630,181. X-RAY APPARATUS. PAUL A. ISHERWOOD, West Chicago, Ill., assignor to H. S. Fischer Co., Chicago, Ill. Filed Feb. 16, 1926. Serial No. 88,632. 2 Claims. (Cl. 250—34.)



1. In an X-ray apparatus, an elevated trackway comprising a pair of spaced channeled rail members arranged in confronting relation, a carriage having rollers on the outer sides thereof travelling along said rails, said carriage including a depending cylindrical hollow member stationarily mounted with respect thereto, a tubular member telescopically engaged exteriorly upon said first named tubular member and provided with means for supporting an X-ray tube, said second named tubular member being vertically adjustable with respect to the first named for varying the height of the X-ray tube, trolley wires located at opposite sides of said trackway, carriages movably mounted along said trolley wires, and conductors connected with said last named carriages and with the terminals of the X-ray tube.

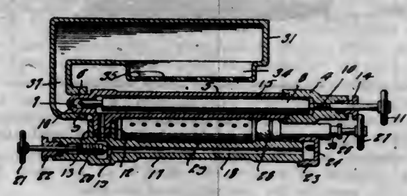
1,630,182. RAZOR-HONING DEVICE. EMANUEL JACOBS, Detroit, Mich. Filed Aug. 9, 1923. Serial No. 656,581. 1 Claim. (Cl. 51—211.)



A sharpening device wherein a blade is adapted to be moved at substantially a right angle to the longitudinal

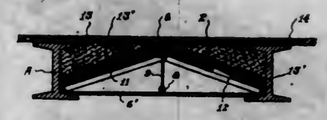
axis of said device, said device comprising opposed channel shaped holders having outturned extensions at one end forming wings, stones in said holders, filler pieces interposed between the wings of one holder and the wings

of the other holder and extending between said stones to space said holders apart, and U-shaped finger pieces clamping the filler pieces between the holder wings by engaging outer walls of said holder wings.



1,630,183. ROTARY-KEY CLUTCH. FERDINAND JOHN, Dusseldorf-Oberkassel, Germany. Filed Dec. 21, 1926, Serial No. 156,223, and in Germany Dec. 19, 1925. 5 Claims. (Cl. 192—29.)

1. A rotary key clutch including a rotatable member, a rotating member, a rotary clutch key associated with said members, a catch, the action of which is dependent upon the rotating member, for keeping the rotary key disengaged, and means for setting free the rotary key for the purpose of closing the clutch at a moment when it is possible for said rotary key to enter correctly into a corresponding recess.



1,630,184. KEROSENE-GAS GENERATOR AND BURNER USING RADIANTS. SHELDON JOSEPH, Wheeling, W. Va., assignor of eighteen one-hundredths to J. Plumer Cole, sixteen one-hundredths to William B. Casey, and sixteen one-hundredths to Elmer H. Meagle, Wheeling, W. Va. Filed Feb. 6, 1926. Serial No. 86,613. 8 Claims. (Cl. 158—53.)

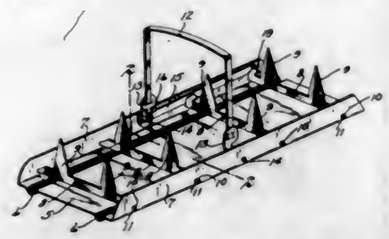
1. In a kerosene or coal oil burner, the combination of a gas manifold having gas radiants, means for regulating the flow of gas to the radiants, a valve controlled gas generator in communication with the gas manifold, said generator including a tubular casing, a cylinder of smaller diameter than the casing and terminating in a needle valve, a chamber having a passage in which the needle valve seats, said passage opening into the manifold leading to the gas radiants, means for supplying coal oil

under pressure to the generator, a Bunsen burner arranged in proximity to the generator and positioned under and at one side of said generator and a valve controlled pipe connection between the Bunsen burner and the generator.

1,630,185. FLOOR AND CEILING CONSTRUCTION. FURMAN M. KANDLE, Atlantic City, N. J. Filed June 12, 1925. Serial No. 36,695. 3 Claims. (Cl. 72—66.)

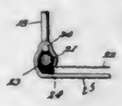
1. In a floor and ceiling construction, a plurality of metal mesh units, a U shaped spreading members centrally pivoted within said units to provide pyramidal forms with their inclined lower sides in floor material supporting position, and said units disposed in endwise formation between a pair of I beams.

1,630,186. COMBINATION KNIFE FOR PEELING ORANGES. HANSON C. KELLY, West Burlington, Iowa. Filed July 9, 1925. Serial No. 42,492. 3 Claims. (Cl. 146—3.)



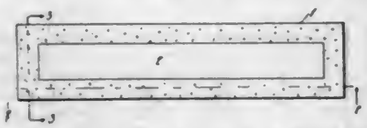
1. In an orange peeler, a cutting implement having a shank, a pointed blade forming an extension of said shank and arranged at one side thereof, said blade being sharpened on its two edges, a blade at the other side of the shank and extending laterally thereof, said blade being sharpened on its outer lateral edge, and another blade extended perpendicularly to the face of the second mentioned blade and curved in outline, said blade having its extended edges sharpened.

1,630,187. MOP-ASSEMBLING APPARATUS. MINOR KENNER, New Orleans, La. Filed Sept. 14, 1926. Serial No. 135,426. 5 Claims. (Cl. 300—1.)



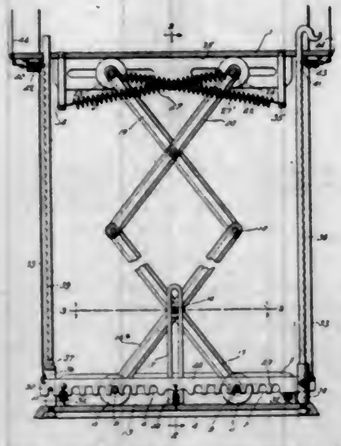
1. A mop assembling apparatus, including an internally grooved segmental ring adapted to be positioned around a member and receive a tying strand therein, said ring adapted to receive the strands of the mop yarn over the same in the assemblage of the mop.

1,630,188. HOLDER FOR BAKING POTATOES. ULYSSES G. KNAUFF, Minneapolis, Minn. Filed Jan. 13, 1926. Serial No. 80,953. 6 Claims. (Cl. 53—6.)



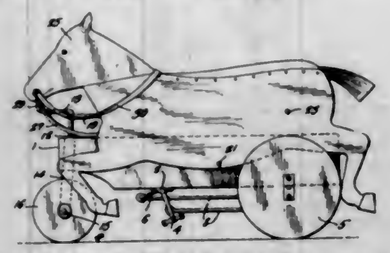
2. A holder for baking potatoes and the like comprising a base, a plurality of teeth mounted on said base for movements to and from projected operative positions, a handle connected to said base for movements to and from an operative position, and connections between said handle and teeth for moving the latter to operating positions when said handle is moved to an operative position and for moving said teeth to inoperative positions when said handle is moved to an operating position.

1,630,189. LAUNDRY CLOTHES-HANDLING APPARATUS. EMMA R. KNUDSON, Jewell, Iowa. Filed Jan. 19, 1926. Serial No. 82,349. 2 Claims. (Cl. 68—30.)



1. In apparatus of the character specified, a sling comprising a frame, a wire fabric covering the frame and secured at its marginal edge thereto, metal straps extending beneath the wire fabric from one side of the frame to the other and attached at their respective ends to the frame at opposite points, and arms pivotally connected to the frame by said straps which are bent around the frame and the pivotal ends of the arms.

1,630,190. COMPOSITE REENFORCED RAILWAY TIE. CHARLES W. LEE, Lock Haven, Pa. Filed Jan. 13, 1927. Serial No. 160,880. 1 Claim. (Cl. 238—90.)

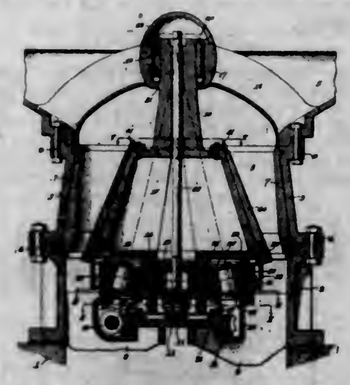


A railway tie, comprising a block of fibrous material extending longitudinally of the tie and terminating adjacent to the ends thereof, a shell of plastic material enclosing the ends, sides and bottom of the block and constituting therewith the tie aforesaid, a reenforcing element for the shell, comprising a rectangular frame surrounding the block and secured thereto, and a rod located under the block and having upturned ends engaging the ends of the frame.

1,630,191. SHOE-RAISING-PLATFORM DEVICE. CHARLES LIBERMAN, New York, N. Y. Filed Aug. 19, 1926. Serial No. 130,259. 6 Claims. (Cl. 304—1.)

1. A shoe raising platform comprising a lazy tong structure, a base associated with one end of the lazy tong structure, a platform associated with the other end of the lazy tong structure, a spring tending continually to distend said lazy tong structure, a vertically movable locking bar formed with means for locking the lazy tong structure against distention, and means extending from said bar to a position adjacent the platform whereby a person standing on a platform may move the locking bar to an unlocked position, and a spring for automatically returning said bar to a locking position when the bar is released.

1,630,192. WHEELED TOY. NELS MADSON, Coeur d'Alene, Idaho. Filed Aug. 24, 1926. Serial No. 131,235. 2 Claims. (Cl. 208—42.)

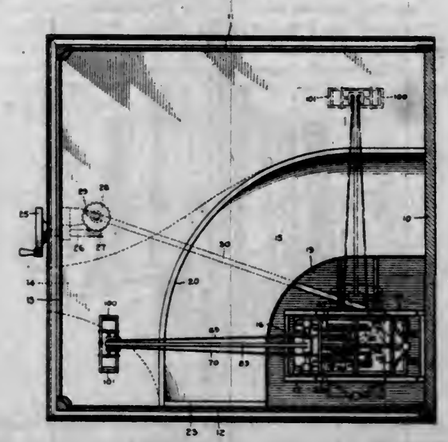


1. A wheeled toy as herein described, comprising a frame, spaced transversely arranged shafts journaled on the frame, ground wheels fixed on the ends of one of the shafts, the second shaft having cranked ends and provided with pedals, means between the shafts for imparting motion to the wheel carrying shaft when the pedal carrying shaft is turned, steering wheels between the forward ends of the frame, a mount therefor, a pivotally supported cranked rod associated with the mount and extending above the frame, a hollow body representing the figure of a galloping horse arranged over the frame and having its sides pivotally secured to the sides of the frame, means operated by the turning of the wheel carrying shaft for imparting a vertical reciprocatory movement to the hollow body, a head pivotally secured on the body, a strap having its ends secured to the sides of the head, and an arched yoke fixed to the head, depending therefrom and receiving the cranked rod therethrough, for the purpose set forth.

1,630,193. EYESHADE. AARON L. MALLORY, St. Petersburg, Fla. Filed June 26, 1926. Serial No. 118,655. 1 Claim. (Cl. 88—41.)

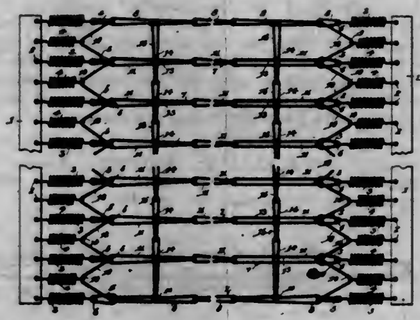
In an eye shade for spectacles, a pair of transparent colored discs adapted to be positioned upon the lenses of a pair of spectacles, a clip formed on the inner side edge of each disc and disposed inwardly in spaced relation with respect to the outer face of each disc, an elastic member having its end portion engaged within the opposed clips formed at the inner opposed edges of the discs for resiliently interconnecting the discs and a pair of clips formed on the outer side edge of each disc, said last mentioned pair of clips being arranged equidistant from the clip on the inner side edges of each disc, the outer clips being bent inwardly in spaced relation with respect to the inner face of the disc and adapted to engage over the rims of the lenses of the spectacles, one of said outermost clips having an opening for attaching a suspension cord thereto.

1,630,194. ROCK OR ORE CRUSHING MACHINE. JAMES GUNNELL MALONE and JOHN A. DORMER, Detroit, Mich. Filed Oct. 16, 1925, Serial No. 62,692. Renewed Nov. 12, 1926. 8 Claims. (Cl. 83—10.)



1. In a rock or ore crushing machine having a crushing chamber with a driven crushing head therein:—driving means for said crushing head, said means being located below said head and adapted to impart a gyratory motion thereto, said driving means including inner and outer race members with rollers therebetween and one of said race members provided with an undulating surface.

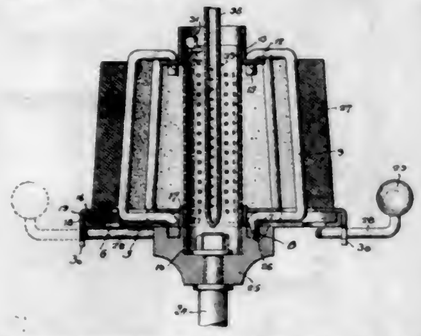
1,630,195. VENDING MACHINE. MORDICHA MARGOLITH, New York, N. Y. Filed Feb. 20, 1926. Serial No. 89,624. 43 Claims. (Cl. 221—146.)



1. In a vending machine having a supporting platform for articles of merchandise, the combination of delivering mechanism, a source of driving energy, means operable by said source for causing the delivering mechanism to function, and independently operable means for initially moving the delivering mechanism into desired positional relation with respect to said articles.

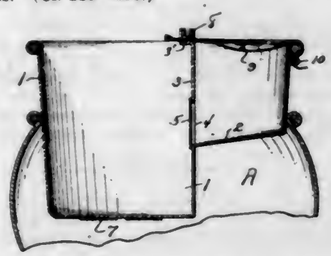
24. In a vending machine having a supporting platform for articles of merchandise, delivering mechanism comprising a hoistable grasping scoop, a driving shaft, scoop-lifting means, locking means cooperating with the latter for normally holding the scoop in suspended position over said articles, a cam member driven by the shaft, and means operable by said cam member for releasing said locking means whereby the scoop will drop upon said articles at a predetermined time; said cam member comprising a hub portion having a cam surface, and said locking means comprising a cam-follower, and a spring constraining the follower to engage the hub portion.

41. In a vending machine having a supporting platform for articles of merchandise, delivering mechanism comprising a rotatable support, a beam horizontally pivoted at one end with respect to said support, a hoistable grasping scoop suspended from said beam and over said articles, a driving shaft aligned with the axis of said support, and means driving by said shaft for pivotally moving the beam at predetermined time intervals to shift the scoop with respect to said pivot, whereby rotation of the support may be effected independently of the positional relation of said shaft to position the scoop over desired articles, and whereby movement of the beam will transport grasped articles from their display locations.



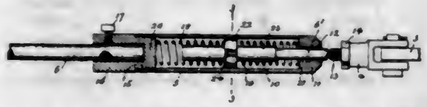
1,630,196. BEDSPRING FABRIC. WILLIAM H. MATTHEWS, Newburgh, N. Y. Filed June 4, 1925. Serial No. 34,937. 3 Claims. (Cl. 5—188.)

1. A bed spring fabric, comprising a longitudinally extending parallel series of link chains, each link being of elongated substantially U-shaped contour, means for



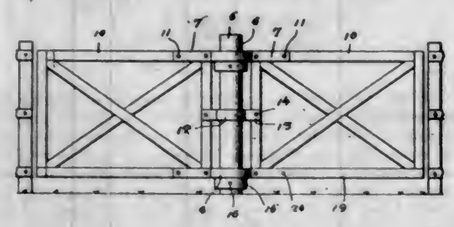
setting up a resilient connection between the end of each chain and an adjacent spring frame end bar, and a transversely extending parallel series of link chains, each of elongated substantially U-shaped contour and having the end link of each chain fixed to a link of an outer longitudinally extending chain and the other links of the body of the chain slidably extended between the legs of the links of the longitudinal elements substantially midway their length.

1,630,197. METHOD FOR USE IN THE MANUFACTURE OF ARTIFICIAL SILKS. DONALD A. MCKENZIE, Swarthmore, Pa., assignor to The Viscose Company, Marcus Hook, Del., a Corporation of Pennsylvania. Filed Dec. 28, 1923. Serial No. 683,213. 22 Claims. (Cl. 18—8.)



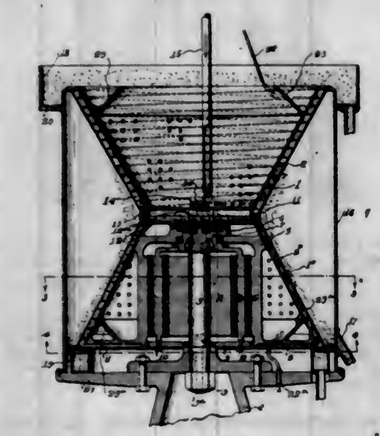
1. In the manufacture of artificial silk, the step of applying liquid to a rotating fiber cake simultaneously throughout the length of the cake axis to cause the liquid to pass through the cake by centrifugal force.

1,630,198. STRAINER. NATHAN ARTHUR MCMAHON, Durand, Wis. Filed Apr. 26, 1926. Serial No. 104,815. 3 Claims. (Cl. 210—155.)



1. A strainer of the class described comprising a receptacle having one part of greater depth than the other, a partition dividing the two parts and having an opening at its bottom for permitting liquid to pass from the part of less depth to the other part, a screen covering the said opening and the bottom of the deep part having an opening and a screen covering the same.

1,630,199. ACCELERATOR CUSHION. GEORGE W. MEGNIN, Allendale, N. J. Filed July 23, 1926. Serial No. 124,540. 2 Claims. (Cl. 74—48.)

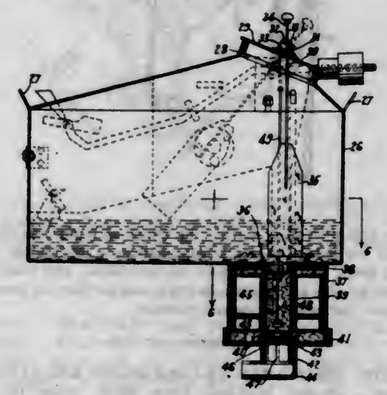


1. An accelerator cushion including a casing having an opening at one end, a rod receiving block removably connected to the other end, a sliding abutment arranged in the casing formed with an aperture extending therethrough, means extending from said abutment through said opening so as to connect said abutment with an adjacent object, and a spring on each side of said abutment for resiliently holding the abutment centered, the aperture in the abutment permitting air and lubricant to pass from one side of the abutment to the other as the abutment is moved.

1,630,200. GATE. AYRES P. MERRILL, Natchez, Miss. Filed Sept. 4, 1925. Serial No. 54,554. 1 Claim. (Cl. 39—84.)

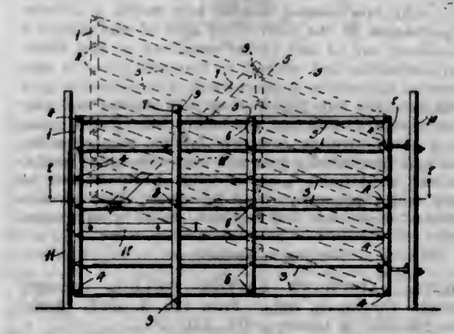
A gate construction including a cross sectionally rounded post, upper and lower annular members secured on the post, each of said members having their upper faces concaved and dished from diametrically opposite points to provide tracks and to afford, at its said diametrically opposite points projections, and concaved walls between said projections, a gate comprising two sections, ring members having oppositely directed bifurcated arms which receive therein and have fixed thereto the respective gate sections, said ring members being disposed opposite the tracks and having journaled therein rollers which rest on the tracks, and a collar surrounding the post and having oppositely extending pairs of ears which receive therein and are fixed to the gate sections.

1,630,201. CENTRIFUGAL SEPARATOR. VIRGIL E. MERCALFE, Delicias, Oriente, Cuba. Filed Aug. 16, 1923. Serial No. 657,739. Renewed Apr. 6, 1927. 8 Claims. (Cl. 210—72.)



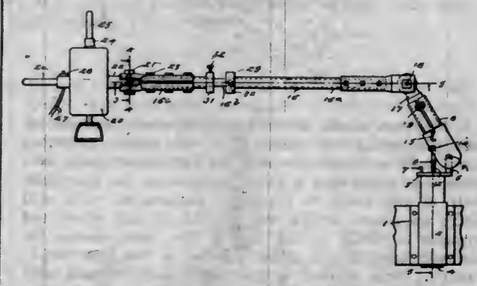
1. In a centrifugal separator, a rotatable annular screen, an inner rotatable conveyor coaxial with said screen, and means for varying the speed ratio of said rotatable screen and conveyor comprising electro-inductive means for operating said screen and conveyor.

1,630,202. METHOD OF COATING GASOMETERS. ROBERT MEZGER, Stuttgart, Germany, assignor to the Firm: Paul Lechler, Stuttgart, Germany. Filed July 10, 1925, Serial No. 42,841, and in Germany Sept. 11, 1922. 1 Claim. (Cl. 91—68.)



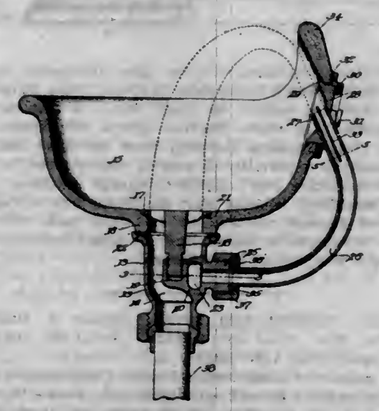
The method of protecting bells of gasometers against corrosion, comprising applying to the surface to be protected a coating consisting of a solution of a neutral bituminous substance in an oil having a high flash point and which does not dry by oxidation, and which is substantially non-volatile, and providing a body of the same solution in contact with the gas holder bell, whereby on being moved it will take up some of the solution.

1,630,203. COIN-ACTUATED LIQUID-DISPENSING MACHINE. ALFRED MIDDLETON, Lavender Bay, near Sydney, New South Wales, Australia. Filed Aug. 6, 1924, Serial No. 730,338, and in Australia Aug. 29, 1923. 3 Claims. (Cl. 221—114.)



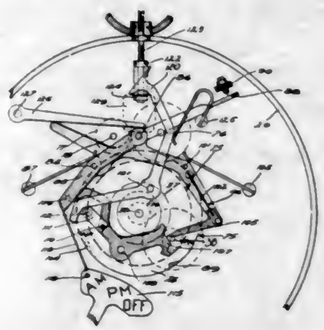
1. In a liquid dispensing apparatus, a chest having a pair of superimposed compartments separated by a substantially horizontally disposed partition having a central opening therethrough, a measuring chamber disposed in the upper compartment and having a valve port disposed substantially centrally above the said central opening, and a conduit leading laterally from the bottom of the valve port beyond the said central opening so as to from a baffle for preventing the said port discharging directly into the said central opening.

1,630,204. GATE. JAMES MILLARD, Steubenville, Ohio. Filed June 22, 1926. Serial No. 117,725. 1 Claim. (Cl. 39—80.)



A gate, comprising end posts, longitudinal bars pivotally engaging said end posts, a pair of bars pivotally engaging said longitudinal bars intermediate of the end posts by pivots extending therethrough and through each of said pair of bars, another pair of bars arranged on the two sides of said longitudinal bars and pivotally secured to one of said longitudinal bars, said pair of bars extended above and below the gate, bolts secured to the extended ends of said pair of bars and adapted to clamp said bars in frictional engagement with the longitudinal bars, the gate being adapted to be adjusted parallelogrammatically to avoid obstruction thereunder and to be held in adjusted positions by clamping said pair of bars in engagement with the longitudinal bars, and the extended ends of said last mentioned pair of bars, below the gate, forming a support for the gate in its lowest position.

1,630,205. PORTABLE MOUNTING FOR ELECTRIC DRILLS. CECIL A. MOWLES, Drill, Va., assignor of one-half to William H. McIlhany, Bluefield, W. Va. Filed July 18, 1925. Serial No. 44,607. 3 Claims. (Cl. 255—52.)



1. A mounting comprising, in combination with a support, a member connected to the support for movement about a horizontal axis, means yieldingly supporting the member, a rod connected to the member for adjustment about a horizontal axis, a drill, and means connecting the drill to the rod for angular adjustment with respect to the axis thereof.

1,630,206. INCLINED-NOZZLE DRINKING FOUNTAIN. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Apr. 23, 1923. Serial No. 633,938. 11 Claims. (Cl. 299—12.)

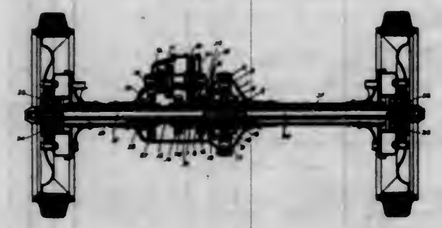
2. In a drinking fountain, a horizontally disposed supply pipe, a waste nipple having a horizontal supply passage, one end of said passage being connected to said pipe, a waste basin mounted on said nipple, a nozzle in the side of said basin remote from said nipple, and means connecting the nozzle to the other end of said supply passage.

1,630,207. MECHANISM-CONTROLLING ALARM IN CLOCKS. BASIL NEWTH and OCTAVIA NEWTH, Sydney, New South Wales, Australia. Original application filed Nov. 26, 1923, Serial No. 677,048, and in Canada Nov. 27, 1923. Divided and this application filed Aug. 16, 1924. Serial No. 732,477. 8 Claims. (Cl. 58—19.)

1. In alarm clocks, alarm actuating means and mechanism permitting the operation of said alarm actuating means only at a set time and for an interval only, said mechanism comprising a wheel mounted on the hour hand shaft of the clock in frictional engagement with said shaft; an alarm setting dial carried by said wheel and arranged centrally in the face of the clock; means for manually moving said wheel relative to the hour hand; a pair of rings carried by said wheel each provided with a notch, and a pair of levers each having a lug bearing against one of said rings and adapted to enter the notch therein, one of said levers, when actuated, permitting the alarm actuating means to operate and the other lever, when actuated, restoring the first lever to its normal position thereby silencing the alarm.

1,630,208. WINDOW ATTACHMENT FOR WINDSHIELDS. EMIL THEODORE NORBECK, Minneapolis, Minn. Filed June 10, 1925. Serial No. 36,162. 1 Claim. (Cl. 20—40.5.)

A window attachment for use upon automobile windshields comprising a rectangular resilient frame having a groove provided within its inner edges, a transparent plate having its edges received within the groove, a beveled strip extending obliquely from the outer edge of the frame and a plurality of suction cups secured to one side of the frame and adapted to engage the inner side of the windshield in order that the frame may be rigidly supported thereon whereby an air tight space will be defined therebetween, eliminating the usual frosting and assuring a clear vision therethrough.

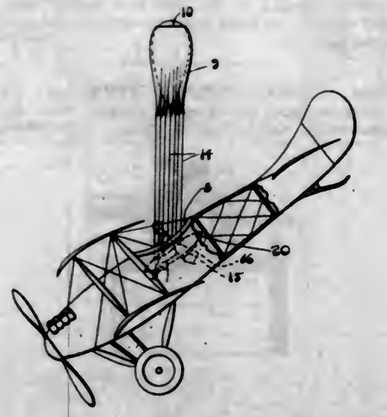


1,630,209. RESPIRATOR MASK. HARRY S. OLGAED, Kohler, Wis. Filed Apr. 9, 1926. Serial No. 100,883. 4 Claims. (Cl. 128—146.)

1. A respirator comprising a hollow frusto-conical face engaging member formed with cushioning means to abut the face of the wearer, a casing having an inset front wall provided with a foraminous upper part and a rearwardly inclined lower part, means within said casing to provide an upper air escape compartment, an intermediate air vestibule and a lower fresh air inlet compartment, means for connecting the casing to the front of and for establishing communication thereof with said body, said vestibule opening into said means, valve controlled passages for establishing communication between said compartments and the vestibule, said foraminous upper part of said wall forming the front of said air escape compartment, and a flanged cap member mounted upon said

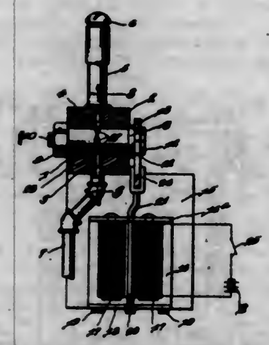
casing and providing with said front wall an air escape passage for said air escape compartment, means for conveying fresh air to said inlet compartment, and said cap member having an opening in its lower portion to provide an outlet for said air escape passage.

1,630,210. REAR-AXLE TRANSMISSION MECHANISM. NELS L. OLSON, Highland Park, Mich. Filed Oct. 6, 1924. Serial No. 741,835. 1 Claim. (Cl. 74—57.)



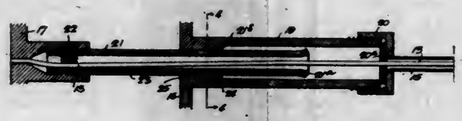
In a rear axle housing, aligning axle shafts, a differential mechanism at the confronting ends of said shafts, a sleeve about one of said shafts connected to said differential mechanism and adapted to transmit power to said differential mechanism, a worm wheel, a transmission gear having a hollow hub journaled in said housing and connected to said worm wheel, the hollow hub of said transmission gear providing clearance for the connection between said transmission gear and said differential mechanism and a shiftable gear on said sleeve adapted to engage said transmission gear for direct drive of said differential mechanism and said axle shafts by said worm wheel.

1,630,211. AIRCRAFT SAFETY DEVICE. JOSEPH OSTAND, Cincinnati, Ohio. Filed Feb. 3, 1927. Serial No. 165,573. 2 Claims. (Cl. 244—21.)



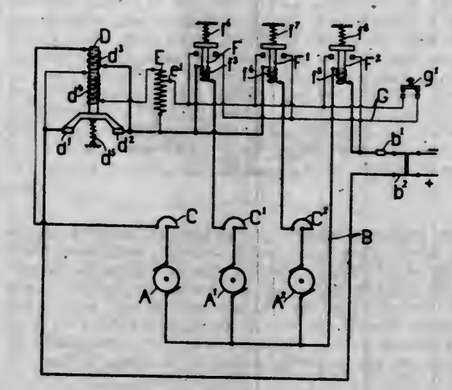
1. An aircraft safety device comprising a parachute, a balloon secured within and at the apex of the parachute, adapted to support the parachute in partially expanded

condition previous to complete expansion thereof, and an aviator-supporting buoy attached to the parachute, said buoy consisting of a substantially annular seat supporting inflated element, and an elongated inflated element at-



tached thereto and in supporting relation thereto to each side thereof, attachment of said aviator-supporting buoy being effected by cables in spaced relation about the rims of and the annular inflated element.

1,630,212. ELECTRIC GAS SWITCH. WILLIAM H. OVERTON, Swanwick, Ill., assignor of one-tenth to Bert Overton, Swanwick, Ill. Filed Oct. 26, 1925. Serial No. 64,955. 1 Claim. (Cl. 67—16.)

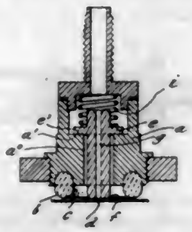


In a gas controlling means including a valve comprising a rotatable cylinder having a multiplicity of transverse openings communicating through a common center, a circumferential groove connecting the peripheral openings, substantially as shown, a valve casing provided with inlet and outlet ducts in alignment with corresponding openings in said valve, a ratchet wheel secured on one end of said valve having a number of teeth equally spaced and corresponding to twice the number of peripheral openings in said valve, an electrical magnet disposed to support and actuate an intermediately supported rod member, substantially as shown, a pawl pivoted on said rod member and positioned for engagement with the ratchet wheel so that when the magnet is energized the pawl will advance said ratchet wheel one tooth and on release will return to the next tooth.

1,630,213. OPERATING DEVICE FOR VALVES AND THE LIKE. NICHOLAS A. PETRY, Philadelphia, Pa. Filed Feb. 24, 1925. Serial No. 11,210. 15 Claims. (Cl. 74—39.)

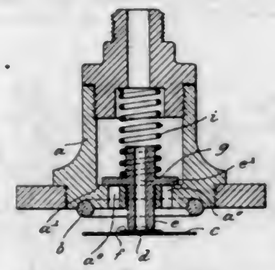
1. The combination of a device to be actuated; a longitudinally adjustable power transmitting element connected to said device; a fixed structure having an opening of other than circular outline; and a tubular member also of other than circular section connected to said element and freely movable through the opening of the fixed structure in one position but capable of frictionally gripping the same when rotated.

1,630,214. ELECTRIC OVERLOAD PROTECTIVE SYSTEM. JAKOB PFRETZSCHNER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 27, 1922, Serial No. 547,243, and in Germany May 26, 1921. 6 Claims. (Cl. 175—294.)



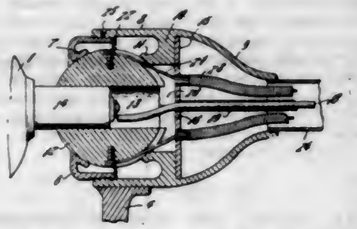
1. In an electric system, the combination with a plurality of motors connected in parallel, a main current circuit and motor armature branch circuits, of an overload circuit-breaker in the main current circuit comprising two magnet coils, and a series of contactors arranged for co-operation with the several motor branch circuits, each of the said contactors being adapted, when operated, to produce in one of the said magnet coils an exciting current of a strength such as to cause the overload circuit-breaker to move into open position, and other magnet coil being connected in series with at least one of said motor armature circuits.

1,630,215. MEANS FOR SEALING RECEPTACLES. HENRY JEFFREY POOLE, London, England. Filed Feb. 14, 1921, Serial No. 444,815, and in Great Britain Apr. 29, 1920. 3 Claims. (Cl. 226—82.)



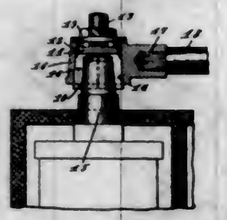
1. Means for sealing the evacuation pinholes in tins or other metallic or partly metallic containers, comprising in combination a suction nozzle having means for connection with an evacuating device, a luting ring on the face of said nozzle, a movable plunger within the said suction nozzle having a longitudinal bore therethrough communi-

cating with the nozzle, and adapted to hold a loose disk of thin material interposed between the bore hole of the said plunger and the evacuation pinhole of the container,



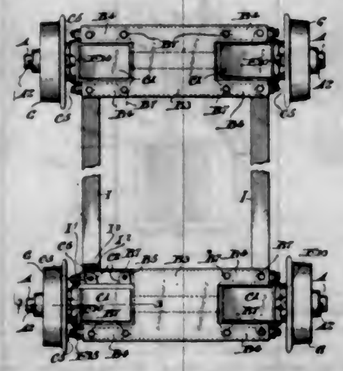
and a spring operating to compress the plunger and with it the disk of thin material against the container to close the evacuation aperture therein.

1,630,216. EVACUATION AND SEALING OF TINS AND THE LIKE METALLIC CONTAINERS. HENRY JEFFREY POOLE, London, England. Filed Oct. 1, 1921, Serial No. 504,768, and in Great Britain June 25, 1921. 1 Claim. (Cl. 113—82.)



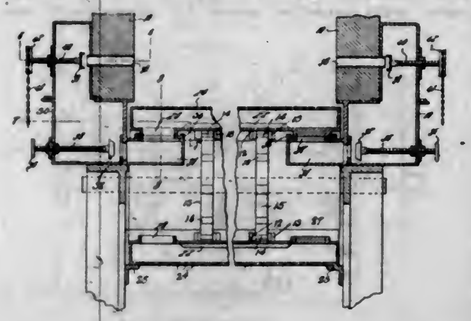
A method of sealing the evacuation pinholes in tins or other metallic or partly metallic containers, which comprises holding a metallic disc in a position opposite to the pinhole and ready for sealing, by suction during the evacuation of the tin, interrupting such suction and thereby causing the disc to be applied automatically to the pinhole to seal the latter, and then permanently affixing the disc over the pinhole by soldering or heat.

1,630,217. SPOTLIGHT. FLOYD O. RASOR, Westerville, Ohio. Filed Jan. 8, 1926. Serial No. 80,072. 2 Claims. (Cl. 240—61.)



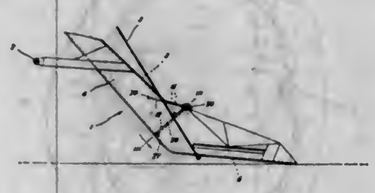
1. A spot light including a cylindrical body having internal screw threads at one end, a flanged ring threaded into said body, an inwardly rounded annular flange at the outer end of said ring, an inwardly projecting annular flange within the body having an outwardly extending portion formed with a concave face and round in plane, a ball positioned between the inwardly rounded flange and the flange on the body, said ball having a central longitudinal opening therethrough, a disk positioned against one face of the flange on the body and formed with a central opening and further formed with right angularly arranged openings in close proximity to the central opening, the inner end of said body being reduced and substantially cone-shaped, a conductor extending through the central opening in the disk and flexible shafts extending through the right angular openings and connected with the ball.

1,630,218. STORAGE-BATTERY TERMINAL. MARVIN E. RUTHERFORD, Los Angeles, Calif. Filed Apr. 15, 1925. Serial No. 23,383. 1 Claim. (Cl. 173—259.)



A terminal of the character described, comprising a pair of interfitting male and female members, each of substantially cup shape internally and externally tapered, the male member being longitudinally split at intervals and of greater length than the female member, an external lateral nipple on the female member for the attachment thereto of a conductor, a central threaded lug on the top of the male member, the female member being provided with a central opening in its top to receive the lug, and a nut engaged on the lug to work against the top of the female member, the slits in the male member being extended through the free edge and terminating at the top thereof.

1,630,219. HUB AND JOURNAL BOX. HUGH W. SANFORD and HARRY W. JONES, Knoxville, Tenn., assignors to Sanford Investment Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 21, 1926. Serial No. 156,146. 23 Claims. (Cl. 295—42.)

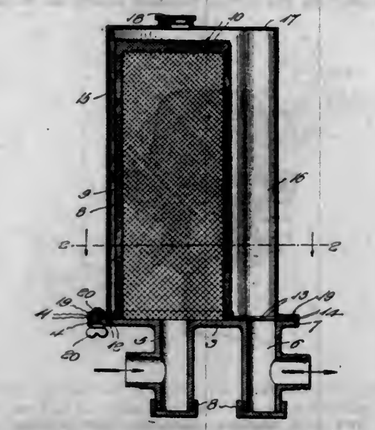


2. In a railway car, the combination with an axle and a wheel surrounding the axle, of an axle box surrounding the axle, a housing structure surrounding the axle box and closed for retaining lubricant and excluding dirt and comprising a thrust plate and a cap between which is an upright annular recess communicating at its lower part with the lower part of the interior of the portion of the housing in which the axle box is located, means in said annular recess for carrying lubricant upward from the lower part of said recess, and a lubricant-conducting passage extending through said cap, substantially as described.

1,630,220. TRAVELING-GRATE STOKER. ALFRED E. M. SHAFER, Lehighton, and ALBIN A. NORRMAN, Tamaqua, Pa. Filed July 24, 1925. Serial No. 45,853. 4 Claims. (Cl. 110—40.)

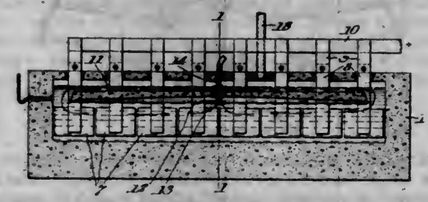
1. In combination, an endless grate including a plurality of pivotally connected hollow grate sections, each having an air inlet opening adjacent each end, with said openings arranged on opposite sides of the longitudinal medial line of the bottom of said section, and a plurality of air exhaust openings in the top thereof, means for operating said grate, and means for alternately supplying said air inlet openings with air when each grate section reaches predetermined positions in the course of its travel.

1,630,221. LOADING SKIP FOR CONCRETE MIXERS. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 13, 1926. Serial No. 108,958. 6 Claims. (Cl. 214—130.)



1. In combination with a charging skip for concrete mixers formed with a spout section and a large loading section for the coarse aggregate, a partition separating the said two sections, and forming a chamber for the cement at the bag of the spout section, the partition being movable to permit the coarse aggregate to pass when the skip is tilted to discharge.

1,630,222. CLOSURE DEVICE. ROBERT D. SIMPSON, Columbus, Ohio. Filed Feb. 13, 1926. Serial No. 88,120. 9 Claims. (Cl. 221—60.)

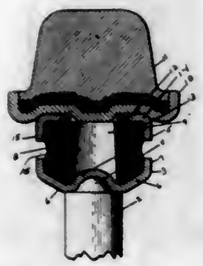


1. As an article of manufacture, a tooth paste container having a cap provided with a discharge orifice made of a substantially rigid non-corrosive and non-metallic material, and a closure member adapted to be moved over and away from said orifice.

1,630,223. LIQUID STRAINER. LOUIS F. STIEHM, Rolling Stone, Minn. Filed July 19, 1926. Serial No. 123,498. 2 Claims. (Cl. 210—165.)

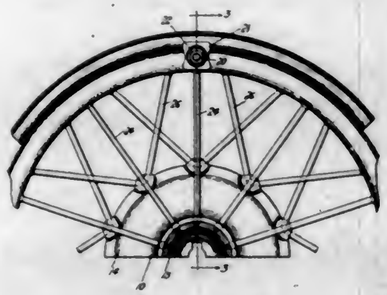
1. A liquid filter comprising an ovate plate having inlet and outlet openings, one of which is disposed substantially in the center and the other in the lobe of the plate, T couplings communicating with said openings, caps removably secured to the branches of said couplings which are in direct line with the openings in said plate, a casing of ovate form in cross-section, having an open end secured to said plate and having its opposite end closed and provided with a restricted opening, a removable cap for normally closing said opening, and cylindrical strainers concentrically arranged in said casing over the inlet opening in said plate and spaced from the walls of the casing, said strainers being closed at one end and open at their opposite ends, said open ends being secured to said plate.

1,630,224. ELECTROLYTIC METHOD AND APPARATUS. KENNETH E. STUART, Niagara Falls, N. Y., assignor to Hooker Electro-Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 13,285. 10 Claims. (Cl. 204—1.)



1. The method of maintaining a uniform concentration of the electrolyte in a cell having longitudinally arranged electrodes which comprises diverting the gaseous product evolved at an electrode along a submerged path extending longitudinally of the cell.

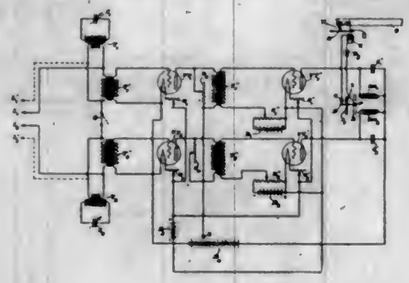
1,630,225. RESILIENT WHEEL. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed June 25, 1921. Serial No. 480,333. 5 Claims. (Cl. 152—36.)



5. In a resilient wheel construction, a plurality of spokes, a fixed wheel rim on said spokes, a plurality of spoke end receiving sockets, formed in the base of the fixed rim, outwardly extending flanges on the fixed rim, an elastic band seated in the fixed rim between

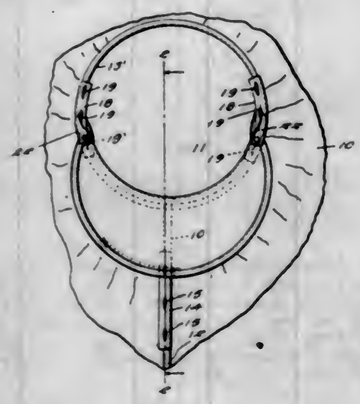
the flanges, a plurality of holes passing radially through the band, certain of said holes seating over the sockets, an outer tire carrying rim surrounding the elastic band, said tire carrying rim having channels formed on its inner

surface, and split angular clamping rings between the tire carrying rim and the elastic band, the horizontal portions of said rings being received in the channels and the vertical portions lying alongside of the elastic band.



1,630,226. METHOD FOR MANUFACTURING WIRE WHEELS. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 9, 1925. Serial No. 1,405. 3 Claims. (Cl. 29—174.)

1. The method of manufacturing wire wheels comprising forming a hub with grooves and projecting lugs adjacent thereto, forming a felly with pockets, forming a series of double spokes of a single wire bent to substantially V-shape, positioning the double spokes so that their vertices are in alignment with the grooves, and their ends in alignment with the pockets, contracting the felly onto the spokes to urge the vertices in the grooves and their ends in the pockets and peening the metal of the projecting lugs over the vertices of the spokes seated in the grooves.

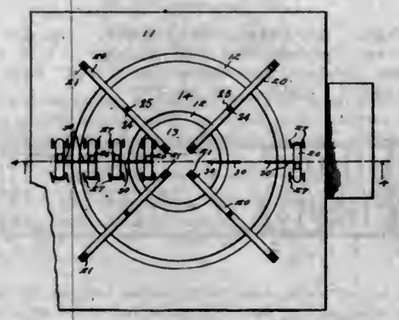


1,630,227. APPARATUS FOR RECORDING ELECTRICAL SIGNALS. ALBERT H. TAYLOR, Washington, D. C. Filed Jan. 2, 1924. Serial No. 683,928. 6 Claims. (Cl. 250—8.)

1. In a system for recording signals composed of periodical electrical currents in the presence of varying electrical currents of an interfering nature the combination of means for separating the currents into two components one of which has the signal and interfering currents in association and the other comprising substantially only interfering currents, means for rectifying the currents, shunt connected means for independently con-

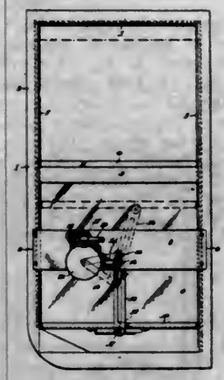
trolling the amplitude of the two components, means for integrating the energy of a plurality of the rectified cycles and variations of said currents into one-way mechanical efforts, said means being adapted to oppose the efforts resulting from the separated interfering currents, and means for utilizing the resulting unopposed effort of said signal currents to record signals.

1,630,228. DRESS SHIELD. BERTHA E. TEDSTONE, San Antonio, Tex. Filed Oct. 19, 1926. Serial No. 142,675. 3 Claims. (Cl. 2—56.)



1. The combination with the arm-hole portions of a dress and sleeve, of a dress shield disposed in the arm-hole and having flaps, apertured members carried by the seams of the dress and sleeve, means on the ends of the shield removably engaged in the apertured members of the sleeve seam, and means on the lower edges of the flaps of the shield for detachable engagement in the apertured members of the dress seam.

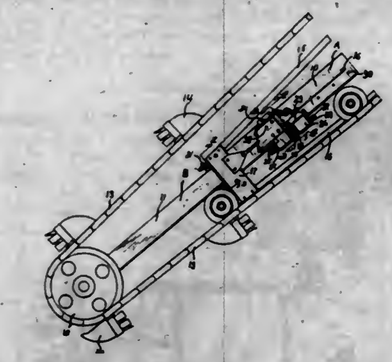
1,630,229. AUTOMOBILE SPEEDWAY DEVICE. CHARLES F. THUSS, Great Cacapon, W. Va. Filed May 27, 1926. Serial No. 112,053. 4 Claims. (Cl. 273—86.)



1. A device of the class described comprising concentric independently movable bushings, said bushings being

of different heights to provide exposed portions, movable bodies, means to move said bodies connected to said ex-

posed portions, and means to drive said bushings comprising gear members each of different diameters, and means to drive the gear members.

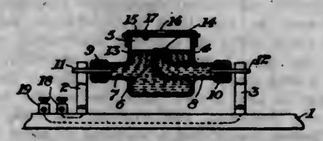


1,630,230. SASH-REGULATING DEVICE. CARL UNGERMAN, Detroit, Mich. Filed Jan. 10, 1924. Serial No. 685,329. 9 Claims. (Cl. 268—126.)

1. In a sash regulating device, the combination with a support, of a swingable and invertible sash supporting arm slidable relative to said support, and a crank operable from said support and connected to said arm for imparting movement thereto.

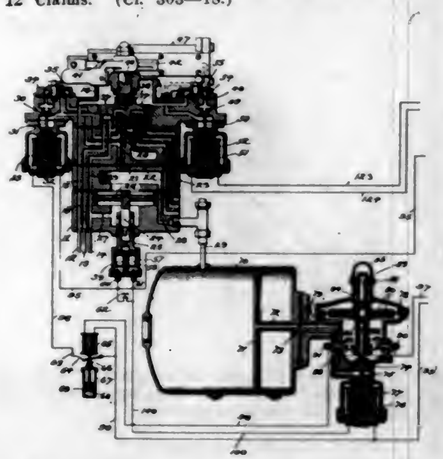
1,630,231. LONGITUDINALLY-EXTENSIBLE BOOM FOR EXCAVATING MACHINES. GEORGE A. VAUGHN, Newton, Iowa, assignor to The Parsons Company, Newton, Iowa. Filed Sept. 30, 1926. Serial No. 138,644. 5 Claims. (Cl. 37—83.)

1. In a longitudinally extensible boom, a boom section comprised of laterally spaced members, a second boom section comprised of smaller laterally spaced members, one end of the second boom section being received in one end of the first boom section, means secured on the inside of the second boom section for holding its members properly spaced apart, a filler adjacent to the end of the second boom section received between the members of the first boom section, means for detachably connecting said filler with the first boom section, adjustable means for connecting said first means and said filler



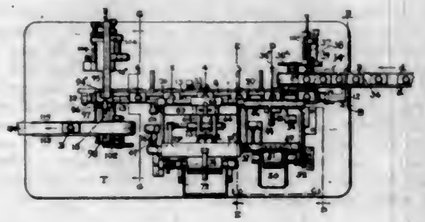
together, means for gripping the members of said first boom section together and thus gripping between them the members of the second boom section.

1,630,232. SWITCHING ARRANGEMENT FOR ELECTRIC HEATER CIRCUITS. WARREN R. WALKER, Bloomfield, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed May 1, 1926. Serial No. 105,927. 3 Claims. (Cl. 219—25.)



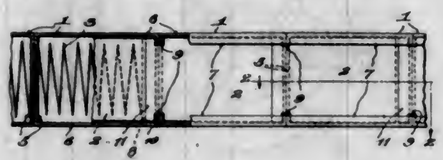
1. In combination with a pair of mains for connection to a source of electric supply, two resistor elements, connection from one supply main directly to one end of one of said resistors, connection from the other end of said resistor to one end of the other resistor, connection through a liquid flow switch from the other end of said other resistor to said supply main and through a second liquid flow switch to the other of said mains, and a connection from between said resistors through a third liquid flow switch to a point between said second switch and said other supply main.

1,630,233. LIGHT FOR MICROSCOPES AND THE LIKE. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, a Corporation of New Jersey. Filed Oct. 3, 1923. Serial No. 666,284. 6 Claims. (Cl. 176—48.)



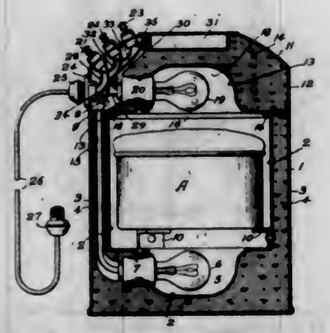
1. A vapor arc lamp comprising a closed envelope, a tube sealed through the wall of said envelope and opening within the body of the envelope, and lead-ins sealed into said envelope and said tube, said lead-ins being aligned and diametrically opposed with respect to the vertical axis of said lamp.

1,630,234. TRAIN CONTROL. CHARLES A. CAMPBELL and EAWIN C. VROMAN, Watertown, N. Y., assignors to The New York Air Brake Company, a Corporation of New Jersey. Filed July 31, 1926. Serial No. 126,306. 12 Claims. (Cl. 303—18.)



1. The combination of an engineer's brake valve; a control device operable to shift said valve to an application position; and means rendered active by said control device in so shifting said valve, and serving when active to interrupt periodically the brake applying flow through said valve, while the brake valve remains in application position.

1,630,235. LABELING MACHINE. ARVID P. EKVALL, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 29, 1926. Serial No. 105,467. 18 Claims. (Cl. 216—54.)

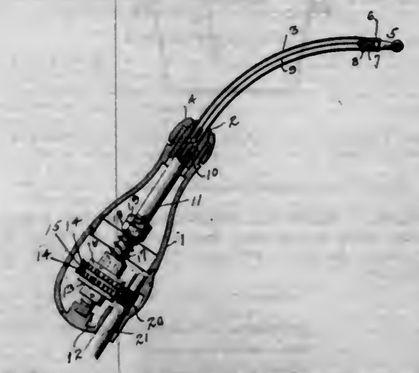


1. A labeling machine comprising in combination, means for supporting and directing articles to be labeled consisting of a dual-track way having an intermedial longitudinal space, means in lateral relation to said track way for gumming and applying a label to the article at a predetermined station thereon, said means including a standing frame, a bottom-delivery label-supply holder mounted thereon, oscillating label pickers fulcrumed above the track way, an oscillating stripper-finger fulcrumed below the track way, the fulcrum axes being approximately in the same vertical plane as the front of the trackway, a gum-supply reservoir and means for transferring gum to the picker faces, means for severally actuating the gumming, and applying devices, article-propelling means comprising a plurality of pairs of gripping members adapted for positively closing against the sides of the article above the plane of the tracks for effecting its forward movement, and opening and retracting below the track level for its backward movement, means for reciprocating said gripper members, means for closing and opening the pairs of gripper members at the limits of the reciprocative movement, and a laterally moving pressing wiper for finally smoothing on the label, and removing the labeled article from the track way; said mechanism constructed and organized for operation substantially as set forth.

1,630,236. EXPANSIBLE BRACELET. FREDRICK W. NITTEL, Attleboro Falls, Mass., assignor to M. S. Company, Attleboro, Mass. Filed June 3, 1926. Serial No. 113,420. 2 Claims. (Cl. 59—79.)

1. In a bracelet, links having boxes, ears on the upper edge of an end of each box projecting above such edge, inwardly extending flanges on the box sides overlying the ears at one end of the box and having their opposite ends free and spaced above the upper edge of the opposite end of the box, and a spring pressed connector in each box having cut-outs in its sides formed to receive the flanges and ears, the cut-outs and flanges being related so as to permit the connector to be held at right angles to the plane of the box thereby to receive the flanges in the cut-outs, and allow the connector to be moved along the flanges to cause the ears to be received in the cut-outs and thereupon permit the connector to be moved into the plane of the box.

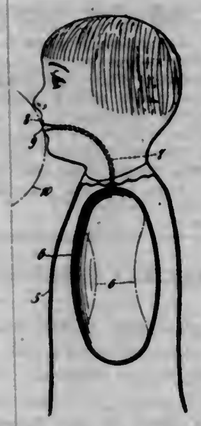
1,630,237. ELECTRIC COOKER. JOHN E. SMITH, East Orange, N. J., assignor to The Lite-Rays Cooker Corporation, Plainfield, N. J., a Corporation of New Jersey. Filed Oct. 22, 1926. Serial No. 143,311. 6 Claims. (Cl. 219—35.)



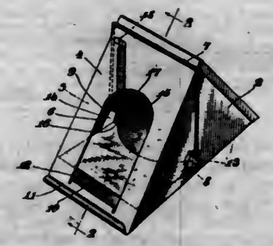
1. In a cooker, a body having an interior concave depression in the bottom thereof, a removable cover for the body having an interior concave depression in the under face thereof, electric bulbs disposed in the depressions in the body and covered and spaced from the outer edges thereof, and a reflector within the body and in the depressions whereby the food to be cooked will be acted upon by the direct and actinic rays from the electric bulbs.

1,630,238. LOCK. EDGAR M. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed June 12, 1926. Serial No. 115,440. 1 Claim. (Cl. 70—72.)

The combination with a lock, including a housing, a locking stump movable in the housing, tumblers in the housing having their front ends adjacent and recessed for the locking stump, and a cover plate having an aperture opposite the outer end of the locking stump, of a plate engaging the locking stump for movement therewith disposed intermediate the cover plate and the tumblers and extending across said aperture in all positions of the locking stump, whereby access to the ends of said tumblers adjacent the locking stump through said aperture is prevented.

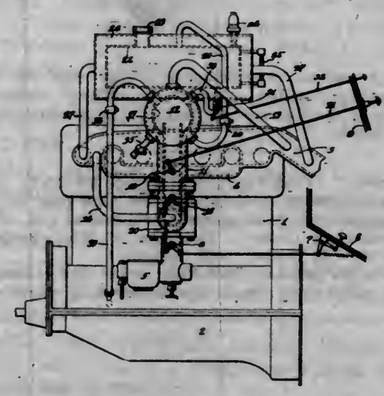


1,630,239. ANTRUM BURR. ROY S. BINKLEY, LEONARD E. STUTSMAN, and THOMAS E. GROVE, Dayton, Ohio. Filed May 9, 1924. Serial No. 711,972. 17 Claims. (Cl. 128—305.)



1. In a surgical drill, a hollow handle portion, an inflexible arcuate tubular stem carried thereby, a burr revolubly mounted at the extremity of the arcuate stem, said arcuate stem being shaped and proportioned to follow the burr through a restricted passage, a flexible shaft extending through the stem and operatively connected with the revoluble burr and driving means for rotating the shaft located within the hollow handle portion, with which the flexible drive shaft is operatively connected.

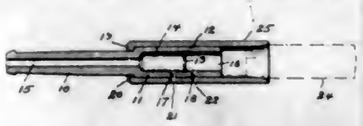
1,630,240. DOLL. JAMES A. BOLTON, Sayville, N. Y. Filed July 10, 1926. Serial No. 121,570. 2 Claims. (Cl. 46—40.)



1. In an osculating doll, an orifice formed between the lips of the doll, the outer extremities of the orifice being flush with the lips of the doll, means for producing a partial vacuum in said orifice, whereby following the actuation of the vacuum producing means and the application of the lips of the doll to a yielding surface the withdrawal of the lips of the doll from contact with the yielding surface will be accompanied by a sound simulating the sound of a kiss.

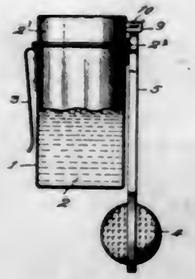
1,630,241. MOUSETRAP. WILLIAM S. MOUNTFORD, Dumont, N. J., assignor to William Dubilier, New York, N. Y. Filed Dec. 6, 1923. Serial No. 678,806. 4 Claims. (Cl. 43—82.)

4. A mouse trap comprising a housing having an entrance passageway therein through one side wall thereof, a jaw member comprising a lever pivoted to the housing and movable across said entrance passageway to closed position, a plate pivoted in the housing and extending over the interior thereof adjacent said passageway, said lever being provided with a projection within the housing engaging said plate whereby movement of the plate will be transmitted to the lever, and a spring engaging said projection exerting tension on the lever substantially in the direction of its pivot when the lever is in open position, but in all other positions urging the lever to move the lever across said entrance passageway to closed position.



1,630,242. CARBURETOR ATTACHMENT. RUFUS R. ROSS, Detroit, Mich., assignor to Detroit Specialty Products Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 13, 1926. Serial No. 108,814. 2 Claims. (Cl. 123—25.)

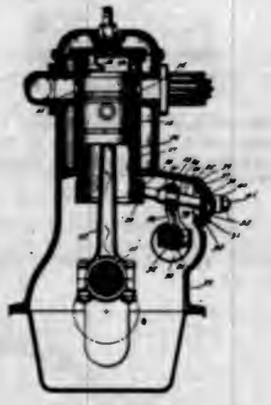
1. The combination with an internal combustion engine having a crank case, intake and exhaust manifolds, and a carburetor adapted to supply fuel to the engine intake manifold, said carburetor having an air intake connection, of a head connected to the air intake connection of said carburetor, a mixing chamber in said head, said head having an air passage through said mixing chamber to the air intake connection of said carburetor, connections



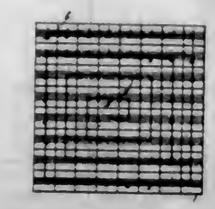
between said head and the exhaust manifold so that the exhaust gases may circulate in said head and heat said mixing chamber, a steam generator, a connection between said steam generator and said mixing chamber so that steam may be supplied to said mixing chamber, and a connection between said mixing chamber and the engine crank case so that oil vapor may be supplied to the mixing chamber.

1,630,243. CIGARETTE HOLDER. CLIFFORD D. ROSAN, New Haven, Conn.; Eva H. Rosan administratrix of said Clifford D. Rosan, deceased. Filed May 1, 1925. Serial No. 27,187. 5 Claims. (Cl. 131—10.)

5. In a device of the character described; a member having a bore therein and a plurality of ports through the wall thereof; a separable plate, having an opening therethrough, within said bore between the said ports; and a sleeve encircling the member, having ports therethrough in the same axial line that register with said ports; and another port in the same peripheral line as one of said ports.



1,630,244. APPARATUS FOR RENEWING SURFACES OF GOLF BALLS. WILLIAM P. HAMMOND, East Orange, N. J. Filed May 29, 1922. Serial No. 564,341. 4 Claims. (Cl. 91—60.)



2. A portable re-surfacing device for used golf balls, comprising a liquid container, a golf ball holder and means on the container for removably supporting the golf ball holder.

1,630,245. INTERNAL-COMBUSTION ENGINE. JULES HALTENBERGER, Indianapolis, Ind., assignor to Jules Haltenberger, Incorporated, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 9, 1926. Serial No. 80,268. 42 Claims. (Cl. 123—81.)

1. In an internal combustion engine, the combination of a cylinder, a piston, a sleeve-valve, a single valve-shaft, and a movement-multiplying operating connection between said valve-shaft and said sleeve-valve and operated wholly by said single valve-shaft for producing an increased axial throw of said sleeve-valve.

1,630,246. MUSICAL TRANSFORMATION CHART. JOHN WOLF-MARJANSKI, New York, N. Y. Filed Jan. 18, 1921. Serial No. 438,120. 2 Claims. (Cl. 283—47.)

1. A musical transformation and directional chart, comprising a body part having a surface divided into squares of equal size, said squares registering both transversely and longitudinally and being in number sufficient to dispose eight squares in each row to correspond to the eight notes of a musical scale, a direction indicating diagram superposed on the surface of the body part and comprising a line having a point of commencement and a point of ending and disposed to intersect all of said squares, said squares having therein the conventional music notation lines and spaces and thereby adapted to receive therein each a musical notation of a given scale with the notations in the consecutive order of the scale and in the squares consecutively designated by said diagram, whereby different transformations may be made by reading the notations transversely and longitudinally in the rows, and also diagonally through the rows.

Patents Nos. 1,630,247 to 1,631,111.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 358—No. 5. TUESDAY, MAY 31, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

(ORDER No. 3,003.)

U. S. PATENT OFFICE, *Washington, Apr. 8, 1927.*

Acting under the provisions of section 487 of the Revised Statutes of the United States as amended February 18, 1922, Louis F. Griswold, of Miami, Fla., formerly of Cleveland, Ohio, whose registration number is 2261, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

TRADE-MARKS CANCELED.

41,955. Certain named lubricants. The Ohio Filler & Shield Co., Columbus, Ohio. Registered January 26, 1904. Canceled May 2, 1927.

130,530. Fence posts. Raymond C. Knopke, Chicago, Ill. Registered Apr. 27, 1920. Canceled May 2, 1927.

142,231. Boots, shoes, and slippers and certain named shoe findings. Bally Company, Inc., Wilmington, Del., and New York, N. Y. Registered May 10, 1921. Canceled May 5, 1927.

142,390. Pillows, sofa cushions, mattresses, and box springs. The Sanitary Feather Co., Chicago, Ill. Registered May 10, 1921. Canceled May 5, 1927.

148,993. Certain articles of clothing. Bally Company, Inc., Wilmington, Del., and New York, N. Y. Registered December 6, 1921. Canceled May 5, 1927.

158,354. Mouth washes, tooth powder and paste. Howard Herman Ments, D. D. S., Gustine, Calif. Registered August 29, 1922. Canceled May 2, 1927.

167,966. Fresh citrous fruits. Associated Fruit Co., Miami, Fla. Registered May 8, 1923. Canceled April 18, 1927.

179,449. Bread. Hochman & Wertheim, Brooklyn, N. Y. Registered February 12, 1924. Canceled April 18, 1927.

190,260. Certain named furniture and bedding. Louis R. Gans, doing business as Howard Furniture Co., Brooklyn, N. Y. Registered March 10, 1925. Canceled May 2, 1927.

196,357. Antiseptics. Lehn & Fink, Inc., New York, N. Y. Registered March 17, 1925. Canceled May 2, 1927.

207,576. Dandruff ointment. Charles Blum, doing business as The Dando-Rub Laboratories, Brooklyn, N. Y. Registered January 5, 1926. Canceled May 2, 1927.

210,534. Crackers. The Schust Company, Saginaw, Mich. Registered March 16, 1926. Canceled May 2, 1927.

215,035. Gas ranges, gas heaters. Charles C. Brunner, New York, N. Y. Registered July 27, 1926. Canceled May 2, 1927.

216,550. Canned fruits and canned vegetables. The Lodi Canning Co., Lodi, Calif. Registered August 10, 1926. Canceled April 18, 1927.

217,245. Oil-burning apparatus. Melco Oil Burner Corporation, Buffalo, N. Y. Registered August 31, 1926. Canceled May 2, 1927.

Condition of Applications Under Examination at Close of Business May 20, 1927.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 60,530; Trade-Mark Division, 1,896. Oldest new case, Oct. 2, 1926; oldest amended, Oct. 6, 1926. The dates given are 1926 except where † indicates 1927.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders	†Mar. 7	†Mar. 9	534
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	†Feb. 1	†Feb. 10	763
331	3. LINDSEY, A., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 22	†Jan. 27	1,533
234	4. MERRITT, A. D., Conveyers; Hoists; Handling Apparatus and Implements, and Pushing and Pulling.	Dec. 10	Dec. 8	1,522
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording; Knotters	Nov. 30	Dec. 4	962
318	6. LEWERS, A. M., Chemistry; Chemistry—Carbon Compounds; Substance Preparation	Nov. 1	Nov. 1	1,581
106	7. JARBOE, C. G., Amusement and Exercising Devices; Toys; Optics; Photography	Dec. 15	Dec. 8	1,242
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	†Jan. 8	†Jan. 15	1,640
221	9. ADAMS, R. E., Pumps; Fluid and Fluid-Current Motors	†Feb. 16	†Mar. 1	824
118	10. HUNTER, O. F., Land Vehicles—Animal Draft Appliances, Bodies and Tops	Dec. 30	†Jan. 8	1,128
148*	11. ARMSTRONG, H. C., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Hides, Skins, and Leather Manufactures; Nailing and Stapling; Whip Apparatus; Cutting and Punching Sheets and Bars.	†Jan. 21	†Jan. 19	989
330	12. PIERCE, P. P., Machine Elements	Dec. 15	†Jan. 4	1,239
154*	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning; Boring and Drilling.	Dec. 6	†Jan. 3	1,238
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working; Metal Working, Assembling, and Blanks and Processes.	Nov. 22	†Jan. 8	1,202
329	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	†Jan. 10	†Jan. 14	1,390
242*	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	†Jan. 21	†Feb. 1	668
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Oct. 28	Dec. 6	711
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Nov. 5	Oct. 30	967
236	19. GLASCOCK, E. S., Furnaces, Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces	†Feb. 7	†Feb. 15	756
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking	†Jan. 21	†Jan. 20	965
212	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	Dec. 18	Dec. 23	965
244*	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms, Ordnance, and Explosive Devices; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Nov. 4	Dec. 1	856
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	Nov. 23	†Jan. 5	695
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Oct. 2	Oct. 6	1,049
314	25. LIGHTFOOT, J. H., Agitating; Bleaching and Dyeing; Butchering; Classifying Solids; Centrifugal-Bowl Separators; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Mills; Sugar and Starch; Threshing; Vegetable and Meat Cutters and Comminutors.	Dec. 27	†Jan. 3	1,229
238*	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	Dec. 10	Dec. 16	897
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	†Feb. 2	†Feb. 10	822
225	28. BENSON, A. R., Internal-Combustion Engines	†Jan. 2	†Jan. 22	1,148
160*	29. MORRIS, B. N., Abrading; Button Making; Coopering, Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	Dec. 10	Dec. 17	1,145
248	30. SHIPMAN, J. L., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Typewriting Machines; Thermostats and Humidostats	†Jan. 3	†Feb. 21	1,022

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE FORSYTH.

Decided June 23, 1925.

DESIGNS—PATENTABILITY—COMBINATION OF FEATURES SHOWN IN DIFFERENT REFERENCES.

Where the general outline of applicant's disk wheel is shown in the patent to P., but the portion connecting the rim with the central curved portion in P. is straight, whereas the corresponding portion of applicant's wheel is dished or curved, but this feature is shown in the patents to W. and S., *Held* that the substitution for the straight portion in P. of the curved portion in the other references did not involve invention.

[Affirmed by the Court of Appeals of the District of Columbia, 358 O. G. 1049.]

APPEAL from Examiners in Chief.

Application for design patent for disk wheel filed March 2, 1922, Serial No. 988.

Messrs. Cromwell, Greist & Warden for the applicant.

FENNING, *Assistant Commissioner:*

Applicant appeals from the action of the Examiners in Chief affirming the Primary Examiner in refusing his application for a patent for a design for disk wheel of the type which is commonly used in automobiles.

The tribunals below have suggested that the disk wheel is a device utilitarian in character and that it is not the proper subject matter for a design patent, which is directed toward the esthetic. They also find the device illustrated in the present application anticipated by Putnam, Des. No. 57,861.

Applicant admits that the general outline of his wheel is shown in Putnam, but points out that the portion connecting the rim with the central curved portion of Putnam is straight, whereas the corresponding portion of applicant's wheel is dished or curved. A very similar dish, similarly situated, is shown in Patent No. 1,405,648, Williams, issued Feb. 7, 1922; see, also, No. 1,416,524, Surridge, Mar. 16, 1922; and No. 1,441,769, Williams, Jan. 9, 1923. The applications for all of these patents were filed long prior to applicant's filing date.

It seems clear that applicant has merely substituted for the straight portion of Putnam the curved portion of the other patents. A change of this sort is not patentable in view of *Knapp* v. *Wül & Baumer Co.*, 290 O. G. 645, 273 Fed. 280.

The general appearance of applicant's device is nearly the same as that of the prior art devices. As was pointed out by the Court of Appeals in *In re Freeman*, 1904 C. D. 619, 109 O. G. 1339, 23 App. D. C. 226:

> A minute cog-wheel, almost indistinguishable by the naked eye, might make a vast difference in the operativeness of a mechanical device, while details of that nature could not possibly make any appreciable difference between devices for designs. As has been well stated by the present Commissioner of Patents in another case, the novelty of a design device must be tested by the test of ornament. Now, while the final merit of ornamentation may depend upon the harmonious blending of numerous small details, and all such details are important in the production of the harmonious whole, yet it is very evident that, in such matters, differing therein from mechanical contrivances, the change or omission or addition of a few minor details would not justify the multiplication of design patents, even though one design might readily be distinguished from another by some one or more features.

Applicant's reference to the appearance of the wheel when revolving should not support a patent in view of *In re Mygatt*, 1913 C. D. 330, 188 O. G. 1056, 39 App. D. C. 432.

The attitude of the Court of Appeals, and consequently of this Office, toward patentability of designs is clearly set out in *In re Schraubstadter*, 1906 C. D. 541, 120 O. G. 1167, 26 App. D. C. 331; *In re Tournier*, 1901 C. D. 306, 94 O. G. 2166, 17 App D. C. 481; *In re Sherman*, 1910 C. D. 382, 154 O. G. 839, 35 App. D. C. 100. These cases preclude allowance of the present application. In design cases as well as in structural cases every shadow of a shade of a change of line does not import invention. (*Majestic Electric Development Co.* v. *Westinghouse Electric & Mfg. Co.*, 276 Fed. 676.)

The Examiners in Chief are affirmed.

Court of Appeals of the District of Columbia.

IN RE FORSYTH.

No. 1,578. Decided February 7, 1927.

APPEAL from Patent Office. Affirmed.

(For Commissioner's decision see 358 O. G. 1049.)

Mr. L. T. Greist for Forsyth.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

Appellant was denied a patent on a claim for an ornamental design for a disk wheel, and accordingly this appeal was taken.

We deem it unnecessary to consider the case at length as we are clearly of the opinion that if appellant's design would be patentable, in the absence of anticipation by the disclosures of the prior art, he is completely barred by existing patents cited in the decisions of the tribunals below.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

OSTERMOOR & COMPANY, INC., *v.* INTERNATIONAL BEDDING COMPANY.

No. 1,921. Decided February 7, 1927.

TRADE-MARKS—OPPOSITION—10-YEAR PROVISO OF ACT OF 1905—ADVERSE INTRASTATE USE SUFFICIENT TO PREVENT REGISTRATION UNDER.

Where the applicant was seeking registration under the 10-year clause of the act of February 20, 1905, and opposer had established intrastate use during the 10-year period prior to the passage of the act, *Held* that the adverse use within a State is sufficient to prevent registration.

APPEAL from the Patent Office. Affirmed.

Mr. C. C. Cousins and *Mr. H. F. Riley* for Ostermoor & Company, Inc.

Mr. Edw. S. Rogers for International Bedding Co.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.*:

This case is here on appeal from the Commissioner of Patents in two trade-mark opposition proceedings, which have been consolidated for the purposes of this case. Opposition No. 5477 involves a mark consisting of a mattress, one end of which is open so as to expose the layers of felt composing the mattress. Opposition No. 5478 differs from the above mark only in that it shows a two-piece mattress.

This mark was registered in 1900 under the Trade-Mark Act of 1881 and again in 1905 under the Trade-Mark Act of 1905. The registration under the act of 1905 was canceled, for the reason that the mark was descriptive and incapable of registration. *Ostermoor & Co.* v. *Rose Spring and Mattress Co.* 338 O. G. 972, 55 App. D. C. 307, 5 Fed. (2d) 268.

It is sought now to register the mark under the 10-year clause of the Trade-Mark Act of 1905. To accomplish this the applicant must establish exclusive use of the mark during the 10-year period prior to the passage of the act of 1905. The tribunals of the Patent Office found from the testimony that appellant had failed to establish such exclusive use and was, therefore, not entitled to registration. We have examined the evidence in the case and find that it overwhelmingly supports the findings of the Commissioner. Inasmuch as the case has been here on three previous occasions, we deem it unnecessary to enter into a discussion of the facts as disclosed by the record.

It is contended that the opposition has failed to establish any interstate use of the mark as against appellant's alleged exclusive use during the 10-year period. This is not necessary. Adverse use within a State during that period is sufficient to prevent registration. *Macauley* v. *Malt Diastase Co.* 338 O. G. 4, 55 App. D. C. 277, 4 Fed. (2d) 944. In other words—

> actual use must be shown to have been possessed and enjoyed by the applicant to the sole exclusion of all others. *Worcester Brewing Corp.* v. *Rueter*, 188 O. G. 1190, 30 App. D. C. 428.

The decision of the Commissioner is affirmed.

ADJUDICATED PATENTS.

(C. C. A. Pa.) The Lubbers patent, No. 886,618, for glass-drawing apparatus, claim 5 *Held* valid and infringed. *Window Glass Mach. Co.* v. *Pittsburgh Sheet Glass Co.*, 18 F. (2d) 63.

(C. C. A. Pa.) The Lubbers patent, No. 914,588, for apparatus and method for drawing glass, *Held* valid and infringed. *Window Glass Mach. Co.* v. *Pittsburgh Sheet Glass Co.*, 18 F. (2d) 63.

(C. C. A. Pa.) The Lubbers patent, No. 922,973, for glass-drawing machine, claims 1, 2, 3 *Held* invalid. *Window Glass Mach. Co.* v. *Pittsburgh Sheet Glass Co.*, 18 F. (2d) 63.

(D. C. N. Y.) The Miller patent, No. 945,570, for ice-cream freezer, claims 12 and 20 *Held* valid and infringed. *H. H. Miller Industries Co.* v. *Emery Thompson Machine & Supply Co.*, 18 F. (2d) 150.

(C. C. A. Pa.) The Frink patent, No. 988,454, for double glass pot with means of moving it longitudinally, claim 8 *Held* not infringed. *Window Glass Mach. Co.* v. *Pittsburgh Sheet Glass Co.*, 18 F. (2d) 63.

(C. C. A. Pa.) The Lubbers patent, No. 1,020,920, relating to automatic venting of pulsations in glass apparatus, *Held* infringed. *Window Glass Mach. Co.* v. *Pittsburgh Sheet Glass Co.*, 18 F. (2d) 63.

(C. C. A. Ill.) The Clark patent, No. 1,207,711, for changeable signboard, *Held* invalid. *R. W. Clark Mfg. Co.* v. *Tablet & Ticket Co.*, 18 F. (2d) 91.

(C. C. A. Ohio.) The Gullborg patent, No. 1,307,734, for lubricating means for automobiles, claims 1–4, 7, 8, 14, 15, *Held* valid and infringed and claim 12 invalid. *Lyman Mfg. Co.* v. *Bassick Mfg. Co.*, 18 F. (2d) 29.

(C. C. A. N. Y.) The Meldrum patent, No. 1,458,535, for paper cap for milk bottles, claim 1 *Held* valid but not infringed. (D. C.) *Smith-Lee Co.* v. *Plympton Paper Products Co.*, 18 F. (2d) 153, decrees affirmed 18 F. (2d) 154.

(C. C. A. Ohio.) The Manzel patent No. 1,459,662, for automobile lubricating system, *Held* invalid. *Lyman Mfg. Co.* v. *Bassick Mfg. Co.*, 18 F. (2d) 29.

(C. C. A. Cal.) The Greer patent, No. 1,460,716, for metal book-form savings bank with detachable covering, claim 6 *Held* valid and infringed and the remaining claims invalid. *Bankers' Utilities Co.* v. *Pacific Nat. Bank*, 18 F. (2d) 16.

(C. C. A. Ohio.) The Winkley reissue patent, No. 14,667, for lubricating system for automobiles, claim 6 *Held* not infringed and claim 12 valid and infringed. *Lyman Mfg. Co.* v. *Bassick Mfg. Co.*, 18 F. (2d) 29.

(C. C. A. N. Y.) The Calkins reissue patent, No. 15,824, for guide strips in laying terrazzo mosaic, *Held* valid and infringed. *Traitel Marble Co.* v. *U. T. Hungerford Brass & Copper Co.*, 18 F. (2d) 66.

Disclaimers.

1,577,076.—*Albert O. Powell*, New York, N. Y. TELEPHONE-EXCHANGE SYSTEM. Patent dated March 16, 1926. Disclaimer filed April 14, 1927, by the patentee, assignee, *Western Electric Company, Incorporated*, consenting.

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words, to wit:

"1. In a telephone exchange system, a plurality of operators' positions, a sender controlling equipment at each of said positions, a plurality of outgoing trunks, each trunk terminating at its distant end in a manual connection terminal, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of sender controlling equipments, a plurality of switching units common to said operators' positions, means to operate a switching unit to establish an interconnection between a sender controlling equipment, a sender and an idle trunk, and means to operate said mechanism over said trunk under the control of a sender in accordance with the operation of said sender controlling equipment.

"2. In a teleprone exchange system, a plurality of operators' positions, a sender controlling equipment at each of said positions, a plurality of outgoing trunks, each trunk terminating at its distant end in a manual connection terminal, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of senders, a plurality of sender controlling equipments, a plurality of switching units common to said operators' positions, means to operate a switching unit to establish an interconnection between a sender controlling equipment, a sender and an idle trunk, means to indicate to an operator the number of the idle trunk selected, and means to operate said mechanism over said trunk under the control of a sender in accordance with the operation of said sender controlling equipment.

"3. In a telephone exchange system, in combination, incoming lines, outgoing trunks, each trunk terminating at its distant end in a manually operable connection terminal, an operator's position, a cord circuit terminating at each end in a manually operable device for interconnecting an incoming line and an outgoing trunk, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a

plurality of variably operable senders for controlling said mechanism over said trunks independent of said cord circuit, and means at said operator's position to control the automatic selection of a trunk and to variably control the settings of said senders for controlling said mechanism.

"4. In a telephone exchange system, in combination, incoming lines, outgoing trunks, each trunk terminating at its distant end in a manually operable connection terminal, an operator's position, a cord circuit terminating at each end in a manually operable device for interconnecting an incoming line and an outgoing trunk under the control of said operator's position, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of variably operable senders for transmitting series of impulses of varying characteristics over said trunks for controlling said mechanism, and means at said operator's position to control the automatic selection of a trunk and of a sender and to variably control the setting of said senders for controlling said mechanism.

"5. In a telephone exchange system, in combination, incoming lines, outgoing trunks, each trunk terminating at its distant end in a manually operable connection terminal, an operator's position, a cord circuit terminating at each end in a manually operable device for interconnecting an incoming line and an outgoing trunk under the control of said operator's position, means associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of senders for transmitting series of impulses of varying characteristics over said trunks for controlling said mechanism, registers in said sender for recording the digits of wanted line numbers, and means at said operator's position to control the automatic selection of a trunk and of a sender and for variably controlling the setting of said registers for controlling said mechanism.

"6. In a telephone exchange system, a plurality of operators' positions, a sender controlling equipment at each of said positions, a plurality of outgoing trunks, each trunk terminating at its distant end in a manually operable connection terminal, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of senders, a plurality of sender controlling equipments, a plurality of switching units common to said operators' positions, means to operate a switching unit to establish an interconnection between a sender controlling equipment, a sender and an idle trunk, means to operate said mechanism over said trunk under the control of a sender in accordance with the operation of said sender controlling mechanism, and means operative following the completion of the operation of said sender to release said switching unit.

"7. In a telephone exchange system, a plurality of operators' positions, a sender controlling equipment at each of said positions, other operators' positions, a plurality of outgoing trunks, said trunks terminating at said latter positions in manually operable connection terminals, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of senders, a plurality of sender controlling equipments, a plurality of switching units common to said first operators' positions, means to operate a switching unit to establish an interconnection between a sender controlling equipment, a sender and an idle trunk, means to operate said mechanism over said trunk under the control of a sender in accordance with the operation of said sender, controlling mechanism, and means operative upon the response of a second mentioned operator to start said sender into operation.

"9. In a telephone exchange system, a plurality of incoming lines, a plurality of outgoing trunks, each trunk terminating at its distant end in a manually operable connection terminal, means for interconnecting said lines and trunks, mechanism associable with the distant ends of said trunks for indicating the numerical designation of a desired line, a register sender, groups of relay registers for said sender, means for registering the numerical and stations designations of a desired line on said registers, means associated with said sender for transmitting over said trunks a plurality of series of impulses of varying characteristics corresponding to the designations registered on said registers for controlling said mechanism, and means for changing the order of transmission of said series of impulses in accordance with the operated condition of the relays of certain of said registers."

1,580,252.—*Emil Jacobsen*, Chicago, Ill. AUTOMATIC TELEPHONE SYSTEM. Patent dated April 13, 1926. Disclaimer filed May 12, 1927, by the assignee, *Automatic Electric Inc.*

Hereby enters this disclaimer to that part of the claims in said specification which is in the following words, to wit:

"19. In a telephone system, a trunk line having two branches at the incoming end, an automatic switch in which said trunk terminates at the outgoing end, two groups of lines accessible to said switch corresponding, respectively, to said two branches, automatic switching mechanism for extending a call to the trunk via either of said branches, means for then operating said switch to further extend the call by way of an idle one of said lines, and discriminating means for causing said switch to select an idle line in the particular group which corresponds to the incoming branch in use.

"20. In a telephone system, a trunk line having two branches at the incoming end, an automatic switch in which said trunk terminates at the outgoing end, two groups of lines accessible to said switch corresponding, respectively, to said two branches, automatic switching mechanism for extending a call to the trunk via either of said branches, means for then operating said switch to further extend the call by way of an idle one of said lines, testing means in said switch, and means associated with said incoming branches for controlling the action of said testing means to cause the said switch to select an idle line in the particular group which corresponds to the incoming branch in use.

"21. In a telephone system, a trunk line having two branches at the incoming end, an automatic switch in which said trunk terminates at the outgoing end, two groups of lines accessible to said switch corresponding, respectively, to said two branches, automatic switching mechanism for extending a call to the trunk via either of said branches, means for then operating said switch to further extend the call by way of an idle one of said lines, testing means in said switch normally effective to cause said switch to select an idle line in a particular one of said groups corresponding to a particular incoming branch, and means responsive in case the call is received over the other incoming branch for causing said switch to select an idle line in the other group.

"22. In a telephone system, a trunk line having two branches at the incoming end, an automatic switch in which said trunk terminates at the outgoing end, two groups of lines accessible to said switch corresponding, respectively, to said two branches, automatic switching mechanism for extending a call to the trunk via either of said branches, means for then operating said switch to further extend the call by way of an idle one of said lines, testing means in said switch for causing the selection of an idle line in a particular one of said groups, other testing means in said switch for causing the selection of an idle line in the other group, and means for automatically rendering effective only the testing means which is associated with the group corresponding to the incoming branch in use."

Interference Notice.

U. S. PATENT OFFICE, *Washington, May 19, 1927.*

C. Schultz, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of C. R. & W. J. Sutherland, 45 Hudson Ave., Albany, N. Y., for registration of a trade-mark and trade-mark registered April 4, 1916, No. 109,423, to C. Schultz, 32 Jay St., New York, N. Y., and a notice of such declaration sent by registered mail to said C. Schultz at the said address having been returned by the post office undeliverable, notice is hereby given that unless said C. Schultz, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, May 12, 1927.*

Engineering Products Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of O'Neil Duro Company, of Milwaukee, Wis., to effect the cancellation of the trade-mark registration of Engineering Products Corporation, Newport News, Va., No. 107,818, dated December 28, 1915, and the notice of such proceeding sent by registered mail to the said Engineering Products Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Engineering Products Corporation, its assigns or lexal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 31, 1927.

[VOL. 358. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 193,276. (CLASS 38. PRINTS AND PUBLICATIONS.) THE ENGINEERING MAGAZINE COMPANY, New York, N. Y. Filed Mar. 5, 1924.

Handbook
of
Industrial Management

Particular description of goods.—Publication Issued and to be Issued in Sections and Dealing More Particularly with Administration Problems of Corporations.
Claims use since Feb. 4, 1924.

Ser. No. 211,012. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JOHN BOYLE & COMPANY INCORPORATED, New York, N. Y. Filed Mar. 14, 1925. Under 10-year proviso.

CAMBRIDGE

Particular description of goods.—Awning Stripes and Ticking Made of Cotton, Linen, Cotton Damask, and Combinations of Cotton and Linen.
Claims use since Jan. 1, 1888.

Ser. No. 211,379. (CLASS 37. PAPER AND STATIONERY.) GEORGE M. SCHAFF, Cleveland, Ohio. Filed Mar. 20, 1925.

BooKeePeer

Particular description of goods.—Blank Books and Blank Forms Including Check Books, Bank Accounts, Journals, Ledgers, and All Office Record and Account Books.
Claims use since Feb. 1, 1925.

Ser. No. 212,628. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE MAZDA RADIO MANUFACTURING COMPANY, Cleveland, Ohio. Filed Apr. 18, 1925.

MUZĀDĀ

Particular description of goods.—Radio Apparatus, Parts, and Supplies—Namely, Dials, Sockets, Jacks, Plugs, Rheostats, Condensers, Switches, and Vernier Attachments for Dials.
Claims use since Feb. 18, 1925.

Ser. No. 215,413. (CLASS 37. PAPER AND STATIONERY.) ARTHUR WALDO LOVEJOY, Lowell, Mass. Filed June 6, 1925.

Holderpack

Particular description of goods.—Toilet Paper.
Claims use since Apr. 19, 1925.

Ser. No. 222,797. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SIDNEY M. PHILLIPS, doing business as S. M. Phillips Flour Mills, San Francisco, Calif. Filed Nov. 4, 1925.

4
BIG FOUR

Particular description of goods.—Self-Rising Pancake and Waffle Flour.
Claims use since Oct. 19, 1925.

Ser. No. 225,803. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) GEO. D. ROPER CORPORATION, Rockford, Ill. Filed Jan. 11, 1926.

ROPER

The drawing consists of the word "Roper" with an underscoring wavy line, the name "Roper" being disclaimed apart from the mark as shown.

Particular description of goods.—Gas-Burning Water Heaters, Air and Gas Mixers for Gas-Burning Devices, Gas-Fired Steam Boilers; Furnaces—Namely, Gas-Fired Furnaces for Domestic and Industrial Purposes; and Parts and Appliances Used on the Foregoing.

Claims use since Mar. 13, 1922.

Ser. No. 227,475. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) HELMUTH REICHHOLD, doing business as Beck-Koller & Company, Detroit, Mich. Filed Feb. 18, 1926.

BECKACITE

Particular description of goods.—Dry, Paste, and Ready-Mixed Paints, Varnishes, and Lacquers.

Claims use since Feb. 5, 1925.

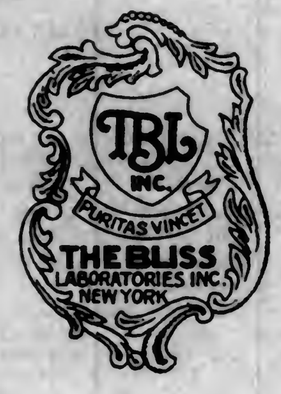
Ser. No. 229,454. (CLASS 39. CLOTHING.) MONTGOMERY WARD & Co., INCORPORATED, Chicago, Ill. Filed Mar. 31, 1926.

The lining on the drawing is intended for shading purposes only.

Particular description of goods.—Men's and Boys' Clothing—Namely, Suits and Overcoats.

Claims use since Jan. 1, 1923.

Ser. No. 229,464. (CLASS 39. CLOTHING.) DR. A. POSNER SHOES INC., New York, N. Y. Filed Mar. 31, 1926.



POSNER-PEDIC

Applicant owns registration No. 91,690.

Particular description of goods.—Shoes Made of Leather, Rubber, Fabrics, and Combinations Thereof.

Claims use since Dec. 10, 1925.

Ser. No. 229,491. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BLISS LABORATORIES, INC., New York, N. Y. Filed Apr. 1, 1926.

No claim is made to the exclusive use of the words "New York" apart from the mark as shown in the drawing.

Particular description of goods.—Hair Tonic, Hair Powder, Astringent Remedies, Face Powder, Tissue Cream, Eyelash Stimulator, Nail-Bleach Powder, Whitening Cream, Toilet Water, Perfumes, and Follicle Lotion—Viz., Liquid Antiseptic.

Claims use since 1913.

Ser. No. 229,633. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) IVER JOHNSON'S ARMS & CYCLE WORKS, Fitchburg, Mass. Filed Apr. 3, 1926. Under 10-year proviso.

IVER JOHNSON

Particular description of goods.—Revolvers and Shotguns.

Claims use since Sept. 1, 1894.

Ser. No. 229,930. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) REPUBLIC PAINT & VARNISH WORKS, Chicago, Ill. Filed Apr. 9, 1926.

UNI-SPAR

Applicant disclaims the word "Spar" as apart from the mark shown in the drawing.

Particular description of goods.—Clear Varnish, Linoleum Varnish, Paint Enamel, Varnish Stain, and Lacquer.

Claims use since MAR. 26, 1919.

Ser. No. 230,664. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) D. ROY F. FOWLER, doing business as Fowler Batting & Fibre Mills, Philadelphia, Pa. Filed Apr. 24, 1926.

FOBAFIMI

Particular description of goods.—Textile Upholstery Padding Made in the Piece.

Claims use since Dec. 20, 1923.

Ser. No. 230,673. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KINGAN & CO. INCORPORATED, Indianapolis, Ind. Filed Apr. 24, 1926.

Applicant is owner of registered mark 66,700, covering "K" within a circle, used since 1887.

Particular description of goods.—Smoked and Cured Meats, Particularly Sugar-Cured Hams and Sugar-Cured Picnics.

Claims use since Feb. 26, 1926.

Ser. No. 230,880. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) FROEDTERT GRAIN & MALTING COMPANY, Milwaukee, Wis. Filed Apr. 29, 1926.

Particular description of goods.—Malt Extract or Sirup Composed of Mixed Malted Barley and Corn for Making a Malt Beverage in the Nature of Near Beer.

Claims use since Apr. 1, 1926.

Ser. No. 231,277. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PEARL RADIO CONDENSER CO. INC., New York, N. Y. Filed May 7, 1926.

Applicant disclaims exclusive right to the words "Straight Line Broadcasting" except as same are used in connection with the other features of the mark shown on the drawing.

Particular description of goods.—Radio Variable Condensers.

Claims use since Apr. 22, 1926.

Ser. No. 231,413. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE TWITCHELL-CHAMPLIN COMPANY, Portland, Me., and Boston, Mass. Filed May 10, 1926.

Particular description of goods.—Canned Apples, Apricots, Blueberries, Cherries, Grapefruit, Loganberries, Peaches, Pears, Pineapple, Plums, Stewed Prunes, Raspberries, Rhubarb, Strawberries, and Fruits for Salad; Dried Evaporated Apples, Raisins, Currants, Dates, Prunes, and Plums; Orange Marmalade, Raspberry Jam, Strawberry Jam, Preserved Raspberry, Strawberry, Tamarinds, Apple Jelly, Cranberry Sauce, Apple Sauce, Figs in Sirup and Honey; Canned Asparagus, String Beans, Baked Beans, Shelled Beans, Lima Beans, Bean Sprouts, Beets, Mushrooms, Cabbage, Carrots, Corn, Dandelions, Peas, Pimento, Pumpkin, Sauerkraut, Spinach, Squash, Succotash, and Tomatoes; Vermicelli, Spaghetti, Macaroni, Rice, Tapioca; Canned Fresh Clams, Tunny, Shrimp, Crab Meat, Salmon, Clam Chowder, Norwegian Kipper Snacks and Norwegian Smoked Sardines, Dried Tunny and Salmon; Sweet Mixed Pickles, Sweet Cucumber Pickles, Sweet Pickles, Sweet Gherkins Pickles, Chili Sauce, Tomato Catchup, Salad Dressing, Olives; Canned Vegetable, Chicken, and Tomato Soups and Tomato Purée; Prepared Dietetic Flour, Brown Bread, Three-Minute Oat Flakes, Rolled Oats, Quick Oats, Cornmeal, Bird Food for Canaries, Vinegar, Olive Oil; Food-Flavoring Extracts—

Ser. No. 232,433. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SCHWABACHER BROS. & CO. INC., Seattle, Wash. Filed May 28, 1926.

QUAIL

Particular description of goods.—Canned Vegetables, Canned Berries, Canned Fruit, Solid Packed Canned Pie Squash, Canned Tomatoes with Purée from Trimmings, Canned Whole Clams, and Tomato Catchup, Canned Hominy, and Canned Sauerkraut.

Claims use since Jan. 1, 1903.

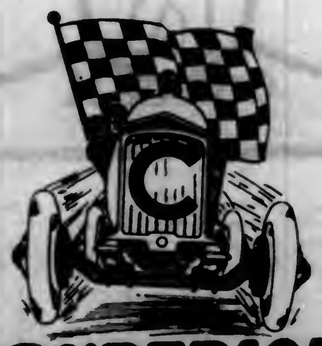
Ser. No. 233,316. (CLASS 15. OILS AND GREASES.) THE UNITED STATES GASOLINE CORP., Denver, Colo. Filed June 19, 1926.

EVOLOIL

The word "Oil" is disclaimed apart from the mark shown. The mark comprises the word "Evoloil."

Particular description of goods.—Lubricating Oils and Greases.

Claims use since Oct. 1, 1925.



Ser. No. 233,763. (CLASS 39. CLOTHING.) CLIFT & GOODRICH, INC., New York, N. Y. Filed June 26, 1926.

MERRIE-MAN

Particular description of goods.—Hosiery, Underwear of Knitted and Textile Fabric for Men, Women, and Children, and Sweaters.

Claims use since Feb. 1, 1926.

Ser. No. 233,812. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COMMANDER MILL COMPANY, Minneapolis, Minn., assignor to Commander Milling Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 28, 1926.

The word "Superior" is disclaimed except as associated with other features of the mark.

Particular description of goods.—Wheat Flour.

Claims use since about Sept. 20, 1919.

Ser. No. 234,236. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMMA S. TAUFERT, doing business as Paul Taufert Company, St. Paul, Minn. Filed July 6, 1926.

Hi-Dive

Particular description of goods.—Insecticides.

Claims use since June 1, 1923.

Ser. No. 234,373. (CLASS 38. PRINTS AND PUBLICATIONS.) THE BUZZA COMPANY, Minneapolis, Minn. Filed July 10, 1926.

The Remembrance GIFT MOTTO

No claim is made to the words "The Remembrance Gift Motto" apart from the mark shown in the drawing.

Particular description of goods.—Gift Mottoes.

Claims use since May 10, 1925.

Ser. No. 234,376. (CLASS 38. PRINTS AND PUBLICATIONS.) THE BUZZA COMPANY, Minneapolis, Minn. Filed July 10, 1926.

No claim is made to the words "The Gift Parchment De Luxe" apart from the mark shown in the drawing.

Particular description of goods.—Gift Mottoes.

Claims use since Jan. 1, 1920.

Ser. No. 235,236. (CLASS 39. CLOTHING.) RUFUS W. SCOTT COMPANY, New York, N. Y. Filed July 27, 1926.

The words "Hosiery" and "Sock" are disclaimed apart from the mark shown.

Particular description of goods.—Stockings.

Claims use since Apr. 20, 1926.

Ser. No. 235,753. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. A. ROBINSON COMPANY, INCORPORATED, Lynchburg, Va. Filed Aug. 9, 1926.

GLOVE KID

Particular description of goods.—Peanuts (Roasted and Raw) and Peanut Butter.

Claims use since 1905 on peanuts, and since January, 1926, on peanut butter.

Ser. No. 235,875. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BAYER COMPANY, INC., New York, N. Y. Filed Aug. 12, 1926.

"SOBRECITO BAYER"

BAYER

Contiene

1 TABLETA BAYER de ASPIRINA
(½ gramo)

With the exception of the name "Bayer," the Bayer cross, and the words "Aspirina" and "Sobrecito Bayer," exclusive rights in all of which are claimed, no claim under the statute is made for the other words appearing on the drawing except in connection with the mark as shown, all common-law rights being reserved.

Particular description of goods.—Antirheumatic, Analgesic, and Antipyretic Medicines.

Claims use since July, 1920.

Ser. No. 235,876. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BAYER COMPANY, INC., New York, N. Y. Filed Aug. 12, 1926.

"SOBRECITO ROJO BAYER"

BAYER

CAFIASPIRINA

1 TABLETA BAYER de Aspirina con Cafeína

With the exception of the word "Bayer," the Bayer cross, the words "Cafiaspirina," "Aspirina," and "Sobrecito Rojo Bayer," exclusive rights in all of which are claimed, no claim under the statute is made for the other words appearing on the drawing except in connection with the mark as shown, all common-law rights being reserved.

Particular description of goods.—Antirheumatic, Analgesic, and Antipyretic Medicines.

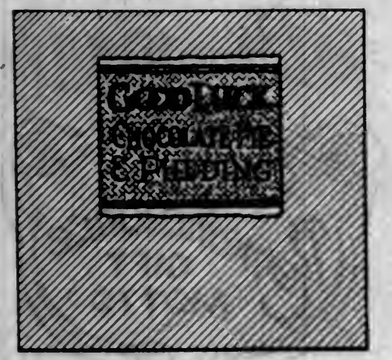
Claims use since July, 1920.

Ser. No. 235,880. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BROWN AND BAILEY CONDENSED MILK COMPANY, Brooklyn, N. Y. Filed Aug. 12, 1926.

BETSY-B

Particular description of goods.—Powdered Skim Milk.

Claims use since July 15, 1926.



Ser. No. 236,371. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) HAMBLIN & RUSSELL MANUFACTURING COMPANY, INC., Worcester, Mass. Filed Aug. 24, 1926.

TURQUOISE BLUE

Particular description of goods.—Woven-Iron-Wire Kitchen Strainers and Fry Baskets.

Claims use since Aug. 10, 1926.

Ser. No. 237,100. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GOOD LUCK FOOD CO., INC., Rochester, N. Y. Filed Sept. 10, 1926.

The lettering is in black and yellow on an orange panel having a chocolate-colored background. For the purposes of this application ownership of the exclusive right to the use of the wording "Chocolate Pie & Pudding" is disclaimed apart from the mark as shown in the drawing.

Particular description of goods.—Preparation for Making Pie Fillings and Puddings.

Claims use since July, 1922.

Ser. No. 237,136. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE THERMO-ELECTRIC COMPANY, INC., New Orleans, La. Filed Sept. 11, 1926.

REED

Particular description of goods.—Automatic Electric Incubators and Brooders.

Claims use since Feb. 26, 1910.

Ser. No. 237,481. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) UNITED STATES PRODUCTS CORPORATION, San Jose, Calif. Filed Sept. 20, 1926.

The Royal Family of Fruits

The word "Fruits" appearing on the drawing is disclaimed apart from the mark as shown.

Particular description of goods.—Canned Fruits.

Claims use since Apr. 28, 1926.

Ser. No. 238,011. (CLASS 39. CLOTHING.) FRANK G. DELBON, Brooklyn, N. Y. Filed Oct. 1, 1926.

TRIPEDIC

SUPPORT

The word "Support" is hereby disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Leather Shoes.

Claims use since about Oct. 10, 1923.

Ser. No. 238,381. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) EDWARD LICHTIG, New York, N. Y. Filed Oct. 9, 1926.

AVIS

Particular description of goods.—Cotton and Silk and Cotton Mixtures in the Piece.

Claims use since Sept. 29, 1926.

Ser. No. 238,573. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) O. DONELIAN & CO., INC., New York, N. Y. Filed Oct. 14, 1926.

Lori

Particular description of goods.—Textile Rugs and Carpets.

Claims use since Jan. 2, 1926.

Ser. No. 238,574. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) O. DONELIAN & CO., INC., New York, N. Y. Filed Oct. 14, 1926.

SISWAN

Particular description of goods.—Textile Rugs and Carpets.

Claims use since Mar. 6, 1926.

Ser. No. 238,795. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE W. J. LOTH STOVE COMPANY, INC., Waynesboro, Va. Filed Oct. 18, 1926.

No claim is made to the wording shown apart from the name "Loth's." The drawing is lined for red.

Particular description of goods.—Stoves and Ranges for Burning Coal and Wood.

Claims use since Mar. 16, 1925.

Ser. No. 238,928. (CLASS 27. HOROLOGICAL INSTRUMENTS.) WALTHAM WATCH COMPANY, Waltham, Mass. Filed Oct. 20, 1926.

Maximus.

Particular description of goods.—Watches and Parts Thereof.

Claims use since May 28, 1896.

Ser. No. 239,108. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HIJOS OF ANTONIO ESTEVA Y OLIVER, Palma de Mallorca, Spain. Filed Oct. 28, 1926.

The words "Spain, Purveyor to the Royal Family, Al Escudo De Espana, S. Miguel 220 Palma, Net Weight 400 Grammes, Made in Spain," the representation of a label, and the representation of the medals are all disclaimed apart from the other features shown in the drawing.

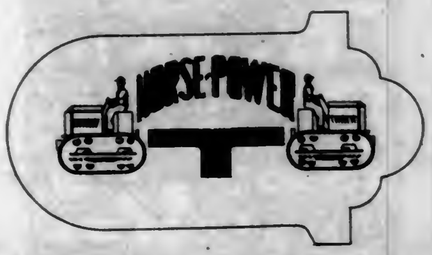
Claims use since 1885.

Ser. No. 239,823. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. B. PICKER, New York, N. Y. Filed Nov. 8, 1926.

FORMITAN



Particular description of goods.—Liquid Antiseptic and Mouth Wash for Membranes of the Throat and Mouth.
Claims use since Jan. 1, 1926.

Ser. No. 240,102. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUN-MAID RAISIN GROWERS OF CALIFORNIA, Fresno, Calif. Filed Nov. 15, 1926.

Particular description of goods.—Dried Fruits.
Claims use since Apr. 19, 1915.

Ser. No. 240,358. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) C. M. & H. LONDON & CO., New York, N. Y. Filed Nov. 20, 1926.

Particular description of goods.—Cotton Piece Goods.
Claims use since Aug. 1, 1926.

Ser. No. 240,364. (CLASS 39. CLOTHING.) QUAKER HAT CO., INC., New York, N. Y. Filed Nov. 20, 1926.

HANDKERCHIEF FELT

No registration rights are claimed in the word "Felt" except in association with the other features of the mark.
Particular description of goods.—Ladies' Hats.
Claims use since December, 1925.

Ser. No. 240,538. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CURTISS CANDY COMPANY, Chicago, Ill. Filed Nov. 24, 1926.

MAID O MILK

Particular description of goods.—Candy and Candy Bars.
Claims use since July 1, 1926.

Ser. No. 240,680. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) HUSTON RAY, New York, N. Y. Filed Nov. 27, 1926.

MIRACLE

Particular description of goods.—Phonographs, Talking Machines, Phonograph and Talking-Machine Records, Automatic Pianos, Automatic Organs, and Music Rolls for Automatic Pianos and Organs.
Claims use since Jan. 15, 1923.

Ser. No. 240,681. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) HUSTON RAY, New York, N. Y. Filed Nov. 27, 1926.

MUSIC HEALER

The word "Music" is disclaimed apart from the mark disclosed in the drawing.
Particular description of goods.—Phonographs, Talking Machines, Phonograph and Talking-Machine Records, Automatic Pianos, Automatic Organs, and Music Rolls for Automatic Pianos and Organs.
Claims use since Jan. 15, 1923.

Ser. No. 240,698. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE COLASTA CO. INC., Hoosick Falls, N. Y. Filed Nov. 29, 1926.

Colasta

Particular description of goods.—Electric Insulating Molding Compounds.
Claims use since Oct. 1, 1918.

Ser. No. 240,806. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Dec. 1, 1926.

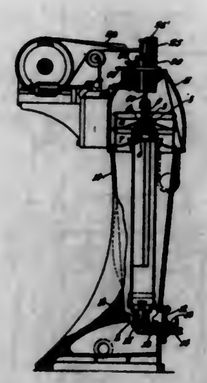
REISSUES



MAY 31, 1927.

16,639. BLOOD-COAGULATION MEDIUM. CLARENCE A. MILLS, Cincinnati, Ohio, assignor to The William S. Merrell Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 25, 1923. Serial No. 646,640. Original No. 1,397,896, dated Nov. 22, 1921, Serial No. 379,404, filed May 6, 1920. 7 Claims. (Cl. 167—7.)

6. A blood coagulant comprising as its principal ingredients a protein and a phospholipin and obtained by isolating the active material from a salt solution, or an extraction, of tissue.

7. A blood coagulant in a suspended, dissolved or emulsified form and comprising as its principal ingredients a protein and a phospholipin obtained by isolating the active material from a salt solution, or an extraction, of tissue.

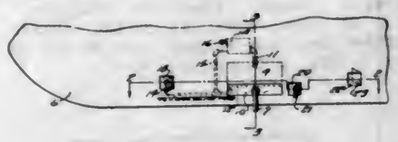
16,640. CENTRIFUGAL MACHINE AND PROCESS INVOLVING THE USE OF THE SAME. LEO D. JONES and ARTHUR U. AYRES, Philadelphia, Pa., assignors to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 13, 1927. Serial No. 183,535. Original application filed May 1, 1924, Serial No. 710,388. Original No. 1,575,061, dated Mar. 2, 1926. Divided and this application filed May 29, 1925. Serial No. 33,729. 47 Claims. (Cl. 233—13.)

1. In the centrifugal treatment of a substance the process which comprises subjecting the substance to the action of centrifugal force to effect a desired change in the substance and to discharge the substance in dispersed form from the influence of the centrifugal force, and suitably regulating the pressure of the atmosphere within which the substance is so discharged to prevent undesirable alteration of the substance while it exists in the dispersed state in which it is discharged.

16,641. PYJAMA TROUSERS. GEORGE M. HARSH, Baltimore, Md. Filed Jan. 8, 1927. Serial No. 159,969. Original No. 1,593,631, dated July 27, 1926, Serial No. 89,405, filed Feb. 19, 1926. 7 Claims. (Cl. 2—237.)

6. A supporting band for wearing apparel consisting of a tube of elastic textile fabric, a strip of sheet rubber enclosed within the fabric and elastic stitching securing the rubber to the fabric causing the textile fabric to contract and expand with the rubber, the fabric lying flat on the rubber at all times.

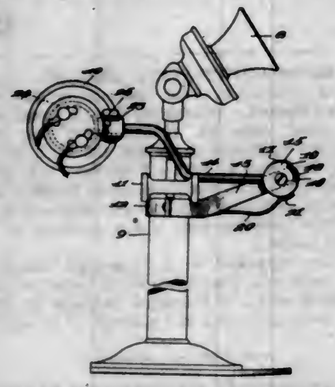
16,642. GAS METER. GEORG KARL VILHELM JOHANSON, Lidingo, Sweden, assignor to Aktiebolaget Gasmätare, Stockholm, Sweden, a Corporation of Sweden. Filed Mar. 26, 1926. Serial No. 97,798. Original No. 1,417,998, dated May 30, 1922, Serial No. 321,100, filed Sept. 2, 1919. 2 Claims. (Cl. 73—1.)



1. In a gas meter, the combination of two measuring chambers, a movable diaphragm separating said chambers, an inlet to said chambers, an outlet from said chambers, valves between each of said chambers and said inlet and said outlet, a spring mechanism between said diaphragm and said valves comprising a lever and means whereby said lever is connected with the diaphragm, a second lever, means whereby said last named lever is connected with the valves, a spring connecting the said second lever to a point on the first named lever remote from its fulcrum, said levers being so related that lines connecting their fulcra and the fixing points respectively of the spring cross one another in the limit positions of the levers, and means for locking said second lever against movement during the movement of the diaphragm until it reaches its limit positions of movement.

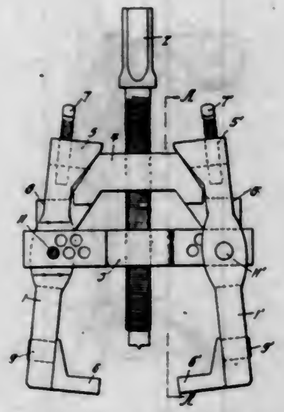
16,643. LOCKING DEVICE FOR TRUNKS. MILTON H. LUCE, Kansas City, Mo., assignor to Wheary Trunk Company, Racine, Wis. Filed Jan. 5, 1927. Serial No. 159,247. Original No. 1,578,537, dated Mar. 30, 1926, Serial No. 613,136, filed Jan. 17, 1923. 21 Claims. (Cl. 70—27.)

1. Trunk locking mechanism comprising the combination with the meeting margins of two trunk sections, of a locking lever fulcrumed to the wall of one section, the adjacent margin of the section being recessed and said lever having an offset portion adapted for swinging movement in said recess, a locking device carried by the offset portion of the lever, and a co-operating catch carried by the registering wall member of the opposing trunk section.



16,644. HEAT-TRANSFER SYSTEM FOR AIRCRAFT. HUMPHREY F. PARKER, Philadelphia, Pa. Filed Mar. 10, 1926. Serial No. 93,765. Original No. 1,503,374, dated July 29, 1924, Serial No. 557,229, filed Apr. 28, 1922. 20 Claims. (Cl. 244—3.)

7. A method of recovering water on aircraft consisting in passing engine exhaust gases isolated from the sustaining gas against the inner surface of a fabric wall, the outer surface of said wall being exposed to the air stream, whereby water is condensed from said exhaust gases.

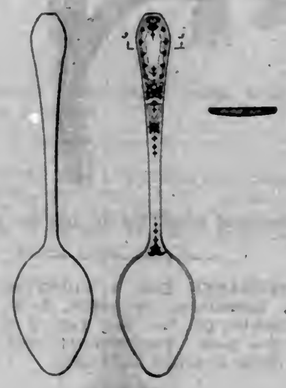


16,645. TELEPHONE ATTACHMENT. FAIRFIELD W. HOBAN, New York, N. Y., assignor, by mesne assignments, to Holdaphone, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1927. Serial No. 173,728. Original No. 1,530,897, dated Mar. 24, 1925, Serial No. 482,446, filed July 5, 1921. 8 Claims. (Cl. 179—149.)

1. A telephone attachment comprising a bracket member and means for mounting the same on a telephone instrument, a receiver carrying arm member pivoted to the bracket member and adapted to move between a position on the receiver hook and a position in advance of the same, one of said members having a head provided with a smooth friction surface terminating in a stop shoulder, and a friction spring carried by the other member and

bearing against the friction surface, said spring abutting against the stop shoulder when the carrying arm is in its advance position to hold it therein and bearing against the smooth friction surface during the travel of said arm to and when it is located on said receiver hook.

16,646. TOOL FOR REMOVING COLLARS AND THE LIKE. FLOYD ANDREW MITCHELL, Portland, Oreg. Filed Aug. 10, 1921. Serial No. 491,276. Original No. 1,259,036, dated Mar. 12, 1918, Serial No. 130,434, filed Nov. 9, 1916. 7 Claims. (Cl. 29—85.)

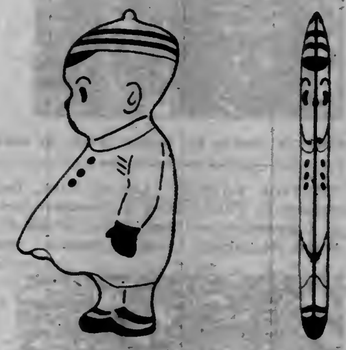


1. A tool for removing collars and the like from shafts and the like comprising in combination, a cross-piece, a pair of side pieces pivoted to said cross-piece, a yoke, a rod intermediate said side pieces having threaded engagement with said yoke, and means for transmitting stress from said yoke to said side-pieces for engaging them with a collar or the like.

DESIGNS

MAY 31, 1927.

72,747. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y. Filed Dec. 24, 1926. Serial No. 20,138. Term of patent 14 years.



The ornamental design for a spoon or similar article as shown.

72,748. STAND MIRROR. LINWOOD M. ANDREWS, Chicago, Ill. Filed Mar. 21, 1927. Serial No. 21,233. Term of patent 7 years.

The ornamental design for a stand mirror, as shown.

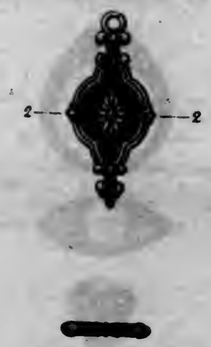
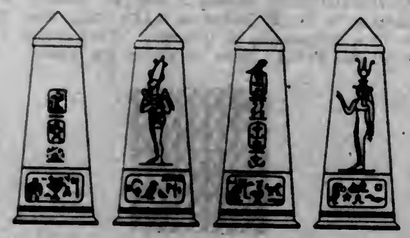
The ornamental design for a spreader for a lighting fixture, as shown.

72,756. CHANDELIER. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 17, 1927. Serial No. 21,166. Term of patent 3½ years.



The ornamental design for a chandelier, as shown.

72,757. BRIDGE-LAMP ARM OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 21,189. Term of patent 3½ years.



The ornamental design for a bridge lamp arm or similar article, as shown.

72,758. PENDANT FOR LIGHTING FIXTURES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1927. Serial No. 21,364. Term of patent 3½ years.

The ornamental design for a pendant for lighting fixtures, as shown.

72,759. BOX OR SIMILAR CONTAINER. RUBY T. BREWSTER, New York, N. Y. Filed Mar. 18, 1927. Serial No. 21,187. Term of patent 3½ years.

The ornamental design for a box or similar container, as shown.

72,760. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Feb. 14, 1927. Serial No. 20,733. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

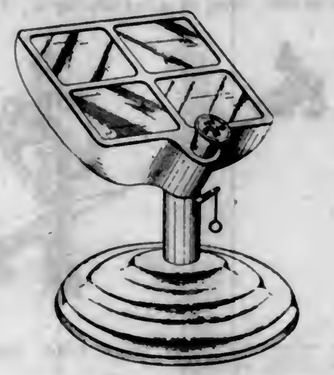
72,761. ARM FOR LIGHTING FIXTURES. LE ROY A. CRUMLEY, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 11, 1927. Serial No. 21,101. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures as shown.

72,762. LIGHTING-FIXTURE PLATE. LE ROY A. CRUMLEY, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 17, 1927. Serial No. 21,175. Term of patent 3½ years.

The ornamental design for a lighting fixture plate as shown.

72,763. PLATE. OLIVE W. DENNIS, Baltimore, Md., assignor to Baltimore & Ohio Railroad Company, Baltimore, Md. Filed Dec. 7, 1926. Serial No. 19,951. Term of patent 14 years.



The ornamental design for a plate as shown.

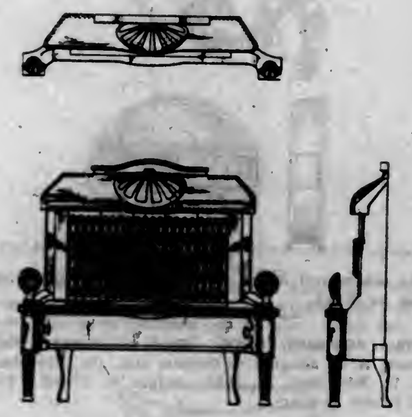
72,764. BADGE OR SIMILAR ARTICLE. BERNARD J. DE PASSE, New York, N. Y. Filed Oct. 23, 1924. Serial No. 11,167. Term of patent 14 years.

The ornamental design for a badge or similar article as shown.

72,765. COMBINED CIGAR LIGHTER AND ADVERTISING-DISPLAY STAND. VICTOR E. EXTROM, Minneapolis, Minn. Filed Aug. 28, 1926. Serial No. 18,890. Term of patent 3½ years.

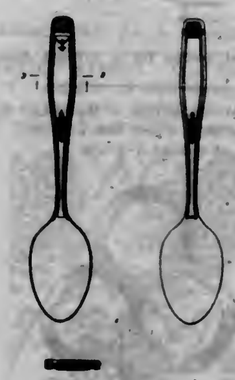
The ornamental design for a combined cigar lighter and advertising display stand, as shown.

72,766. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading under the firm name of Klebanoff and Grossman, New York, N. Y. Filed Jan. 3, 1927. Serial No. 20,262. Term of patent 3½ years.



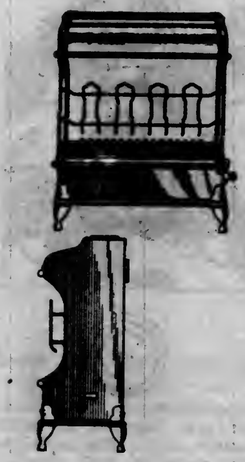
The ornamental design for a finger ring as shown.

72,767. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALFRED J. HEINKE, Towaco, N. J., assignor to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1926. Serial No. 19,302. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

72,768. HEATER. STANLEY F. JACKES, St. Louis, Mo., assignor to Jackes-Evans Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 11, 1927. Serial No. 21,098. Term of patent 7 years.



The ornamental design for a heater, substantially as shown.

72,769. SPOON. SIDNEY V. JAMES, Niagara Falls, N. Y., assignor to William A. Rogers, Ltd., Niagara Falls, N. Y., a Corporation of Ontario, Canada. Filed Mar. 24, 1927. Serial No. 21,314. Term of patent 14 years.

The ornamental design for a spoon as shown.

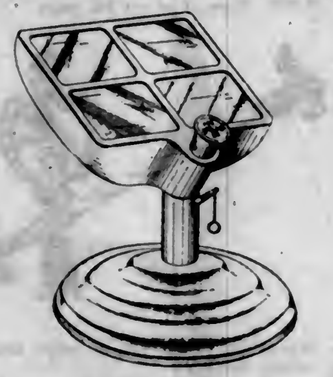
72,770. GAS HEATER. JOSEPH R. KING, Oklahoma City, Okla. Filed Mar. 17, 1927. Serial No. 21,177. Term of patent 7 years.

The ornamental design for a gas heater, as shown.

72,771. GLASS JAR. WALTER VAIL JOHNSTON, Milwaukee, Wis. Filed Dec. 24, 1926. Serial No. 20,142. Term of patent 7 years.

The ornamental design for a glass jar as shown.

72,763. PLATE. OLIVE W. DENNIS, Baltimore, Md., assignor to Baltimore & Ohio Railroad Company, Baltimore, Md. Filed Dec. 7, 1926. Serial No. 19,951. Term of patent 14 years.



The ornamental design for a plate as shown.

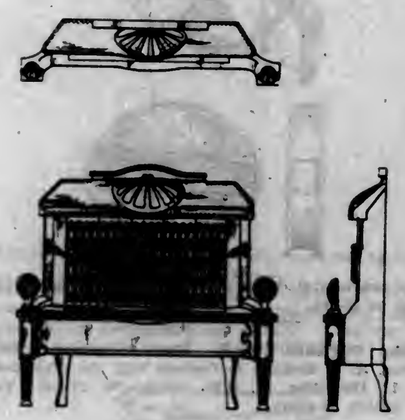
72,764. BADGE OR SIMILAR ARTICLE. BERNARD J. DE PASSE, New York, N. Y. Filed Oct. 23, 1924. Serial No. 11,167. Term of patent 14 years.

The ornamental design for a badge or similar article as shown.

72,765. COMBINED CIGAR LIGHTER AND ADVERTISING-DISPLAY STAND. VICTOR E. EXTROM, Minneapolis, Minn. Filed Aug. 28, 1926. Serial No. 18,890. Term of patent 3½ years.

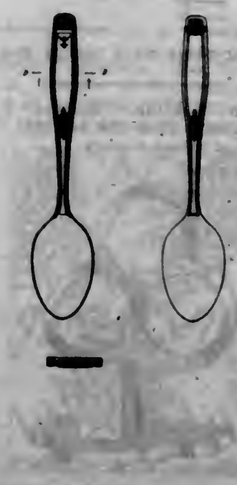
The ornamental design for a combined cigar lighter and advertising display stand, as shown.

72,766. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading under the firm name of Klebanoff and Grossman, New York, N. Y. Filed Jan. 3, 1927. Serial No. 20,262. Term of patent 3½ years.



The ornamental design for a finger ring as shown.

72,767. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALFRED J. HEINKE, Towaco, N. J., assignor to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1926. Serial No. 19,302. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

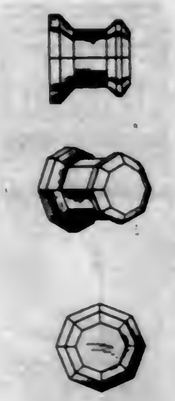
72,768. HEATER. STANLEY F. JACKES, St. Louis, Mo., assignor to Jackes-Evans Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 11, 1927. Serial No. 21,098. Term of patent 7 years.

The ornamental design for a heater, substantially as shown.

72,769. SPOON. SIDNEY V. JAMES, Niagara Falls, N. Y., assignor to William A. Rogers, Ltd., Niagara Falls, N. Y., a Corporation of Ontario, Canada. Filed Mar. 24, 1927. Serial No. 21,314. Term of patent 14 years.

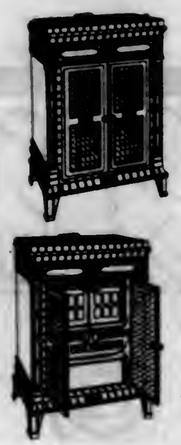
The ornamental design for a spoon as shown.

72,770. GAS HEATER. JOSEPH R. KING, Oklahoma City, Okla. Filed Mar. 17, 1927. Serial No. 21,177. Term of patent 7 years.



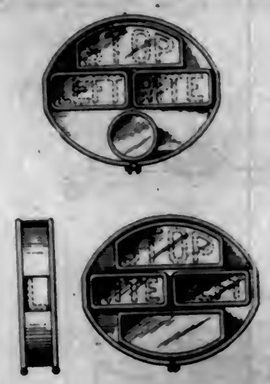
The ornamental design for a gas heater, as shown.

72,771. GLASS JAR. WALTER VAIL JOHNSTON, Milwaukee, Wis. Filed Dec. 24, 1926. Serial No. 20,142. Term of patent 7 years.



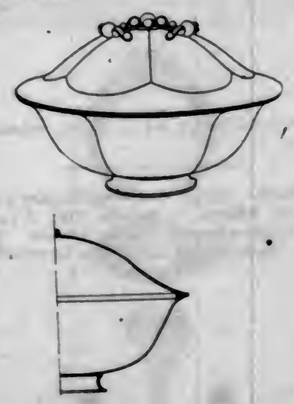
The ornamental design for a glass jar as shown.

72,772. KNOB. ALLEN F. KIPPER, Los Angeles, Calif., assignor to Rite Hardware Company, Los Angeles, Calif., a Partnership consisting of Preston S. Wright and Harold H. Tilton. Filed Sept. 18, 1926. Serial No. 19,108. Term of patent 14 years.



The ornamental design for a knob as shown.

72,773. HEATER. MAX R. LEHMAN, Quincy, Ill., assignor to Orbon Stove Co., Belleville, Ill., a Corporation of Illinois. Filed Mar. 30, 1927. Serial No. 21,402. Term of patent 3½ years.

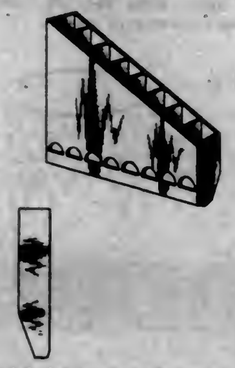


The ornamental design for a heater, substantially as shown.

72,774. AUTOMOBILE SIGNAL-LAMP CASING. THOMAS LONEY, Oakland, Calif. Filed Oct. 17, 1924. Serial No. 11,096. Term of patent 14 years.

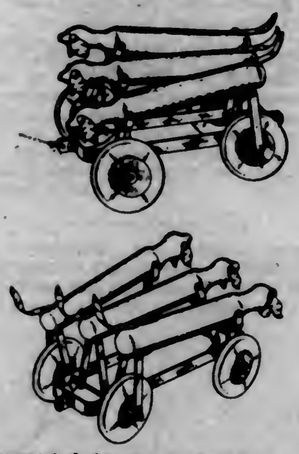
The ornamental design for an automobile signal lamp casing as shown.

72,775. COVERED DISH. ERIK MAGNUSSEN, Providence, R. I., assignor to Gorham Mfg. Co., Providence, R. I. Filed Mar. 21, 1927. Serial No. 21,245. Term of patent 14 years.



The ornamental design for a covered dish, as shown.

72,776. MATCH HOLDER. RUSSELL T. MANNING, Minneapolis, Minn. Filed Feb. 4, 1927. Serial No. 20,616. Term of patent 7 years.



The ornamental design for a match holder, as shown.

72,777. CANDY CONFECTION. HUBERT A. MYERS, Toledo, Ohio. Filed Nov. 5, 1925. Serial No. 15,353. Term of patent 3½ years.

The ornamental design for a candy confection as shown.

72,778. WHEELED TOY. CHARLES HAMILTON PAJEAU, Glencoe, Ill., assignor to The Toy Tinkers, Inc., Evanston, Ill., a Corporation of Illinois. Filed Oct. 22, 1926. Serial No. 19,449. Term of patent 14 years.

The ornamental design for a wheeled toy as shown.

72,779. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Feb. 14, 1927. Serial No. 20,739. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

72,780. TEXTILE FABRIC. MAX ROTHSCHILD, New York, N. Y., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Feb. 14, 1927. Serial No. 20,740. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

72,781. FINGER RING. SAMUEL SKALETZKY, New York, N. Y., assignor to Skaletzky Bros. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1927. Serial No. 21,819. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

72,782. DOLL. EDITH H. UFFORD, Salina, Kans. Filed Dec. 3, 1926. Serial No. 19,913. Term of patent 3½ years.

The ornamental design for a doll, as shown.

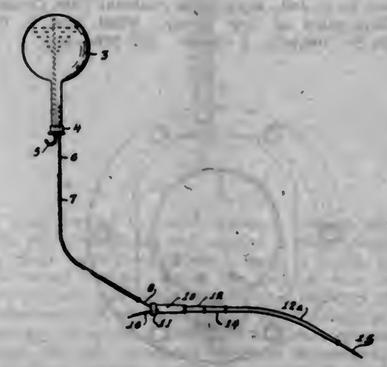
72,783. TUMBLER OR ARTICLE OF SIMILAR NATURE. OREN CLAY BUELL, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 6, 1926. Serial No. 19,251. Term of patent 14 years.

The ornamental design for a tumbler or article of similar nature, as shown.

72,784. TUMBLER OR ARTICLE OF SIMILAR NATURE. OREN CLAY BUELL, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 23, 1926. Serial No. 20,125. Term of patent 14 years.

The ornamental design for a tumbler or article of similar nature, as shown, and described.

PATENTS

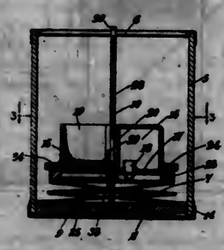


GRANTED MAY 31, 1927.

1,630,247. MEANS FOR DETERMINING COLOR COMBINATIONS. HAZEL H. ADLER, New York, N. Y. Filed Sept. 8, 1922. Serial No. 586,820. 17 Claims. (Cl. 88—14.)

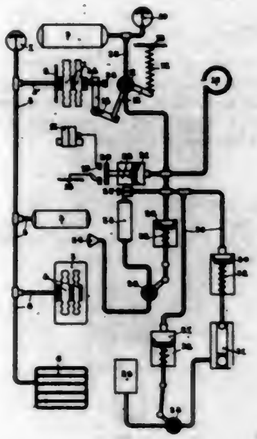
3. A device of the character described comprising a plurality of rows of color indicating areas corresponding to the color sequence of a spectrum, each row including one entire range of the spectrum colors followed by a considerable part of a second identical range in the same order the colors in each row being arranged in sequence according to the notes of a musical scale and the color area for each color in each row differing in tone or pitch from the corresponding color area in the other rows, said rows being so arranged that the different pitches or tones for each color are disposed in alinement in graduated relation, and means settable at any selected color in any row for thereby selecting from any of said rows three-color harmonious color combinations of which the selected color forms an element corresponding to harmonious musical combinations.

1,630,248. METHOD AND MEANS FOR BLOOD TRANSFUSION. NARCISO COSIO AGUILAR, Mexico City, Mexico. Filed June 23, 1926, Serial No. 118,028, and in Mexico Aug. 14, 1925. 3 Claims. (Cl. 128—214.)



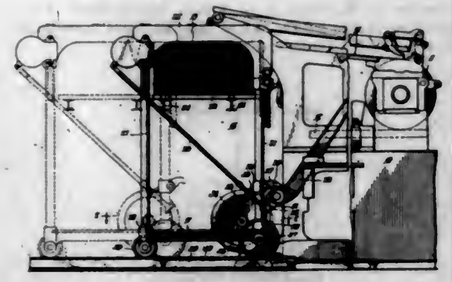
1. In an apparatus of the class described, a portable receptacle subject to change in elevation, a flexible tube leading from said receptacle, an elongated hollow member providing a mixture chamber, a second tube leading from said flexible tube into said hollow member in a direction approximately parallel to the longitudinal axis of said elongated hollow member, a hollow donor needle extending into said chamber in the same general direction in which the second tube enters said chamber, a mixture conveying tube leading from the elongated hollow member at the end opposed to that at which said second tube and needle enter, and a recipient needle continuing from said mixture conveying tube.

1,630,249. GOLF-CLUB SHAFT. JOHN F. BABBITT, Louisville, Ky., assignor to J. V. Pilcher, Louisville, Ky. Filed Feb. 3, 1927. Serial No. 165,730. 8 Claims. (Cl. 273—81.)



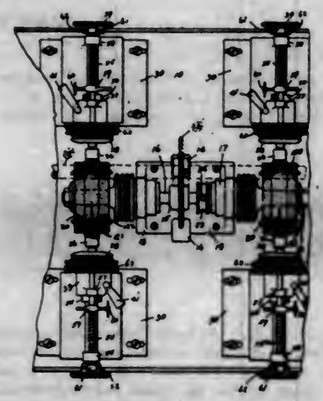
1. A golf club shaft having a wrapping of flexible material and ferrules compressed upon said wrapping at opposite ends thereof.

1,630,250. VOICE MECHANISM. LOUIS V. ARONSON, Newark, N. J., assignor to Voices Incorporated, a Corporation of Delaware. Filed May 28, 1924. Serial No. 716,344. 20 Claims. (Cl. 46—46.)



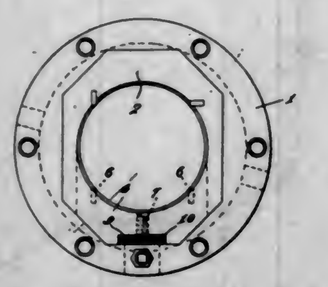
5. A sound producing device comprising a post, a weight supported by and mounted upon the post freely slidable therealong, a sound producing element carried by the weight extending longitudinally in a direction transverse to the length of the post, and means whereby sliding movement of the weight along the post will produce interrupted sound of the sound producing element.

1,630,251. FIRE-EXTINGUISHING AND LIKE APPARATUS. EMILE JOSEPH BÉCHARD, Levallois-Perret, France. Filed June 16, 1924, Serial No. 720,461, and in France July 21, 1923. 7 Claims. (Cl. 169—2.)



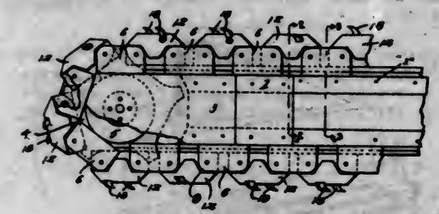
1. An apparatus for use on flying machines including a reservoir consisting of a plurality of expansible elements, devices capable of being placed in the crank case of the motor of the machine and in the gasoline tank thereof and adapted to be acted upon, respectively, by variations in temperature and pressure, means establishing communication between said devices and said reservoir, a tank for containing fluid under pressure, a valve controlling the outflow of the fluid from said tank, means operated by the expansion of the elements of said reservoir for actuating said valve, and fire extinguishing mechanism operated by the release of fluid from said tank.

1,630,252. PRINTING PRESS. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1924. Serial No. 710,759. 6 Claims. (Cl. 271—8.)



1. In a printing press, the combination of a main frame, a printing couple carried thereby, a feeder pile frame, a pile platform carried thereby, said feeder pile frame with its pile platform as a unit being bodily movable entirely away from said main frame in a direction longitudinally with respect to said main frame to render parts accessible for "make ready", and power mechanism for moving said feeder pile frame.

1,630,253. MACHINE FOR GRINDING LENSES. LUCIAN W. BUGHER, Indianapolis, Ind., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1924. Serial No. 742,000. 1 Claim. (Cl. 51—105.)

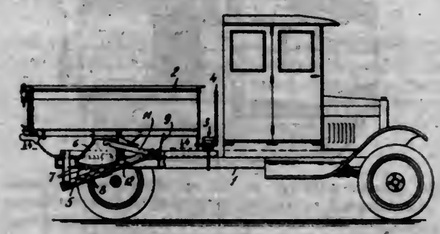


A machine for grinding lenses including a rotary grinder, a lens holding spindle arranged to hold the lens against the grinder, a lens block on one end of the spindle, means for rotating the spindle, a collar on the spindle near the lens block, a frame having a bearing for the outer portion of the spindle, a split housing on said frame, a bearing sleeve in said housing having a rack on the underside thereof and in which the inner portion of the spindle is rotatably mounted, means engaging the rack for longitudinally moving the sleeve when the housing is not clamped, whereby the sleeve may be moved inward against the collar in order to move the spindle to working position preliminary to the grinding operation and withdrawn after the grinding operation, means for clamping the housing, and yielding means for urging the spindle towards the grinder.

1,630,254. TAPPING-MACHINE CHUCK. ALFRED BURGE, Gary, Ind., assignor to National Tube Company, a Corporation of New Jersey. Filed Apr. 7, 1926. Serial No. 100,444. 2 Claims. (Cl. 279—44.)

1. A device of the class described comprising a support, a gripper removably seated in the support and having an opening therein, a block or section movably arranged in said opening and having a curved inner portion which forms a movable wall for the gripper, an eccentric for moving the block or section and means for adjusting the extent of movement of the block by the eccentric.

1,630,255. CUTTING APPARATUS FOR MINING MACHINES. JAMES CAMERON, Henryetta, Okla. Filed Nov. 6, 1925. Serial No. 67,373. 3 Claims. (Cl 262—33.)



1. In a cutting apparatus including a chain structure strap plates forming links in the chain structure and arranged in pairs, each member of each pair having inwardly disposed flanges, rivets connecting the members of the pairs together, spacing sleeves located upon the rivets, and pick carrying blocks having openings receiving the spacing sleeves.

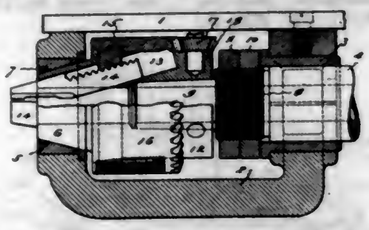
1,630,256. PUMP. THOMAS D. CLEAGE, St. Louis, Mo., and WASHINGTON S. SMITH and JAMES R. MURRAY, Tulsa, Okla. Filed Jan. 21, 1924. Serial No. 687,499. 1 Claim. (Cl. 103—179.)

A pump having an outer casing, a plunger arranged within said outer casing and adapted to reciprocate therein, a check valve through which liquid is drawn by said reciprocatory plunger, means for packing said reciprocatory plunger, said means comprising a plurality of compressible members surrounding said reciprocatory plunger, a plurality of members associated with said compressible member, the last mentioned members surrounding said reciprocatory plunger and being formed of a material which is capable of polishing said reciprocatory plunger, a pair of members between which said compressible members and said polishing members are interposed, and a plurality of polishing members surrounding said reciprocatory plunger at points below the compressible members and the associated polishing members, the last mentioned polishing members and the polishing members associated with said compressible members being adapted to prevent the adhesion of gypsum to said reciprocatory plunger.

1,630,257. VEHICLE DUMPING MECHANISM. EDWARD A. DEWALD, Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed July 3, 1924. Serial No. 723,914. 4 Claims. (Cl. 298—10.)

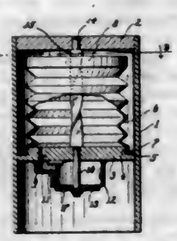
1. Vehicle dumping-mechanism of the class described, comprising a dump-body, a vehicle frame having a cross-bar located near the rear end of the dump-body and well to the rear of the vehicle axle, means on the vehicle frame for supporting said dump-body including steep downwardly and rearwardly sloping tracks, said tracks having thereon a plurality of pivot-sockets located a substantial distance below the vehicle frame, and feet on the dump-body extending a substantial distance below the body and provided with sectors for coacting with said tracks, said sectors having their front ends substantially the same vertical distance from the dump-body as their rear ends and having pivots on their peripheries for successively fitting into said pivot sockets.

1,630,258. EYEGLASS AND SPECTACLE FRAME. EDGAR R. DUBOIS, Newark, N. J., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 16, 1924. Serial No. 732,402. 3 Claims. (Cl. 88—43.)



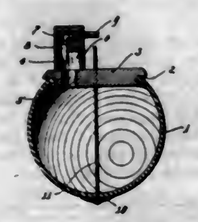
1. An eye-glass or spectacle frame of xylonite in which the bridge and the connections between the opposite ends of which and the rims are reinforced by means of a plurality of wires extending longitudinally within and through the said bridge and through adjacent portions of the rims, the end portions of the wires upon the inner sides of said rims being bent in opposite directions and seated within grooves in the said rims.

1,630,259. CHUCK. GUSTAF A. ENGLUND, West Hartford, Conn., assignor to The Jacobs Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 27, 1925. Serial No. 52,819. 3 Claims. (Cl. 279—1.)



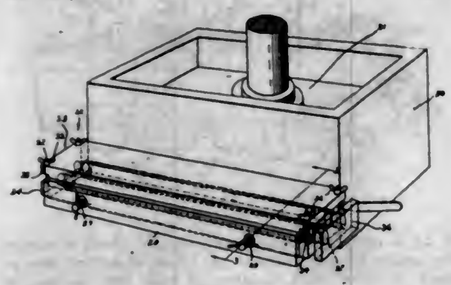
1. A chucking means comprising a frame having axially aligned bores, a bushing with a cylindrical opening located in one bore, a bushing with a tapering opening located in the other bore, a spindle rotatable fitted in the former bushing, a chuck body removably connected with the spindle, said body having a tapering nose rota-

tably fitted in the tapering bushing, jaws movable in the body, means located on the chuck body between said bushings for opening and closing said jaws, and means



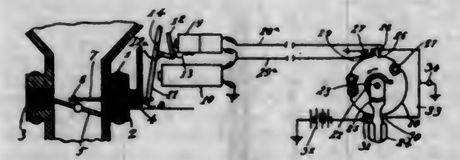
on the spindle adjacent to the spindle-supporting bushing and adapted to engage said bushing for adjusting the position of said tapering nose in the tapering bushing.

1,630,260. TALKING TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,496. 13 Claims. (Cl. 46—46.)



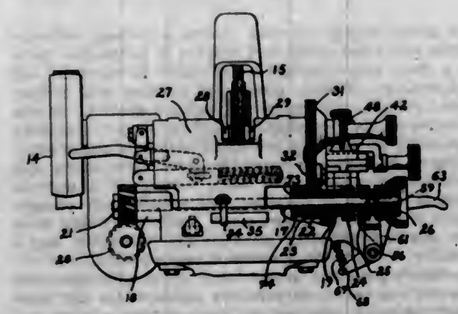
10. A sound producing device having in combination, a weighty head and a fixed head, a tubular bellows connecting said heads and adapted to be operated by gravity by said weighty head, a sound reed operated by the bellows, means having an opening through which the sound from the reed is adapted to issue, a valve rotatably and slidably mounted with respect to said opening, and means including a cam member cooperating with said weighty head to automatically cause rotation of the valve to control the issuance of sound from said sound opening responsive to the operation of the bellows.

1,630,261. TALKING TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 22, 1923. Serial No. 626,782. 12 Claims. (Cl. 46—46.)



11. In a device of the class described, the combination of a collapsible air chamber, a sound device operatively connected therewith and operated thereby, and means for controlling the sound from said sound device, said last mentioned means comprising a member of flexible material having an opening therethrough, through which opening the sound is adapted to issue from the sound device, and means for causing said opening to be restricted by bringing the sides of the opening together to control the issuance of sound therethrough, said last mentioned means being operated by the operation of said air chamber.

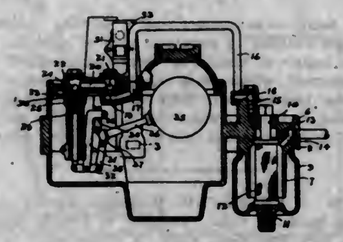
1,630,262. PROCESS OF MAKING OPHTHALMIC BLANKS. FRANK FRASER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 16, 1924. Serial No. 726,324. 6 Claims. (Cl. 18—55.)



1. The process of forming a master blank of the character described, consisting of forcing a plastic cellulose composition material into a mold, and then applying pressure to the mold to thoroughly compress the cellulose composition material.

1,630,263. LOCKING-DEVICE CONTROL. EDWIN L. GRAUEL, Cincinnati, Ohio, assignor to The Graulock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 6, 1923. Serial No. 661,276. 16 Claims. (Cl. 70—50.)

1. In combination with an operation inhibiting mechanism, of electro-magnetic means controlling the same, and comprising a plurality of electro-magnets, armatures for said magnets, and inter-related locking mechanism between said armatures, said locking mechanism being arranged to require operation of one armature to set the device, and subsequent operation of the other to release the inhibiting mechanism.

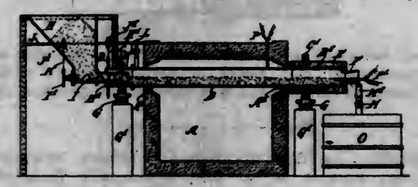


1,630,264. EDGING MACHINE. WILLIAM A. GUNNING, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 15, 1925. Serial No. 37,205. 5 Claims. (Cl. 51—101.)

1. In a machine of the character described, a base member, a shaft in the base member, a lens carriage pivotally mounted on said shaft, lens clamping shafts

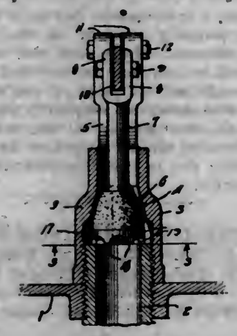
contained within said carriage, a support secured to said base member, means carried by said support for moving said carriage about its pivot, and means also carried by said support and cooperating with said first named shaft whereby to start or stop the rotation of the said clamping shafts.

1,630,265. OIL-FEED CONTROL FOR OIL BURNERS. ARTHUR P. HOLDEN, PHILIP MORGAN, and SAMUEL ROLFE WILLIAMS, Toronto, Ontario, Canada. Filed Sept. 23, 1926. Serial No. 137,358. 5 Claims. (Cl. 158—36.3.)



1. In an oil feed control for oil burners, the combination with an oil supply and a pump and means for regulating the flow of oil from the pump to the burner, of a reservoir adapted to receive the excess discharge from the pump, an oil passage connected with the main supply and leading to the intake of the oil pump, a free check valve in said passage adapted to close the inflow of oil to the pump, a passage connected with the passage to the pump and leading into the reservoir, a valve separate from said check valve adapted to close the passage from the reservoir to the pump and concurrently open the check valve and adapted to permit the closing of the check valve upon being opened, and float controlled means for operating the latter valve.

1,630,266. BRAIDING CARRIER. HENRY JANSSEN, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1926. Serial No. 96,123. 3 Claims. (Cl. 96—14.)

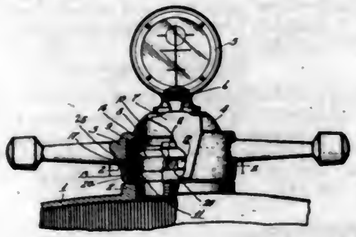


1. A braiding carrier comprising a base portion having a tubular standard, a bobbin non-rotataly mounted upon said fixed standard and provided with a locking head, and a combined thread take off and tensioning unit rotatable on the axis of the standard, said unit comprising a casing rotatable in said standard and having an upwardly extending portion provided with an axially arranged take-off eye and a pivoting bracket, a thread-guiding locking arm pivoted to said bracket, and an axially arranged thread tensioning device in said casing adapted to release said locking arm, the latter being normally pressed into engagement with the bobbin locking head by the tensioned thread.

1,630,267. METHOD AND APPARATUS FOR QUENCHING LITHOPONE. AUGUST SONNIN KREBS, Wilmington, Del., assignor to The Kreba Pigment & Chemical Company, Newport, Del., a Corporation of Delaware. Filed June 29, 1923. Serial No. 648,431. 5 Claims. (Cl. 134—78.)

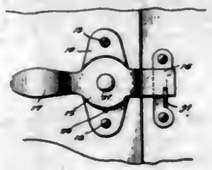
1. The method of quenching calcined lithopone which consists in feeding the hot lithopone in a continuous fine stream into a running stream of water and continuously conveying the quenched lithopone to a settling tank by means of said running stream.

1,630,268. AUTOMATIC VALVE FOR WATER TANKS. OTTO LINSTADT, Madison, Nebr. Filed Nov. 9, 1926. Serial No. 147,336. 3 Claims. (Cl. 137—104.)



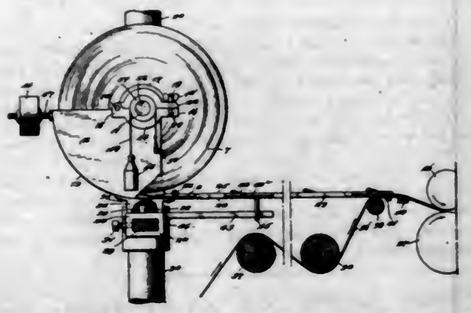
1. In an automatic valve for water tanks, the combination of a threaded valve casing, an inflow water pipe on which said valve casing is threaded, an upstanding and offset arm integral with the valve casing, a rod having one end pivotally affixed to said arm, a float connected with the free end of the arm, a valve stem pivotally connected with an intermediate portion of the rod, a resilient valve mounted on the valve stem and adapted to seat in the valve seat of the valve casing, and a head affixed to the lower end of the valve stem and bearing against the valve, said head having spaced lugs adapted to rest on the upper end of the inflow water pipe when the valve is unseated.

1,630,269. LOCKING CAP FOR RADIATORS. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor, by direct and mesne assignments, to The Norlipp Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1924. Serial No. 704,835. 8 Claims. (Cl. 220—24.)



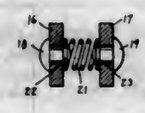
1. The combination of a collar member having means for attachment to the radiatorneck and having a circumferential groove provided with an abutment, a cap adapted

to loosely fit over said collar member and having an annular groove and an internal recess arranged to oppose the annular groove in said internal collar member, and



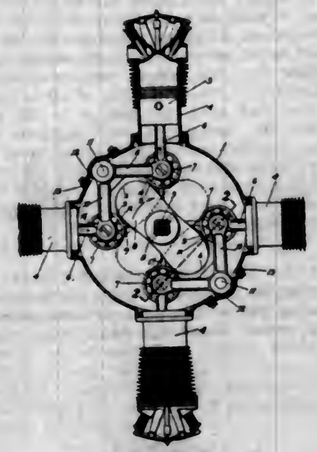
means contained in said grooves and cooperating with said abutment and said recess to permit relative turning movement of said cap and said collar in one direction only.

1,630,270. LATCH. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 14, 1924. Serial No. 692,635. 5 Claims. (Cl. 292—228.)



1. In a latch, a base member having a slot opening, a lever member pivotally mounted on said base member, and a spring disposed within said base member having one end secured to said base member and the other end extending through said slot opening and secured to said lever member said spring end adapted by abutment against one end of said slot opening to determine the normal operative position of said lever member and by abutment against the other end to limit the effective movement of said lever member.

1,630,271. METHOD AND MECHANISM FOR MARKING MATERIALS. HAROLD B. MOWRY, Sterling, Conn., assignor to The United States Finishing Company, New York, N. Y., a Corporation of Connecticut. Filed Apr. 18, 1923. Serial No. 632,815. 9 Claims. (Cl. 41—7.)

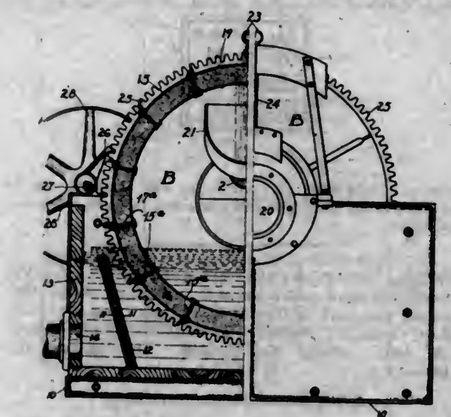


1. A device of the character described comprising in combination, a support for a roll of tape-like material, said support having a delivery end through which the tape-like material may be withdrawn and mountings for the support whereby the support and delivery end thereof may be laterally shifted and the delivery end elevated or depressed.

1,630,272. ELECTRIC CONNECTING SOCKET. FREDERICK W. C. NEUNER, Connersville, Ind., assignor, by mesne assignments, to Indiana Lamp Corporation, Connersville, Ind., a Corporation of Delaware. Filed Feb. 26, 1923. Serial No. 621,247. 6 Claims. (Cl. 173—328.)

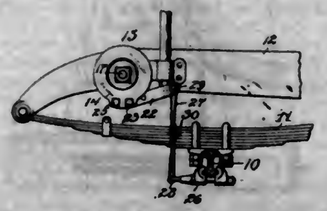
1. A lamp socket comprising a tubular shell open at both ends adapted to receive a pair of electrical fixtures therein, a pair of insulating disks spaced apart and slidably mounted within said shell, and a contact spring positioned between said disks having the ends thereof so positioned as to make electrical contact with said fixtures and yieldingly maintain said disks in spaced relation.

1,630,273. DUPLEX-CAM MOTOR. HENRY A. NORDWICK, Stockton, Calif., assignor to Duplex Motor Company, San Francisco, Calif., a Corporation of Nevada. Filed June 17, 1926. Serial No. 116,559. 5 Claims. (Cl. 123—197.)



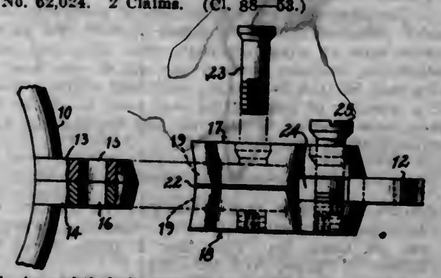
4. In an internal combustion engine, a shaft, a pair of cylinders disposed radially of the shaft at an angle to each other, pistons in the cylinders, connecting rods pivoted in the pistons, rollers on the outer ends of the rods, means rigidly connecting said rollers together to cause them to oscillate radially of the shaft during their strokes in reverse directions, and a cam for each roller to allow of four strokes of the same with each revolution of the shaft, said cam being generated with respect to the movement of the other roller on its cam as to cause said rollers to bear equally on their cams at any positions of the cams and rollers.

1,630,274. WATER FILTER. RAY A. NORTH, Green Bay, Wis. Filed Apr. 20, 1923. Serial No. 633,416. 1 Claim. (Cl. 210—201.)



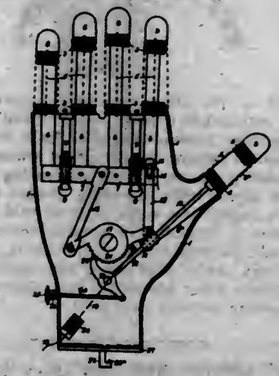
A water filter, comprising a reservoir, a hollow revoluble drum supported in the reservoir and having widely spaced outer and inner annular sectional walls, each wall including superimposed double sections, the outermost sections being formed with relatively large perforations and the innermost sections being of fine wire mesh, radially disposed longitudinally extending

partitions between the sections to form independent non-communicating pockets between the walls, the pockets being inset relative to the outer periphery of the drum, filtering material entirely filling the pockets, an inlet



conveyor opening into the drum axially thereof at one end of the same, and an inclined imperforate chute supported within the drum and having its discharge end opening through the other end of the drum above its axis.

1,630,275. SHOCK ABSORBER. FREDERICK A. RUFF, Belleville, N. J. Filed Sept. 11, 1926. Serial No. 134,789. 2 Claims. (Cl. 267—63.)

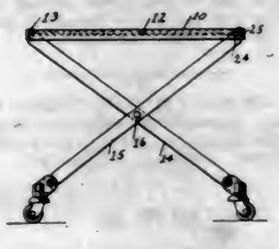


1. A shock absorber for springs comprising a casing with an annular channel on the outside, an elastic ring in the channel, a band encircling the ring and secured at one end to the casing, a lever secured at one end to the casing and near said end secured to the other end of the band, and a strand secured to the free end of the lever.

1,630,276. OPHTHALMIC MOUNTING. HARRY A. SANGREN, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 12, 1925. Serial No. 62,024. 2 Claims. (Cl. 88—53.)

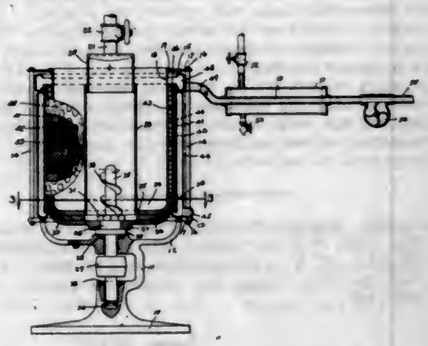
1. An ophthalmic mounting comprising a split frame having offset end pieces with aligned openings therethrough, a pair of separated members having recesses to fit over the respective end pieces, openings to align with the openings in the end pieces, recesses to receive the end of a temple and openings communicating with the temple recesses, holding means through the end piece openings to hold the separated members and the end pieces together, and holding means through the openings communicating with the temple recesses to pivotally hold the temple in the temple recesses.

1,630,277. MECHANICAL DETACHABLE HAND AND FOREARM. JAMES SMITH, Edinburgh, Scotland. Filed Oct. 6, 1926, Serial No. 139,821, and in Great Britain Sept. 23, 1926. 4 Claims. (Cl. 3—12.)



1. In an artificial hand comprising a palm plate with spiral spring fingers and thumb, flexible wires connected to each finger and thumb, flat springs projecting within each finger and thumb and operated by a movable plate through a pivoted ratchet sector, the combination therewith of movable transverse members between which the flat springs of the fingers are clamped, means for absorbing shock in connection with the movable transverse members, means for operating the thumb from the transverse members, and means for detachably and rotatably connecting and locking the hand to an artificial fore-arm, substantially as set forth.

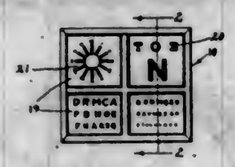
1,630,278. NOZZLE FOR ATOMIZERS. JACOB STEISS, New York, N. Y., assignor to The Larvex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 25, 1924. Serial No. 728,229. 4 Claims. (Cl. 299—120.)



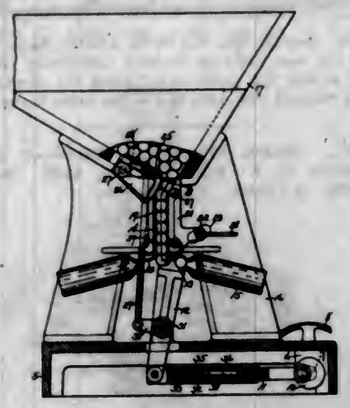
1. In a nozzle for atomisers, the combination of a tapered head at the end of a tube, a correspondingly tapered cap having a discharge orifice and screw-threads, a nut swiveled on the head and adapted to engage the threads of the cap to force it on the head, and an inwardly opening frusto-conical shell disposed within said cap and corresponding in taper therewith, the shell being of larger diameter at its closed end than the outer end of the cap, whereby the shell is forced into water tight engagement with the cap when liquid is forced against the inner side of the shell, and the closed ends of said shell and cap being in spaced relation to provide a whirl chamber, said shell having, in its closed end an opening which is closed in a direction parallel to the axis of the nozzle and shell and is tangential to the wall of said whirl chamber.

1,630,279. ROLLING TUB STAND. HOWARD T. STROOP, AUGUST F. HAUSER, and JULIUS HAMMER, Peoria, Ill. Filed Nov. 22, 1923. Serial No. 676,234. 1 Claim. (Cl. 280—43.)

A device of the class described, comprising two cooperating collapsible frames, each formed of two legs pivoted together intermediate their ends, rollers on said legs adapted to support the device for rolling in collapsed and extended positions, a platform having two opposite edges, and downwardly extending flanges at said edges adapted to engage the upper ends of said legs in abutting relation to thereby maintain the device in extended position, said platform being provided with two elongated slots adjacent one of said edges, two corresponding legs of said frames being pivoted to said platform by means of pins passing through said slots.



1,630,280. DEHYDRATOR FOR CLAY SLIPS. JACOB P. TETER, Indianapolis, Ind. Filed Apr. 19, 1924. Serial No. 707,789. 2 Claims. (Cl. 210—69.)

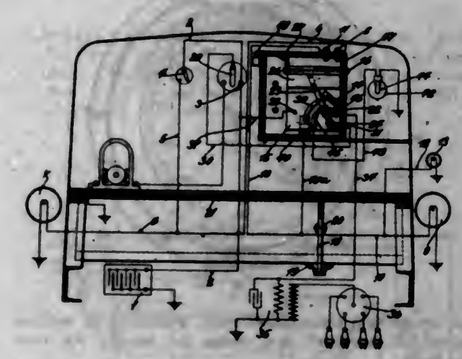


1. A dehydrator comprising a rotatable annular filtering wall, a second and stationary wall in spaced relation therewith forming an annular channel therebetween, means on the second wall for causing longitudinal or axial movement of the filtered solids, an annular receiver adjacent the top of the filtering wall into which the solids are discharged by said means, a pair of bowls beneath said walls and in spaced relation with each other forming a channel communicting with the first mentioned annular channel, means for supplying filtering material to said bowl channel, and means for rotating said bowls and said rotating wall for dehydrating said material.

1,630,281. EYE-TESTING CABINET. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 12, 1925. Serial No. 62,020. 2 Claims. (Cl. 88—20.)

1. In an eye testing cabinet, a box having a translucent side having test characters thereon and a reflective covering on the inside walls of the box except on the translucent side, a source of light between the translucent side and the side of the box opposite thereto, and a screen between the light and the translucent side whereby the direct rays from the light are screened from the translucent side.

1,630,282. HEAT-BRANDING MACHINE. ANTON VAN VERN, Hartford, and GEORGE F. MATTESON, Rocky Hill, Conn., assignors to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 18, 1924. Serial No. 738,492. 18 Claims. (Cl. 101—11.)



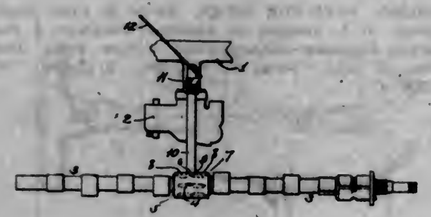
1. A branding machine comprising a hopper for supplying articles to be branded, a plurality of branding irons, and a carrier to receive said articles and present them alternately to the action of said branding irons.

1,630,283. PROCESS FOR PRODUCTION OF PHOSPHORIC ACID. WILLIAM H. WAGGAMAN and HENRY W. EASTERWOOD, Chicago Heights, Ill., assignors to Victor Chemical Works, Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1924. Serial No. 687,931. 4 Claims. (Cl. 23—165.)

1. The process for the production of phosphoric acid which comprises heating by means of solid fuel an extended mass of mixed phosphate rock, silica and coke, introducing oxidizing gases at one end of said mass to burn said fuel and introducing additional oxidizing gases at a plurality of points along said mass to oxidize the phosphorus evolved by the reactions between the constituents of the charge.

1,630,284. DEVICE FOR PREVENTING THEFT OF AUTOMOBILES IN HIGHWAYS. GEORGE A. WETTENGEL, St. Louis, Mo. Filed Mar. 2, 1925. Serial No. 12,595. 6 Claims. (Cl. 177—314.)

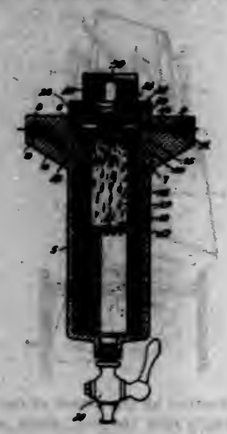
1. In a motor vehicle, the combination with the usual ignition and lighting circuits and their respective opening and closing switches, of additional switching means arranged to be operated by the vibration of the vehicle when travelling to derange and interrupt the usual functioning of said two circuits, means normally latching said second switching means in an inoperative position, and



means operable by the authorized driver for releasing said latching means in the event of a holdup with intent to take the vehicle.

1,630,285. MANUFACTURE OF ARTIFICIAL SILK OR THE LIKE. JOZ OLGIERD ZDANOWICH, London, England. Filed Aug. 12, 1926, Serial No. 128,916, and in Great Britain May 6, 1925. 2 Claims. (Cl. 18—54.)

1. The process which consists in the extrusion of a directly spinnable acetylated solution of cellulose acetate into a coagulating bath, winding of the forming filament under substantially no tension and completing the formation of the filament with spontaneous slight increase of tension.



1,630,286. ATTACHMENT FOR GAS ENGINES. WILLIAM H. ALLEMAN, Ingalls, Mich. Filed July 2, 1926. Serial No. 120,180. 4 Claims. (Cl. 123—124.)

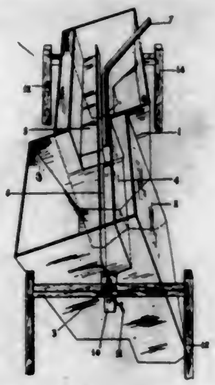
1. An attachment for explosive engines comprising a pipe extending from the cam shaft to the intake manifold, and means at and controlled by the cam shaft for periodically admitting air to the pipe.

1,630,287. FILTER. SAMUEL S. AMDURSKY, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Sept. 25, 1924. Serial No. 739,048. 4 Claims. (Cl. 210—165.)

1. In a device of the class described, the combination of a container having an internally threaded open end and lateral inlet and outlet passages, a filtering cartridge having threaded means for detachably supporting the same in said container end between said passages, a

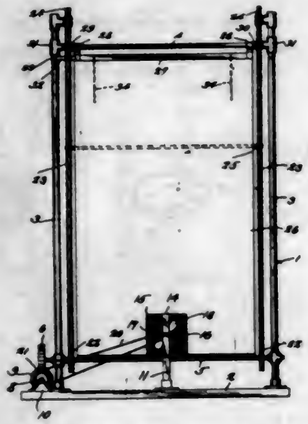
closure for said container end, and means on said closure for unscrewing said threaded means and detaching said cartridge.

1,630,288. GOLF TEE. GEORGE NOEL BOLINGER, Shelbyville, Ill. Filed Oct 15, 1926. Serial No. 141,842. 2 Claims. (Cl. 273—33.)



1. A device of the character described comprising a tee formed of a single piece of wire, said wire being bent at one end to form a substantially circular ball supporting ring, a shank arranged beneath said ring, an arm connected at its outer end to one end of said ring and its inner end to the upper end of said shank, the portion of said ring adjacent its point of connection with said arm being arranged substantially tangential to the circle defined by said ring, the outer end of said arm being curved upwardly adjacent its point of connection with said ring to form a loop, the free end of said ring being arranged in said loop and supported on said arm.

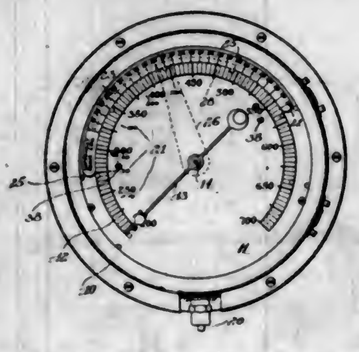
1,630,289. APPARATUS FOR MEASURING AND DISTRIBUTING LIQUIDS. MAURICE BOUFFART, Herstal, near Liege, Belgium. Filed Aug. 4, 1924, Serial No. 730,024, and in Germany Aug. 15, 1923. 7 Claims. (Cl. 73—28.)



1. Apparatus for measuring and distributing liquids, comprising a unit mounted to oscillate about a horizontal axis and embodying a pair of measuring receptacles, means providing communication between said receptacles

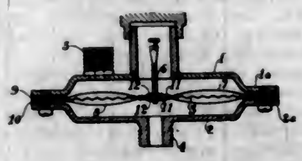
at a predetermined level to deliver excess liquid from one to the other, and means for shifting the center of gravity of the unit automatically from one side of such axis to

the other in alternation by the action of the excess liquid so delivered so as to rock the unit about said axis first in one direction and then in the other.



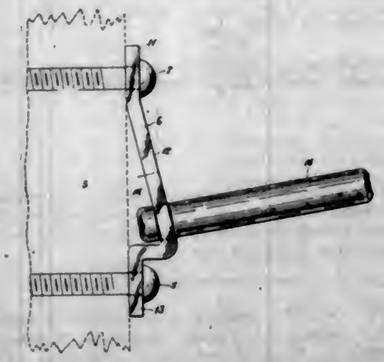
1,630,290. LEAF TURNER. LOUIS BOYD, Connellsville, Pa. Filed Nov. 1, 1926. Serial No. 145,532. 3 Claims. (Cl. 40—104.)

1. In a device of the class described, a book including a binding and leaves, means for mounting the binding for rotation about an axis, a leaf turner, means for mounting the turner for movement in an orbit about the book, means for moving the free ends of the leaves, one at a time, into the path of the turner, whereby the turner will turn the leaves backwardly and downwardly with respect to said axis, to form a pendant portion, and a projection on the book and movable against the last leaf of the book when the binding makes a partial rotation with respect to said axis, due to the weight of said pendant portion, whereby the turner will engage directly with the projection after the last leaf has been turned, and complete the rotation of the binding on said axis, thereby to restore the book to its original position.



1,630,291. INDICATING INSTRUMENT. CHARLES B. CARSON, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 14, 1925. Serial No. 75,248. 2 Claims. (Cl. 73—118.)

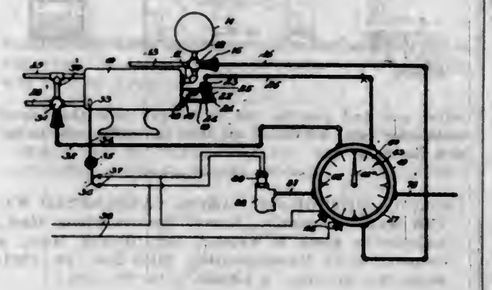
1. In an instrument of the class described, the combination with an arcuate temperature scale, of a fixed arcuate pressure scale disposed along one side thereof, an arcuate temperature scale movable along the other



side of the said temperature scale, graduated to indicate degrees of superheat, and means for moving the movable scale.

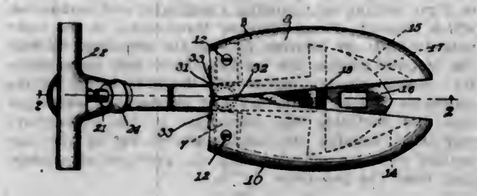
1,630,292. SENSITIVE DIAPHRAGM FOR LIGHT PRESSURE. JAMES ELY, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 22, 1926. Serial No. 124,245. 3 Claims. (Cl. 137—157.)

1. In pressure-responsive devices of the diaphragm type, the combination of a diaphragm sensitive to small changes in pneumatic pressure and a shield against influences of moisture, said shield comprising a thin sheet of pliable material of the order of alum-tanned colon leather.



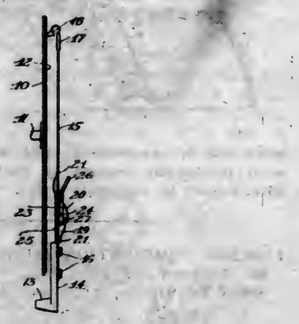
1,630,293. STEP FOR POLES. LEWIN B. FISH, Maplewood, N. J., assignor to American Telephone & Telegraph Company, a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,608. 2 Claims. (Cl. 228—47.)

1. The combination of a base-plate adapted to be permanently attached to a pole and having a declined offset central portion provided with a key-hole slot, and a



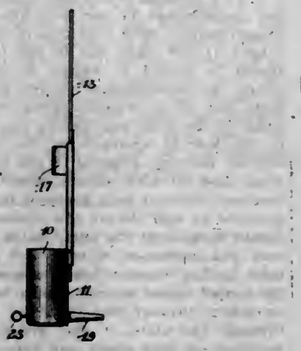
cylindrical step having detachable interlocking means near one end to co-operate with said key-hole slot so that it may be affixed to said plate in an inclined position with respect to the pole, said interlocking means being of a diameter not exceeding that of said step.

1,630,294. PROCESS-CONTROL APPARATUS. EDWARD B. FOOTE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,168. 12 Claims. (Cl. 62—2.)



1. In apparatus of the character described, a container for material to be processed, means for discharging said material therefrom, conducting means for supplying a medium to said container for controlling the temperature of said material, a sensitive device subjected and responsive to the temperature in said container, control mechanism governed by said sensitive device and comprising rotary cam means, and operating connections actuated by said cam means for operating said discharge and supply means.

1,630,295. BOOT AND SHOE STRETCHER. CHARLES GREGORY, Denison, Tex., assignor of one-half to William Freeman, Denison, Tex. Filed May 8, 1925. Serial No. 28,931. 1 Claim. (Cl. 12—128.5.)

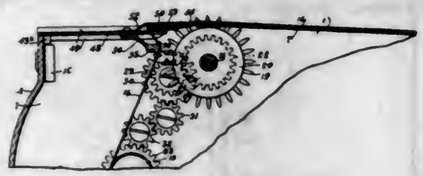


In a stretcher of the class described, a hollow body portion, an expanding member including pivoted sections connected with the hollow body portion and having grooves formed in the inner surfaces thereof; a movable expanding member operating within the grooves, a flexible member in the form of a wire extending through the hollow body portion and having connection with the expanding member, a plurality of oblong blocks slidably mounted on the flexible member, said blocks adapted to engage the inner surface of the hollow body portion to prevent rotation of the flexible member, and means at one end of the flexible member for moving the movable expanding member between sections of the expanding member.

1,630,296. RECORDER-PEN-ARM RELEASE. HENRY W. HEESCH, Rochester, N. Y., assignor to Taylor Instrument Cos., Rochester, N. Y., a Corporation of New York. Filed Dec. 26, 1923. Serial No. 682,609. 4 Claims. (Cl. 234—1.)

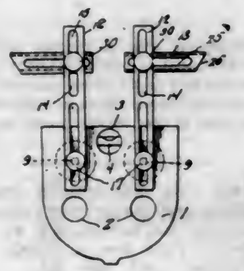
1. The combination with a flexible pen arm for recording instruments, of a relatively rigid piece engaging the arm at two points and a lever mounted on said piece and operable to press upon the arm portion intermediate said points to flex it out of the plane passing through said points.

1,630,297. PEN FOR RECORDING INSTRUMENTS. HENRY W. HEESCH, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Feb. 25, 1926. Serial No. 90,503. 2 Claims. (Cl. 120—43.)



1. A pen for recording instruments comprising a reservoir having a tubular marking spout extending therefrom, the bore of said spout being open at both ends exteriorly of the reservoir and communicating at an intermediate point with the interior of the reservoir.

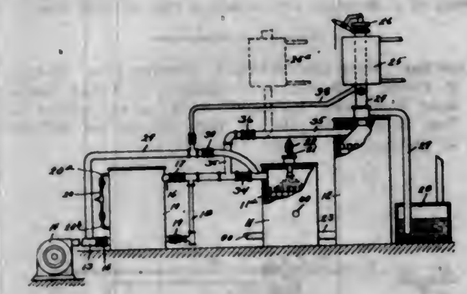
1,630,298. AUTOGRAPHIC REGISTER. PHILIP A. JACKSON, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed June 5, 1924. Serial No. 717,959. 15 Claims. (Cl. 281—5.)



1. In an autographic register adapted to contain a record roll strip and one or more receipt strips, one of which is stored as a record, means for maintaining the record roll strip in engagement with the end of a writing table consisting of a plate carrying members attached

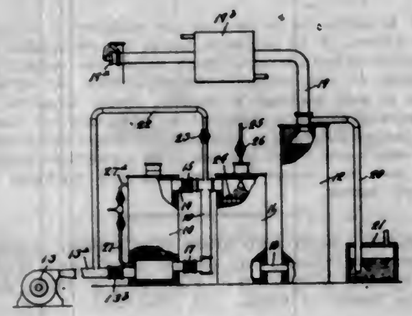
to its upper and under surfaces, the upper member overlapping the forward end of the writing table and the lower member extending below and rearward of the for-

ward end of the writing table with which the record strip frictionally engages to prevent it from shifting with respect to the other strips.



1,630,299. COMBINATION GAUGING DEVICE. MILTON M. JOHNSON, Cleburne, Tex. Filed Mar. 3, 1926. Serial No. 91,978. 2 Claims. (Cl. 33—174.)

1. In a gauging device and in combination, a body having countersinks in one side and journal apertures in communication with said countersinks, slotted wings arranged at the other side of the body, slotted wings designed to extend at angles to the first-named slotted wings, the second-named slotted wings being recessed at their rear sides, revoluble disks disposed in the countersinks of the body and having journal portions arranged in the journal apertures of the body and also having angular portions disposed in the slots of the first-named wings and threaded shanks extending from said angular portions, recessed nuts mounted on said shanks, washers mounted on said shanks and interposed betwe n the first-named wings and the nuts, coiled springs housed in the nuts and interposed between the nuts and the washers, bolts having angular heads disposed in the recesses of the second-named wings and also having threaded shanks extending through the slots of said wings and also through the slots of the first-named wings, washers mounted on said shank and arranged against the faces of the first-nam d wings, nuts mounted on the shanks and provided with recesses, and springs housed in the nuts and interposed between the washers and the nuts.

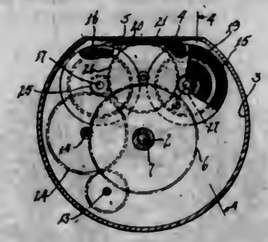


1,630,300. METHOD FOR MAKING CARBURETED WATER GAS. AUGUST C. KLEIN, Jamaica Plain, Mass., assignor to Stone & Webster, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1921. Serial No. 448,059. 3 Claims. (Cl. 48—205.)

1. The method of making carbureted water gas in a gas making set comprising a water gas generator, a carburetor and a superheater, which consists in a gas making cycle consisting of the following steps: heating a fuel bed in the generator by blasting the generator with air and excluding the blast gases from the carburetor and simultaneously passing free air into the carburetor to burn out any carbon deposited therein in a previous gas making cycle and to heat the carburetor; stopping the generator blasting and carbon burning operations and admitting steam into the heated fuel in the generator to form

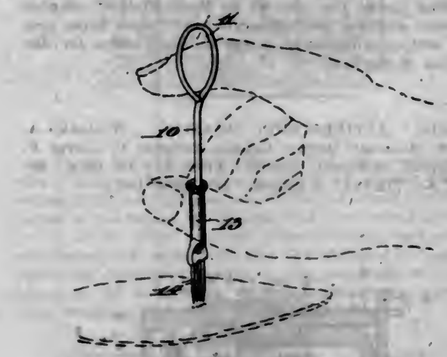
water gas and passing the water gas into the heated carburetor; and admitting oil into the carburetor to enrich the water gas.

1,630,301. METHOD OF MAKING CARBURETED WATER GAS. AUGUST C. KLEIN, Jamaica Plain, Mass., assignor to Stone & Webster, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1921. Serial No. 516,230. 3 Claims. (Cl. 48—205.)



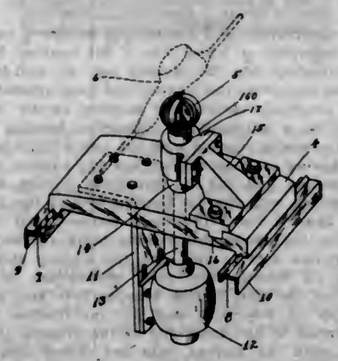
2. The method of making carbureted water gas with an oil having a substantial carbon depositing content and in a gas making set including a generator and carburetor, which consists of the following three steps, in the order named; first, air blasting fuel in the generator to heat the fuel and passing the hot blast gases into the carburetor; second, passing steam into the heated fuel in the generator to form water gas and passing the water gas into and enriching the water gas in the carburetor; and third, burning the carbon deposit out of the carburetor with air and excluding the products of combustion from the generator.

1,630,302. LOGGING DEVICE FOR RADIO TUNING INSTRUMENTS. ERIC H. LARSON, Chicago, Ill., assignor to The Logo-Dial Corporation, a Corporation of Illinois. Filed May 4, 1925. Serial No. 27,986. 2 Claims. (Cl. 40—86.)



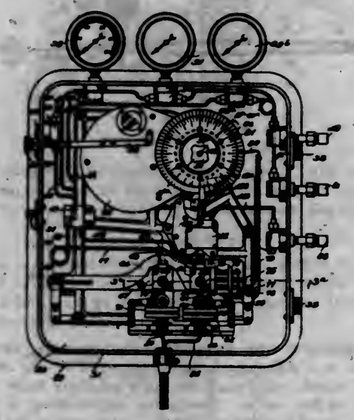
1. The combination with a rotor shaft, of a casing, a gear disposed within said casing and adapted for engagement with said rotor shaft, a manually actuated pinion in mesh with said gear for slowly rotating said rotor shaft, a pair of drums rotatably mounted within said casing, a tape having its opposite ends secured to said drums and being wound upon said drums, whereby rotation of said drums in the same direction will cause the tape to pass from one drum to the other, said casing having an aperture therethrough through which the

tape may be observed, a spring for resisting rotation of said drums in one direction, and gears connecting said drums with the shaft of said manually actuated pinion,



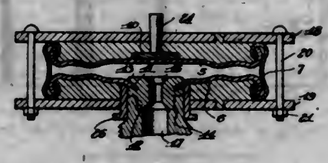
whereby the operation of said manually actuated pinion will cause the rotation of said drums at a relatively high rate of speed.

1,630,303. ANIMAL-TATTOO-MARKING INSTRUMENT. MARCELLUS W. MEEK, Arcadia, Calif. Filed Dec. 31, 1925. Serial No. 78,526. 3 Claims. (Cl. 101—30.)



1. A tattoo marking implement comprising a shank, a finger-receiving loop on one end thereof, a tubular member mounted for rotation on the other end of said shank, a series of needles carried by the rotatably mounted member and a flange on the upper end of said rotatably mounted member.

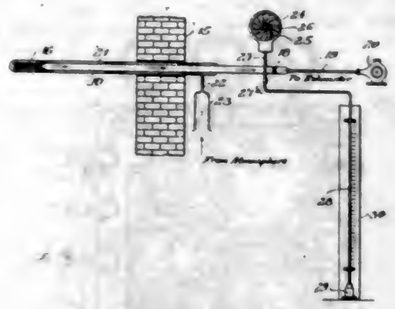
1,630,304. LAST LATHE. CHARLES P. MORTON, Cincinnati, Ohio. Filed May 7, 1923. Serial No. 637,142. 1 Claim. (Cl. 142—15.)



In a last lathe the combination with a lathe bed, of a carriage reciprocally mounted on the lathe bed and having a bore therethrough, a depending bracket mounted on the bottom of the carriage, a vertical motor carried by the depending bracket and having an elongated vertical armature shaft extending upwardly through the bore in the carriage, a bearing bracket adjustably mounted upon the upper side of the carriage for receiving the projecting end of the armature shaft, and a rotary cutter mounted on the free end of the armature shaft adapted to engage the side of the horizontally arranged work.

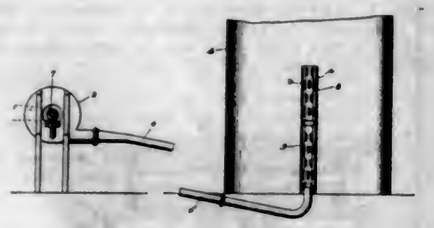
1,630,305. TIME-CONTROLLED REGULATING APPARATUS. HARRY Y. NORWOOD, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 9, 1921. Serial No. 521,222. 12 Claims. (Cl. 236—46.)

1. In a regulating apparatus, the combination of a container the condition within which is to be regulated and a regulating valve therefor, actuating means for said valve, a timing device, a temperature responsive device, mechanism comprising a lever arranged for movement by one of said devices for variable cooperation with the other device to effect conjoint control by said devices of said actuating means, and adjustable means for differentially varying the effective length of said lever for varying the proportional effect of one of said devices relative to the other on said actuating means.



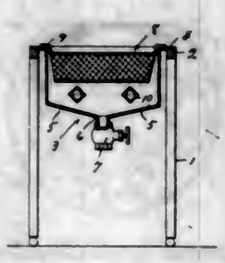
1,630,306. PRESSURE RESPONSIVE DIAPHRAGM. HARRY Y. NORWOOD, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 18, 1922. Serial No. 530,202. 4 Claims. (Cl. 137—157.)

1. In a device of the character described, the combination with a pressure-responsive diaphragm comprising opposed flexible walls and a peripheral wall, of a pair of plates disposed on opposite sides of the diaphragm and interconnected outside the confines thereof to assume a definite position relatively to the diaphragm, and means between the said plates and the said flexible walls, defining surfaces abutting with the flexible walls over substantially the entire surface thereof when the



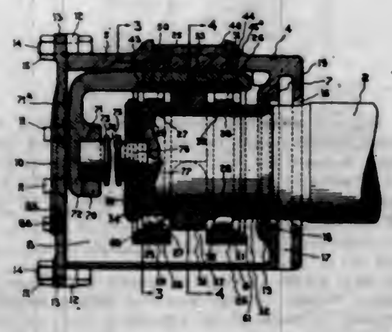
latter are in a definite expanded condition, said means consisting of material cast into the space between the plates and the said flexible walls while the latter are in expanded condition.

1,630,307. APPARATUS FOR MEASURING AND INDICATING THE FLOW OF GASES. HARRY Y. NORWOOD, Avon, and KENNETH L. TATE, Rochester, N. Y., assignors to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Aug. 4, 1925. Serial No. 48,170. 1 Claim. (Cl. 73—32.)



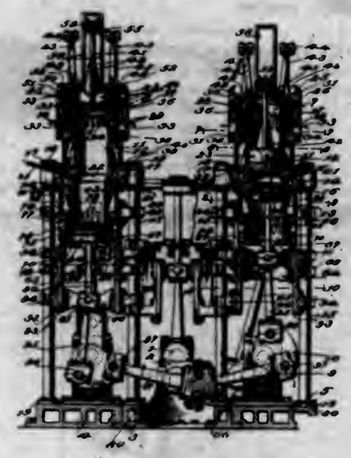
In apparatus for measuring temperatures, the combination of a manometric tube connected at one end to a body of liquid, a chamber having a capillary inlet and an effusion orifice outlet, means for maintaining a partial vacuum on the exterior of the outlet and a connection between the chamber and the manometric tube, the outlet orifice and the inlet being so proportioned that the external pressure on the orifice is less than .53 of the pressure in the chamber.

1,630,308. APPARATUS FOR DRYING, CURING, VENTILATING, OR OTHERWISE TREATING GRAIN OR THE LIKE. ANIBAL JULIO SANTOS PAZZI, LUIS JOSE DOMINGO PAZZI, and ADOLFO PEREZ ORDOÑEZ, Buenos Aires, Argentina. Filed Dec. 10, 1926, Serial No. 153,983, and in Argentina Sept. 25, 1926. 1 Claim. (Cl. 34—26.)



Apparatus for drying or otherwise treating grain or the like, comprising means for forcing a fluid into the grain, a fluid-distributing pipe connected with said means and adapted to extend through the grain, said pipe having elongated perforations in its walls, outwardly extending projections integral with the pipe, which projections are coextensive with and disposed beside the perforations, and a sheath of fabric surrounding the pipe throughout its length and spaced therefrom by the projections.

1,630,309. FRYING APPARATUS. ARTHUR R. PITMAN, Lynn, Mass. Filed Dec. 18, 1926. Serial No. 155,659. 2 Claims. (Cl. 53—7.)



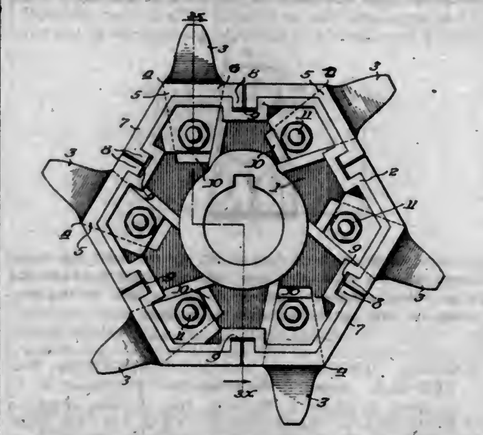
1. In a structure of the class described, a support, a grease container of box-like form having outstanding supporting flanges, inclined bottom portions and a valved drain at the center of the bottom, together with tubes extending across the interior of the container, adapted to receive suitable heating means, said tubes being provided with longitudinally spaced internal baffles for distribution of the heat.

1,630,310. ANTIFRICTION BEARING. WILLIAM A. PITT, Montreal, Quebec, Canada, assignor to George F. Sheppard, Montreal, Canada. Filed May 16, 1924. Serial No. 713,785. 5 Claims. (Cl. 308—180.)

1. The combination of a journal box having a top portion the underside of which has a flat bearing face, a journal extending into the journal box, an anti-friction bearing unit encircling the journal and fixed against axial movement relatively thereto but movable axially in unison therewith, a substantially cylindrical housing encircling and in bearing relation with the anti-friction bearing unit and having an external top bearing surface convex in axial section and flat in transverse section and in bearing relation with the flat bearing face of the journal box, said housing being internally recessed and having rings within the recess constituting outer raceways for the anti-friction bearing unit, and the housing and rings presenting an interior free from obstruction to axial movement of the anti-friction bearing unit and journal substantially as described, and an anti-friction thrust bearing carried by the front end of the housing in axial alignment with the journal, said end thrust being constructed and arranged to permit a limited axial travel of the journal and its anti-friction bearing unit relatively to the housing before taking up the end thrust.

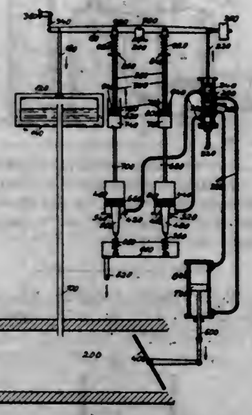
1,630,311. INTERNAL-COMBUSTION ENGINE. CHARLES REINEKE, New York, N. Y., assignor to The Reineke Motor Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 29, 1921. Serial No. 525,702. 10 Claims. (Cl. 123—54.)

1. In an internal combustion engine, the combination with a cylinder having offset portions, of opposed pistons arranged in said cylinder, an oscillating crank shaft arranged at one end of the cylinder and intersecting the axis of one of the offset portions of the cylinder, and means connecting said crank shaft with the aforesaid pistons for permitting the power strokes of said pistons to be transmitted to the crank shaft at points outside of a vertical plane through the center of the crank shaft.



1,630,312. THERMAL TRANSLATING DEVICE. WILLIAM A. RHODES, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 6, 1919. Serial No. 343,103. 8 Claims. (Cl. 200—122.)

1. A translating device comprising a fluid, means for confining said fluid, a diaphragm separating the confined fluid into two parts, means for heating the fluid on one side of the diaphragm and mechanism for translating the motion of the diaphragm on the other side thereof.



1,630,313. SPROCKET WHEEL. CLAUDE ROBABECK, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 30, 1925. Serial No. 26,855. 4 Claims. (Cl. 74—31.)

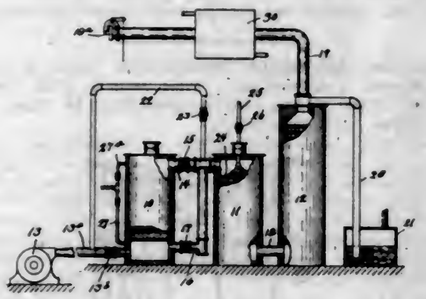
3. A sprocket wheel, consisting of a polygonal body portion, separately formed rim segments each conforming to two adjacent sides of the polygon of the body portion, sliding into assembly with the body portion in the direction of its axis and interlocking against displacement

thereon either circumferentially or radially, and removable teeth socketed in the body portion and intersecting the rim segments and holding them against disassembly.

1,630,314. AUTOMATIC REGULATOR. ERICH ROUČKA, Blansko, Czechoslovakia. Filed June 2, 1925, Serial No. 34,500, and in Czechoslovakia June 18, 1924. 16 Claims. (Cl. 137—78.)

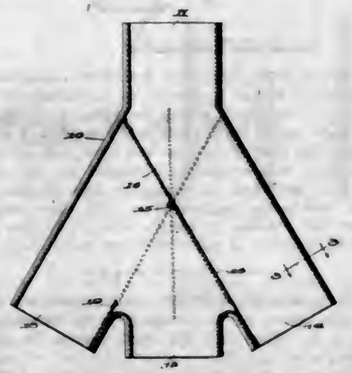
1. A system of the character described, comprising normally balanced means responsive to variations in a condition to be controlled, means including a double-acting fluid pressure motor for varying said condition, a governor for controlling flow of fluid to and from said motor, and fluid pressure means directly actuated by the pressure difference of said fluid caused by the flow of fluid to and from the said motor in accordance with the actuation of said governor tending to restore balance in the system after each variation of said condition to be controlled.

1,630,315. UNDERGARMENT. ALEXANDER M. SCHNEIDER, New York, N. Y., assignor to G. Sperling, New York, N. Y. Filed July 13, 1926. Serial No. 122,054. 6 Claims. (Cl. 2—78.)



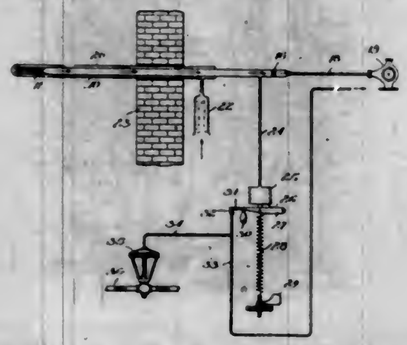
1. A combination undergarment comprising a substantially form fitting body portion with a closed crotch and leg openings diverging therefrom upwardly to points at the sides of the garment substantially at the waistline, and flounces comprising enlarged leg portions of tubular

form secured at said openings, each of said flounces being when developed a substantially quadrilateral member but with one side cut away to provide a substantially semi-



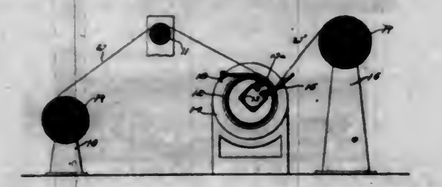
circular edge for attachment at one of said leg openings, the two side edges next adjacent said semi-circular edge being stitched together along the side of the garment in forming the tubular leg portion.

1,630,316. METHOD OF MAKING CARBURETED WATER GAS. ALLEN E. SHIPPEE, East Providence, R. I., assignor to Stone & Webster, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1921. Serial No. 438,115. 5 Claims. (Cl. 48—205.)



4. The process of making carbureted water gas in a gas making set comprising a generator and a carburetor, which consists in three steps, namely, an air blast run, a steam run including carbureting, and an independent run of free air through the carburetor.

1,630,317. AIR-CONTROL VALVE. FRANK J. SKONIER, Altoona, Pa. Filed Mar. 18, 1927. Serial No. 176,569. 3 Claims. (Cl. 251—14.)

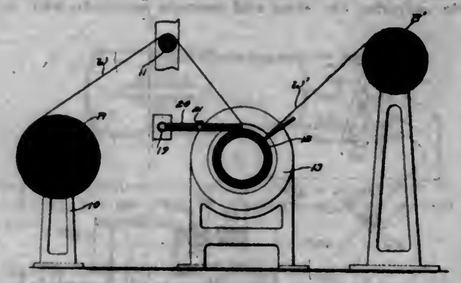


1. An air control valve device comprising a casing having an air pressure inlet at one end, an atmospheric air inlet and supply and exhaust outlets at the other end, said exhaust outlet having an inner wall extending within the casing, and a plate valve pivoted within the casing at the end of said wall and adapted to connect the air pressure inlet with the exhaust outlet and the atmospheric air inlet with the supply outlet or to connect the air pressure inlet with the supply outlet in the respective extreme positions of the valve, and to effect the several stated connections simultaneously when the valve is in intermediate position.

1,630,318. APPARATUS FOR MEASURING THE FLOW OF GASES. KENNETH L. TATE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed May 16, 1925. Serial No. 30,846. 6 Claims. (Cl. 73—32.)

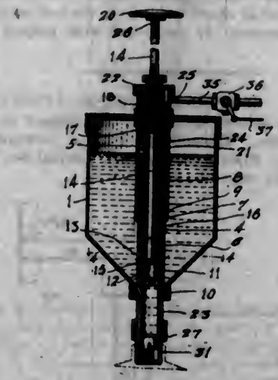
2. An apparatus of the character described, comprising a chamber having constricted inlet and outlet passages, means for maintaining a predetermined difference in the pressures to which said passages are externally subjected, one of said passages being constructed relative to the other to maintain a pressure difference between opposite sides thereof adapted to maintain a maximum flow therethrough substantially independent of fluctuations in the external pressure thereon, and a device responsive to variations of pressure in the said chamber.

1,630,319. AIR-SUCTION CRINKLING APPARATUS. KURT WANDEL, New York, N. Y., assignor, by mesne assignments, to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1920. Serial No. 363,709. 8 Claims. (Cl. 92—69.)



1. Paper crinkling apparatus, comprising a crinkling drum mounted for rotation with a doctor co-operative therewith and equipped for holding the paper adherent to the drum by air suction, such equipment consisting in a series of circumferential grooves in the surface of the drum alternating with continuous circumferential paper supporting areas, said paper supporting areas acting to hold the paper substantially out of said grooves, said grooves having communication with a source of air suction.

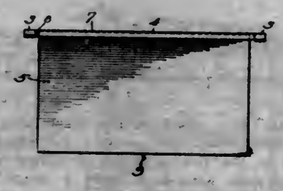
1,630,320. PAPER-CREPING APPARATUS. KURT WANDEL, New York, N. Y., assignor, by mesne assignments, to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1920. Serial No. 366,823. 6 Claims. (Cl. 92—69.)



1. Paper crinkling apparatus, comprising a crinkling drum, a doctor co-operative therewith, and means ex-

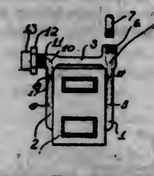
ternal of the drum for holding the paper adherent thereto by air suction in advance of the doctor, said drum presenting a series of continuous supporting areas circum-

ferentially of the drum alternating with circumferential grooves constituting suction areas, said supporting areas acting to hold the paper substantially out of said grooves.



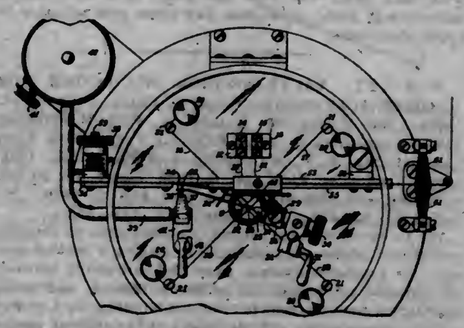
1,630,321. FORCE-FEED LUBRICATOR. JOSEPH W. WOODRUFF, Elizabeth, N. J. Filed Dec. 23, 1924. Serial No. 757,618. 7 Claims. (Cl. 184—29.)

1. A device of the character described, comprising a cylinder having an inlet and an outlet, a piston reciprocable with a sliding fit in said cylinder between said inlet and said outlet, said piston having an opening to establish communication therethrough between said inlet and outlet, a valve rod having a limited reciprocatory movement relative to said piston in opposite directions and a sliding fit in said opening to close and open the same, means on said valve rod above said opening in the piston to have an abutting engagement with said piston to limit relative movement of said piston and said valve rod in the direction to close said opening and cause movement of said piston with said valve rod after said opening is closed, and means for connecting said piston and said valve rod to limit relative movement of said piston and said valve rod in the direction to open said opening and cause movement of said piston with said valve rod in said direction after said opening is opened, whereby actuation of said valve rod in opposite directions closes and opens said opening and simultaneously actuates said piston in said cylinder.



1,630,322. CARD-INDEX DEVICE. ALBERT G. WUEST, Monroe, Mich., assignor to The Weis Manufacturing Company, Monroe, Mich., a Corporation of Michigan. Filed Mar. 7, 1925. Serial No. 13,726. 4 Claims. (Cl. 129—16.)

1. A visible card-index card-holder comprising a sheet-metal tube having a slot on one side thereof for the card, and having a flattened intermediate portion to frictionally grip the card, leaving two cylindrical end portions projecting beyond the edges of the card, said slot extending to the outer ends of said end portions, so that the card may be inserted at one corner thereof in the end of the holder and moved along into said flattened

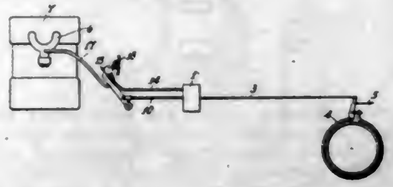


portion, with means forming a stop at one end of the flattened portion, to limit said insertion, preventing the card from being inserted through the cylindrical portion adjacent said stop, said stop preventing the card from being pushed into the adjacent cylindrical portion, and positioning the card between the two cylindrical portions.

1,630,323. CONNECTER AND SUPPORT FOR METERS. EDWARD P. BARTHOLOMAY, Rochester, N. Y. Filed June 5, 1926. Serial No. 114,007. 2 Claims. (Cl. 73—167.)

1. The combination with a gas meter casing having inlet and outlet openings in its opposite side walls, of a combined support and connection comprising two upright arms fitting against and secured to the exterior of the side walls of the meter and extending along the same and having passages communicating with the inlet and outlet openings in the said side walls of the meter, a connecting member formed integral with the said arms and extending across the meter, and means on the ends of the arms for connecting the inlet of the meter with the supply pipe and the outlet with a service pipe.

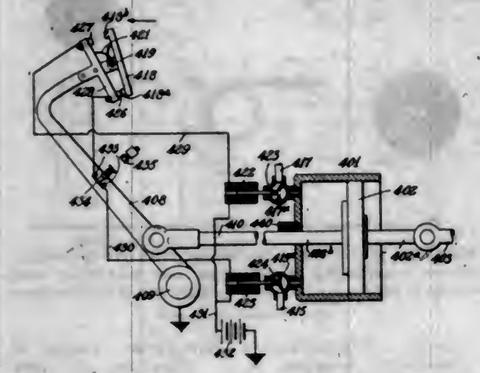
1,630,324. SIPHON RECORDER. EDWARD BLAKENEY, Kitchawan, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 6, 1921. Serial No. 520,247. 14 Claims. (Cl. 178—91.)



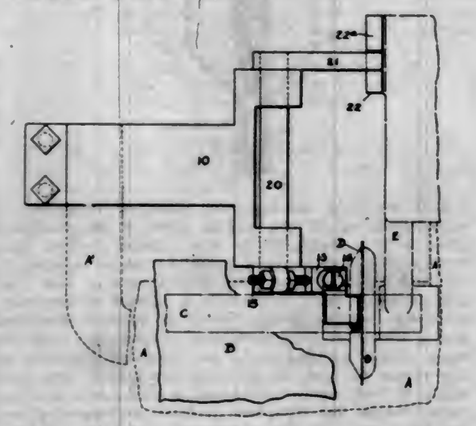
1. In an indicator for electric current, the combination of a fluid reservoir having a slot adapted to retain fluid by surface tension and a recording pen movable in said slot adapted to withdraw said fluid from the slot.

1,630,325. TROUGHLESS SKELETON FLANGE-WAY GUARD. HAROLD P. BLUM, Cleveland, Ohio, assignor to The Cleveland Railway Supply Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 4, 1926. Serial No. 127,076. 7 Claims. (Cl. 238—9.)

1. A flange way guard section of skeleton type, comprising a continuous base member for engagement and attachment to the ties, a series of spaced vertical legs formed integrally with said base, a flange way guard member formed integrally with said legs and adapted to lie parallel with the main rail, and a series of inwardly extending spacer members formed integrally with said legs and guard, and adapted for wedging engagement between the ball and the base flange of the main rail and having a trough shaped upper contour.



1,630,326. VALVE-CONTROL MECHANISM FOR POWER ACTUATORS. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Apr. 3, 1925. Serial No. 20,333. 17 Claims. (Cl. 303—50.)



2. In an automotive vehicle, the combination with brake mechanism, a power actuator comprising a cylinder and a piston operatively connected with the brake mechanism and means for establishing differential pressures on opposite faces of the piston including controlling valve mechanism, of a pivoted rocking pedal, operative connections between said pedal and said valve mechanism, and a spring normally holding said pedal out of the position to which it is moved by the placing of the operator's foot in normal operative relation therewith, and holding the valve mechanism in off position, whereby the act of engaging the foot in normal operative relation with said pedal will rock the pedal in a direction to operate said valve mechanism and cause said actuator to apply the brakes.

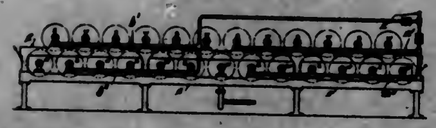
1,630,327. VALVE-CONTROL MECHANISM FOR POWER ACTUATORS. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Original application filed Apr. 3, 1925, Serial No. 20,333. Divided and this application filed July 3, 1926. Serial No. 120,420. 13 Claims. (Cl. 188—152.)

11. In an automotive vehicle, provided with an internal combustion engine for propelling it, having a suction passage for explosive charges from the carburetor between the throttle valve and the cylinders thereof, and brake mechanism for the vehicle, the combination of a power actuator comprising a cylinder and a piston therein, means for connecting said actuator with said suction passage and with the atmosphere to establish differential pressures on opposite faces of the piston including controlling valve mechanism, electro-magnetic devices for operating said valve mechanism, means for connecting the actuator piston with the brake mechanism of the vehicle, a pivoted pedal lever, operatively connected with the brake mechanism of the vehicle, a pedal mounted on said lever for operating the same and movable relatively with respect to the lever, and electric connections between the said pedal and said electro-magnetic devices operable by the relative movement of the pedal with respect to said lever.

1,630,328. SLOTTING-MACHINE ATTACHMENT. ALVIN L. BRUMBACH, Reading, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Aug. 30, 1924. Serial No. 735,142. 3 Claims. (Cl. 90—11.)

1. In combination with a slotting machine comprising a supporting frame and a work holder and rotary-cutter carrier relatively movable thereon to effect stepped cutting movements transversely of the work holder; a movably mounted slot-wall bracing-finger mounted on the frame rearwardly of the cutter path, and means for automatically moving said bracing-finger into a previously cut slot preliminary to each succeeding slot-cutting movement and withdrawing the same preliminary to each step movement.

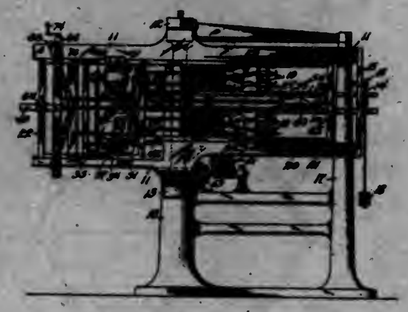
1,630,329. INK ERADICATOR. THOMAS W. CAPPON, Brooklyn, N. Y. Filed Mar. 8, 1924. Serial No. 697,750. 4 Claims. (Cl. 120—36.)



1. A fluid ink eraser, comprising in combination a container having a narrow operating aperture and a fluid applying pencil extending in front of the outer orifice of the container and freely slidable in said aperture and provided with an enlargement at its inner end adapted to limit outward movement of said pencil; said pencil being so proportioned to the container as to produce effective ejection of fluid by displacement when pressed inward.

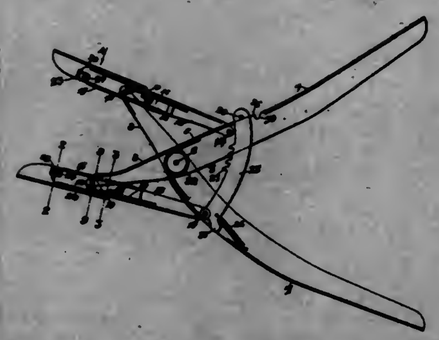
1,630,330. WINDSHIELD. FREDERICK A. DILLINGHAM, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a Corporation of Ohio. Filed May 28, 1924. Serial No. 716,380. 3 Claims. (Cl. 296—86.)

1. In a windshield for automobiles and the like, a body member, a frame member, a body bracket carried by the body member, a frame bracket carried by the frame member, a lever interposed between said brackets, interfitting cone-shaped wedge members non-rotatably connected respectively with said lever and one of said brackets, means for forcing the wedge members into locking engagement, and a yieldingly locking connection between said wedge members, said yieldingly locking connection including a spring pressed plunger and a cooperating depression in the cooperating cone surface of said cone shaped wedge members.



1,630,331. MULTIPLE-CYLINDER DRYING MACHINE. GERALD DOD, Southport, England. Filed Mar. 24, 1926, Serial No. 96,993, and in Great Britain Mar. 31, 1925. 5 Claims. (Cl. 34—48.)

1. A multi-cylinder drying machine comprising a plurality of sections, each section consisting of at least one cylinder, a steam-conduit along each side of the machine, means for supplying steam from one of said conduits to alternate sections, means for supplying steam from the other of said conduits to the intermediate sections, and means for discharging water of condensation from each cylinder at the end opposite its steam supply.

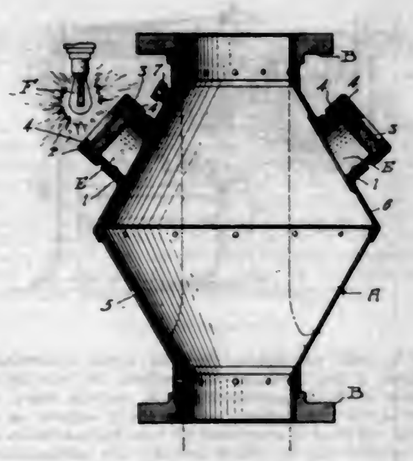


1,630,332. [WITHDRAWN.]

1,630,333. LATHE. GEORGE W. DUCHEMIN, Newark, N. J. Filed May 26, 1925. Serial No. 32,896. 2 Claims. (Cl. 142—13.)

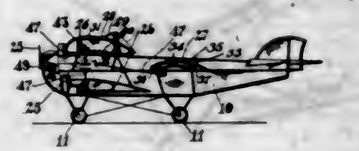
1. A lathe for turning irregular forms comprising a support, a gate swinging intermediate its ends on the support, a sliding pattern and work carrying chuck support on the gate, chucks on the chuck support on one side of the pivot, a mechanism for rotating the chucks and for reciprocating the chuck support, said mechanism being mounted on the gate on the other side of the pivot, and a pattern wheel and cutters disposed so as to bear on pattern and work in the chucks.

1,630,334. SPRING COMPRESSOR. DAVID CHARLES FEATHER, Denver, Colo., assignor to The Feather Motor Appliance Company, Denver, Colo., a Corporation of Colorado. Filed May 17, 1926. Serial No. 109,663. 12 Claims. (Cl. 29—86.3.)



9. A tool of the character described comprising crossed levers, a spring to yieldingly resist their operative movement, jaws supported on corresponding arms of the lever, lock mechanism for the jaws controlled by the levers, to release the same in a determinate adjusted position of the levers, and a locking device adapted, for adjustment to determine said adjusted position of the levers.

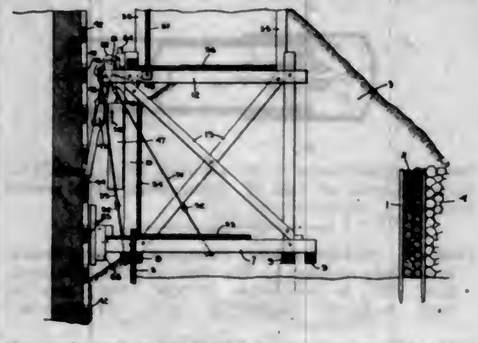
1,630,335. SIGHT FLOW BOX. ERNEST B. FORD, Union, N. J., assignor to Foster Engineering Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 17, 1925. Serial No. 76,034. 8 Claims. (Cl. 116—117.)



5. A sight flow box comprising a body having a chamber provided with an inlet and an outlet, a pair of oppositely disposed sight openings directed into said cham-

ber at an angle to each other and each obliquely to said inlet, whereby a large area of a column of water in said chamber can be viewed through either of said openings

and light directed into said chamber through the other opening to enhance visibility without interference by glare with vision through the first-mentioned opening.

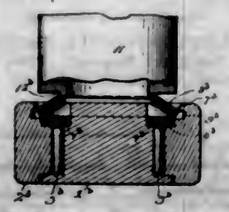


1,630,336. DIRIGIBLE AEROPLANE. JULIUS FOX, Cleveland, Ohio, assignor of one-fourth to Joseph H. Grummer and one-fourth to Eugene O. La Fevre, Cleveland, Ohio. Filed Mar. 26, 1926. Serial No. 97,492. 2 Claims. (Cl. 244—5.)

1. In a device of the class described, a dirigible aeroplane comprising front and rear wings, struts comprising spaced members supporting said wing, means for retaining gas of a weight lighter than air mounted between the spaced members of the struts of said front and rear wings, valve mechanism for controlling the gas content of said retaining means while said aeroplane is in operation to selectively vary the lifting power of the front and rear wings of said aeroplane for effecting changes in the direction of movement thereof.

1,630,337. APPARATUS AND METHOD OF CONSTRUCTING AND SINKING A CAISSON. JOHN R. FREEMAN, Providence, R. I. Filed Aug. 24, 1921. Serial No. 494,944. 11 Claims. (Cl. 61—40.)

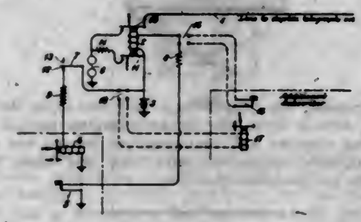
1. An apparatus for sinking a caisson vertically comprising a support on the earth surrounding the caisson, a plurality of expansible jacks engaging and acting downwardly against the caisson periphery and engaging and reacting upwardly against the support, a load on the support of sufficient weight together with that of the support to take up the reaction of the jacks, means for expanding the jacks gradually to force the caisson into



the earth, and means carried by the support and engaging the caisson periphery for centering and guiding the caisson in its descent.

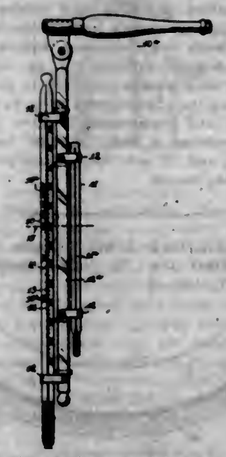
1,630,338. METAL JOINT. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed June 23, 1919. Serial No. 305,976. 5 Claims. (Cl. 287—20.)

1. In a metal joint, the combination of a plate member having an opening therethrough, a sheet metal member extending at an angle from said plate member and having a tongue extending from one edge and through said opening and also having a shoulder at the base of said tongue seated against one side of said plate, and a retaining plate engaging the other side of said first plate and butt-welded to the end of said tongue.



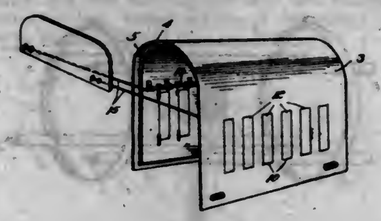
1,630,339. ANTIFRICTION BEARING AND METHOD OF ASSEMBLING THE SAME. JOSEPH A. GANSTER, Philadelphia, Pa. Filed July 13, 1925. Serial No. 43,196. 9 Claims. (Cl. 29—84.)

1. In an anti-friction bearing, the combination of inner and outer casing members and interposed rolling elements, a confining washer for the rolling elements applied to one of said members, and a circumferentially continuous deformed fastening washer fixedly interlocked with said casing member and forcibly engaging the confining washer to fasten it permanently in place.



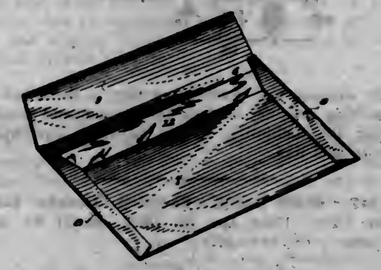
4. The method of assembling anti-friction bearings comprising inner and outer casing members and interposed rolling elements, one of which casing members is provided with a ledge and with an adjoining groove, which method consists in seating on the ledge a washer to confine the rolling elements and of a thickness to project into the plane of the groove, and forcing into the groove by deformation, a fastening washer, while causing the deformed washer to forcibly engage the projecting portion of the confining washer.

1,630,340. TELEGRAPH SYSTEM. MERTON C. HALL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 18, 1925. Serial No. 38,083. 7 Claims. (Cl. 178—58.)



1. In a telegraph system, in combination, a line, means for signaling over said line, a subscriber's set connected to said line comprising a neutral relay having two armatures, a key, a polar relay, a sounder, and a source of potential, the winding of said neutral relay being arranged in a circuit in series relationship with said source of potential and said key, said sounder being arranged in another circuit in series relationship with said source of potential and the armature of said polar relay, one armature of said neutral relay being arranged to connect the winding of said polar relay to the line when said neutral relay becomes energized and to disconnect said polar relay from the line when said neutral relay is deenergized the other armature of said neutral relay being arranged to connect the winding of said polar relay to said source of potential when the neutral relay becomes deenergized.

1,630,341. THERMOMETER SCALE. EARL VERNON HILL, Chicago, Ill. Filed June 1, 1925. Serial No. 33,959. 10 Claims. (Cl. 73—24.)

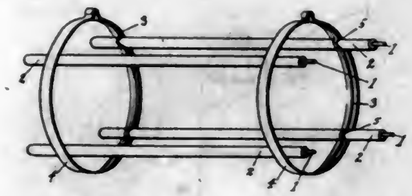


7. A combination scale comprising a main scale with graduations to represent degrees numerically increasing in one direction and a second scale placed opposite the first scale, the two scales having one graduation of like numerical order common to the two scales, and the second scale running inversely from the common graduation and bearing graduations which are correlated in a predetermined inverse relation to the corresponding graduations on the other scale, said predetermined inverse relation corresponding to a correlation of two conditions to be maintained as registered on the two scales.

1,630,342. HOOD CONSTRUCTION. MAX A. HUHNHOLZ, Chicago, Ill. Filed Feb. 23, 1922. Serial No. 538,506. 2 Claims. (Cl. 180—69.)

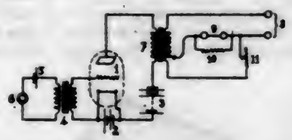
1. In an automobile hood construction, the combination of an inner and an outer wall united to prevent the conduction of heat to the exterior surface of the hood whereby the finish thereon may be preserved from the burning action of the heat of the motor, and pivotally mounted shutters also provided with an inner and an outer wall to prevent the conduction of heat to the exterior thereof for preserving the finish thereon, the pivotal mounting of said shutters permitting the shutters to move into and out of said double wall hood whereby the inner and the outer walls of the shutters, when closed, are coplanar with the inner and the outer walls of said hood.

1,630,343. PAPER PACKAGE AND METHOD OF FORMING IT. DANIEL C. HURLBUT, Bennington, Vt., assignor to Bennington Wax Paper Company, Bennington, Vt., a Corporation of Vermont. Filed Feb. 19, 1924. Serial No. 698,800. 5 Claims. (Cl. 206—57.)



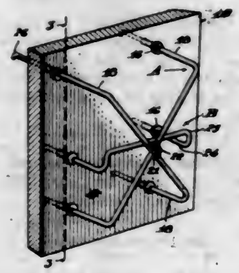
3. A paper package comprising an envelope open at one edge and including a back flap narrower than the envelope, end flaps secured to the back flap, a closing flap removably secured as a tuck between the back flap and the end flaps, and a mass of folded sheets of paper within said envelope.

1,630,344. WINDOW SHADE. HATTIE ILIGAN, East Elmhurst, N. Y. Filed Dec. 8, 1925. Serial No. 74,104. 4 Claims. (Cl. 156—10.)



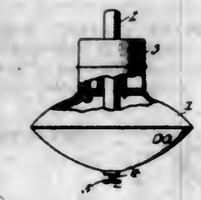
1. A window shade having a plurality of ventilating passages therein, and means integral with said shade for forming partial closures for said passages.

1,630,345. BALL CONVEYER. BENJAMIN LANZA, Philadelphia, Pa. Filed Nov. 20, 1926. Serial No. 149,683. 8 Claims. (Cl. 273—110.)



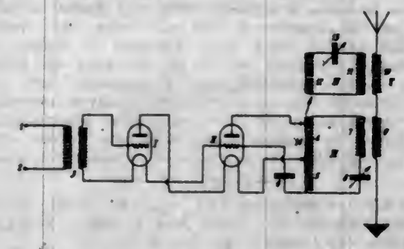
1. A device for holding the longitudinal rods of a guideway, in spaced relation, comprising: interfitted bands shaped to provide spaced sockets, each adapted to receive a rod and secure it against transverse displacement in all directions.

1,630,346. AMPLIFIER FOR ELECTRICALLY-DISTURBED TELEPHONE LINES. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 29, 1921, Serial No. 496,649, and in France June 25, 1915. 14 Claims. (Cl. 178—44.) (Granted under the provisions of the act of Mar. 3, 1921; 41 Stat. L., 1313.)



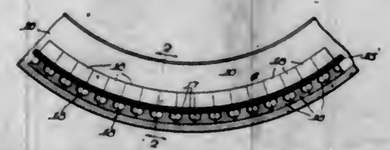
1. In combination, a telephone line, a thermionic tube transmitting amplifier at each end thereof, and means for reducing the audibility of the parasitic currents and speech in said line.

1,630,347. SEED RACK. EDWIN A. LUTHER, Los Angeles, Calif. Filed Apr. 27, 1925. Serial No. 26,003. 1 Claim. (Cl. 211—17.)



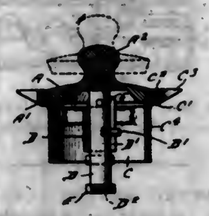
A rack of the class described comprising a back and a rear wall spaced from the back, said back having a series of groups of apertures formed therethrough, a packet holder for each group of apertures and each packet holder comprising a front and legs for slidable extension through said apertures, means on said legs to prevent complete withdrawal of the legs, there being a second series of groups of apertures in said back located within the first mentioned groups and an auxiliary packet holder for each of the group of apertures of the second series having legs for slidable and limited movements in said apertures.

1,630,348. WALKING TOP. LOGAN L. MALLARD, Norfolk, Va. Filed Jan. 10, 1926. Serial No. 81,775. 2 Claims. (Cl. 46—32.)



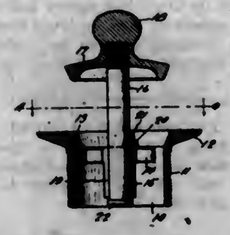
1. A spinning top comprising a body and a peg therefor provided with a head, the surface-engaging face of said head being serrated and the serrations having the walls thereof inclined alternately with long and short faces, as and for the purposes described.

1,630,349. ARRANGEMENT FOR SUPPRESSING IDLE CURRENT IN RADIOTRANSMITTERS. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany. Filed Apr. 6, 1925, Serial No. 20,929, and in Germany Apr. 10, 1924. 5 Claims. (Cl. 250—6.)



1. In combination, a source of a carrier wave of relatively high frequency, means for modulating said carrier wave at a relatively low frequency resulting in waves of carrier and side-band frequencies, an antenna circuit, means coupling said antenna circuit to said source, and means permitting the transmission of a wave of said side-band frequency and suppressing a wave of said carrier frequency comprising a tuned circuit coupled to said antenna circuit and to said source independently of the aforesaid coupling means.

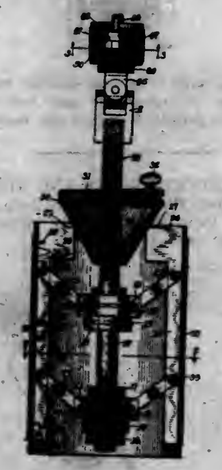
1,630,350. RESILIENT TIRE. CLYDE S. MORSE, De Kalb, Ill. Filed Jan. 23, 1926. Serial No. 83,214. 2 Claims. (Cl. 152—8.)



1. In a resilient tire, the combination of a circular casing, with a yieldable band located therein at a distance from the tread or outer portion thereof and a plurality of transversely disposed resilient tread engaging members carried by said band on its outer surface, each of said members having its outer portion widened circumferentially with respect to the casing and in contact with the corresponding portions of adjacent ones of said members to impart resiliency to said band and to form an unspaced support to the casing.

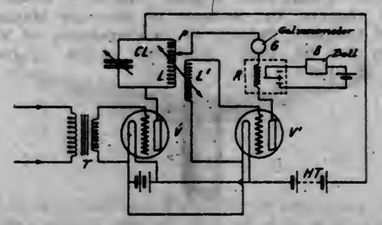
1,630,351. VALVE FOR PLUMBING FIXTURES. JOHN N. MORTIMER, Lakewood, Ohio, assignor to the Central Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 29, 1926. Serial No. 98,088. 1 Claim. (Cl. 4—295.)

As a new article of manufacture, a waste valve for bathtubs comprising a valve provided with a stem, said stem having a laterally projecting pin intermediate its ends and a laterally projecting stop at its lower end, a ring having a seat for the said valve and a laterally extending flange at the upper end of the sleeve, said flange having one or more notches, said ring having a depending externally threaded sleeve and a spider arranged within the sleeve and having a centrally bored hub in which the valve stem works, said centrally bored hub being vertically slotted, and a stop lug carried by the spider and with which the laterally projecting pin is adapted to engage to limit the rotation of said stem.



1,630,352. WASTE VALVE FOR BATHTUBS AND LAVATORIES. JOHN N. MORTIMER, Lakewood, Ohio, assignor to The Central Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 18, 1926. Serial No. 142,278. 1 Claim. (Cl. 4—295.)

As a new article of manufacture, a waste valve for bathtubs comprising an externally threaded sleeve provided at its upper end with an outwardly extending flange, said sleeve having a valve seat at its upper end, a centrally disposed spider having a longitudinally slotted hub, said hub having an upwardly projecting stop lug, and a valve provided with a stem, said stem having a laterally projecting pin intermediate its ends and a laterally projecting stop at its lower end, the length of said stem being such as to hold the valve elevated a sufficient distance above the spider to permit a tool to be brought into engagement with said spider for the purpose of screwing the sleeve into the bathtub.



1,630,353. INTERNAL-CYLINDER GRINDER. LEO D. PANGBORN, ROGERS M. WARWICK, and GEORGE H. MCKAY, Chicago, Ill., assignors, by mesne assignments, to Chicago Hardware Foundry Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1924. Serial No. 725,573. 10 Claims. (Cl. 51—206.)

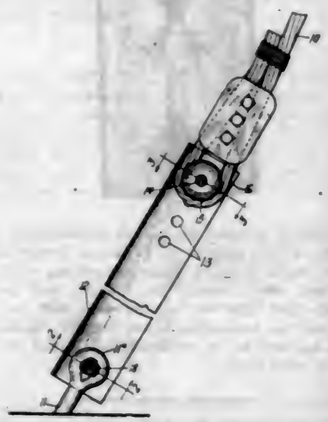
1. An internal grinding device comprising, in combination, a central shaft, two spaced collars on said shaft, one collar being adjustable and the other being fixed, a plurality of parallel bars extending longitudinally of said shaft and being radially movable relatively thereto, a plurality of links pivotally connecting said bars to said collars, a cone adjustably mounted on said shaft and engaging said bars for adjusting said bars radially, and abrasive carrying means defining a cylindrical surface mounted on said bars.

8. A cylinder grinder having, in combination, a shaft, a plurality of bars adapted to be moved toward and away from said shaft, parallel links connecting each of said bars to said shaft, means for moving said bars away from said shaft and for locking said bars in adjusted position, and an expansible sleeve secured to one of said bars and adapted to be enlarged and locked in adjusted position by said bars.

1,630,354. RADIO SIGNALING APPARATUS. THOMAS DIXON PARKIN, Chelmsford, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 2, 1921, Serial No. 519,311, and in Great Britain Jan. 31, 1921. 3 Claims. (Cl. 250—8.)

1. The combination of two three-electrode valves one of which is on the point of self-oscillation when no oscillations are impressed on it, means for applying incoming oscillations to the grid circuit of one valve, an oscillatory circuit adapted to be tuned to a desired frequency connected to the anode of that valve and connected to the grid circuit of the second valve by means of an adjustable tap and a relay coil connected between the oscillatory circuit and the anode of the second valve.

1,630,355. SHUTTLE. LUIGI PAVIA, Allentown, Pa. Filed Oct. 16, 1926. Serial No. 141,940. 5 Claims. (Cl. 139—210.)



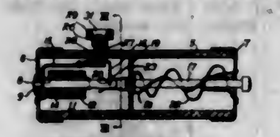
1. In combination, with a shuttle body having a longitudinal cavity and a transverse bearing, a spindle arranged in the cavity and split in a plane intersecting the axis

of the bearing from the butt toward the point of the spindle to form two legs, one such leg having pivotal contact, and the other being free of such contact, with

the bearing, and said body and spindle having coacting means to collapse or expand the split part of the spindle when the same is pivotally shifted one way or the other.

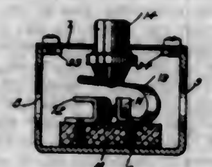
1,630,356. COMBINATION GUY AND GUARD. GEORGE W. PERKS, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed May 22, 1926. Serial No. 110,976. 8 Claims. (Cl. 189—31.5.)

5. A guy including a guard or telltale incorporated therein as a tension member.



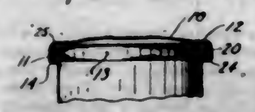
1,630,357. CORE FOR MOLDS. HENRY C. PERIL, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed May 23, 1925. Serial No. 32,254. 5 Claims. (Cl. 22—165.)

1. In a mold, divided by a plane of separation into cope and drag sections, a core crossing the plane of separation and having its respective ends projecting into the two sections, said core being constructed with transverse projections embedded in the material of a mold section and sustaining the core against tipping.



1,630,358. CUT-OUT. MAURITS J. SANDIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1922. Serial No. 548,659. 2 Claims. (Cl. 200—116.)

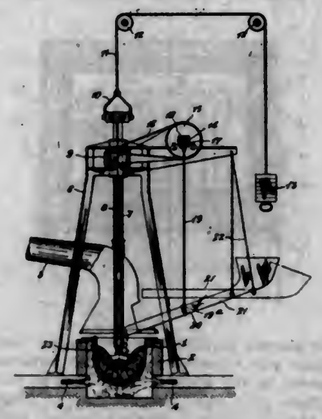
1. A cut-out device comprising a tubular insulating casing, terminal members mounted on the ends of the casing, relatively movable contact members connected to the terminal members and adapted to conductively connect the terminal members, latching means for securing the contact members in engagement, means for separating the contact members in a direction longitudinally of



the casing upon their release by the latching means, and a barrier on one of the members extending transversely of the casing.

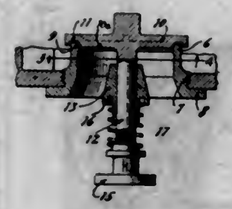
1,630,359. ELECTRIC SWITCH. GUY F. SCOTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1920. Serial No. 428,862. 4 Claims. (Cl. 200—159.)

1. In an electric switch, a switch box, a cover therefor provided with an opening, a push button extending through the opening and having a shouldered portion normally in engagement with the under side of the cover, a bridging member having one end connected to a stationary terminal member and its other end adapted to engage a stationary contact member, a stem extending loosely through the bridging member and having an expanded end to normally abut against the under side of said member and its other end rigidly seated in the push button, and an expanding member lying between the push button and the bridging member for yieldingly holding them in spaced relation.



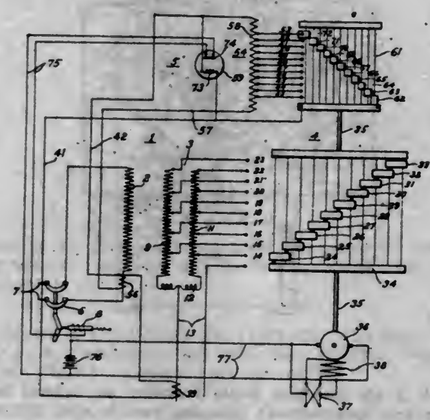
1,630,360. RECEIPTACLE CLOSURE. HERBERT T. SNYDER, New York, N. Y., assignor to Upressit Products Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,609. 2 Claims. (Cl. 215—95.)

1. In combination, a container, said container having a shoulder, a self gripping and releasable cap closure fitting over the opening of said container and having depending spring fingers engaging under said shoulder, a band enclosing the depending fingers to hold them in gripping relation to the shoulder, said band having a flange extending under the shoulder and a second flange extending over the top of the closure whereby accidental displacement of the closure is prevented.



1,630,361. APPARATUS FOR RECLAIMING METALS. THERON D. STAY and CHARLES O. TESSIER, Cleveland, Ohio, assignors, by mesne assignments, to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 28, 1921. Serial No. 511,021. 18 Claims. (Cl. 263—37.)

1. An apparatus for reclaiming light readily oxidizable metals comprising in combination, a melting furnace, molten metal agitating means in the furnace, means for actuating said agitating means, means for feeding scrap



metal into the furnace in a substantially continuous stream, and means for concentrating the dross on the surface of the molten metal.

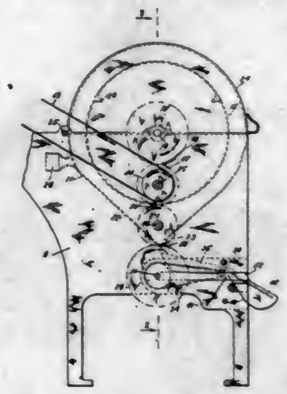
1,630,362. VALVE. WILLIAM S. SUTTON, Rockford, Ill., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 16, 1921. Serial No. 461,770. 2 Claims. (Cl. 137—53.)

1. A valve of the character described comprising a casing having an internal annular wall terminating at the outlet end in a valve seat; a valve disk having an enlarged central portion at its inner side and an annular groove adjacent its periphery; said groove having a relatively wide inwardly inclined wall constituting the periphery of said enlarged central portion, a narrow outwardly-inclined outer wall portion and a horizontal intermediate wall portion, an intermediate portion of said inwardly-inclined wall adapted to engage said valve seat when the valve is closed; said annular groove serving to receive the adjacent end of said annular casing, the outer and intermediate wall portions of said groove lying about and in normally spaced relation to the adjacent outer portion of said annular casing to provide a passage therebetween, said inwardly-inclined wall projecting within said casing when the valve is seated to provide a wedge-like annular space between said enlarged central portion of the valve disk and the adjacent portion of the internal annular wall of the casing below the valve seat whereby, when said valve is actuated, to cause the fluid to instantly pass through said passage and react upon the walls thereof and upon the valve seat to unseat and maintain said valve disk unseated, substantially as specified.

1,630,363. TRANSFORMER-TAP-CHANGING DEVICE. HENRY A. TRAVERS, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1926. Serial No. 116,314. 8 Claims. (Cl. 171—119.)

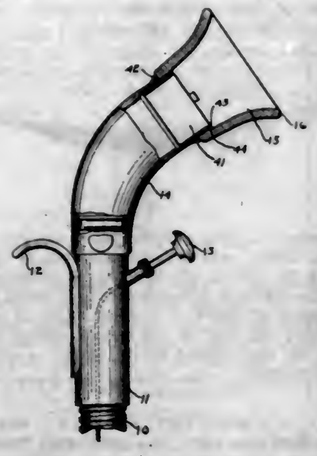
1. The combination with a transformer comprising primary and secondary windings, means for varying the number of effective turns of one of the windings, and a relay system responsive to predetermined differences in the current traversing the primary and secondary windings, of means for regulating the relay system in accordance with the operation of the means for varying the winding.

1,630,364. VEHICLE SPRING. WILLIAM H. WALLACE, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Spring Corporation, Detroit, Mich., a Corporation of Ohio. Filed Apr. 8, 1925. Serial No. 21,518. 4 Claims. (Cl. 267—47.)



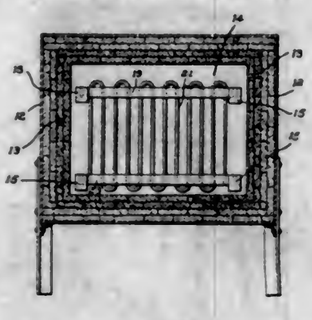
1. A spring comprising a plurality of superposed leaves of varying lengths some of which are formed of resilient metal and the others of relatively non-resilient metal, each of said leaves of non-resilient metal being backed-up by a plurality of leaves of resilient metal of which the one adjoining the leaf of non-resilient metal is of substantially the same length as the latter, as and for the purpose described.

1,630,365. CONDENSATION PRODUCT. HENRY C. P. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1920. Serial No. 412,568. 6 Claims. (Cl. 91—68.)



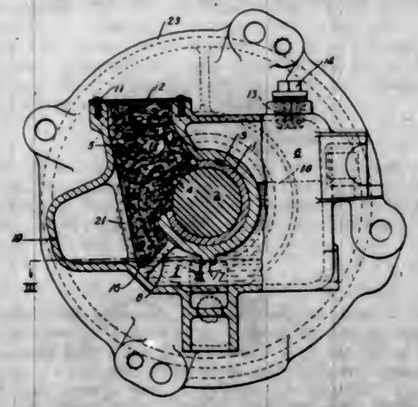
1. A method of forming a condensation product which consists in treating cellulose with a parchmentizing agent, treating the cellulosic material with a phenol and then treating the mixture with formaldehide to form resinous material.

1,630,366. DEVICE FOR SEPARATING PINS FROM SWEEPINGS. CHRISTIAN WILDHABER, New York, N. Y. Filed Apr. 9, 1926. Serial No. 100,893. 2 Claims. (Cl. 209—99.)



1. A pin assorting device including an inclined belt conveyer, longitudinally extending parallel slats dividing the acting portion of said conveyer, the distance between adjacent slats being smaller than the length of a pin, a slanting board adjacent the discharge end of said conveyer, said slats projecting forwardly of said conveyer, and a slanting board adjacent the forwardly extending ends of said slats.

1,630,367. SOUND COLLECTING AND TRANSMITTING. CHARLES K. WOODBRIDGE, New York, N. Y., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed May 29, 1924. Serial No. 716,626. 16 Claims. (Cl. 181—21.)

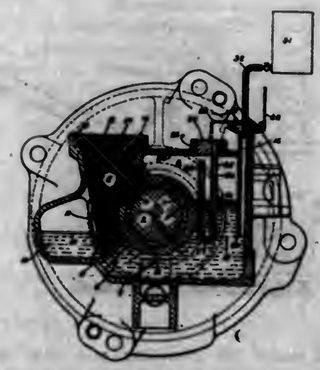


1. A sound-receiving device comprising a handle portion and an outwardly flaring mouthpiece portion, and means for adjustably connecting the handle portion and the mouthpiece portion to allow rotary movement of one relative to the other.

1,630,368. RESISTOR MOUNTING FOR ELECTRIC FURNACES. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 8, 1924. Serial No. 704,972. 6 Claims. (Cl. 204—64.)

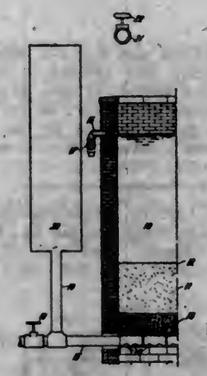
1. In an electric furnace, the combination with a furnace chamber and a plurality of spaced refractory members supported by the walls of said chamber and extending therefrom into said chamber, of a resistor unit supported thereby having a single refractory member and a return-bent electric heating element supported by the bent portions only of said element and coacting with said last-named refractory member.

1,630,369. BEARING. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 672,707. 11 Claims. (Cl. 308—132.)



4. The combination with a bearing lubricator, of oil supply means therefor comprising a hermetically closed oil reservoir, a chamber extending upwardly from, and in communication with, the lower portion of said oil reservoir and having an opening communicating with the upper portion of said oil reservoir, an oil receptacle adjacent to said chamber having an opening communicating with said chamber, and oil-lifting means in said oil receptacle.

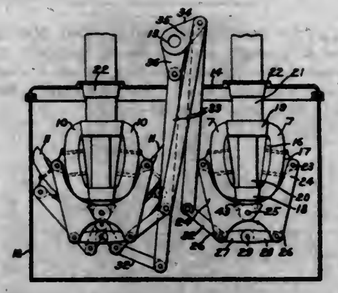
1,630,370. BEARING. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1923. Serial No. 681,750. 19 Claims. (Cl. 308—132.)



12. A hermetically closed vessel for holding a liquid, means for displacing liquid from said vessel by admitting

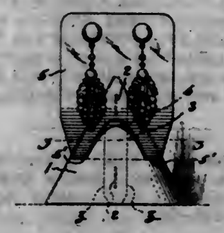
a gaseous medium to the upper portion thereof and filling means for injecting liquid into said vessel at a level

below the normal level of the liquid and expelling the gas trapped above said liquid without substantially disturbing the hermetical enclosure formed thereby.



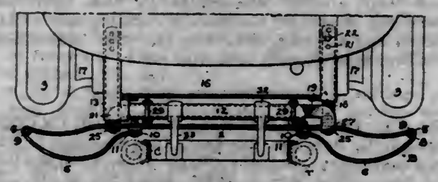
1,630,371. FILTRATION SYSTEM. HIRAM W. BLAISDELL, New York, N. Y., assignor to The Blaisdell Filtration Company, a Corporation of Delaware. Filed Apr. 27, 1922. Serial No. 556,993. 3 Claims. (Cl. 210—130.)

1. The process of renovating a filtration bed, comprising shutting off the outflow of water, permitting said outflowing water to accumulate between the filter bed and the shutting-off point, so that the accumulation of surplus water automatically flows back and up through the bed for the purpose specified.



1,630,372. ELECTRIC SWITCH. WILLIAM ANSELM COATES, Chorlton-cum-Hardy, and GEORGE EDWARD GITTINS and DAVID REGINALD DAVIES, Stretford, Manchester, England, assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 5, 1922, Serial No. 566,031, and in Great Britain July 13, 1921. 2 Claims. (Cl. 200—18.)

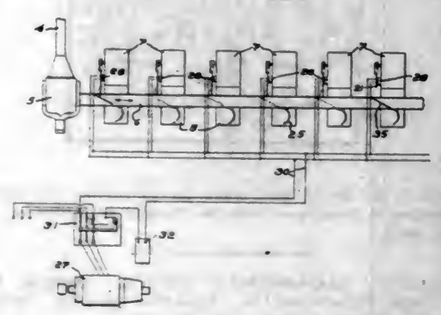
1. The combination with three switches, of an operating shaft for closing the several switches, a crank mounted on and fixed to the shaft for controlling one of the switches during movement of the shaft in either direction, and cranks loosely mounted on the shaft and actu-



ated by the first named crank for controlling the other switches in accordance with the direction of movement of the shaft.

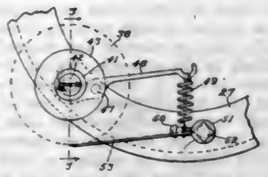
1,630,373. CARD-HOLDING DEVICE. DE'ETTE B. COMBS, Philadelphia, Pa. Filed Nov. 10, 1923. Serial No. 673,938. 1 Claim. (Cl. 40—149.)

A card holder, comprising a substantially semi-circular blank of sheet material, said blank being rolled to form a hollow conical member with the meeting portions of its diametric edge overlapped and secured together to retain said blank in the aforesaid conical form, and said conical member having a transverse semi-elliptical upwardly bowed slot having vertically spaced apart edges which converge toward the respective ends thereof, the lower edge of said slot defining an upwardly directed gripping tongue adapted to engage a card inserted in said slot and laterally flex the same so as to frictionally bind it against the upper edge of said slot.



1,630,374. AUTOMOBILE BUMPER AND FITTING. WILLIAM G. COX, Cleveland, Ohio, assignor to The Eaton Axle and Spring Company, a Corporation of Ohio. Filed Sept. 15, 1923. Serial No. 662,830. 4 Claims. (Cl. 293—55.)

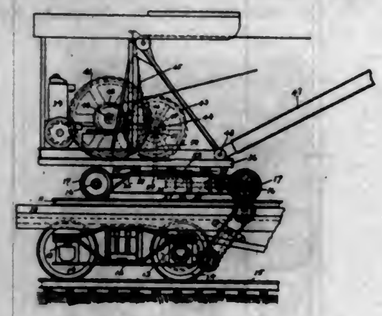
1. An automobile bumper having a supporting bar, and attachment fittings for said bar comprising a pair of



bracket members having upwardly-extending brace portions at one end and clamping extremities at their opposite ends and a connecting bar extending between said opposite ends.

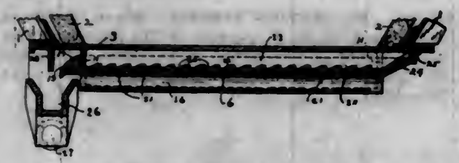
1,630,375. COTTON-DISTRIBUTING MECHANISM. ROBERT S. CURLEY, Lowell, Mass., assignor, by mesne assignments, to Kitson Machine Shop, a Corporation of Massachusetts. Filed June 6, 1925. Serial No. 35,382. 10 Claims. (Cl. 19—69.)

1. In a cotton distributing apparatus, the combination of a series of cotton working machines, mechanism for supplying cotton to the machines, devices for controlling the delivery of cotton from said supplying mechanism to the machines, and means whereby said devices control the operation of said supplying mechanism.



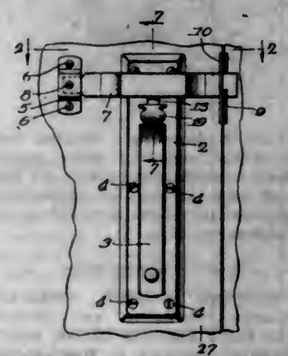
1,630,376. TENSION MECHANISM. JASPER DERBY, Medford, Mass., assignor to Andrew Terkelsen, Boston, Mass. Filed Oct. 20, 1924. Serial No. 744,860. 6 Claims. (Cl. 242—75.)

3. In a tire wrapping machine having means for supporting an article to be wrapped, the combination of a shuttle rotatable around the article, a rotary member upon which the roll is mounted carried by said shuttle, an arm engaging the periphery of the roll, a stud connected with said shuttle, a hub movably mounted upon said stud by which said arm is carried, a second stud projecting laterally from said movable hub, a one-piece brake lever pivoted intermediate its ends upon the shuttle and at one end peripherally engaging said rotary member, and a spring connecting the other end of said lever with said laterally projecting stud.



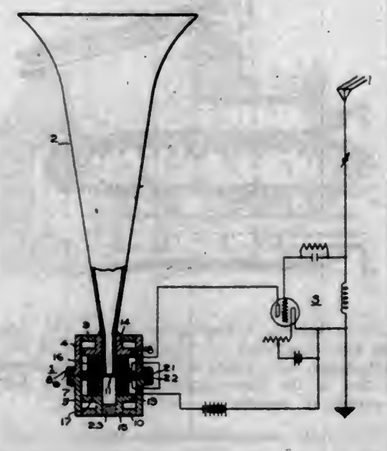
1,630,377. PROPELLING MECHANISM FOR CRANES. EUGENE G. DEUCHER, Cleveland, Ohio, assignor to The Universal Crane Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 1, 1926. Serial No. 91,640. 22 Claims. (Cl. 105—28.)

1. A traveling power crane structure comprising a vehicle, a base movably mounted on said vehicle, a rotatable superstructure mounted upon said base, an engine carried by said superstructure, mechanism connected



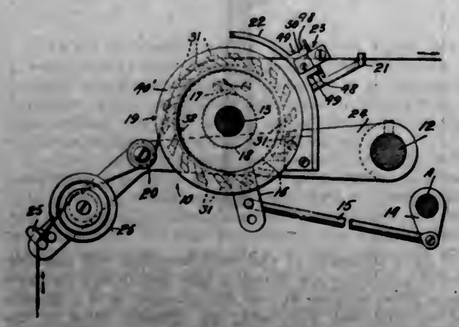
with said engine for propelling said base upon said vehicle, and mechanism adapted to be connected with the base propelling mechanism for propelling said vehicle.

1,630,378. ASH GATE. FRANK H. DUNBAR, Cleveland, Ohio. Filed Oct. 22, 1924. Serial No. 745,170. 6 Claims. (Cl. 110—171.)



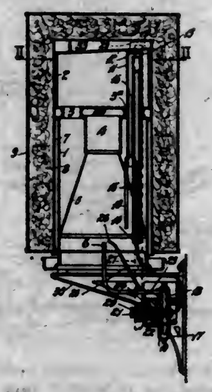
1. A hopper provided with a bottom discharge opening, a frame surrounding said opening, a door associated with said frame and slidable to open or close the opening, depending flanges at the sides of the frame and upwardly extending flanges carried by the door at each side thereof to form a channel for said depending flange of the frame.

1,630,379. DOOR LATCH. PETER FRANTZ, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Aug. 28, 1925. Serial No. 53,010. 6 Claims. (Cl. 292—231.)



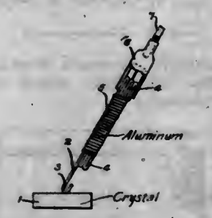
1. A door latch for doors of different thicknesses, comprising a latch bar, a pivoted lifting piece for raising said bar, the bar and lifting piece having the same relation for doors of different thicknesses, a thumb piece for one side of the door, a thumb piece for the other side of the door, one thumb piece extending over the other below said lifting piece, and means to fulcrum and support each thumb piece, so that each thumb piece has the fulcrum point thereon for doors of different thicknesses, whereby depression of either thumb piece will cause said lifting piece to raise the latch bar.

1,630,380. LOUD-SPEAKER UNIT. CLINTON R. HANNA, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 8, 1925. Serial No. 28,792. 6 Claims. (Cl. 179—114.)



5. A telephone receiver device comprising a diaphragm, a tubular pole piece, a magnetizing coil thereon, a conical, non-conductive non-resonant annular disk adjacent said diaphragm, and surrounding the end of said pole piece.

1,630,381. METHOD AND APPARATUS FOR CLEANING YARN. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y., a Corporation of New York. Filed Apr. 23, 1926. Serial No. 104,010. 22 Claims. (Cl. 28—68.)

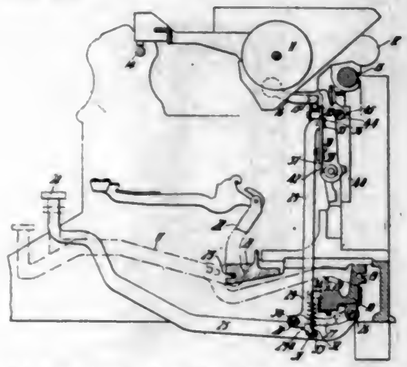


1. The method of cleaning yarn, which comprises applying cleaning means to a travelling yarn in such relation thereto as to remove particles and some fibrous matter from the yarn, so changing the relation of the cleaning means to the travelling yarn that the yarn draws from the cleaning means the fibrous matter and particles collected therein, and removing such fibrous matter and particles from the yarn at a further point in its travel.

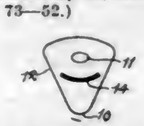
1,630,382. WATER HEATER. PETER STEWART HANTON and JAMES DICK, Kew, Victoria, Australia. Filed Sept. 28, 1924, Serial No. 739,355, and in Australia Oct. 8, 1923. 8 Claims. (Cl. 122—160.)

1. In a domestic water heater, a burner, a container for water to be heated by said burner, an intake chamber of substantial height within said container and having a lower open end freely communicating with the interior of said container, and an upper end closed except for one or more restricted passages communicating with said container, means for admitting supply water to the upper part of said chamber, and temperature-responsive means within said chamber for controlling the supply of fuel to said burner, said temperature-responsive means being in a position to be actuated by the incoming supply water.

1,630,383. DETECTOR. EARL J. HAVERSTICK, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 28, 1923. Serial No. 648,228. 6 Claims. (Cl. 250—31.)



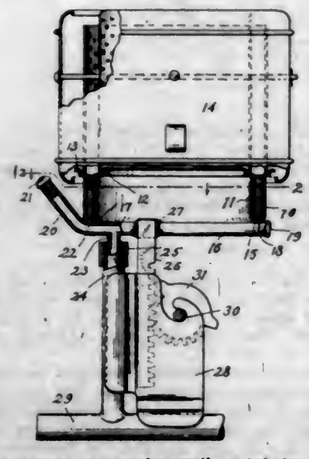
3. A rectifier comprising a sensitive crystal, an aluminum wire, the wire being bent upon itself whereby a portion thereof is reinforced, a clamp engaging one end of the reinforced portion, said wire having a bend beyond the other end of the reinforced portion, the rounded portion of said bend contacting the crystal.



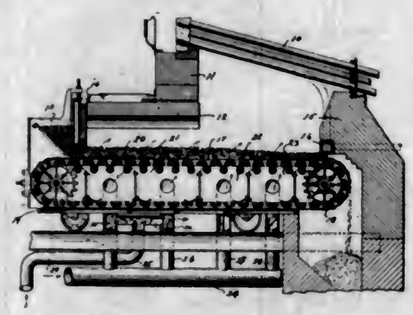
1,630,384. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 20, 1924. Serial No. 700,460. 5 Claims. (Cl. 197—91.)

2. In a typewriting machine having a carriage and a rack, a back-spacing mechanism for the carriage comprising a key-operated lever, a link extending therefrom, a back-spacing dog movable by said link first laterally into mesh with said rack and then in a direction longitudinal of the rack to back-space the carriage, and a single spring connected to said link to tend to co-operate with the key to shift the dog into mesh with the rack

at the start of the depression of the back-spacer key, and to return all the parts to normal positions at the relief of the key from pressure, said link being in the form of an elbow-lever, one arm of the elbow-lever being connected to the key-lever and the other arm being connected to the back-spacing dog to shift it into mesh with the rack, and said spring connected to the elbow to serve as a yielding fulcrum for said lever to co-operate therewith in shifting the dog at the beginning of the key-stroke.

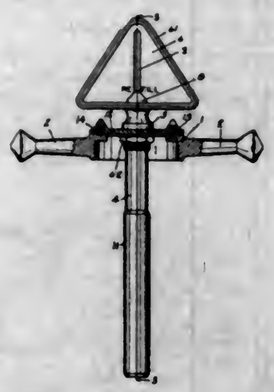


1,630,385. THERMOMETER. ALFRED T. HESPE, East Orange, N. J. Filed July 16, 1924. Serial No. 726,230. 4 Claims. (Cl. 73—52.)



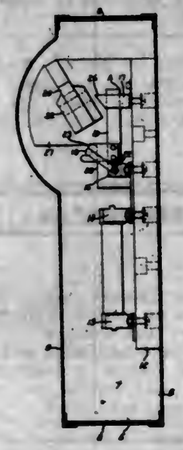
1. A glass tube thermometer having a longitudinal and translucid colored member arranged within the glass and between the mercury column and the observation side of the thermometer, said colored member being of a color contrasting with that of the body of the thermometer.

1,630,386. OIL STOVE. RUDOLPH HOFFMAN, Cleveland, Ohio. Filed Nov. 30, 1925. Serial No. 72,297. 4 Claims. (Cl. 158—42.)



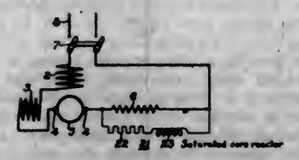
1. In burners, an annular well, a tubular member secured to the bottom of said well and extending across the same and provided with an upwardly inclined extension at one side of the well, a supply pipe secured to said member and having communication with the interior of the well through said member, said member being flattened between the sides of said well, and a guiding and lifting member secured to said flattened portion.

1,630,387. METHOD AND APPARATUS FOR BURNING FUEL. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 19, 1921. Serial No. 485,869. 8 Claims. (Cl. 110—40.)



4. In a furnace, a mechanical stoker and means to supply superoxygenized air to selected parts of the grate of said stoker, said stoker being arranged to present the fresh fuel to the superoxygenized air supply and then to a normal air supply.

1,630,388. WATER GAUGE FOR AUTOMOBILE RADIATORS. LEWIS A. JARVIS, Grand Rapids, Mich. Filed May 1, 1922. Serial No. 557,618. 2 Claims. (Cl. 73—82.)

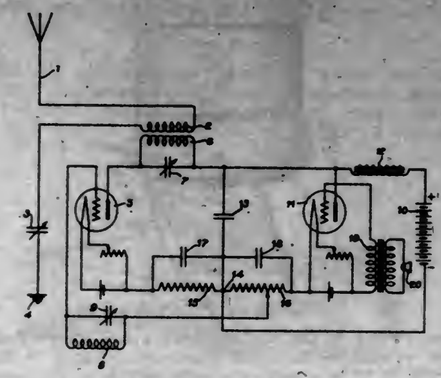


1. In a structure of the class described, the combination of a radiator cap having a hole therein and also having a filling opening at one side provided with a closure, the opening and hole being on opposite sides of the center of the cap, a dial member provided with an integral tubular shank disposed through said hole in said cap and secured therein, said dial member comprising a triangular frame and a weblike plate within the frame having a vertical slot therein, a float tube secured to the lower end of said shank a float disposed in said tube, a vane slidable in said slot in said dial member, and a rod connected to said float and carrying said vane.

1,630,389. SWITCH MECHANISM. OLIVER S. JENNINGS, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,241. 11 Claims. (Cl. 200—151.)

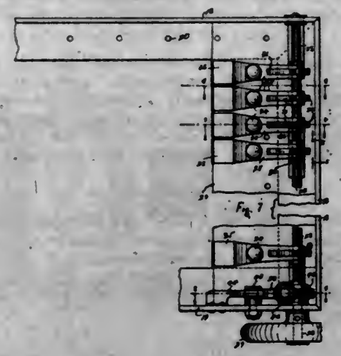
1. A barrier for a switch having a movable blade member comprising an insulating plate provided with a slot having an enlarged portion through which the end of the blade member passes in moving to closed position.

1,630,390. ALTERNATING-CURRENT MOTOR. KURT KRAUSS, Berlin-Friedenau, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1925, Serial No. 33,331, and in Germany May 28, 1924. 3 Claims. (Cl. 171—228.)



1. In an alternating-current commutator series motor, a commutating-pole winding and means connected in parallel to said winding for producing a predetermined variation in the magnitude and phase of the current in said winding relatively to the motor current in response to the variation of said last-mentioned current.

2. The combination with an alternating-current motor comprising a serially connected field winding, an armature having a commutator winding and a commutating-pole winding, of a shunt connected in parallel to said commutating pole winding to control the current therethrough, said shunt comprising a resistor and means offering a substantially constant reactive voltage drop independently of the current flowing therethrough.

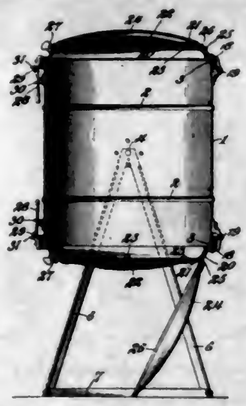


3. The combination with an alternating-current motor comprising a field winding, an armature having a commutator winding and a commutating-pole winding, said windings being connected in series, of impedance means connected in shunt to said commutating-pole winding, said impedance means embodying a resistor and a serially connected, iron-core choke coil, said choke coil operating above the knee of the saturation curve over substantially the entire operating range.

1,630,391. MODULATION SYSTEM. LUDWIG KÜHN, Charlottenburg, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1921, Serial No. 498,185, and in Germany Dec. 1, 1920. 6 Claims. (Cl. 179—171.)

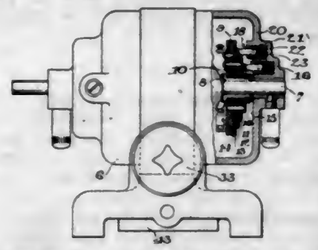
1. In combination, a pair of vacuum-tube devices, each having a plate circuit, a source of direct-current energy connected to said plate circuits in parallel, said connection including a resistor, a condenser in parallel to said resistor, and a connection from the grid circuit of one of said vacuum-tube devices to an adjustable point on said resistor.

1,630,392. CONVEYER PLAIT PRESS. JAMES C. LEDBETTER, Brooklyn, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., a Corporation of New York. Filed Sept. 5, 1924. Serial No. 736,003. 2 Claims. (Cl. 68—9.)



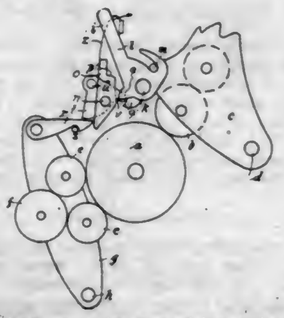
1. Plait holding means comprising a frame embodying a work support, a shaft rotatably mounted therein, a plurality of spring pressed fold retaining fingers journaled on the shaft, a ratchet wheel fixed to the shaft, a pawl attached to each finger and locking against the ratchet wheel to hold the finger down on the plait fold, and unlocking means cooperating with the shaft by which all the fingers are simultaneously lifted off the work.

1,630,393. INCINERATOR. THOMAS H. LEDDEN, Ridgway, Pa. Filed Aug. 18, 1926. Serial No. 130,004. 4 Claims. (Cl. 110—18.)



1. An incinerator having a cylindrical open-ended body member centrally pivoted at opposite sides to be turned with either end up, closure rings hinged at the ends of

the body and adapted to be locked over the same, foraminous grates carried by the rings and adapted to be swung

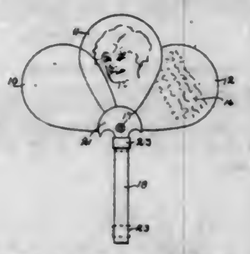


open therewith, and lids separately hinged to the rings and adapted to be locked in covering relation to the grates or to be swung open independently of the same.

1,630,394. SPEED GOVERNOR FOR ELECTRIC MOTORS. ROYAL LEE, Milwaukee, Wis. Filed Sept. 26, 1923. Serial No. 664,926. 6 Claims. (Cl. 171—222.)

1. The combination with an electric motor, of a speed controller comprising centrifugally operated breaker mechanisms for automatically maintaining the speed of the motor at any one of a plurality of predetermined speeds, and means under the control of the operator for rendering effective the mechanism maintaining the speed desired.

1,630,395. DUPLICATING APPARATUS. EDMUND LICHTENSTEIN, Berlin, Germany, assignor to Deutsche Maschinenbau- und Vertriebs-Gesellschaft m. b. H., Berlin, Germany, a firm. Filed Sept. 26, 1925, Serial No. 58,909, and in Germany Oct. 29, 1924. 7 Claims. (Cl. 101—147.)

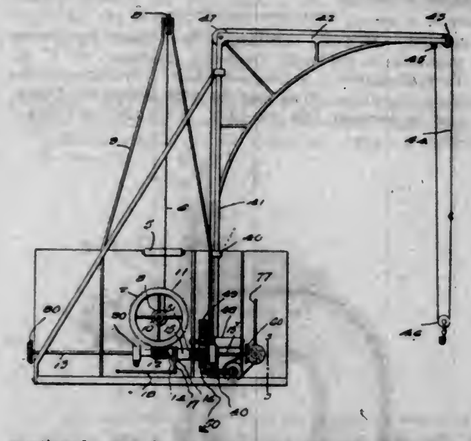


1. Duplicating apparatus comprising moistening mechanism and inking mechanism and means for preventing movement of the moistening mechanism to inoperative position until after the inking mechanism has been so moved, as well as means for preventing movement of the inking mechanism to operative position until the moistening mechanism has been so moved, both mechanisms being adapted to be so moved independently and free of compulsory connection by common engaging and disengaging means.

1,630,396. WAVING OF HAIR. WILLIAM MACDONALD and HUGH MACDONALD, Inverness, Scotland. Filed Nov. 2, 1925, Serial No. 66,371, and in Great Britain Nov. 3, 1924. 6 Claims. (Cl. 132—36.)

1. A hair-waving appliance comprising the combination of a jacket adapted for moist heat treatment of the hair, and a flexible sleeve element adapted to be mounted upon the jacket at the scalp end thereof, said sleeve having an outer beaded edge adapted to facilitate the formation of a vapour-tight joint between the tress of hair and the jacket at the scalp end thereof.

1,630,397. FAN. HYOKICHI MARUI, Osaka, Japan. Filed May 13, 1926. Serial No. 108,785. 2 Claims. (Cl. 230—33.)

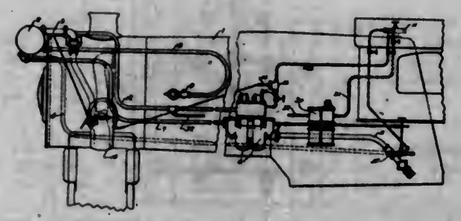


1. A fan having a plurality of blades, a projection formed integral with each blade, each said projection being disposed at a different angle to all other said projections and a common pivot for all said blades and a handle member through which said pivot passes and means upon said handle member for engaging all said projections, to retain said blades open.

1,630,398. FREIGHT-HANDLING EQUIPMENT FOR MOTOR TRUCKS. JAMES B. MCDEVITT, Uhrichsville, Ohio. Filed Jan. 21, 1926. Serial No. 82,764. 1 Claim. (Cl. 214—65.)

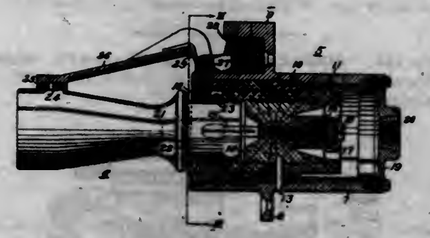
A power transmission means for operating a crane and hoisting mechanism and a vehicle dumping mechanism from an engine including, in combination, a drive shaft driven by the engine and having a gear at its end, a driven shaft formed transversely to the drive shaft and having a gear meshed with the first gear, a worm loose on said drive shaft, said worm having an end portion constituting the clutch member, a clutch member splined on said shaft, a third shaft alined with the second shaft and having a gear on its outer portion and another gear on its inner portion and also having a clutch member in opposed relation to said splined clutch member, a hoisting drum having a gear meshed with the third mentioned gear, an upright shaft for maneuvering a crane, a worm gear fixed to said upright shaft, a worm meshing with said worm gear, a reversible driving connection manually controlled and interposed between the third

shaft and the last mentioned worm, a dumping drum having a worm gear meshed with said first mentioned worm, and means for shifting the splined clutch member into engagement with the clutch member on the first



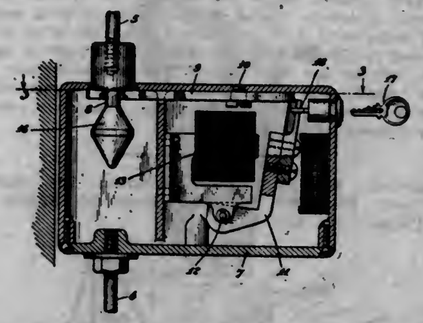
mentioned worm for operating the dumping drum or for engaging the splined clutch member with the clutch member on the third shaft for operating the hoisting drum and the reversible driving connection so that the crane may be maneuvered.

1,630,399. FORGING MACHINE. NEAL TRIMBLE MCKEE, Mount Vernon, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Apr. 25, 1922, Serial No. 634,633, and in Great Britain May 19, 1922. 3 Claims. (Cl. 78—82.)



3. In a forging machine, the combination of a pair of gripping dies, a pair of forging dies alined with them, one die of each pair being mounted to a fixed portion of the machine, the other dies being mounted each to a lever, a cross-lever engaging both levers, a toggle joint the movable end of which engages the cross lever at its mid-point by means of a spherical joint, a cylinder, a piston reciprocable in the cylinder, means operatively connecting the piston to the middle joint of the toggle, and means to admit pressure fluid to the cylinder.

1,630,400. FEED-WATER HEATER ARRANGEMENT. NEAL TRIMBLE MCKEE, Bronxville, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Sept. 30, 1925. Serial No. 59,505. 4 Claims. (Cl. 122—441.)



1. In a locomotive the combination of an exhaust steam, feed-heater, a pipe supplying exhaust steam from the main engine to it, a pipe supplying feedwater to it, a pipe carrying feedwater from it to the boiler, a pump supplying water to said second named pipe, a pipe supplying steam to the pump, a steam pipe supplying live steam to the main engine, and a valve in the pump steam pipe responsive to pressure conditions in the main engine steam pipe to open when the pressure is above a certain point and to close when it is below such point.

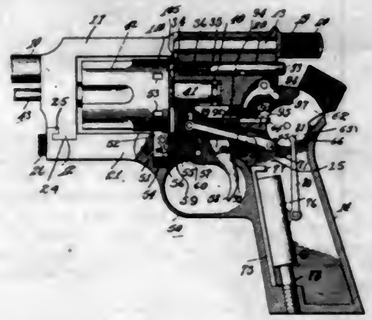
1,630,401. CONNECTER. HARRY R. MEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 17, 1920. Serial No. 381,841. 5 Claims. (Cl. 173—338.)

1. A connecter, comprising a pair of terminal members movable axially into conductive engagement and provided with interlocking means adapted to be moved into operative attaching engagement by relative rotary movement of the members about their axes and to prevent separation of the members, and means hinged to one of the members and adapted to operatively engage the other member to prevent relative rotary movement of the members.

1,630,402. SAFETY DEVICE. JAMES B. MONAHAN, New York, N. Y., assignor to Litho Etching Corporation, New York, N. Y., a Corporation of New York. Filed July 29, 1925. Serial No. 46,755. 6 Claims. (Cl. 192—129.)

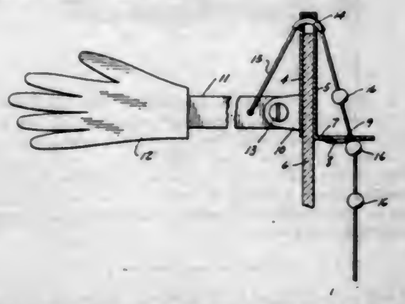
1. A safety device for a machine of the character set forth including: a connecting rod consisting of two members, an actuating device for one of said members, a casing carried by one of said members, a latch engaging member on the other of said members to enter the casing, a complementary latching member within the casing, and means extraneous of the casing to control engagement of said latching members.

1,630,403. RATCHET-OPERATING DEVICE. HARRY ALTON MORRIS, Marietta, Ohio. Filed Aug. 13, 1925 Serial No. 50,047. 3 Claims. (Cl. 74—54.)



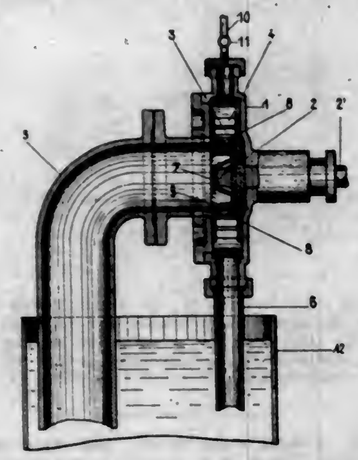
1. The combination with a rotatable shank and a wheel mounted thereon and provided with peripheral notches, of a lever journaled on said shank, a bolt slidably supported by the lever and engageable with the notches

in the wheel when moved inwardly, a spring normally holding the bolt in its outermost position, an extension handle having a socket slidable longitudinally on the outer end of the lever, and means within the socket en-



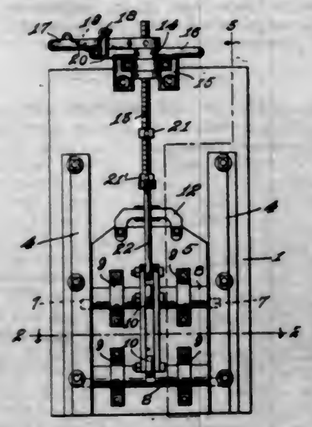
gageable with the outer end of the bolt when the handle is moved inwardly and operable when so moved to move the bolt in opposition to the spring and into engagement with one of the notches, whereby the wheel and shank may be rotated by swinging the handle.

1,630,404. FIREARM. GUSTAVO NICHOLSON, Aquino, Paraguay. Filed July 11, 1925. Serial No. 43,026. 6 Claims. (Cl. 42—62.)



1. A firearm including a frame, a barrel, a cylinder, a hammer, and a trigger, means operable by the trigger, upon initial movement thereof, for cocking the hammer, trigger actuated means for rotating the cylinder upon partial movement thereof, means on the rotating means for engagement with the hammer when the latter is in cocked position to hold the same in such position until the cylinder has been rotated, and means operable by the trigger, upon final movement thereof for completing the movement of the rotating means whereby to release the hammer holding means.

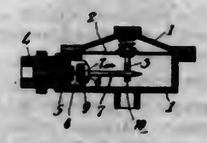
1,630,405. SIGNAL. HOMER L. NIHELL, Los Angeles, Calif. Filed Feb. 10, 1926. Serial No. 87,258. 3 Claims. (Cl. 116—52.)



1. A direction indicator unit comprising a body arranged to detachably straddle and rest upon an upright panel, a swingable visual indicator mounted on the outside wall of said body, a line passing over the top of said panel and to the inside wall thereof and secured at the other end to said indicator, spaced abutments on said line, an outstanding member on the inside of said body having a way through which said line may pass but which said abutments will bridge and thereby will hold said line and maintain said indicator in selected angular position.

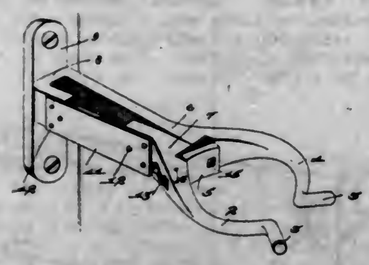
1,630,406. MIXING APPARATUS. HANS PRILLWITZ, Frankfort-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the Main, Germany. Filed Aug. 20, 1925, Serial No. 51,470, and in Germany Aug. 29, 1924. 2 Claims. (Cl. 259—96.)

1. Mixing apparatus of the turbine or centrifugal pump type, comprising a casing, a paddle-wheel in the said casing rotated by an external driving mechanism, a supply pipe having an inner diameter approximating the inner diameter of the paddle-wheel and extending into the interior cylindric opening of the said paddle-wheel, the end of the said supply pipe being provided with a large number of slots in the proximity of the paddles of the said wheel, and a pipe extending from the delivery side of the said paddle-wheel.



1,630,407. DITCH GATE. PRESTON ROOTS, San Benito, Tex. Filed Aug. 20, 1926. Serial No. 130,533. 2 Claims. (Cl. 251—56.)

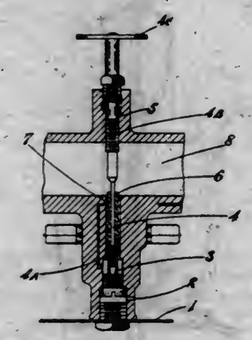
1. A water gate of the class described comprising a frame, guideways therein, a gate slidably mounted between the guideways, shafts rotatably mounted on the



gate and having eccentric ends engaging the guideways, an arm on each shaft, a rod connected with the arms and having a horizontal part provided with a threaded hole, a screw shaft connected with the top of the gate and passing through the said hole, a nut member rotatably supported and through which the shaft passes, a handle on the nut member and a handle on the shaft.

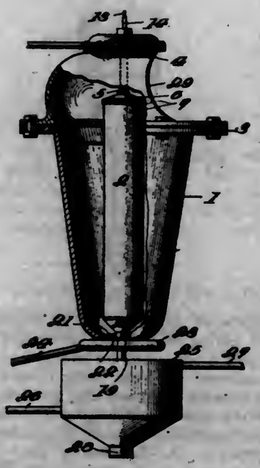
1,630,408. GAS-PRESSURE REGULATOR. HANS ROSENTHAL, Berlin, Germany. Filed Nov. 12, 1925, Serial No. 68,722, and in Germany Nov. 18, 1924. 2 Claims. (Cl. 50—20.)

1. A gas pressure regulator of the character described, including a casing having inlet and outlet openings, a pressure responsive device situated within the casing, a socket member insertable in the inlet opening of the casing in the direction of flow, a valve mounted on the socket member, a valve rod, an enlarged end on said valve rod, a forked-shaped extension projecting from the socket member, a pin for mounting the enlarged end of the valve rod for oscillatory movement between the forked-shaped extension, the valve and valve rod being mounted on the socket member so as to be removable therewith, and a stud secured to the membrane and engaging said valve rod.



1,630,409. MILK-BOTTLE HOLDER. THOMAS C. ROUSE, Washington, D. C. Filed Dec. 8, 1925. Serial No. 74,092. 4 Claims. (Cl. 232—41.)

1. A milk bottle holder comprising a pair of jaws, and a resilient element constituting the support of one of the jaws and additionally tending to hold the jaws in the closed position to thereby provide the sole support for a milk bottle.

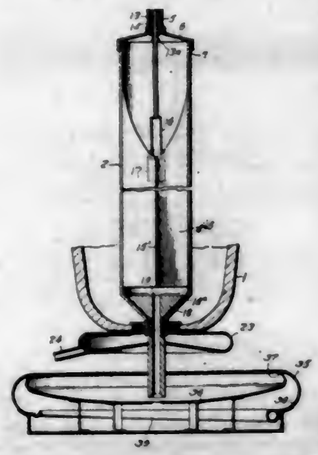


1,630,410. FUEL ATOMIZER. WILLIAM STEVENSON, Dunedin, Otago, New Zealand. Filed Jan. 30, 1925. Serial No. 5,833. 2 Claims. (Cl. 261—118.)

1. In a device of the character described, in combination, a mixing chamber, a channel leading to the mixing chamber, a nozzle projecting into the lower end of the channel, a needle valve projecting downwardly into the channel and coacting with the nozzle, a tubular atomizer arranged through the channel and engageable about the nozzle and having a bore wherethrough the needle valve operates and having its lower portion adjacent its point of connection with the nozzle provided with openings and

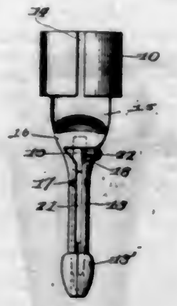
also having a series of superposed annular ridges formed on its outer surface for cooperating with the surrounding wall of the channel to break up and atomize the fuel as it passes through the channel prior to entering the mixing chamber.

1,630,411. PROCESS OF TREATING LATEX AND PRODUCT THEREOF. WILLIAM BURTON WESCOTT, Dover, Mass. Filed June 27, 1925. Serial No. 40,118. 5 Claims. (Cl. 18—50.)



1. The process of making rubber preparations which comprises concentrating a caoutchouc latex in a centrifugal and spraying the so-concentrated material under drying conditions.

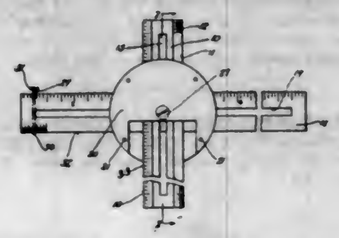
1,630,412. CENTRIFUGAL MACHINE. WILLIAM BURTON WESCOTT, Dover, Mass. Filed Nov. 7, 1925, Serial No. 67,614. Renewed Dec. 1, 1926. 15 Claims. (Cl. 232—14.)



1. A centrifugal liquid separator for the separation of composite liquids into light and heavy components, com-

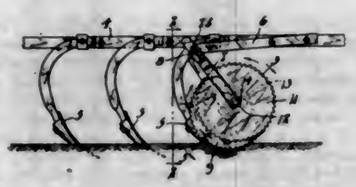
prising a rotor, means for supporting and rotating the same, means for supplying liquid to be separated to the rotor, means for facilitating separation within the rotor

and means for supplying a washing liquid to the lighter layer during such separation and means for discharging separated liquids at different points.



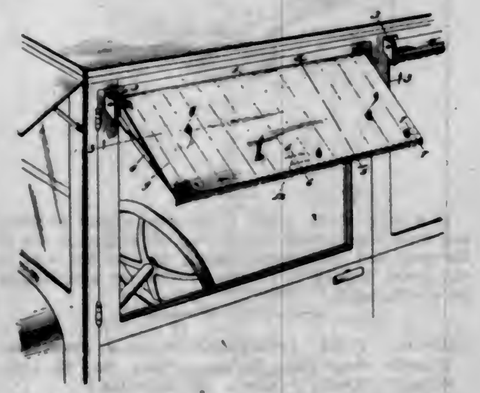
1,630,413. CLIP AND PENCIL FOR FOUNTAIN PENS. RAMON G. ANTONIO, Manila, P. I. Filed Apr. 5, 1922. Serial No. 549,867. 1 Claim. (Cl. 120—1.)

As an article of manufacture, a pencil comprising a tubular body having an enlarged outwardly tapering head on one end and a split ring on the other end for attachment to a support, the body being formed with a longitudinal slot between the head and split ring, one wall of the slot having lateral notches intermediate its ends, a tapering and longitudinally split pencil head holder slidable and rotatable in the tubular body and having a finger-piece arranged to be grasped to slide and rotate the holder and for engagement interchangably in said notches to hold the holder in different positions within the tubular member, the smaller end of the holder being adapted to be wedged in said head whereby to cause the holder to firmly grip the lead while a portion thereof projects beyond the head.



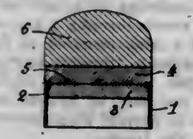
1,630,414. TOOL. WALTER BAIER, New York, N. Y. Filed Feb. 14, 1925. Serial No. 9,117. 3 Claims. (Cl. 33—103.)

1. A tool comprising a base disk, a scale therein, said base disk having a recess receiving said scale, a sighting disk having a recess therein, said sighting disk mounted on said base disk, means securing the sighting disk to



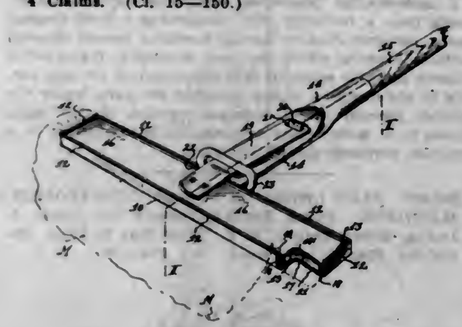
the base disk, and an additional scale slidably mounted in the sighting disk and lugs on said disks guiding said scales in longitudinal movement.

1,630,415. CULTIVATOR SHIELD. EDWARD E. BLUME and CARL ANDERSON, Claremont, Minn. Filed May 7, 1925. Serial No. 28,607. 9 Claims. (Cl. 97—188.)



1. A shield for cultivators and analogous implements comprising a frame adapted to be carried at one side of a plowing element of an implement, a deflecting member journaled in said frame, and a member carried by said frame and contacting the ground adapted to drive said deflecting member in the opposite direction from the movement of the implement, and constituting a guard for preventing plowed material from spreading to the land side of said shield.

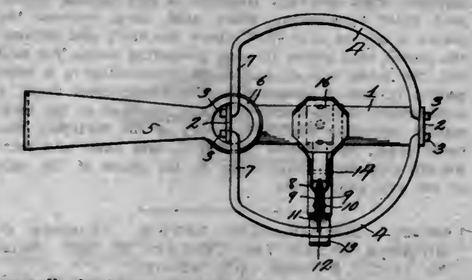
1,630,416. AWNING. CHARLES L. CLEMENTI and EDDIE W. HILDEBRANDT, Pueblo, Colo., assignors to The Auto Roller Awning Manufacturing Company, Pueblo, Colo., a Corporation of Colorado. Filed June 25, 1926. Serial No. 118,546. 4 Claims. (Cl. 156—44.)



1. An awning comprising a spring roller, brackets therefor, arms pivoted at their inner ends to the brackets and having their outer ends oppositely curved and longitudinally slotted, a rod passing through and supported in the outer slotted ends of the pivoted arms and an awning fabric attached to the spring roller and automatically wound thereon, and having its outer portion engaging the said rod at the ends and intermediate the ends thereof.

1,630,417. METHOD FOR SECURING LEATHER DISKS TO THE ENDS OF BILLIARD CUES. THEODORE DETROYES, Villeneuve-sur-Yonne, France. Filed Dec. 15, 1925, Serial No. 75,645, and in France Dec. 20, 1924. 2 Claims. (Cl. 273—70.)

1. In an arrangement for securing the billiard disks to the ends of billiard cues, the combination of a ring having a circular flange, said flange being internally disposed in such manner as to form a cap adapted for the insertion of the accurately formed end of the cue, a disk engaged in the said ring and in contact with the flange, a second disk in contact with the outer face of the said flange, the two disks being suitably secured together, and a billiard disk which is cemented to the outer face of the last-mentioned disk.

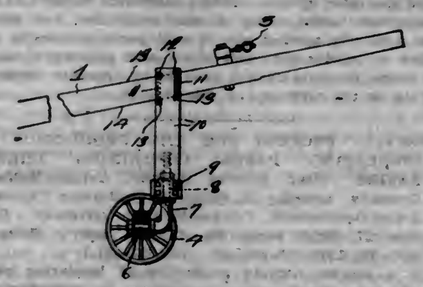


1,630,418. MOP HOLDER. URBANE J. EWING and ADA F. EWING, Wilkinsburg, Pa., assignors to Pittsburgh Lavatory Supply Inc., Pittsburgh, Pa., a Corporation of Delaware. Filed May 24, 1926. Serial No. 111,298. 4 Claims. (Cl. 15—150.)

1. A mop holder comprising a base section provided about its periphery with a raised web forming a shallow recess or pocket, a rod in substantially the same plane as the plane of the base section and attached thereto to one of the sides of the base section, a dished clamping member of less depth than the depth of the recess or pocket formed on the base section and adapted to fit with a slight clearance within the recess or pocket and below the top edges of the web of said base section and means for holding said dished clamping member within said recess or pocket of the base section with the recesses of said clamping member and base section facing each other.

1,630,419. TRAP. FRANK FORTIN, Washburn, Wis. Filed Oct. 16, 1925. Serial No. 62,742. 3 Claims. (Cl. 43—95.)

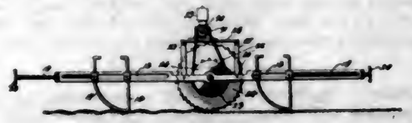
1. The combination with a trap comprising a base, pivoted cooperating bails carried by said base, of a latching and releasing mechanism, said mechanism comprising a bracket carried by the base and extending towards one of the bails when said bail is in open position, upwardly extending flanges carried by said bracket, a pawl pivotally mounted between said flanges, the outer end of said pawl being in the path of the bail and adapted to engage over the bail when the bail is in open position, a pivoted plate carried by the bracket, spring means for



normally forcing the pivoted plate upwardly, and a roller carried by the inner end of the pivoted pawl and engaging over the pivoted plate adjacent its pivotal point.

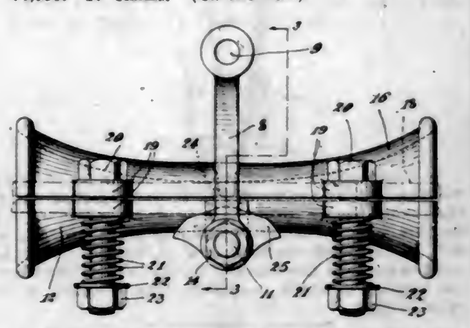
1,630,420. PLUGGING KNIFE. RICHARD GARLAND, Junction City, Kans. Filed Dec. 22, 1925. Serial No. 77,038. 1 Claim. (Cl. 146—53.)

As a new article of manufacture, a knife for plugging watermelons, the same including a handle portion and a blade portion, the blade portion being offset at its juncture with the handle portion, the handle portion, as well as the blade portion being of arcuate design in cross section, the side edges of the blade being sharpened and tapering gradually toward the lower free end of the blade portion.



1,630,421. MOWING-MACHINE-TONGUE SUPPORT. THOMAS A. GEORGE, Fancy Farm, Ky. Filed Sept. 21, 1921. Serial No. 502,165. 1 Claim. (Cl. 280—82.)

A tongue supporting device for a mowing machine, said support comprising dowawardly extending spaced parallel plates, the upper ends of said plates engaging opposite sides of the tongue, U-bolts extending through the plates and securing the same to the tongue, a bear-

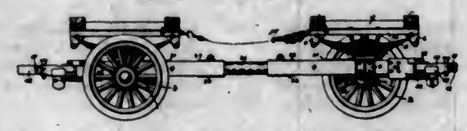


ing block disposed between the lower ends of the plates, transversely disposed bolts extending through the lower ends of the plates and the bearing block, a vertically disposed shaft pivotally mounted in the bearing blocks, said shaft terminating above said block between the plates, a nut on said shaft above the block and between the plates, said plates forming protecting means for said nut, the lower end of said shaft terminating in a rearwardly extending horizontally disposed integral shaft, a horizontally disposed axle pivotally mounted on the rearwardly extending shaft rearwardly of the vertically disposed shaft, and wheels pivoted to said axle, said rearwardly extending shaft being in the plane of the axis of the axle and wheels.

1,630,422. ROAD-PLANING DEVICE. CLARENCE O. GILLESPIE, El Paso, Tex. Filed Dec. 28, 1925. Serial No. 78,021. 5 Claims. (Cl. 262—19.)

1. In a machine of the character described, a frame, a rotary cutting element mounted in said frame, guide members supporting the opposite ends of the frame and opposite sides of said cutting elements, and means for adjusting said guide members longitudinally of said frame toward and away from said cutting members.

1,630,423. CABLE SUPPORT. ARTHUR WILLIAM GOTHBERG, Newark, N. J. Filed Dec. 22, 1925. Serial No. 76,950. 17 Claims. (Cl. 248—31.)

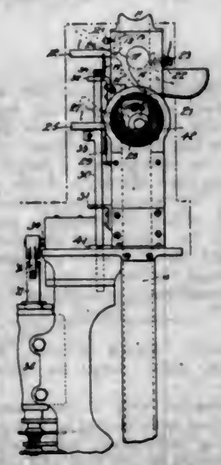


1. In combination with cable suspension means pivoted at its upper end for swinging movement, a cable support connected with the lower end of said suspension means, said support including complemental parts to clampingly hold the cable against shifting movement relative to the suspension means under normal conditions, and means for positively moving one of said parts relative to the other to release the cable when said suspension means is swung from its normal position by excessive tensional strain on the cable at one side thereof.

1,630,424. PROCESS FOR THE PRODUCTION OF INSULATING PAPER CONTAINING PHENOL RESINS. CARL AUGUST HAANEN, Cologne-Mulheim, Germany, assignor to Felten & Guilleaume Carlswerk Actien-Gesellschaft, Cologne-Mulheim, Germany. Filed Nov. 27, 1926, Serial No. 151,260, and in Germany Apr. 29, 1926. 3 Claims. (Cl. 92—21.)

1. A process for the production of insulating paper containing phenol resins, consisting in replacing the water in the fibrous pulp by solvents for phenol resins, adding solutions containing phenol resins, precipitating the phenol resin in and upon the fibres by the addition of water and working up the fibrous material to form paper and pressed articles.

1,630,425. TRAILER. ERNEST F. HARTWICK, Detroit, Mich., assignor to Detroit Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed May 6, 1922. Serial No. 558,932. 4 Claims. (Cl. 280—33.55.)



1. A vehicle consisting of a pair of trucks, each embodying an axle, wheels therefor, a pair of springs mounted on the axle and a bunk mounted on the springs, means connecting the bunks to transmit tractive force from one truck to the other, a reach rotatably mounted in both trucks whereby one may be hauled and steered by the other and means to prevent longitudinal movement of the reach relative to the trucks.

1,630,426. SLUB CATCHER. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y., a Corporation of New York. Filed July 30, 1924. Serial No. 729,052. 9 Claims. (Cl. 28—64.)

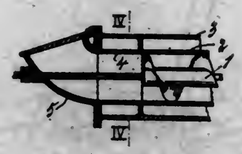
1. A device for eliminating slubs, bunches and enlargements from a traveling yarn, comprising a fixed element and a movable element having normally spaced opposed surfaces between which the yarn is drawn, the movable element being so mounted that movement of its said surface in the direction of the travel of the yarn, under the friction thereon of an enlarged portion of the yarn, causes it to move bodily towards the fixed element in a direction perpendicular to the yarn.

1,630,427. SLUG DETECTOR FOR COIN-CONTROLLED MACHINES. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed May 6, 1922. Serial No. 558,947. 7 Claims. (Cl. 194—98.)

1. In a slug detector for coin controlled machines, a coin chute having openings in the sides thereof, magnifying lenses, and ring members arranged to engage and

retain the same in said opening, a coin detent mounted in said ring member arranged to operate in said chute opposite said lenses to arrest and retain a deposited coin, and means for releasing said detent.

1,630,428. TAKE-UP MOTION FOR LOOMS FOR WEAVING. JOHN HENRY HINDLE and THOMAS HINDLE, Haslingden, England. Filed Sept. 30, 1925. Serial No. 59,737, and in Great Britain Dec. 17, 1924. 2 Claims. (Cl. 139—308.)



1. A take up motion for looms comprising two rollers placed vertically one above the other below the breast beam of equal diameter driven in the same direction at equal speed in combination with a jockey nip roller held in a loop of the cloth tightly against the peripheries of the other two rollers, a lap roller to take up the cloth therefrom, a frame in which the lap roller is mounted, a driving roller journalled in the same frame upon which the lap roller is rotated and means to drive the rollers substantially as described.

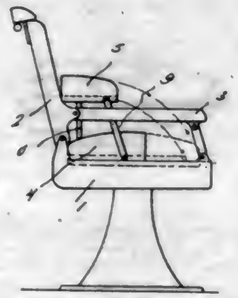
1,630,429. DEVICE FOR FACILITATING THE MARKING OF DOORS AND DOOR JAMBS FOR HINGES. GERD HOBBISIEFKEN, Burlington, Iowa. Filed Mar. 25, 1926. Serial No. 97,350. 3 Claims. (Cl. 33—194.)

1. A device to facilitate the marking of doors and door jambs for hinges, consisting of an elongated bar of general planular nature of the approximate length of a door and having a width approximately equal to the thickness of a door, and comprising a middle section and end sections provided each with a rectangular opening for locating the hinge, the sections having means for securing them together in aligned relation and providing for their adjustment relatively to each other to bring the upper and lower hinge openings towards or away from said middle hinge opening, and the upper section having an upper hooked flange from which the device is suspended from the door, and the lower section having a lower hooked flange adapted to bear against the bottom of the door to gage the adjustment.

1,630,430. SIEVE PLATE FOR SCREW PRESSES. KRISTIAN HOLTER and OLAF QVILLER, Oslo, Norway. Filed Apr. 15, 1926, Serial No. 102,286, and in Norway Feb. 2, 1926. 1 Claim. (Cl. 100—48.)

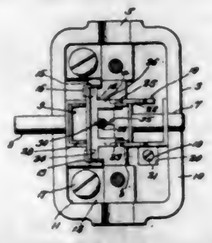
In a screw press for removing water from aqueous substances, pulps etc., the combination of a screw, a sieve plate surrounding the screw having an outlet end, said sieve plate in a zone adjacent to the outlet being made with a polygonal cross section, whereas the other part of the sieve plate is made circular in cross section.

1,630,431. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1922. Serial No. 578,292. 9 Claims. (Cl. 250—27.5.)



1. In an electron discharge device, a pair of insulating members, a pair of metallic supporting members extending between said insulating members, each of said supporting members having one end threaded and a notch adjacent one end of said thread, a filament supported between said insulating members, said filment having its ends arranged in said notches, a sleeve on each of said supporting members for gripping an end of said filament against said member, and a nut on each of said supporting members for holding said sleeve in gripping position.

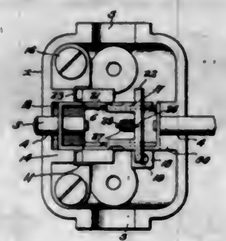
1,630,432. SEAT FOR BARBERS' CHAIRS. REX HYDORN and DAVID FORSYTH, Bonners Ferry, Idaho. Filed Feb. 6, 1926. Serial No. 86,665. 2 Claims. (Cl. 155—132.)



1. A seat comprising two sections arranged in one position end to end, and one section shiftable from the said position to and from an elevated position, a swingable connection between the two sections, and auxiliary means on one section for assisting said swingable connection

in the support of said section in its elevated position; the last-named section being provided with a U-shaped recess in its underside, and the said auxiliary means be-

ing in the form of a U-shaped support, pivotally connected to said section and movable in and out of the recess thereof.



1,630,433. PUSH-THROUGH SWITCH. WILLIAM ILE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed Aug. 18, 1925. Serial No. 50,924. 7 Claims. (Cl. 200—72.)

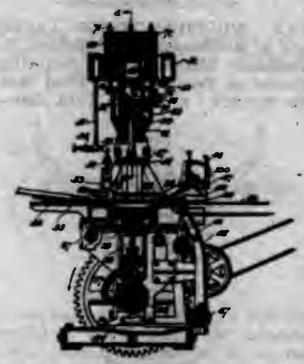
1. An electric switch of the class described including snap switch mechanism comprising a support having side and end walls, the side walls having aligned recesses opening through the upper edges of the sides, the ends of the support having aligned openings, a slide guided in the support and having terminal push buttons slidable through said end openings of the support, said slide having a pair of arms at each end, a movable switch member fulcrumed in said recesses and arranged to be engaged and positively actuated by the pairs of arms of said slide, and a spring connection betwen the slide and the movable switch member against the action of which the pairs of arms of the slide operate the switch member.

1,630,434. ELECTRIC SWITCH. GEORGE MANN, Jackson, Mich., assignor, by mesne assignments, to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,251. 1 Claim. (Cl. 200—72.)

An electric switch including a hollow insulating casing composed of approximately semi-cylindrical sections, one of the sections being provided with spaced enlargements recessed to form seats and provided with projecting flanges located at the space between the said enlargements and forming continuations of the walls of the said space, said section of the casing being also provided with spaced inwardly extending flanges at its opposite side, stationary switch blades secured in the recesses of the said enlargements, snap switch mechanism comprising an oblong support fitting between the said enlargements and against the flanges at the opposite side of the casing, said support being also provided with a projecting attaching lug adapted to be secured to the casing, a slide operating in the support, a movable switch member fulcrumed on the support and adapted to be carried into

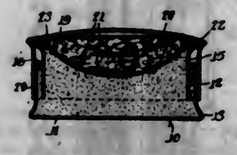
and out of engagement with the stationary switch blades, and a spring connection between the slide and the movable switch member.

1,630,435. ELECTRIC MASSAGE MACHINE. BENNO F. JANCKE, New York, N. Y., assignor, by mesne assignments, to Halliwell-Shelton Electric Corporation, New York, N. Y., a Corporation of New York. Filed May 18, 1925. Serial No. 30,893. 6 Claims. (Cl. 172—15.)



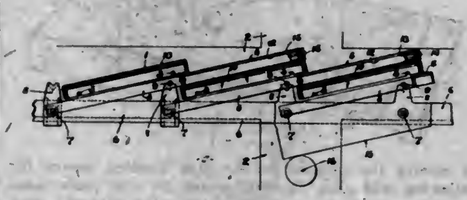
1. In an electric massage machine, the combination of a hollow supporting column, a separate motor casing wider than said column and containing a motor and connected to said column, rheostat means adapted to control the speed of said motor and located in said column, a switch casing located above said column, said casing having therein a plurality of wires connected to separate sections of said rheostat means, said casing also having a movable switch member provided with an operating head extending above said column.

1,630,436. METHOD AND MEANS FOR REPRESSING BRICKS. HOWARD K. KING, Philadelphia, Pa., assignor to Chambers Brothers Company, a Corporation of Pennsylvania. Filed July 14, 1926. Serial No. 122,402. 31 Claims. (Cl. 25—104.)



17. In a brick repressing machine, the combination of a mold box and plunger elements and operating mechanism associated and operating to bring all faces of the brick into exact dimension except the middle part of one face and to permit said middle part to project above said face to the extent required by surplus material in the brick, and means for removing said middle part to approximately the plane of the surrounding margin.

31. In a brick repressing machine, the combination of a plurality of mold boxes, a plurality of pairs of cooperating oppositely acting plungers, one of each pair of plungers being composite, comprising a panel element and a surrounding frame element, means for operating the frame elements and opposite plungers with definite strokes, means for operating the panel elements comprising communicating fluid containing cylinders, pistons operating therein, means connecting the pistons to the panel elements, a common fluid containing cylinder adapted to communicate with the first mentioned cylinders, a piston operating therein, a spring supporting element



connected to said piston, a plurality of springs having their lower ends engaging said element, a top plate engaging the upper ends of said springs and connected to the means actuating the frame elements, means forming a passage having a check valve for permitting flow from the first mentioned cylinders to the common cylinder, means forming a second passage between the first mentioned cylinders to the common cylinder, a valve for controlling said passage, means operated by moving parts of the machine for controlling said valve and means for limiting the downward movement of the panel elements.

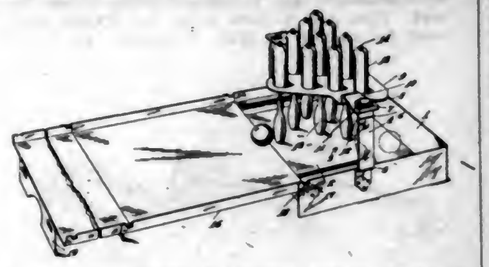
1,630,437. FACE-POWDER CONTAINER. JOHN HERBERT KJELLSTROM, Rockford, Ill., assignor to J. L. Clark Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed July 27, 1925. Serial No. 46,219. 1 Claim. (Cl. 132—82.)

A powder container having, in combination, a casing having a peripheral side wall and a closed end, a closure member comprising a perforated end wall and a peripheral side wall depending from said end wall and projecting into the side wall of said casing in telescoping relation to form a powder compartment of variable volume, the volume of said casing being substantially greater than the volume of said closure member whereby powder contained in said casing can be compressed and forced through said perforated wall by combined axial and rotary movement between said casing and the closure member.

1,630,438. WOOL, COTTON, RAG, AND THE LIKE DRYING MACHINE. WILLIAM EDWARD LAYLAND and JOHN HENRY WHITEHEAD, Leeds, England, assignors to Taylor Wordsworth and Company, Limited, Leeds, England. Filed July 8, 1926, Serial No. 121,165, and in Great Britain Apr. 30, 1926. 7 Claims. (Cl. 34—25.)

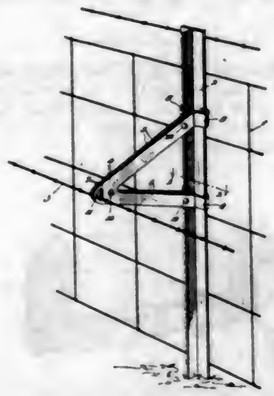
1. In a drying machine, the combination of side bars, movable trays having extensions connected to said side bars, and means supporting said extensions adjacent the movable trays.

1,630,439. COIN-CONTROLLED VENDING MACHINE. DAVID LAZAR, Long Island City, N. Y., and HARRY A. DREW, West New York, N. J.; said Drew assignor to said Lazar. Filed Mar. 16, 1923. Serial No. 625,659. 9 Claims. (Cl. 194—69.)



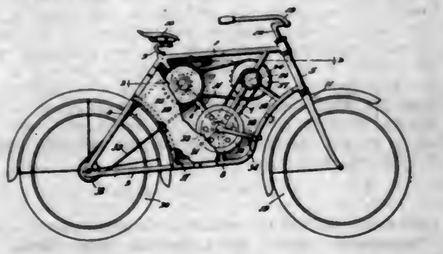
1. In a coin controlled vending machine, a container, a front cover panel therefor having an opening through which the articles to be vended may be passed, a hinged door for said opening supported in said cover, a coin slot disposed in the cover and coin chute leading downwardly therefrom, a coin ejecting device operating in said chute and comprising a yieldable trigger arrangement controlled from the outside of the cover and provided with slidable means to engage against a coin in the chute, and a door locking device operated by the forced movement of the coin by the operation of said trigger arrangement, the said device comprising a slidable bar provided with a bolt adapted to be moved through registered openings in the door and cover when the former is in closed position, means carried by the bar and disposed in the path of the coin through the chute for supporting the coin in the chute below the said trigger, whereby operation of the latter will move the bar to retract the bolt, and means for yieldably holding the bolt projected.

1,630,440. BOWLING ALLEY. RICHARD LINN LLOYD, Minneapolis, Minn. Filed Apr. 28, 1926. Serial No. 105,245. 6 Claims. (Cl. 273—44.)



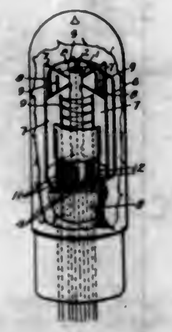
1. In a bowling alley a frame, brackets attached thereto, a plate having pin housings mounted theron, the said

plate having handles projecting therefrom, said handles having slots adapted to receive the brackets with tongues positioned therein, the said brackets having slots adapted



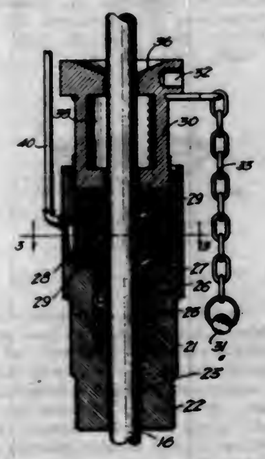
to receive the tongues in the said handles, means for gathering said pins, operable means for said plate being movable on said brackets for setting the gathered pins.

1,630,441. FENCE GUARD. GEORGE LOTZ, St. Johns, Ohio. Filed Apr. 26, 1926. Serial No. 104,741. 3 Claims. (Cl. 256—3.)



1. A fence guard comprising a bracket including a head portion formed with a pocket adapted to receive a strand of guard wire, upper and lower arms extending from said head portion in diverging relation to each other, said arms being resilient and formed with jaws adapted to engage opposite sides of a fence post, and means for drawing said jaws into gripping engagement with a fence post and retaining the bracket thereon.

1,630,442. BICYCLE. GEORGE MAKRIS, Massillon, Ohio. Filed July 29, 1926. Serial No. 125,788. 1 Claim. (Cl. 208—17.)

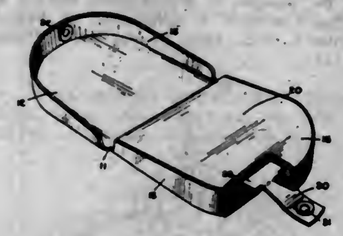


In a bicycle, a frame comprising an upper reach, a lower reach having its front portion curved upwardly and forwardly, a head tube connecting the front ends of the reaches, a fork connecting the rear ends of the reaches, a Y-brace having its vertical member connected to the lower reach and its inclined members to opposite ends of the upper reach, a stay connecting the upper curved portion of the lower reach with the forward inclined member of the Y-brace and a curved bar connecting the lower reach with the said fork, a crank shaft mounted upon the Y-brace at the intersection of its several members, a train of gearing including sprocket wheels mounted upon the inclined members of the Y-brace, and covering plates at the sides of the frame and connected at their marginal edges to members of the frame.

1,630,443. MULTIPLE-TRIODE VACUUM TUBE. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1923. Serial No. 625,224. 18 Claims. (Cl. 250—27.5.)

1. A vacuum tube having a single cathode, a plurality of anodes and means therewithin for exerting a combined mechanical and electrical action to substantially segregate the space discharges between the cathode and the respective anodes.

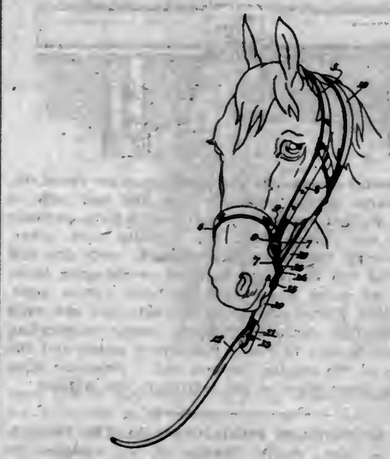
1,630,444. LUBRICATING STUFFING BOX. WILLIAM L. MCLAINE, Los Angeles, and WILLARD L. BOROUGH, Fullerton, Calif. Filed Jan. 12, 1924. Serial No. 685,869. 3 Claims. (Cl. 184—24.)



1. A stuffing box for a reciprocating rod comprising a body providing a lower packing chamber and an upper communicating oil chamber through both of which said rod passes; absorbent packing surrounding said rod within said packing chamber; an axially translatable tubular gland surrounding said rod within said oil chamber and extending into said packing chamber to engage said packing, said gland having a perforate wall permitting free passage of oil from said oil chamber to the rod and having a bore of greater diameter than that of the rod to permit unrestricted passage of oil directly to said packing; and a follower surrounding the rod and forming a closure for said oil chamber and adapted for translation to force said gland against said packing, said follower providing an auxiliary chamber to receive excess oil.

1,630,445. SHOE BOTTOM. ALBERT L. MURRAY, Auburn, Ind. Filed June 25, 1925. Serial No. 39,575. 3 Claims. (Cl. 36—32.)

1. A shoe sole having a comparatively soft rubber tread and a comparatively hard rubber welt engaging portion, the soft rubber tread being located in its entirety beneath the hard rubber portion, and renewable rubber spuds secured to the tread surface of said soft rubber tread.

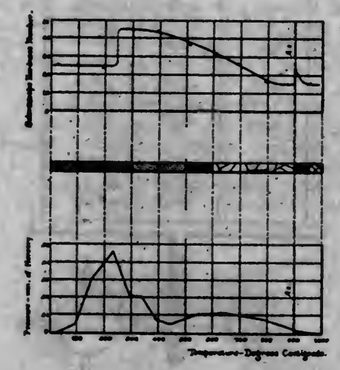


1,630,446. TRAY PURSE, TOBACCO POUCH, OR THE LIKE. GEOFFREY NICKLIN, Walsall, England. Filed Aug. 9, 1926, Serial No. 128,315, and in Great Britain July 23, 1926. 2 Claims. (Cl. 150—37.)

1. A pouch formed from a major and a minor blank of leather; the major blank divided by a fold into a back and a tray; an integral upstanding flange at the edges of the tray and at the edges of the back formed by blocking the major blank; and an integral upstanding flange at the edges of the minor blank formed by blocking said blank; the flanges on the minor blank and the back being secured face to face to form a pocket.

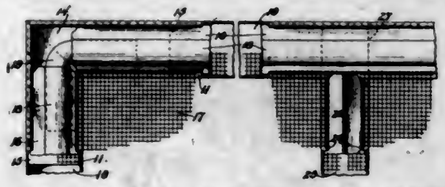
1,630,447. STEEL YOKE. FRANK O'DELL, Union City, Ind. Filed Sept. 14, 1926. Serial No. 135,396. 1 Claim. (Cl. 119—141.)

In a device of the character described, a main bar, a strap secured at one end of the main bar and adapted to be positioned around the neck of an animal, a transverse supporting bar secured to the main bar and curved to conform to the shape of the animal's jaw, snap hooks secured to the bar and adapted to be connected to the halter on the animal to which the device is secured to



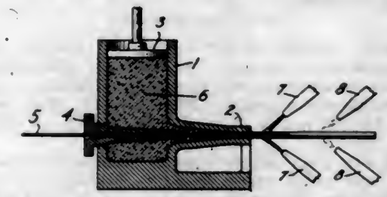
support the forward end of the device, and a pivoted rod carried at the forward end of the bar and extending outwardly therefrom.

1,630,448. STEEL ALLOY. WILHELM OERTEL, Remscheid-Hasten, Germany, assignor to Glockenstahlwerke Aktiengesellschaft vorm. Rich Lindenberg, Remscheid-Hasten, Germany. Filed July 31, 1924, Serial No. 729,370, and in Germany Jan. 9, 1922. 3 Claims. (Cl. 75—1.)



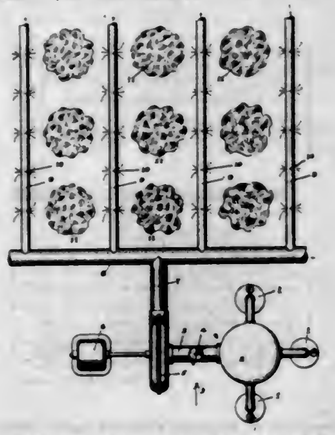
3. A steel alloy, which is highly resistant to chemical action and is of great strength, consisting of iron, 8 to 25% Cr, 0,1 to 1,2% C, 0,2 to 6% Mo, and 0,5 to 2% of Ni for increasing the ductility of the alloy when hot.

1,630,449. HEAT TREATMENT OF ELECTROLYTICALLY-DEPOSITED IRON. NORMAN B. PILLING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 22, 1922. Serial No. 583,468. 2 Claims. (Cl. 148—13.)



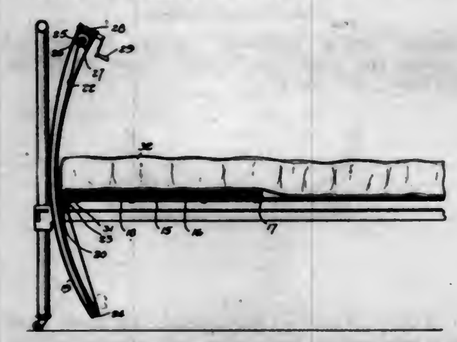
1. A method of treating electrolytically deposited iron which consists in heating said iron to temperatures between 250° C. and about 720° C. to cause a decrease in the brittleness and an increase in the hardness thereof.

1,630,450. METAL SCREEN. DELMAR D. PINKHAM, Texarkana, Tex. Filed Dec. 19, 1925. Serial No. 76,443. 5 Claims. (Cl. 156—14.)



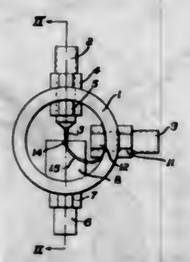
1. In a metal screen, the combination of an outer rectangular frame having separable side and end rails, a detachable mullion connecting the intermediate portions of two of said rails which are opposite each other, netting covering the panels thus formed, each side rail and each end rail having an inclined overhanging inner flange and an outer flange with an inner return bend, angular corner pieces connecting the side and end rails at the respective corners, clamping strips cooperating with the rail flanges to secure the corner pieces and the outer edges of the netting thereto, and a clamping strip securing the inner edges of the netting to the mullion.

1,630,451. METHOD OF PRODUCING COATED CORES. JOSEPH L. RAY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1925. Serial No. 9,160. 3 Claims. (Cl. 18—59.)



1. A process of coating cores which consists in extruding a mixture of pulp and heavy oil on said core, coating the same with a film of cohesive material, and enclosing the whole in a sheath.

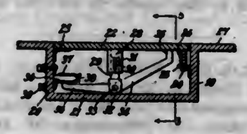
1,630,452. METHOD OF HEATING ORCHARDS AND APPARATUS THEREFOR. WILLIAM C. SCHEU, Upland, Calif. Filed July 14, 1923. Serial No. 651,667. 2 Claims. (Cl. 126—59.5.)



1. The method of making, distributing and burning a temporary gas for the protection of orchards against frost damage consisting in subjecting a fuel oil to heat to convert it into a temporary gas at a generating station, mixing air with said gas, conveying said gas to points in said orchard and retarding the reversion of said gas to its liquid condition while being conveyed, and emitting said mixed air and gas at burner stations in said orchard remote from said generating station, and burning said mixture at said points of emission in the orchard along said pipe lines.

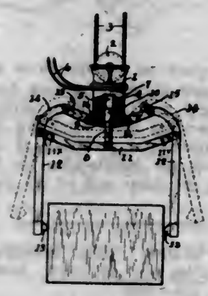
1,630,453. BED ATTACHMENT. TURNER B. SMITH, Wilmington, Calif. Filed Jan. 5, 1926. Serial No. 79,378. 4 Claims. (Cl. 5—76.)

1. A bed attachment comprising a frame adapted to be supported upon the spring frame of a bed, a frame hinged to the first said frame to tilt thereon on an angle to the head of a bed, an arcuate arm fixed between its ends to the free end of the hinged frame so that a portion of definite length of said arm is constantly extended above the hinged frame, and operating means fixed on the upper portion of the arm and connected to the first frame by which the arm and hinged frame may be raised or lowered.



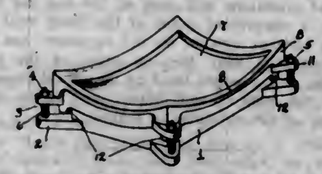
1,630,454. ELECTRODE HOLDER FOR GLOW-DISCHARGE TRANSMITTERS. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1923. Serial No. 637,053. 6 Claims. (Cl. 179—121.)

1. A glow discharge transmitter capsule, comprising a cylindrical portion of insulating material open to the air at its ends and glow discharge electrodes attached thereto in operative relation.



1,630,455. CIRCUIT CLOSER FOR HOLD-UP ALARMS. CARL WEBER, Hilton, Nebr. Filed May 27, 1926. Serial No. 111,981. 2 Claims. (Cl. 200—52.)

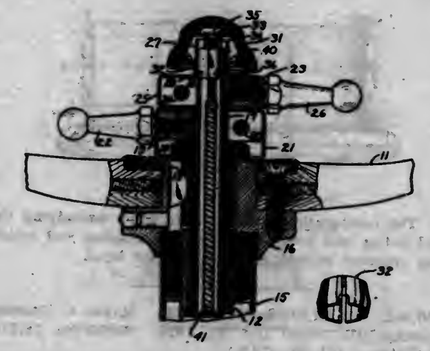
1. In an alarm, a switch comprising a box-like structure encased in a floor, a pair of resilient fingers in said box-like structure, a hinged platform covering said box-like structure, means in said box-like structure engaging the platform and fingers for closing the circuit thru said fingers upon depression of the platform comprising a bell crank, said bell crank being attached to the platform and resting upon the bottom of the box-like structure, a deformed portion on one finger engaged by said bell crank, said bell crank being adapted to flex one of said fingers



to lift the latter into contact with the opposite finger, and slidable means securing the bell crank to the platform allowing said bell crank support to rest upon the bottom of the box-like structure.

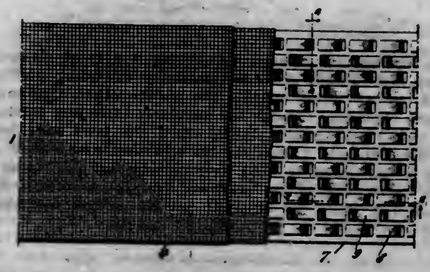
1,630,456. GRAB. WILLIAM G. WEBB, East Cleveland, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Aug. 25, 1925. Serial No. 52,304. 14 Claims. (Cl. 294—88.)

1. A grab comprising a suspension member, a solenoid carried by said member, and having a movable core, load engaging jaws supported by the core of the solenoid, and operating means interposed between the suspension member and jaws to actuate the jaws when the same are moved by the solenoid.



1,630,457. VULCANIZING APPARATUS. HERBERT K. WHEELOCK, Akron, Ohio. Filed Aug. 27, 1926. Serial No. 131,908. 7 Claims. (Cl. 18—18.)

3. An apparatus of the character described, having in combination a vulcanizing plate and retractable means to position a layer of cushioning material over the surface of said plate.

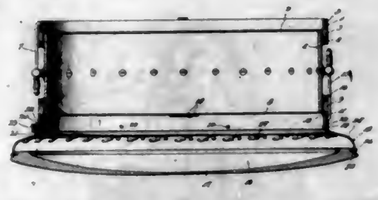


1,630,458. SWITCH. CLARENCE H. WILLIAMS, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Mar. 12, 1925. Serial No. 15,051. 3 Claims. (Cl. 200—159.)

1. A switch comprising a cylindrical cage having upwardly extending spring fingers formed therein, one of said fingers having its upper end bent inwardly and then outwardly to form a hooked portion, and a tiltable switch mechanism comprising an insulating member insertable in said cage, a spider forming a plurality of spring fingers secured to said member, and a cap removably secured to said spider, said insulating member having flat faces against which said first-named spring fingers

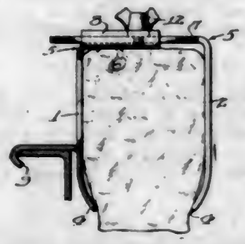
bear, one of said flat faces being provided with a recess for receiving said hooked portion to resiliently retain said switch mechanism in fixed position with respect to said cage.

1,630,459. PAD FOR LAUNDRY AND OTHER MACHINES. WILLIAM A. ZEIDLER, New York, N. Y., assignor to Zeidler Economy Spring Pad Co., Inc., New York, N. Y., a Corporation of New York. Filed July 21, 1923, Serial No. 652,990. Renewed Apr. 25, 1927. 6 Claims. (Cl. 68—9.)



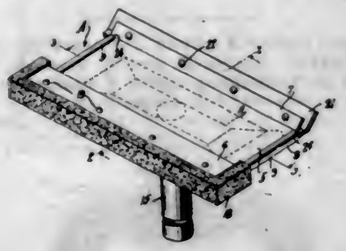
2. In a device of the class described, a spring element composed of a sheet metal base with tongues cut therefrom, said tongues being struck up in a series of rows, the tongues in each row standing in one direction and the tongues in adjacent rows standing in the opposite direction.

1,630,460. CONTACT BRUSH AND METHOD OF MAKING SAME. WALTER M. AUSTIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 28, 1922. Serial No. 597,539. 5 Claims. (Cl. 200—166.)



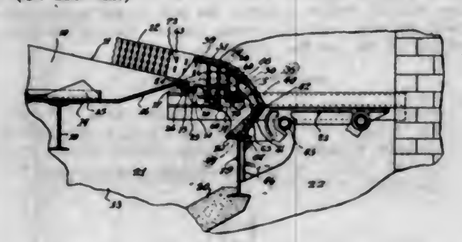
3. A contact brush comprising a plurality of superimposed laminæ, certain of said laminæ possessing an inherent tendency to crowd the adjacent inner laminæ.

1,630,461. SNARE DRUM. FREDERICK J. BACON and DAVID L. DAY, Groton, Conn. Filed Aug. 27, 1925. Serial No. 52,860. 4 Claims. (Cl. 84—411.)



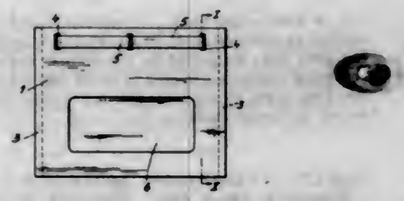
1. The combination with a snare drum embodying the usual batter and snare heads, of a resonating and amplifying chamber enclosing the said snare head.

1,630,462. MATTRESS RETAINER. MABEL C. BARBER, Chicago, Ill. Filed Dec. 31, 1925. Serial No. 78,516. 6 Claims. (Cl. 24—72.5.)



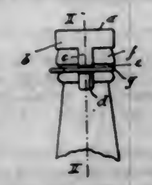
3. A mattress retainer comprising a pair of clamping jaws each formed with an angularly extending portion, said portions being slidable one on the other, tightening means extending through the angularly extending portions to lock them against sliding when the jaws have been adjusted to grip a mattress therebetween, and a hook on one of said jaws to hook over an adjacent portion of a bed frame to hold the mattress against substantial displacement when the adjacent portion of the bed frame has been moved out of horizontal position.

1,630,463. WINDOW-CLEANING DEVICE. HARRY T. BARLOW, Brooklyn, N. Y., assignor to Wonder Window Washer Corp., New York, N. Y., a Corporation of New York. Filed Dec. 3, 1926. Serial No. 152,328. 2 Claims. (Cl. 15—126.)



1. A cleaning device, comprising a plate, a second dished plate fixed to and spaced apart from the said first mentioned plate forming a reservoir adapted to contain liquid, an absorbent conducting member between the said plates at one edge of the device in communication with the reservoir, a gasket between the said plates at the opposite edge of the device extending into the interior thereof to prevent any leakage of the liquid therein, a hollow stem in communication with the reservoir, a handle removably secured to the reservoir, and a sealing member secured to the handle to seal the reservoir.

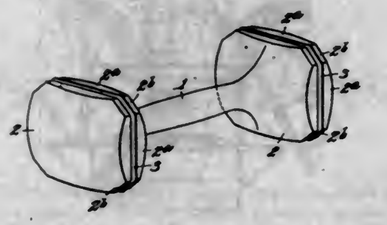
1,630,464. REAR-END STRUCTURE FOR REAR-DUMP STOKERS. ROYCE L. BEERS, Detroit, Mich., assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed June 16, 1922. Serial No. 568,798. 13 Claims. (Cl. 110—44.)



8. A rear-end plate for coaction with duplicate plates to form a rear end bottom structure for an underfeed stoker, comprising a relatively deep vertical web, a relatively shallow marginal head bordering the top surface of the web, complemental provision at opposite lateral faces of the heads for interlocking the heads together, and provision at the front end of the plate for locking it to a retort.

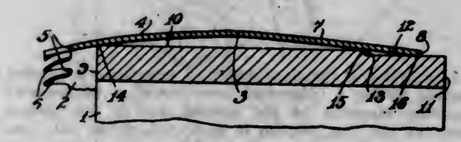
1,630,465. ENVELOPE. CARL BIEDERMANN, Lucerne, Switzerland. Filed Apr. 27, 1923. Serial No. 635,158. 1 Claim. (Cl. 229—68.)

An envelope for repeated use comprising in combination a pocket of aluminum foil open at the top end having a window at a convenient point of the front wall through which the address written on the enclosure can be read and vertical slits near the top edges of the rear and front walls, and a paper band to be passed through said slits, and the ends of said paper band to be connected on the rear of the envelope by sealing.



1,630,466. BOTTLE CLOSURE. JOHN GUSTAV BÖGEHSEN, Lyngby, Denmark. Filed Feb. 25, 1927. Serial No. 170,809, and in Denmark Dec. 15, 1925. 1 Claim. (Cl. 215—82.)

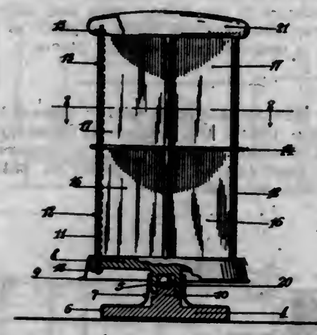
A bottle stopper comprising a cap, adapted to close the mouth of a bottle, two diametrically opposed clips depending from said cap, each of said clips being provided



intermediate its length with an impressed transverse groove adapted to engage a groove in the bottle, and a resilient metallic member adapted to seat in said transverse grooves to retain the cap in place, the ends of said metallic member being spaced from each other and formed into eyelets.

1,630,467. HAND SUPPORT FOR USE IN HORIZONTAL EXERCISES. HOBART J. BRADSTREET, Steubenville, Ohio. Filed Sept. 29, 1925. Serial No. 59,889. 1 Claim. (Cl. 272—64.)

A hand support of the character described, comprising a handle carrying corresponding integral heads upon the opposite ends thereof, each head having a plurality of peripherally arranged flat faces adapted for firmly seating upon a floor and other faces joining said flat faces, the ends of said handle at the point of intersection of said heads being rounded or curved, each head also having therein an annular groove, and a resilient band seated in and projecting from the groove of the head.

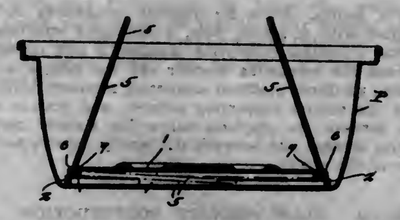


1,630,468. BAND SAW AND WHEEL THEREFOR. JOSEPH WALLACE CAUSEY, Electric Mills, Miss. Filed Dec. 8, 1926. Serial No. 153,237. 8 Claims. (Cl. 143—30.)

1. The combination with a centrally full tensioned band saw, of a supporting pulley therefor having the rear portion thereof slightly reduced in diameter and extending parallel to its axis, so as to bear upon and support the saw at its rear edge and also at a point a short distance removed from said rear edge, as well as adjacent the front edge but rearwardly of the teeth.

1,630,469. SANDWICH-DISPLAY FIXTURE. WILLIAM CECIL, New York, N. Y. Filed Nov. 24, 1926. Serial No. 150,430. 1 Claim. (Cl. 211—25.)

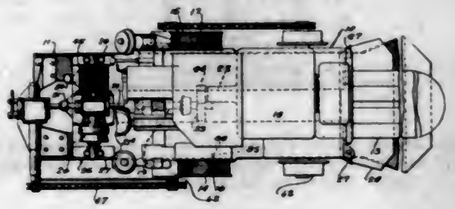
As a new article of manufacture, a sandwich display fixture comprising in combination a relatively fixed base member, a ball bearing therein, an upper display element comprising a base, four bolts secured in said base and projecting upwards therefrom, four compartment units, each composed of a partition member bent at right angles and fitted with two spacing sleeves at the free edges thereof, said compartment units being adapted to be assembled in pairs on said bolts to form four lower and four upper compartments, a shelf between the upper and lower compartments, a dome resting on the said upper compartment units and said bolts, nuts for securing the said base member, compartment units, shelf and dome together to form said upper display element, said



base member having a socket fitted over and resting upon said ball bearing for rotatably and detachably mounting said display element on the said base member.

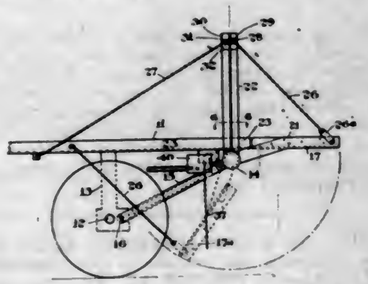
1,630,470. APPARATUS FOR BREAKING DOWN ORE BODIES. WALTER B. CLIFFORD, Kimball, W. Va., assignor to The Clifford Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1922. Serial No. 584,042. 5 Claims. (Cl. 262—12.)

1. Mining apparatus comprising a metallic tube having a longitudinal bore formed therein and lateral passages communicating therewith, an integral flexible envelope surrounding the metallic tube, separate connections between opposite ends of the tube and ends of the envelope for positively and rigidly clamping the latter to the tube at both ends to prevent longitudinal movement of the envelope, and means for supplying liquid under pressure to the longitudinal bore.



1,630,471. RACK FOR ROASTERS. ROLLIN E. COLLINS, Parnassus, Pa., assignor to The Aluminum Company of America, Pittsburgh, Pa. Filed Jan. 26, 1926. Serial No. 83,900. 2 Claims. (Cl. 53—6.)

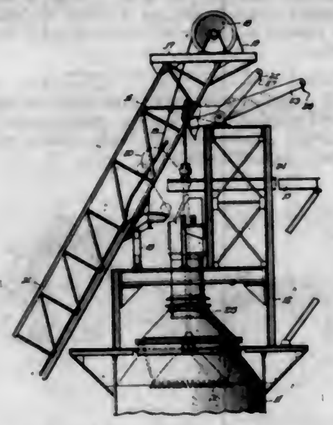
2. A lifting rack for roasting pans and the like including a plate, there being a pair of notches in each side portion of the plate, an inturned ear adjacent each notch providing a bearing sleeve, the notches of each pair being located between two of the ears, bails having alining terminals bearing in the sleeves of each pair, said



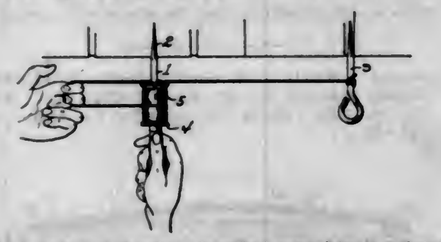
balls being adapted to swing within the notches to lapped positions on one surface of the plate and within the notches to converging positions beyond the other face of the plate, there being means integral with the plate for limiting the sliding movement of the alining terminals of the balls relative to the sleeves when said balls are in either of the two positions stated, thereby to prevent withdrawal of said terminals from the sleeves.

1,630,472. MINING-MACHINE SKID. EDWARD J. DOBERSTEIN, Blue Island, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 13, 1923. Serial No. 651,290. 9 Claims. (Cl. 262—30.)

1. In combination with a draft operated cutting element, adapted for movement along the mine floor, a supporting skid, and auxiliary winding devices on said skid located within prolongations of the longitudinal boundaries of said cutting element.



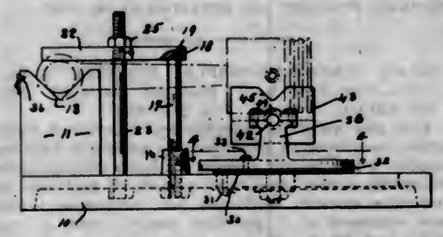
1,630,473. LOADING AND UNLOADING DEVICE FOR VEHICLES. PAUL DUCONDU, Montreal, Quebec, Canada. Filed Oct. 18, 1924. Serial No. 744,382. 13 Claims. (Cl. 214—77.)



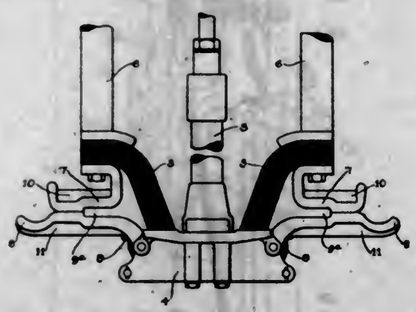
1. A loading device for vehicles, comprising in combination with a vehicle floor, a cantilever structure including a central supporting member, a link connection between the supporting member and the vehicle, a load bearing platform, platform supporting members projecting from the central supporting member, and tension members between the platform supporting member and the central member and between the central member and the floor of the vehicle.

1,630,474. BLAST-FURNACE CONSTRUCTION. WYMAN EATON, Chicago, Ill., and DAVID T. CROXTON, Cleveland, Ohio; said Eaton assignor of his entire interest to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 31, 1924. Serial No. 703,307. 4 Claims. (Cl. 214—18.)

1. In a blast furnace construction, a bell and skip incline supporting structure carried upon the upper portion of the furnace, a skip incline and furnace bells and bell operating mechanism, the skip incline being supported from one side of the supporting structure and the bell mechanism being supported upon the opposite side of the supporting structure.

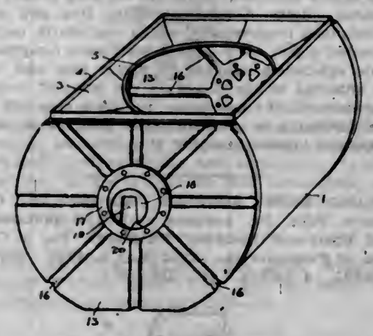


1,630,475. LINE REEL AND PIN. WILLIAM GEORGE ELDER, Bardstown, Ky., assignor to Elder Manufacturing Company, Bardstown, Ky. Filed Oct. 13, 1926. Serial No. 141,417. 2 Claims. (Cl. 33—85.)



1. A device of the class described comprising a pointed member having a transverse hole therein, a flanged reel rotatably mounted on the member and a line wound upon the reel and adapted to pass through the hole, the reel having notches in one of the flanges thereof for receiving a part of the line to prevent rotary movement of the reel.

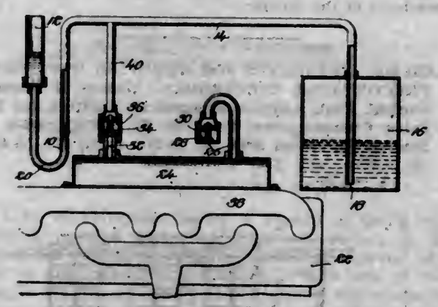
1,630,476. PISTON, WRIST PIN, AND CONNECTING-ROD ALIGNING JIG. HERMAN A. ERICKSON, Fresno, Calif. Filed May 6, 1924. Serial No. 711,398. 6 Claims. (Cl. 33—180.)



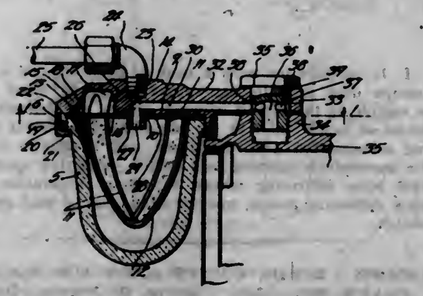
1. A device of the character described comprising a base, a mandrel support carried by said base; a V-block; and means for mounting said block on said base so that it is rockable on a horizontal axis and rotatable around a vertical axis.

1,630,477. CIRCUIT INTERRUPTER. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1922. Serial No. 572,967. 13 Claims. (Cl. 200—144.)

2. The combination in an electric switch provided with a pair of relatively movable contact members, of metallic means for concentrating the magnetic forces set up by the passage of current through the switch for exerting an opening force on said contact members.



1,630,478. TUB FOR WASHING MACHINES. FREDERICK MACDONALD FAIRGRIEVE and ARCHIBALD FAIRGRIEVE, Toronto, Ontario, Canada. Filed Jan. 24, 1924. Serial No. 688,277. 2 Claims. (Cl. 68—21.)



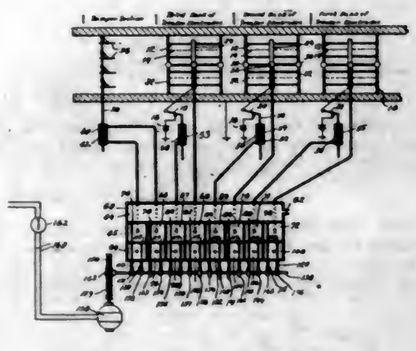
1. A tub for a washing machine having a rectangular opening in the top extending from end to end, a top piece secured to the edges of said opening by a ribbed seam and having a central cover opening and being dished inwardly to said cover opening, a cover closing said opening and formed with a downwardly extending flange adapted to engage the edge of said opening, and a flange spaced back from the edge of said opening and extending downwardly from said top piece to form a baffle spaced from said cover flange.

1,630,479. THERMOSTATIC PUMP. JAMES FENTRESS, Chicago, Ill. Original application filed Dec. 8, 1925, Serial No. 72,900. Divided and this application filed May 12, 1926. Serial No. 108,464. 6 Claims. (Cl. 230—16.)

1. In a thermostatic pump, in combination, a closed receptacle having intake and discharge ports communicating therewith, a normally closed liquid valve at the intake opening permitting the entrance and preventing the discharge of air at that point, and a normally closed liquid valve at the discharge port permitting the outward passage of air from the receptacle and preventing its return to the receptacle, the valves being so adjusted that the heating and consequent expansion of air in the receptacle closes the intake valve and opens the discharge valve and that cooling of the receptacle and consequent contraction of the air content closes the discharge valve and opens the intake valve.

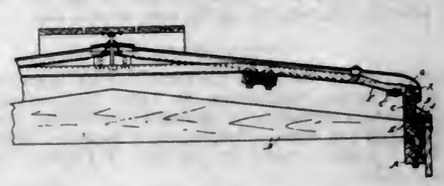
1,630,480. FILTER. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,711. 5 Claims. (Cl. 210—165.)

3. A filter element comprising an imperforate disc having a central opening, a plurality of bowed wires, the ends of which are secured to said disc adjacent the edge thereof, a filter bag held in position by said bowed wires, and means for securing the edge of the open end of said filter bag directly to the edge of said disc.



1,630,481. CAR-COUPLER UNCOUPLING MECHANISM. JOHN THOMAS FITZPATRICK, St. Louis, Mo., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 17, 1923. Serial No. 681,257. 6 Claims. (Cl. 213—170.)

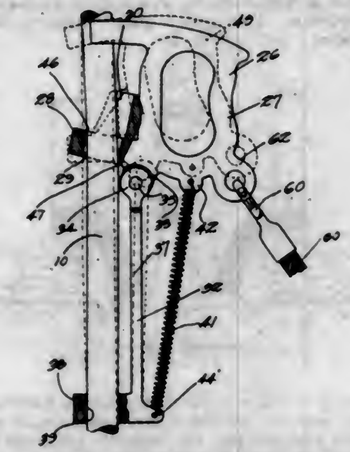
1. In a car coupler releasing mechanism, the combination with the operating rock shaft and means for pivotally connecting the same to the car body, of a rock



arm extending outward from said shaft above the coupler having a bifurcated outer end with the extreme end portions thereof bent towards each other, and a link for connecting the pin to said rock arm having a portion for spreading the furcations upon an abnormal outward movement of the coupler.

1,630,482. APPARATUS FOR REMOVING DUST FROM PRECIPITATOR ELECTRODES. GORDON B. FORBES, Garfield, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 10, 1925. Serial No. 55,431. 11 Claims. (Cl. 183—7.)

1. In combination with a bank of electrodes of a high tension dust precipitating apparatus of the usual type, a switch in the circuit thereof, means for delivering a series of rapid blows to the electrodes thereof for shaking accumulated dust therefrom, and automatic means for successively opening said switch, rendering operative said blow delivering means, rendering inoperative said blow delivering means, and for again closing said electric switch.

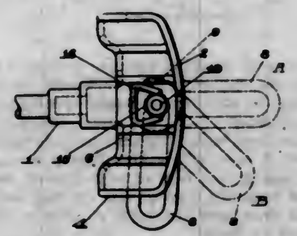


1,630,483. REPAIR CONSTRUCTION FOR WOODEN-FRAME BOX CARS. EDWIN G. FRANCK, Detroit, Mich., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed May 7, 1923. Serial No. 637,307. 4 Claims. (Cl. 105—404.)

1. In a repair construction for wooden box cars, the combination with the original wooden side plates, of flanged metallic structural bars superposed on said side plates on their edge, carlines connected to the tops of said bars and roofing sheets supported by said carlines.

1,630,484. LADDER-CLIMBING DEVICE. GEORGE E. FRITTS, Harbor City, Calif. Filed Oct. 20, 1924. Serial No. 744,616. 4 Claims. (Cl. 227—8.)

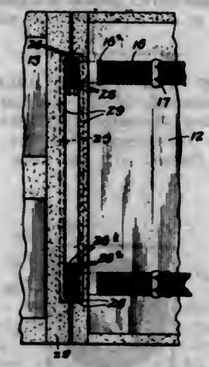
1. In a climbing device, the combination of: a gripping member; a slide member extending through said gripping member; a subsidiary member slidably embracing said slide member and pivotally secured to said gripping



member; and means connected to said gripping member and to said subsidiary member for causing said gripping member to grip said slide member.

1,630,485. DETERMINING CRITICAL TEMPERATURE. GUSTAV F. GERDTS, Bremen, Germany. Filed Dec. 12, 1924, Serial No. 755,584, and in Germany Aug. 26, 1924. 1 Claim. (Cl. 73—32.)

The herein described method of marking during a heat treatment objects of metal including iron and steel at predetermined temperatures, which consists in contacting the heated object with a hard test piece comprising inorganic substances adapted to partly fuse and leave a trace adhering to the object at the point of contact at the predetermined temperature, the trace thus left on the object hardening to a substantially indelible record at a temperature higher than 100° C.

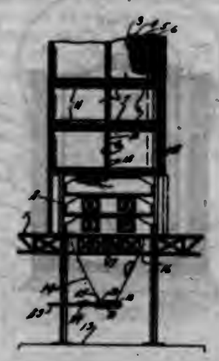


1,630,486. LINK COUPLER. GEORGE W. GRASER, Beaver Falls, Pa., assignor to Koppel Industrial Car and Equipment Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 5, 1923. Serial No. 636,897. 4 Claims. (Cl. 213—86.)

1. In a car coupling, a coupler having a recess formed therein, an elevated portion in said recess, a link loosely mounted in said recess, a washer between said link and coupler adapted to rest on said elevated portion when the link is in operative position and adapted to permit the link to tilt by gravity toward one side or the other of said coupler.

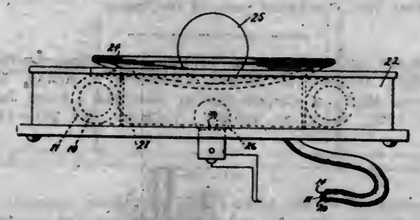
1,630,487. SAMPLE BOOK. FRANK A. HARRISON, Chicago, Ill. Filed Oct. 8, 1925. Serial No. 61,167. 4 Claims. (Cl. 129—41.)

1. In a loose-leaf binder a plurality of leaves each provided with hinge means comprising a wire piece having its center portion secured to the margin of said leaf and its end portions looped to form spaced slots, covers



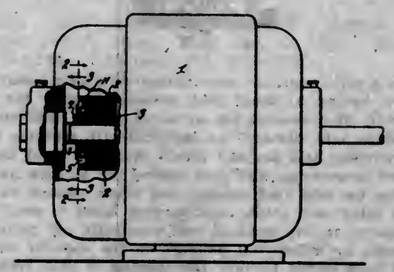
for the opposite sides of said leaves, and tapes secured to said covers in registering position with said slots and passing through the latter.

1,630,488. MOUNT FOR THE TONGUES OF CIGARETTE-ROD-FORMING MECHANISM. FRANK DI IANNI, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a Corporation of New Jersey. Filed June 5, 1926. Serial No. 113,952. 10 Claims. (Cl. 131—43.)



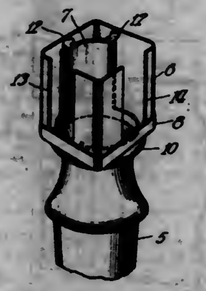
1. A mount for the tongue of a cigarette rod-forming mechanism, comprising a support, means for adjusting said support both vertically and horizontally to control the position of the tongue in said mechanism, and a device for demountably attaching said tongue to the adjusted support.

1,630,489. SHAFT-KILN CONSTRUCTION. STEWART W. JAMESON, Duluth, Minn. File Apr. 25, 1924. Serial No. 708,865. 5 Claims. (Cl. 222—3.)



2. A shaft kiln structure embodying refractory lining means, and a shell for said lining comprising peripherally flanged sections independently removable and providing four-corner meeting joints between said sections, said flanges being exteriorly accessible and exposing flange connecting means accessible exteriorly of the kiln.

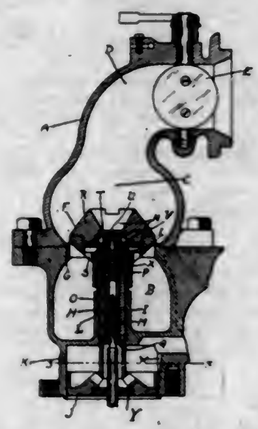
1,630,490. ADVERTISING DEVICE. PAUL E. KLOPSTEG, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1925. Serial No. 39,431. 8 Claims. (Cl. 46—49.)



2. In an advertising device, a support of poorly conducting material presenting a smooth surface at its upper side, an object including conducting material resting on and presenting a relatively smooth area of contact to the smooth surface of the support, and stationary means adjacent to the support for producing an unsymmetrical rotatory magnetic field extending over the surface of the support.

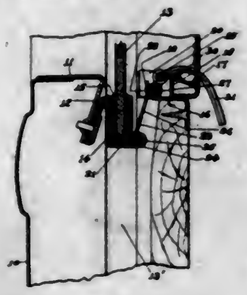
1,630,491. SHORT-CIRCUITING DEVICE. WALTER J. KRAUSE, Cleveland, Ohio, assignor to The Ohio Electric & Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 13, 1924. Serial No. 719,871. 3 Claims. (Cl. 172—279.)

1. A short circuiting device for motors of the class described comprising an endless helical spring having a layer of cotton thread thereover and a jacket of relatively thin copper wire covering said cotton thread.



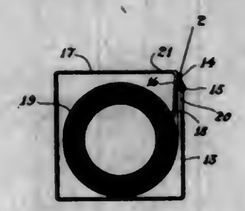
1,630,492. CONNECTION FOR TUBES. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed June 9, 1924. Serial No. 718,716. 6 Claims. (Cl. 15o—194.)

1. In a structure of the class described, the combination of a tube, a mount secured on said tube at an interval from its end, a second tube of larger size and



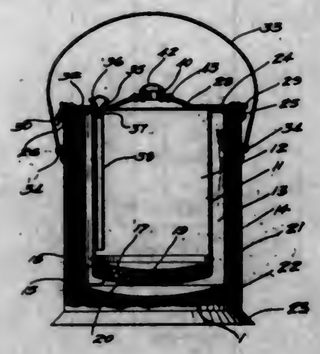
different shape telescoping the end of the first mentioned tube and having its end seated against said mount, the periphery of said abutment corresponding to the size and shape of the larger tube, and a welded connection between the telescoping ends of the tubes.

1,630,493. CARBURETOR. JOHN G. LANNING, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed July 30, 1920. Serial No. 400,087. 1 Claim. (Cl. 261—48.)



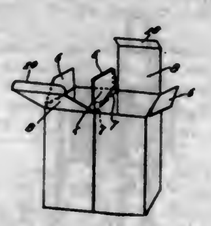
In a carburetor, the combination with an automatic air valve having a liquid fuel passage through the stem thereof, of a control pin arranged within said stem to regulate said passage, an independently movable sleeve surrounding said pin and within said stem, said movable sleeve cooperating with said control pin to form an inlet orifice for said fuel passage and being exposed to pressure below said orifice, said member being of small mass compared to the mass of said automatic air valve, and movable by differential pressure on the opposite sides of said inlet orifice to vary the opening of said orifice independent and in advance of the movement of said valve and yieldable resilient means between said sleeve and said valve for permitting said independent movement and gradually restoring said sleeve to normal position.

1,630,494. LIFTING AND RETAINING DEVICE FOR SLIDING WINDOWS. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1922. Serial No. 552,549. 4 Claims. (Cl. 276—48.)



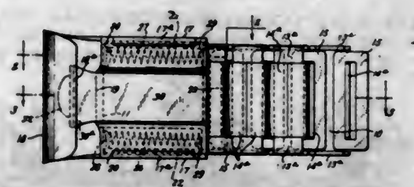
4. In a window lifting and retaining device a stationary retaining support in combination with a loop member, a plate movably connected at one edge to the window and at the other edge to one reach of the loop member, said plate arranged to engage said support to retain the window in its raised position, and a lifting strap connected to the other reach of said loop member.

1,630,495. BOX FOR PAPER ROLLS. NICHOLAS MARCALUS, Plainfield, N. J., assignor to Automatic Paper Machinery Company, Inc., Plainfield, N. J., a Corporation of New Jersey. Filed Oct. 2, 1925. Serial No. 60,036. 3 Claims. (Cl. 206—58.)



1. A box comprising a single folded piece of material and a metal strip having a serrated edge attached with its serrated edge adjacent the free edge of one of the walls of the box, a cover flap for said box forming an integral part of the same piece of material as said box and adapted to fit inside or outside of the wall of the box carrying the metal strip, said metal strip being attached to said box longitudinally of and adjacent the free edge of said cover flap thereby forming a cutting edge for material within the box, and said metal strip being adapted to be concealed or exposed by the position of said flap outside or inside of said box.

1,630,496. DIPPING CONTAINER FOR EXPLOSIVE CARTRIDGES. WILLIAM H. MARSHALL, ROBERT J. KILLGORE, and LUTHER E. BEDORTHA, Denver, Colo., assignors, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed Oct. 25, 1924. Serial No. 745,824. 8 Claims. (Cl. 220—9.)

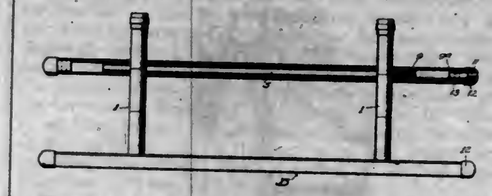


1. A dipping container for explosive cartridges comprising: walls forming a dipping chamber; a hinged cover for said container; a member carried by said cover through which liquid oxygen may be introduced into said dipping chamber; and means for directing said liquid oxygen to the bottom of said chamber.

1,630,497. CARTON. WARREN A. MORRIS, Wyoming, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Mar. 12, 1925. Serial No. 15,034. 9 Claims. (Cl. 229—38.)

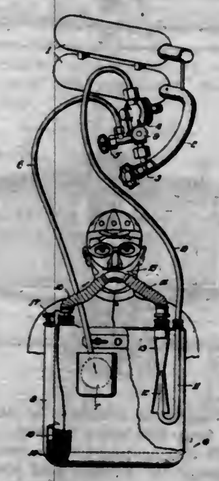
1. A composite package with enclosing walls comprising individual container elements, having flaps of the several container elements engaging adjoining container elements and each container detachably secured to an adjacent container by means of an engaging flap.

1,630,498. BRACELET CHAIN FOR WRIST WATCHES OR THE LIKE. AXEL PERSON, Attleboro, Mass., assignor to Harvey Clap & Co., Attleboro, Mass., a Partnership. Filed Feb. 20, 1926. Serial No. 89,599. 5 Claims. (Cl. 24—233.)



1. A connector for bracelet chains or the like comprising, in combination, a box-like member having top, bottom and side walls, said top wall being extended and curved downwardly at one end to form a hook, a slidable member in said box-like member, sliding thereinto from the end thereof remote from said hook, and a pair of springs within said box-like member urging said last member to slide thereinto, said bottom wall being bent upwardly at an intermediate longitudinal portion and forming with said side wall a pair of longitudinal passages in which said springs rest.

1,630,499. EXPANSIBLE SHACKLE BOLT AND THE LIKE. FRANK A. ROSS, Wilmette, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 9, 1921. Serial No. 476,128. 9 Claims. (Cl. 85—2.)

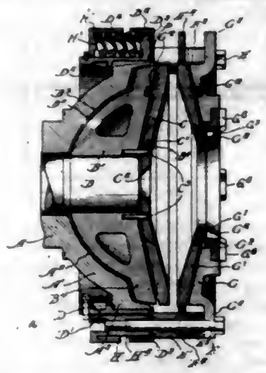


1. A hollow pivot having a bearing surface comprising a longitudinally rifted middle portion and unrifted end portions integral therewith and an expanding device arranged to flex said rifted portion outwardly for taking up wear of the bearing surface of the pivot.

1,630,500. BINDER. WILLIAM J. STEENROD, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Aug. 20, 1923. Serial No. 658,296. 1 Claim. (Cl. 129—12.)

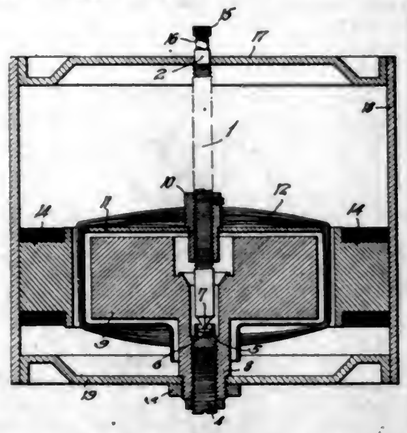
Clamping mechanism for a post binder including a clamping bar equipped with a pair of posts and a hollow clamping bar orificed to receive such posts; said mechanism comprising a longitudinally folded sheet metal locking bar slidingly fitting within said hollow clamping bar, said locking bar having parallel sides adjacent the inner faces of said clamping bar orificed in alignment to receive said posts and arranged to clampingly engage a post at one end, and the sides of the bar near the other end being formed with opposite semi-cylindrical bends arranged to together provide a central screw threaded seat communicating with the adjacent post orifice and being also formed with contiguous plane portions secured together on diametrically opposite sides of such seat, and comprising also a key-operated locking screw in said seat arranged to cooperate with the other locking post in said orifice.

1,630,501. LIFE-SAVING APPARATUS. MARCUS C. STEESE, Duluth, Minn. Filed Apr. 12, 1920. Serial No. 373,185. 2 Claims. (Cl. 128—191.)



1. In a device of the class described, a source of oxygen supply, a valve operatively associated with said source, a Venturi tube, and a connection between said source and said Venturi tube including said valve, said connection terminating in a relatively large opening at the point of greatest restriction of said Venturi tube for controlling said valve and the supply of oxygen from said source.

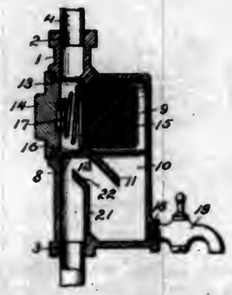
1,630,502. CRUSHING DISK. EDGAR B. SYMONS, Los Angeles, Calif., assignor to Symons Brothers Company, Milwaukee, Wis., a Corporation of South Dakota. Filed Jan. 24, 1925. Serial No. 4,375. 14 Claims. (Cl. 83—10.)



3. A crushing disk for use with disk crushing machines, comprising a plurality of concentric crushing ring sec-

tions, the outer edge of each ring being shaped to overlie the inner edge of the ring next outermost, the inner and outer surfaces of the sections being generally continuous,

and means, positioned on the non-operative face of an outer crushing ring adapted, in cooperation with an inner crushing ring, to hold said outer ring in fixed position upon the crushing head.



1,630,503. ARMATURE FOR DISTANT-CONTROL INDICATORS FOR CONTINUOUS AND ALTERNATING CURRENT. HANS USENER, Kiel, Germany. Filed Apr. 28, 1923, Serial No. 635,395, and in Germany Dec. 16, 1922. 4 Claims. (Cl. 177—327.)

1. An electromagnetic indicator of the character described having fixed field poles, an iron core disposed between said poles and having a sleeve extending from one of its ends, means for holding said sleeve fixed at its free end to maintain said core in fixed position between said poles, and an armature winding disposed between said poles and completely surrounding said core and means journalled in said sleeve for rotatably supporting said winding to permit it to freely rotate around said core.

1,630,504. OIL FILTER. RICHARD A. WALKER, Skidmore, Mo. Filed Apr. 3, 1926. Serial No. 99,598. 3 Claims. (Cl. 210—165.)

1. In an oil filter, a casing having an oil inlet, an oil outlet, a water outlet having a closure, and a clean out opening having a removable closure, the casing having a partition dividing it into a filtering chamber and a settling chamber, the filtering chamber communicating with said oil inlet and with said clean out opening and said settling chamber, the latter communicating with said oil outlet and said water outlet, the casing having a partition intermediate of said oil outlet and said water outlet and having an end portion overlapping and spaced from the end portion of the first named partition, said

water outlet being lower than both of said end portions when the casing is in either of two positions at right angles to each other, and a strainer extending across said filtering chamber.

1,630,505. CENTERING CALIPERS. FRANK WALTHER, Detroit, Mich. Filed Dec. 21, 1923. Serial No. 681,983. 1 Claim. (Cl. 33—191.)

A caliper of the class described, comprising a stationary leg; a pair of cross bars mounted fixedly on said leg, at opposite sides thereof, intermediate its ends, adjacent the upper end thereof and projecting outwardly therefrom at opposite sides; a pair of movable arms, each pivotally connected, adjacent its upper end, between the outer ends of said cross bars; a pair of links, each pivotally connected at one end to one of said movable arms at opposite sides thereof; a head having a bore formed therein; a neck on said head projected through an opening formed in said leg, adjacent the upper end thereof, the end of said neck being upturned to prevent its removal from said opening; a similar head having a neck projecting through a longitudinally extending slot formed in said leg, said neck being upturned to prevent the removal of said neck from said slot, the opposite ends of said links being connected to said last mentioned neck at opposite sides of said leg; a stem projected through said bore in said first mentioned head and secured in said bore in said second mentioned head; a coil spring loosely positioned on said stem, intermediate said heads, and adapted for engaging at its opposite ends, said heads; and a nut threaded on said stem for effecting relative movement of said heads, said relative movement effecting a swinging of said movable arms on their mountings.

1,630,506. INSECTICIDE. CHESTER A. WILKINS, Sacramento, Calif., and STANLEY D. WILKINS, St. Louis, Mo. Filed Feb. 4, 1924. Serial No. 690,657. 6 Claims. (Cl. 167—6.)

1. A composition of matter for insecticide purposes, the same comprising as its chief ingredients desiccated molasses and a poison.

5. A composition of matter for insecticide purposes, the same being substantially in the form of a powder and comprising as ingredients desiccated molasses, an arsenious poison, and a fruit flavor in substantially the proportions stated.

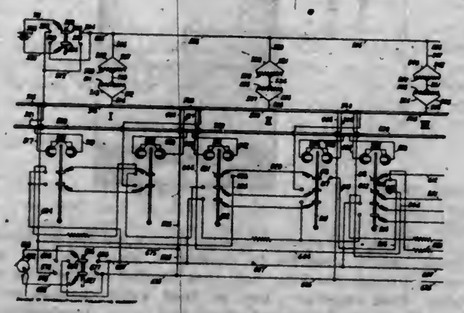
1,630,507. PROCESS OF COATING MATERIALS HAVING AN IRON OR STEEL BASE. LEO A. WYND and JULIAN L. SCHUELER, Peoria, Ill. Filed Feb. 26, 1926. Serial No. 90,868. 7 Claims. (Cl. 91—70.2.)

7. A process for applying smooth zinc coatings to iron or steel material, independent of wiping, which consists in subjecting the material to an activated cleaning prior to its entrance to a coating bath, passing the material thru the coating bath, the entrance of the material and the exit of the material from the coating bath being thru substantially clean zinc surface.

1,630,508. GALVANIZING APPARATUS. LEO A. WYND and JULIAN L. SCHUELER, Peoria, Ill. Filed Mar. 20, 1926. Serial No. 96,301. 1 Claim. (Cl. 91—12.5.)

In a galvanizing apparatus, in combination, a furnace provided with a plurality of longitudinally disposed and spaced heating chambers, a pan for each chamber removably supported therein, individual heating means for each pan, means for dividing the said pans into compartments at each end, and means located above each end of the furnace adapted to supply a flux to the end compartments of said pans to provide a clean zinc system for the ingress and egress of articles through said pans.

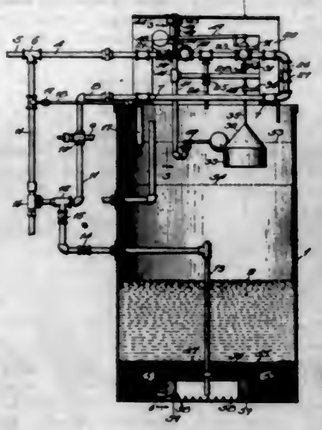
1,630,509. METHOD AND APPARATUS FOR FUEL BURNING. HENRY ADAMS, Plainfield, N. J. Filed Mar. 2, 1923. Serial No. 622,335. 18 Claims. (Cl. 110—22.)



1. The combination with a furnace having a wall and a combustion chamber adjacent to said wall, of a casing passing through said wall at a downward inclination to the line of the floor of said chamber and communicating at its inner end with said chamber and having at its outer end means for inlet of air into the casing, a fuel burner arranged in the casing at the outer end thereof and extending into the casing for discharging therein, a projector arranged in the casing at the outer end thereof and having its discharge end in the casing inwardly of the discharge end of the fuel burner for discharging a stream of fluid of greater velocity than the stream of burning fuel so that the burning fuel is drawn along in the casing by induction of the stream of fluid and mingles therewith and is discharged from the inner end of the casing into the combustion chamber at an inclination to the bottom of said chamber substantially the same as the inclination thereto of said casing, means for inlet of air into the casing transversely of the casing inwardly of the discharge end of the projector, and means for regulating the amount of air admitted by the last mentioned air inlet means.

1,630,510. BARREL CLOSURE. GEORGE HAMILTON AMES, Brooklyn, N. Y. Filed Jan. 29, 1924. Serial No. 689,222. 3 Claims. (Cl. 220—39.)

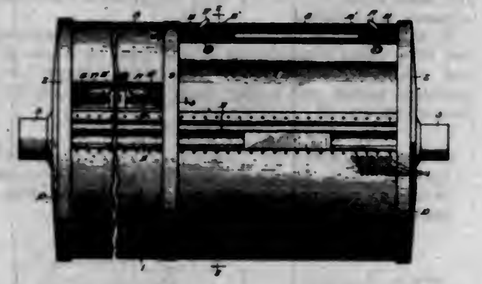
1. In a device of the character described the combination of a containing vessel provided with a bung hole and with a threaded portion encircling said bung hole, a cap provided with a threaded portion mating said first mentioned threaded portion so as to enable said cap to be screwed down relatively to said containing vessel, said containing vessel being further provided with a channel, a gasket fitted into said channel, a filling of soft metal located within said channel and engaging said gasket, a pair of cutting edges carried by said cap and separated by a channel, and a gasket of resilient material located within said last mentioned channel and thus carried by said cap.



1,630,511. CONTROL OF TRAINS. ARTHUR REGINALD ANGUS, Westminster, London, England. Original application filed Dec. 22, 1921, Serial No. 524,228, and in Australia Dec. 13, 1921. Divided and this application filed Sept. 1, 1925. Serial No. 53,814. 4 Claims. (Cl. 246—59.)

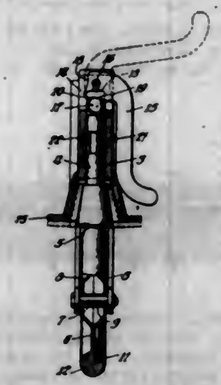
1. Electrical train-controlling apparatus comprising on a train electro-responsive means adapted when energized by a current of a first strength to give clearance to said train and when energized by a current of a second strength to cause the production of a warning operation on said train and adapted to be caused by the cessation of either of said currents without the production of the other thereof to bring about the production of a stopping operation on said train and receiving means arranged to be in energisable relation to running rails alone and adapted to be caused by currents of two specific different

strengths therein to energize said electro-responsive means by currents of said first and second strengths respectively, and, on the track and in connection with three consecutive sections thereof in which the rails of each section on each side of the track are electrically continuous and the rails of each section on one side of the track are separated from adjacent rails by insulation, current-supplying means for supplying the running rails with which said receiving means is arranged to be in energizable relation on said one side of the track in the first of said three sections with currents of said two specific different strengths and in the second of said three sections with current of the one of said specific different strengths corresponding to current of said first strength, traffic-controlling means pertaining to said second and third sections and adapted (a) in a position corresponding to the clear condition of both said second and third sections to cause said current-supplying means to supply said rails on said one side of said first section with current of the one of said specific different strengths corresponding to current of said first strength, (b) in a position corresponding to the clear condition of said second section and the danger condition of said third section to cause said current-supplying means to supply said rails on said one side of said first section with current of the one of said specific different strengths corresponding to current of said second strength, and (c) in a position corresponding to the danger condition of said third section to cause said current-supplying means not to supply said rails on said one side of said second section with current of either of said specific different strengths.



1,630,512. MECHANISM AND PROCESS FOR EFFECTING REGENERATION. FOREST F. AULT, Wilmette, Ill., assignor to The Borrowmite Company of America, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1921. Serial No. 445,415. 7 Claims. (Cl. 210—24.)

1. The method of regenerating a filter bed for softening water, which consists in causing a maximum flow of brine through the filter bed, then cutting off the flow of brine, then causing a flow of flush water through said bed for a predetermined time and at a substantially maximum flow, and then substantially instantaneously stopping the flow of flush water.

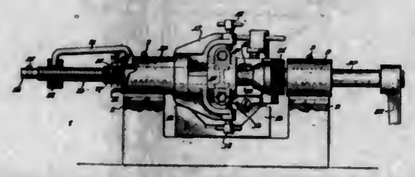


1,630,513. DOOR MECHANISM FOR WASHING MACHINES. FRITZ BALZER, Moline, Ill., assignor to Troy Laundry Machinery Company, Ltd., Chicago, Ill., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,291. 3 Claims. (Cl. 220—41.)

1. In a washing machine, in combination, a rotary cylinder and an enclosing casing therefor, said casing and said cylinder both being provided with doors adapted to be brought into registry to permit access from the exterior of said casing to the interior of said cylinder, said cylinder door being mounted for sliding motion circumferentially of said cylinder, and having a latch member

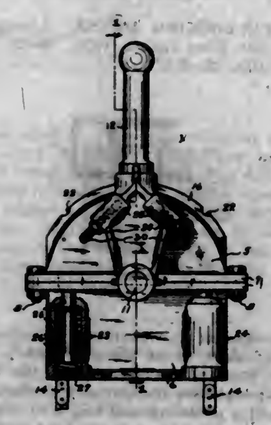
for holding same in open or closed position, said latch member and said cylinder being provided with cooperating parts for holding part of said latch member, when said cylinder door is open, in a position to prevent the closing of said casing door.

1,630,514. CASTER MOUNTING. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Jan. 18, 1923. Serial No. 613,404. 5 Claims. (Cl. 16—35.)



1. In a device of the class described, the combination of a bearing member having a bearing socket and a slotted upper end, the slot and socket communicating with each other, a caster wheel bracket having a stem journaled to rotate in said socket and also to slide axially therein, a caster wheel journaled in said bracket and a flange extending from said bearing member and arranged to tangentially engage the periphery of said wheel upon axial movement of said stem in said bearing member, a cam pivotally mounted in said slotted upper end for imparting said axial movement to said stem, anti-friction means interposed between the upper end of said stem and said cam, said cam having a pair of seats, each of which is adapted to engage said anti-friction means in one of the extremities of its operative movement, and means for retaining said stem in said socket.

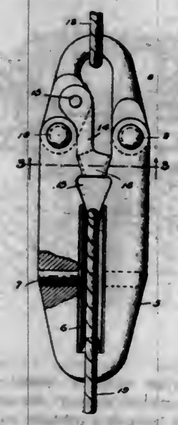
1,630,515. REAMING OR BORING TOOL. GEORGE W. BENEDICT, Detroit, Mich., assignor to Kent-Moore Organization, Detroit, Mich. Filed May 5, 1924. Serial No. 711,092. 1 Claim. (Cl. 77—2.)



A reconditioning machine comprising a base, clamping means on said base adapted for holding a bearing of a connecting rod, a rotatable arbor detachably supported

on said base and adapted to extend through the bearing of the connecting rod, a reversible feed screw coaxially of said arbor, said feed screw having reduced ends either of which may be placed in an end of said arbor, a detent in each reduced end of said feed screw engageable with the end of said arbor for securing said feed screw thereto, a nut on said feed screw, and an arm disposed above

said feed screw and having the ends thereof detachably mounted in said nut and in said base so that said nut will be held stationary relative to said base yet permit of said nut being adjusted when said arm is removed therefrom, and a bit carried by said arbor and adapted to be shifted through the bearing of said connecting rod by rotation of said arbor.



1,630,516. CONTROLLER. KNUTH BERGER, Seattle, Wash. Filed Aug. 2, 1926. Serial No. 126,606. 6 Claims. (Cl. 74—89.)

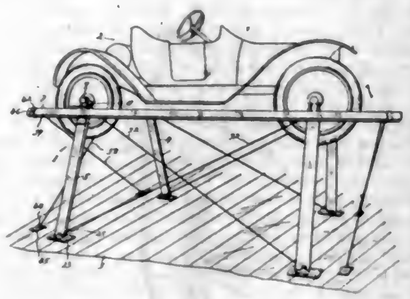
1. In a controller of the class described, a frame, a pulley pivotally mounted on said frame, a flexible connector member carried by said pulley, a handle for oscillating said pulley, said handle having a neutral position, and having an operative position on each side of said neutral position, and resilient recoil means for permitting an overthrow of said handle past either of said operative positions and returning said handle to said operative position.

1,630,517. SNATCH BLOCK. KNUTH BERGER, Seattle, Wash. Filed Aug. 2, 1926. Serial No. 126,607. 2 Claims. (Cl. 254—194.)

1. A snatch block comprising two substantially U-shaped members, the adjoining legs of said members secured together on one side for pivotal movement, means for locking the adjoining legs together on the other side, a sheave rotatively carried by one of the members, said sheave carrying member having an enlarged slot adapted to guide a running line into engagement with the sheave, a dog pivotally connected to the other member, and

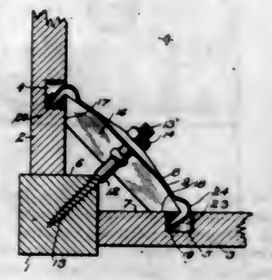
adapted to serve as a closure for said slot and as a means for retaining the legs of the U-shaped members in spaced relation.

1,630,518. NIPPER. WILLIAM A. BERRY, Xenia, Ohio, assignor to The Hooven & Allison Company, Xenia, Ohio, a Corporation of Ohio. Filed Apr. 2, 1926. Serial No. 99,240. 3 Claims. (Cl. 118—39.5.)



1. In a device of the character described a pair of cooperating nipper blades having flared opening portions, oppositely disposed, flattened holding faces, and contiguous smoothing grooves each of said flattened faces terminating at its respective groove, and having its side margins diverging gradually to the full width of said groove.

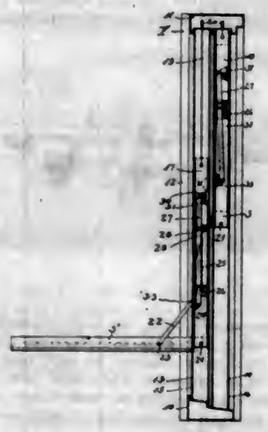
1,630,519. BRAKE-ROD HEAD. WILLIAM W. BLAKELY, Detroit, and CHARLES A. GOODSPEED, Highland Park, Mich.; said Goodspeed assignor to said Blakely. Filed June 11, 1923. Serial No. 644,697. 9 Claims. (Cl. 287—58.)



9. In combination, a rod having a flaring end portion, a head sleeved upon said flaring end portion, a shoulder on the rod constituting an abutment for said head, and a second abutment member for the head held on the rod by the flaring portion aforesaid.

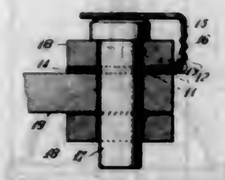
1,630,520. DOUBLE-DECKING DEVICE. WILLIAM W. BLAKELY, Dexter, Mich. Filed Apr. 20, 1925. Serial No. 24,633. 9 Claims. (Cl. 105—368.)

1. The combination with a vehicle and a support therefor, of means on the support for holding the vehicle in elevated position including upright members supporting the wheel hubs of the vehicle, clamps secured to said upright members at the upper ends thereof, anchor plates secured to said support adjacent to the lower ends of said upright members, and bracing means connecting the clamps at the upper ends of the members to the anchor plates at the lower ends of the members.



1,630,521. FURNITURE BRACE. SVEN G. BOLIN, Kansas City, Mo. Filed Mar. 7, 1925. Serial No. 13,863. 3 Claims. (Cl. 45—48.)

3. A furniture brace having, in combination, a body portion, and oppositely disposed angular hooks on said body portion, said hooks being formed with lateral edges adapted to engage the side wall of a cylindrical hole in angular relation to the axis of said hole, said edges converging toward the point of the hooks.

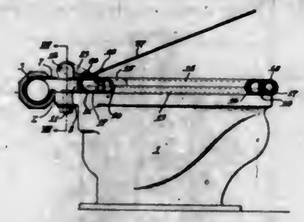


1,630,522. WINDOW STRUCTURE. CHARLES F. BOUCEK, Chicago, Ill., assignor to Ruda Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 4, 1926. Serial No. 92,113. 5 Claims. (Cl. 20—49.)

1. In a window structure, the combination of a window frame having upright side channels, runner frames slidable in said channels, a window sash pivoted to said runner frames to swing vertically into open or closed position, a lever in each runner frame, brake shoes on said levers, said runner frames having openings adjacent to said brake shoes, wedge mechanism in said runner frames, and connections between said wedge mechanism and said sash adapted upon swinging of said sash to open position to actuate said levers to cause the brake shoes to be

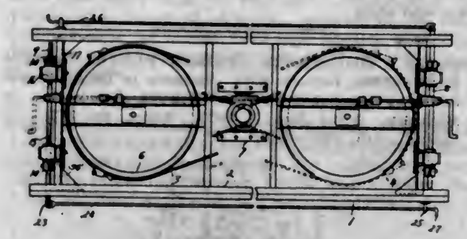
projected through said openings into friction engagement with the sides of said channels to thereby lock said sash against vertical movement in said channels.

1,630,523. PIN-LOCKING MEANS. LLOYD J. BROWN, Evanston, Ill. Filed June 1, 1926. Serial No. 112,992. 1 Claim. (Cl. 85—5.)



Locking means of the character described, composed of a blank of sheet metal provided with a plurality of corrugations disposed transversely of the blank at an angle to the peripheries thereof, said corrugations extending throughout a predetermined length of the blank while the opposite end of the blank is provided with a plain surface, the corrugated end of the blank being provided with a pin receiving aperture, the corrugated end of said blank at a predetermined point intermediate of the aperture and the opposite end of the blank being bent so as to provide a pair of legs or portions disposed at right angles to each other, the juncture between the legs or portions, within the angle defined thereby, being provided with reenforcing ribs disposed lengthwise, while the plain surfaced portion of one of said legs is bent into parallel spaced relation with the apertured leg.

1,630,524. TOILET SEAT. AUGUST J. BRUDER, Holly, Mich. Filed Dec. 2, 1925. Serial No. 72,617. 1 Claim. (Cl. 4—217.)

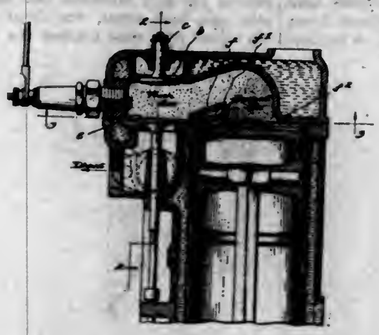


The combination of a toilet bowl, an outlet T connection thereon, and a hollow seat pivotally and detachably connected to said bowl and having an opening establishing a ventilating connection between said bowl and the connection, said seat being composed of a bottom section

having posts, front and back top sections fitted in said bottom section, posts carried by said top section and adjoining the posts of said bottom section, the front top

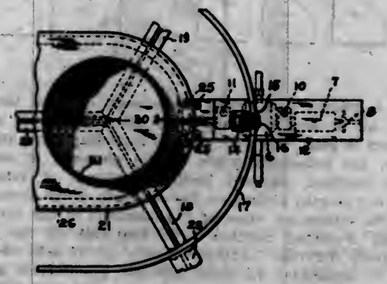
section having a lap joint with the front and back top section, and means connecting the adjoining posts of the sections together.

1,630,525. ATTACHMENT FOR VEHICLES. JAMES HARRY CLARK, River Rouge, Mich. Filed Feb. 20, 1923. Serial No. 620,125. 15 Claims. (Cl. 280—91.)



1. The combination with a vehicle having a main frame, a wheeled truck connected thereto and mechanism for steering said truck, of a shaft supported from said frame, plates secured to said truck, blocks upon said shaft adapted to engage said plates to retain said truck in a pre-determined position with respect to said frame, a handle secured to one of said blocks, a rod connected to said shaft and extending to the opposite end of said frame, and a handle upon said rod.

1,630,526. MACHINE TOOL. STUART A. COGSDILL, Detroit, Mich., assignor to Cogsdill Manufacturing Company, Detroit, Mich., a Copartnership. Filed Mar. 30, 1925. Serial No. 19,521. 5 Claims. (Cl. 279—77.)

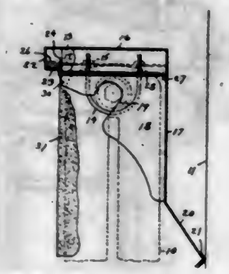


1. In a machine tool, the combination with a cutter shank having a longitudinally extending recess in its side, of a holder having a recess extending longitudinally from one end thereof for receiving said shank, and having a second recess extending longitudinally of and communicating with the first mentioned recess, a pawl rotatable about its longitudinal axis arranged to lie within the second recess during the assembling of said shank with said holder and to extend into the recess in said shank and have an extended contact with said shank longitudinally thereof when said shank is assembled with said holder.

1,630,527. INTERNAL-COMBUSTION ENGINE. EVERETT B. CUSHMAN, Lansing, Mich. Filed Feb. 16, 1924. Serial No. 693,214. 8 Claims. (Cl. 123—191.)

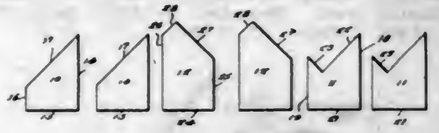
1. In an internal combustion engine, a cylinder, a piston travelling substantially to the top of the cylinder, a combustion chamber in which substantially the entire chamber is comprehended in a relatively long passage of substantially smaller diameter than the cylinder, the axis of the long passage being substantially at right angles to the axis of the cylinder, and a spark plug together with an exhaust valve and port, and an intake valve and port located at the extreme end of such long and narrow combustion chamber remote from the piston.

1,630,528. DRILL MECHANISM. JOHN W. DOYLE, Seattle, Wash. Filed Apr. 19, 1926. Serial No. 102,933. 1 Claim. (Cl. 77—6.)



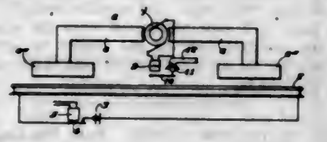
Apparatus of the class described embodying a work support, an arcuate trackway formed around one edge of said work support, another arcuate trackway positioned above said work support, a frame supported and guided for arcuate movement by said trackways, a power operated drill unit carried by said frame and adjustable vertically thereon, means for counter balancing the weight of said drill unit, and a substantially horizontal drill in said drill unit supported with its axis directed toward the vertical axis of the center of curvature of said trackways for all positions of said drill unit on said arcuate trackways.

1,630,529. RADIATOR COVER. KARL DELICA, Portland, Oreg. Filed July 22, 1925. Serial No. 45,211. 1 Claim. (Cl. 237—79.)



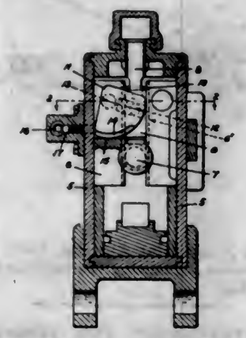
A radiator cover having a pair of horizontal bracket members each of which consists of a channel member adapted to be placed horizontally over the sections of a radiator with the open side of the channel uppermost, each bracket having a U bolt clamp passing around the

under side of the section connection under its respective bracket and fastening to the under side of said channel in a manner to hold its bracket in a permanent position; a removable shelf resting on said brackets and having downturned front, side and rear edges, the front edge having an inturned lip whose rear edge touches the front



of the brackets and the rear edge of said shelf touching the back of said brackets, said rear edge extending downwardly and backwardly to form a spring contact with the wall behind the radiator, said shelf being capable of removal by a lifting action thereon without the removal of any fastenings.

1,630,530. PUZZLE. RICHARD FRYER, Humboldt, Saskatchewan, Canada. Filed Sept. 15, 1924. Serial No. 737,888. Renewed Apr. 20, 1927. 2 Claims. (Cl. 273—157.)

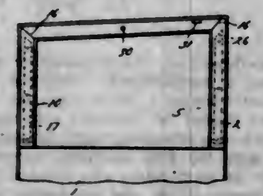


1. A puzzle comprising three sets of two elements each, all of said elements being substantially of oblong contour in plan, and each element including three straight edges, the remaining edges of the elements of one set being inclined, opposed inclined surfaces of relatively different lengths formed on the elements of the second set, and the remaining edges of the elements of the third set having V-shaped notches with the side of the V of relatively different lengths, whereby all of said elements may be associated to form different geometrical figures.

1,630,531. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1922. Serial No. 603,462. 12 Claims. (Cl. 246—63.)

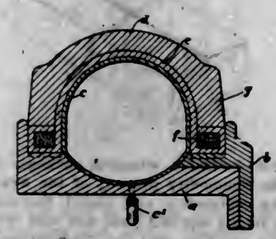
1. In combination, a track rail carrying direct current, a train provided with a generator having a field disposed to receive magnetic flux due to the direct current in said track rail, means on the train for driving the armature of said generator, and train governing apparatus controlled by the current delivered by said armature.

1,630,532. MACHINE-GUN UNIT. THOMAS M. JEFFERY, U. S. Army, Aberdeen Proving Ground, Md. Filed Jan. 13, 1926. Serial No. 81,079. 10 Claims. (Cl. 89—27.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



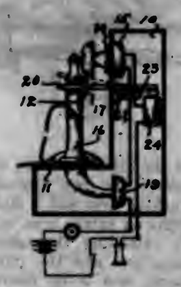
10. The combination with a sear, of a lever fulcrumed adjacent the sear and swingable across the path of travel of the sear, and a sliding connection between the lever and sear.

1,630,533. ADJUSTABLE STRIKER PLATE. EVERETT E. LUNDBERG, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 5, 1925. Serial No. 677. 13 Claims. (Cl. 292—340.)



1. The combination with a door jamb having an opening therein, of a retainer plate bridging the opening, a sheet metal wedge-shaped striker plate adjustably mounted on the retainer plate, means carried by the retainer plate for adjusting the striker plate, and means also carried by the retainer plate for holding said striker plate in adjusted position.

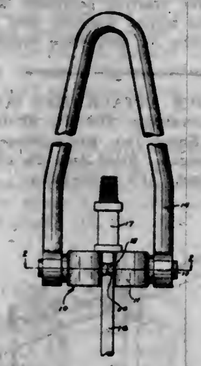
1,630,534. DOOR-WINDOW FINISH-STRIP ASSEMBLY. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1926. Serial No. 123,537. 3 Claims. (Cl. 296—44.)



3. A door assembly comprising a door frame having a cross bar, and depending upright members at the ends of said cross bar, an inverted substantially U-shaped finish strip for said frame having the base of the U extending longitudinally of said cross bar and having the leg portions of the U extending longitudinally of the said upright members, and anchorage strips for said finish strip secured to said upright members and disposed within the leg portions of said U-shaped finish strip.

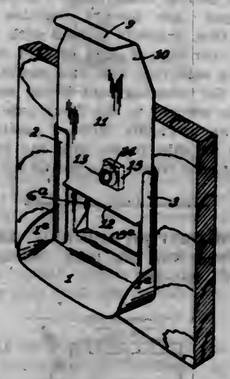
1,630,535. PNEUMATIC TIRE. HANS MAUL, Pasing, near Munich, Germany. Filed Dec. 2, 1926. Serial No. 152,117. 1 Claim. (Cl. 152—10.)

In combination with an inner tube, a tire casing comprising a tread portion and inwardly inclined lateral walls, said walls being of substantial cross-section, the tread portion being of sufficient cross-section to automatically shift the lateral walls to a position parallel to the plane of the tire and to each other on deflation of the inner tube.



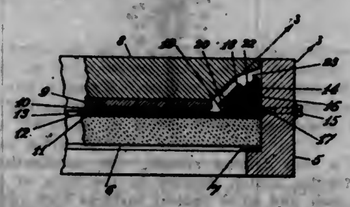
1,630,536. MEANS OF MECHANICALLY INTERCONNECTING SEPARATE TELEPHONE SYSTEMS. RUSSELL L. MAURER, Indianapolis, Ind., assignor of one-half to Edward A. Maurer. Filed May 1, 1926. Serial No. 105,920. 2 Claims. (Cl. 179—170.)

1. The combination with a telephone having an upright standard, a transmitter carried on the standard, a telephone switch-operating, receiver arm extending from the standard normally tending to move upward, and a detachable receiver, of a table supporting said telephone, an extension from the table, a receiver carried by the extension adapted to be covered by the transmitter of said telephone, a transmitter carried by the table against which the telephone receiver may be placed, a lever pivotally carried by the extension adapted normally to press the telephone switch arm downwardly, and an electro-magnet carried by the table to operate said lever whereby said arm may travel upwardly.



1,630,537. SUCKER-ROD ELEVATOR. SAMUEL McGIBBON, Buena Park, Calif. Filed May 2, 1925. Serial No. 27,456. 5 Claims. (Cl. 294—91.)

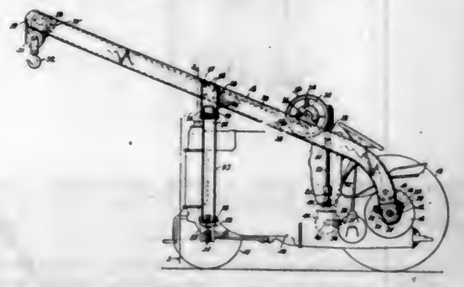
1. A sucker rod elevator including a body, said body having a rod receiving recess therein, said body having a pair of opposed straight holes therein, a plunger mounted to move linearly in each hole, said plungers being adapted in one position to be arranged across said recess to close the same, means to urge said plungers to recess closing position, means to move said plungers to



open position, said means including latches, said latches and said plungers having teeth thereon in direct engagement.

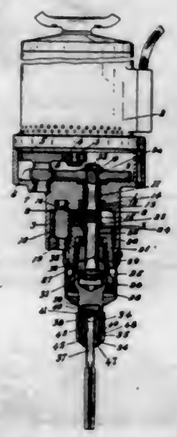
1,630,538. COMBINATION SPOUT AND GATE FOR BINS. RAMIRO PAUL MICALLEF, Fontana, Calif. Filed June 7, 1926. Serial No. 114,132. 3 Claims. (Cl. 221—145.)

1. In a combination spout and gate for bins, a vertical, sheet metallic gate support formed from a single sheet with grooves on its opposite sides and a spout portion at its lower side, and a sheet metallic gate slidably mounted in the grooves.



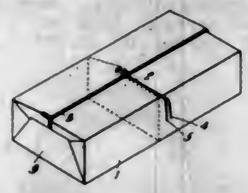
1,630,539. NEGATIVE-MAKING DEVICE. ASHLEY G. OGDEN, Baltimore, Md., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Apr. 22, 1926. Serial No. 103,762. 4 Claims. (Cl. 95—73.)

1. A device for making on one film a plurality of accurately registered negatives of a small original, comprising a photographic exposure frame having a glass



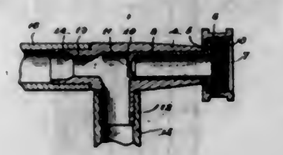
bottom to which the original is secured, a guideway formed along one side of the frame, a slide carrying the film and movable in said guideway, means for accurately indicating successive relative positions of said original and said slide, and means whereby said slide is locked in successive positions for successive exposures.

1,630,540. DERRICK ATTACHMENT FOR TRACTORS. THOMAS F. RAINSFORD, Detroit, Mich., assignor to Whitehead and Kales, Inc., River Rouge, Mich., a Corporation of Michigan. Filed Aug. 26, 1925. Serial No. 52,655. 10 Claims. (Cl. 212—142.)



1. The combination with a tractor having front and rear axles, of a derrick comprising, a frame formed of a pair of U-shaped bars secured together in forwardly converging relation, brackets formed with apertured lugs secured to the rear end of each of said frame members, U-bolts engaging said rear axle and passing through said apertured lugs for securing said frame members to said rear axle, means secured to the front axle for supporting said frame in an upwardly inclined position, a hoisting tackle mounted on said frame with the block thereof at the front end of said frame, and means for operating said hoisting tackle.

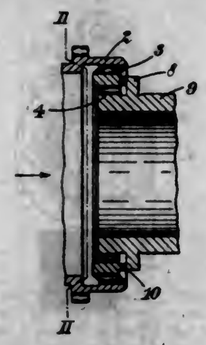
1,630,541. TOOL-DRIVING SPINDLE. ERIC SANDSTROM, Erie, Pa. Filed Nov. 25, 1921. Serial No. 517,833. 2 Claims. (Cl. 10—136.)



1. In a tool driving spindle, the combination of a driven friction clutch member in the form of a sleeve having inner and outer conical surfaces both inclined in the same direction; a forward driving friction clutch member having a conical surface conforming to and engaged by one of the conical surfaces of the friction clutch member when it is subjected to thrust; and a reverse driving friction clutch member having a conical surface conforming to and engaging the other surface of the driven member when the driven member is subjected to pull.

1,630,542. PACKAGE WRAPPING. MYRTLE SCHULZ, Riverside, Ill. Filed July 10, 1922. Serial No. 574,012. 1 Claim. (Cl. 229—87.)

In a sealed severable wrapped package, the combination with the commodity proper; of the wrapping proper enclosing the commodity and sealed thereon said wrapping having folded meeting ends and said wrapping being sealed; and a severing cord for the wrapper proper, said severing cord being loosely confined between the wrapper proper and the commodity and encircling the latter, both free ends of the severing cord being interfolded with folded edges of the wrapper proper and both ends only anchored by said interfolded edges, said ends both being extended to the exterior of the wrapper proper where they are adapted to be grasped and pulled, substantially as specified.



1,630,543. RECEPTACLE FILLING AND DRAINING DEVICE. WILLIAM H. SCOTT, Rochester, N. Y. Filed July 27, 1925. Serial No. 46,206. 3 Claims. (Cl. 162—1.)

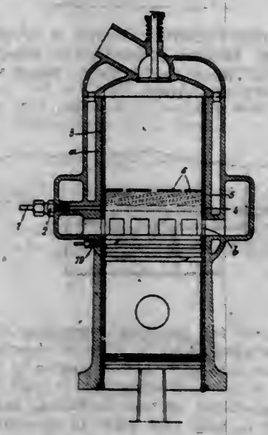
3. An ejector of the class described comprising a tubular T-shaped member, the two aligned arms of which form a faucet attaching arm and a discharge arm while the lateral arm forms an intake arm, said member having a cylindrical bore extending throughout the length of the faucet attaching arm and the intake arm, the passage of the discharge arm being restricted adjacent its intake end and flared outwardly beyond the same, and a tubular member having a cylindrical exterior throughout the greater portion of its length and fitting and extending the entire length of the faucet attaching arm and provided at its inner end with an end wall located at one side of the bore of the intake arm and extending across the faucet attaching arm and provided with a restricted opening forming a jet aperture disposed opposite the restricted end of the bore of the discharging arm.

1,630,544. DRIVING OF ROTARY BLOWERS OR PUMPS FOR USE ON INTERNAL-COMBUSTION ENGINES. FREDERICK ROBERTSON SMITH and SPIRITO MARIO VIALE, Coventry, England. Filed May 12, 1926, Serial No. 108,646, and in Great Britain May 16, 1925. 1 Claim. (Cl. 64—92.)

In the driving of a rotary blower for use as a supercharger on an internal combustion engine, the combination of a driving member and a driven member free of engagement with one another, internally arranged teeth on one of said members and externally arranged teeth on the other member in the same radial planes as the internal teeth, a rigid connecting ring free to float radially in the plane of the teeth on said driving and driven members, and teeth formed externally and internally

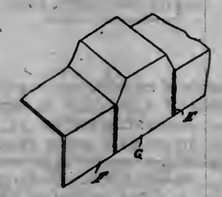
upon said ring adapted to engage respectively with the teeth on the driving and driven members, substantially as set forth.

1,630,545. TOP CONSTRUCTION. SYDNEY SMITH, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 15, 1925. Serial No. 2,536. 11 Claims. (Cl. 296—137.)



1. A vehicle top frame comprising a continuous sheet of metal having a substantially flat deck portion and integral curved side members, the lower edge of said metal being reversely bent to form a channel, a reinforcing member within said channel, and transversely extending reinforcing members secured to the under side of said frame and to said first-named reinforcing member.

1,630,546. STEAM GENERATOR. HUGH SWARTZ and PAUL C. MULLIGAN, Seattle, Wash., assignors, by direct and mesne assignments, to Dual Oil Burner Company, a Corporation. Filed Apr. 12, 1926. Serial No. 101,331. 2 Claims. (Cl. 122—40.)



1. In a steam generator of the class described, an outer casing having a closed outer end, a manifold fitting on the inner end of said casing, a conduit extending through said manifold fitting and into said casing, thence bent double near the outer end of said casing and extending back to a point near the inner end of said casing, the inner end of the conduit being open, a partition in said casing near the inner end, a deflector member extending lengthwise of said casing from said partition to a point near the opposite end of said casing and dividing said casing into an upper and lower compartment, said partition member having openings at the end of said upper compartment for the passage of steam and said manifold fitting having a steam outlet port, and means for supplying liquid to the inlet end of said conduit.

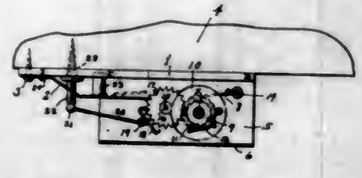
1,630,547. LUBRICATING ARRANGEMENT FOR THE CYLINDERS OF TWO-STROKE CYCLE ENGINES. EUGÈNE HENRI TARTRAIS, Montmorency, France. Filed Jan. 14, 1926, Serial No. 81,143, and in France Jan. 21, 1925. 6 Claims. (Cl. 184—18.)

1. In combination with a two stroke cycle engine having an inner sleeve, a lubricant inlet at the outer periphery of said cylinder, an annular groove at the outer periphery of said sleeve and communicating with said lubricant inlet, narrow and deep apertures provided in said sleeve, opening into the interior of said cylinder, and conduits of great length and relatively small cross section opening into said groove and into said apertures.

1,630,548. CAR-BODY CONSTRUCTION. WILLIAM D. THOMPSON, Detroit, Mich., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed June 11, 1920. Serial No. 388,208. 2 Claims. (Cl. 105—410.)

1. A fashioned metal plate comprising successive portions in the body thereof arranged in separated parallel planes, and a marginal portion in a common plane, said margin having closed cut out portions which compensate for the difference in length of the fashioned and unfashioned portions.

1,630,549. CURTAIN AND DRAPE FIXTURE. HENRY TIELKEMEYER, St. Louis, Mo. Filed Apr. 22, 1926. Serial No. 103,771. 2 Claims. (Cl. 156—10.)



1. A drape or curtain fixture comprising a bracket having a vertical series of holes and a slot extending

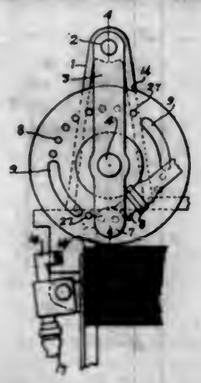
from each hole downwardly toward the inner edge of the bracket and having an upwardly extending seat defined

from the upper edge of the connected slot by an abrupt shoulder and arranged to receive a projection from the end of a curtain rod.

1,630,550. FIRE ALARM. JAMES G. TREMAIN, Port Huron, Mich., assignor of one-half to Joseph Tremain, Detroit, Mich. Filed Aug. 1, 1923. Serial No. 655,042. 3 Claims. (Cl. 116—106.)

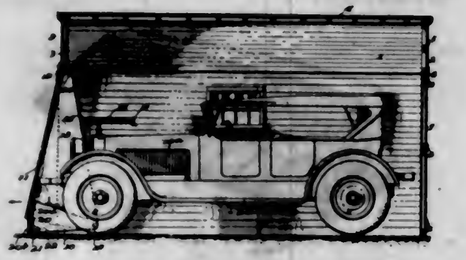
2. A fire-alarm for buildings comprising a clockwork and a hammer adapted to be vibrated thereby, an anvil for said hammer secured to such a portion of the building as is adapted to transmit vibrations, a plate to normally prevent the operation of the clockwork, and a fusible block adapted to hold said plate in operative position, said anvil serving to secure the alarm in position.

1,630,551. SAFETY-RAZOR-BLADE SHARPENER. JOHN VAUGHAN, Milwaukee, Wis., assignor, by direct and mesne assignments, of three-eighths to Allen Nor, Milwaukee, Wis., and one-eighth to William F. Simonsen. Filed Dec. 26, 1922. Serial No. 608,956. 4 Claims. (Cl. 51—211.)



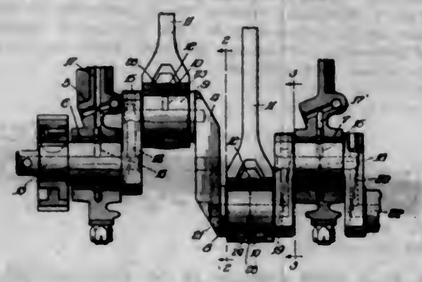
1. As a new article of manufacture, a safety razor blade sharpener consisting of a flat slab of abrading material having a concave sharpening surface of greater width than the width of an ordinary safety razor blade.

4. A sharpening device, consisting of a slab like body provided with a concave abrasive sharpening face of greater width than the width of a razor blade, the radius of the curve of said face corresponding to the bevel of the edge of the blade to be sharpened thereon in any position of use.



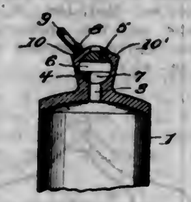
1,630,552. ROTARY FEEDER. ROBERT J. WATERWORTH, Sidney, Ohio, assignor of one-half to L. M. Studevant, Sidney, Ohio. Filed Oct. 5, 1926. Serial No. 139,735. 8 Claims. (Cl. 271—20.)

1. In a feeder, a rotary feeding head, a flattened portion on the periphery thereof said head having supplementary suction passageways communicating with said flattened portion, a main suction passageway communicating with the periphery of the feeder head, a suction means adapted to supply suction to said passageways



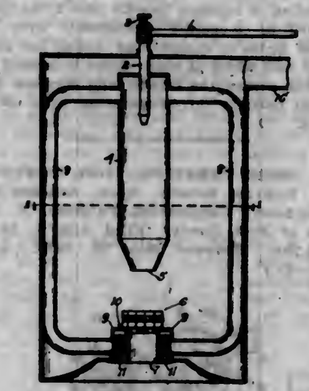
whereby the leading edge of a sheet to be fed will be drawn against the flattened portion of the feeder head and bent at an angle to the sheets upon which it rests.

1,630,553. GARAGE. WILLIAM F. WATSON, Athens, Ga. Filed July 19, 1926. Serial No. 123,459. 17 Claims. (Cl. 20—1.13.)



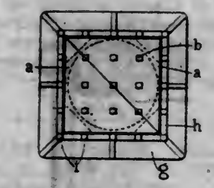
17. In a garage, a vertical wall including a section adapted to yield in an outward and upward direction under impact or pressure, and means automatically adjustable on opening of said yieldable section to substantially close the space between the yieldable section and the underlying surface.

1,630,554. OIL-FEED CONSTRUCTION. CHILDE HAROLD WILLS, Marysville, Mich. Filed Nov. 6, 1920. Serial No. 422,160. 12 Claims. (Cl. 184—7.)



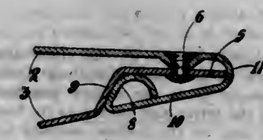
1. A rotating member, a bearing therefor, said member having an oil passage therein and having a channel communicating with said passage upon a chord of the circle of said member extending between the exterior of the member and said passage.

1,630,555. TUBE. ROY M. WITT, Tampa, Fla. Filed June 18, 1926. Serial No. 116,968. 2 Claims. (Cl. 221—60.)



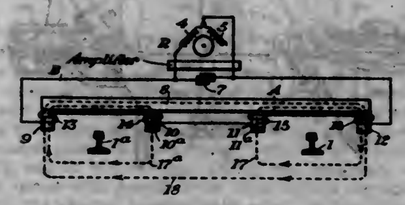
1. A tube for paste and the like comprising a head having a discharge passage therein and a bore intersecting the passage, a rotary valve in the bore and having a slot therein for registering with the passage when the valve is moved to a certain position, a yoke shaped handle connected with the ends of the valve for moving the same, said valve having a slot leading from the first slot through one side of the valve for placing said first slot in communication with the interior of the tube when the valve is in closed position and the head having shoulders thereon for limiting the movement of the handle.

1,630,556. BURNER FOR HEAVY HYDROCARBONS. EDSON R. WOLCOTT, Port Arthur, Tex. Filed Dec. 20, 1923. Serial No. 681,851. 5 Claims. (Cl. 158—53.)



1. A hydrocarbon burner comprising supply means for liquid hydrocarbon, a volatilizing chamber adapted to receive such liquid hydrocarbon from said supply means and provided at its lower end with an opening adapted to permit free and continual discharge of residual material, a burner means positioned directly below said lower opening of the volatilizing chamber and adapted to receive the residual hydrocarbon therefrom, means for conducting to said burner means hydrocarbon vapor produced by action of heat on the hydrocarbons supplied to the said volatilizing chamber, said burner means being provided with means for supplying air thereto for combustion of both the residual hydrocarbon and the said hydrocarbon vapor and means for conducting the hot products of combustion from said burner means to a position to heat the said volatilizing chamber.

1,630,557. COVER FOR MANHOLES. WALTER JOSEPH Woodsow, London, England. Filed Oct. 29, 1926, Serial No. 144,980, and in Great Britain Dec. 19, 1925. 5 Claims. (Cl. 94—34.)

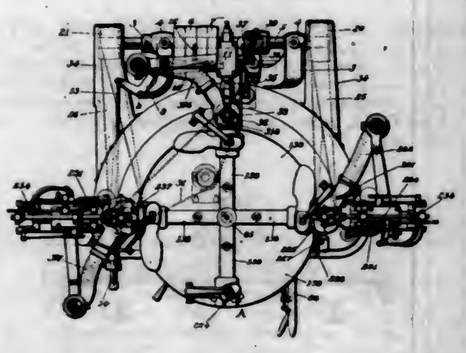


1. A cover for a manhole comprising in combination a plurality of separate triangular sections which are loose with respect to each other and which together form the cover proper, and a frame having seatings to support each of the said separate triangular sections at their three angles, substantially as set forth.

1,630,558. JOINT FOR SHEET-METAL PLATES. HAMILTON NEIL WYLIE and FREDERICK MICHAEL GREEN, Coventry, England. Filed May 20, 1926, Serial No. 110,506, and in Great Britain May 28, 1925. 4 Claims. (Cl. 189—36.)

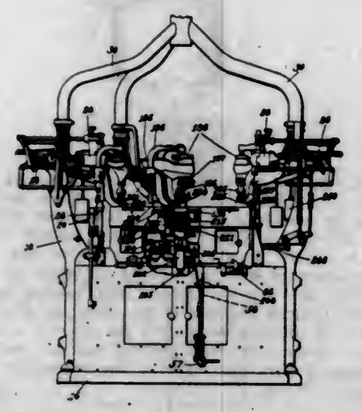
1. A joint for sheet metal plates wherein one plate is bent in two positions to form a step, thereby bringing its edge closer to another plate to which it is fastened, and an extension of the second plate is bent to lie over and above the step and to meet the bent edge of the first plate so that it forms a smooth continuation of the latter's surface.

1,630,559. TRAIN-CARRIED RECEIVER FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. CONRAD H. ZIERDT, Rosedale, Penn Township, Allegheny County, Pa., assignor to The Union Switch and Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 5, 1925. Serial No. 60,504. 2 Claims. (Cl. 246—63.)



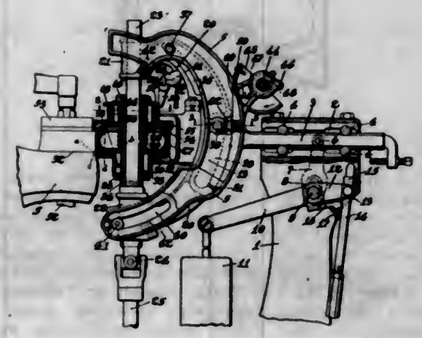
1. A train-carried receiver comprising a bar extending transversely across the track rails and having four downwardly projecting legs, two of which are on opposite sides of one track rail and the other two of which are on opposite sides of the other track rail, and a winding made up of a coil on each leg, said coils being connected in series in such manner that the electromotive forces induced therein by an alternating current flowing through the two track rails in multiple are additive.

1,630,560. HAIR-CURLING DEVICE. PERCY MORTON BEARD, Tulsa, Okla. Filed Mar. 3, 1926. Serial No. 92,015. 7 Claims. (Cl. 132—37.)



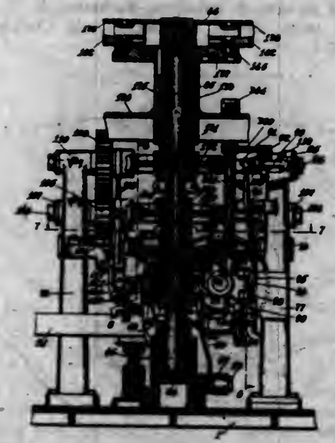
1. A hair curling device of the class described comprising a hollow member, and a heating member disposed within and spaced from the hollow member to thereby indirectly heat the latter and having at its free end prongs to engage the end of the hollow member to center the heating member therein.

1,630,561. HEEL MACHINE. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 4, 1918. Serial No. 265,245. 106 Claims. (Cl. 12—87.)



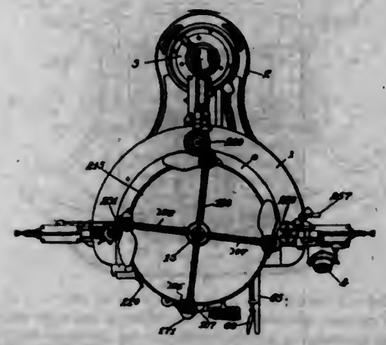
6. In a machine of the class described, the combination of a trimming tool, a randing tool, and a scouring tool, means for operating said tools at uniform speeds, means for successively presenting the heel of a shoe to the treatment of each of said tools, and means for moving the heel relatively to each of said tools as each acts upon the heel to cause the tool to treat the same extent of heel surface in successive equal units of time from one breast corner to the other.

1,630,562. MACHINE FOR USE IN THE MANUFACTURE OF BOOTS AND SHOES. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 4, 1918, Serial No. 265,245. Divided and this application filed Jan. 21, 1926, Serial No. 82,710. Renewed Mar. 5, 1927. 41 Claims. (Cl. 12—87.)



20. A machine of the character described, comprising a rotatable table, a circular series of shoe-supporting and heel-pressing instrumentalities thereon, means for holding and releasing the same, a series of connections extending downward below the table for actuating said instrumentalities, a common treadle and actuating connection adapted to co-operate successively with the members of said series of connections, means for guiding the members of said series of connections to normal positions, and a spring urging the treadle and common connection to a normal position for co-operating with the series of connections.

1,630,563. HEEL-TREATING TOOL SUPPORT. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1920, Serial No. 401,289. Renewed May 25, 1926. 21 Claims. (Cl. 12—87.)

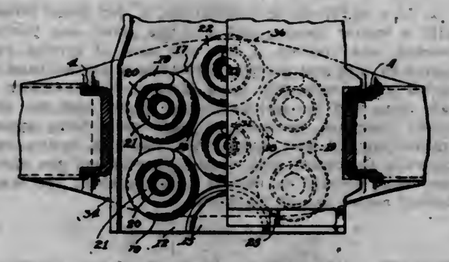


8. A machine having a tiltable rotary heel treating tool, means to limit tilting of the tool in one direction to an initial position with the axis substantially vertical, and a mounting for the tool permitting it to move to tilt its axis from the vertical to treat different parts of a heel and fixing the axis of tilting at such a position that the force of gravity acts on the tool and associated parts of the mounting yieldingly to resist tilting of the axis of the tool from the vertical.

1,630,564. HEEL-FINISHING MACHINE. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 13, 1920, Serial No. 351,117. Renewed May 28, 1926. 35 Claims. (Cl. 12—87.)

7. A heel finishing machine comprising a series of rotary heel finishing tools including a rotary polishing brush, a jack, means for moving the jack to present the heel of a shoe mounted thereon successively to the different tools, a member movable by the operative to initiate the movement of the jack, a wax holder displaceable to apply wax to said rotary polishing brush, and means connecting said wax holder to said movable member to hold said wax holder in position to apply wax to said brush while said movable member is in displaced position.

1,630,565. HEEL MACHINE. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 6, 1923, Serial No. 630,835, and in Canada Apr. 7, 1922. 15 Claims. (Cl. 12—87.)

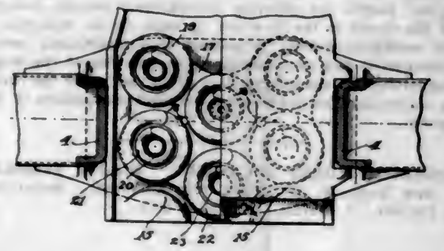


1. In a machine of the character described, a plurality of tools adapted for operating upon a shoe heel and arranged in a circle, a turret rotatable about the center of said circle and carrying a plurality of work supporting devices each rotatably mounted on the turret, means for intermittently rotating said turret to transfer a heel to said tools successively, means for intermittently rotating the work-supporting devices relatively to the turret, means for effecting intermittent reverse rotation of the turret in the direction opposite to the direction of its work-transferring movement, and controlling means constructed and arranged to cause rotation of the work-supporting devices relatively to the turret while the turret is stationary and between two reverse movements of the turret.

1,630,566. TOILET ACCESSORY. WILLIAM FRIEDMAN, New York, N. Y. Filed July 26, 1926. Serial No. 124,984. 4 Claims. (Cl. 206—56.)

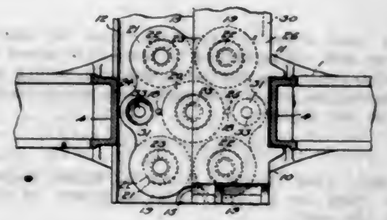
1. A toilet accessory comprising means for holding a make-up stick and permitting the same to be moved longitudinally, and means associated with said holding means for shaving the end of said stick when moved longitudinally in one direction.

1,630,567. CAR TRUCK. BYERS W. KADEL, Baltimore, Md. Filed Apr. 1, 1926. Serial No. 99,063. 21 Claims. (Cl. 105—197.)



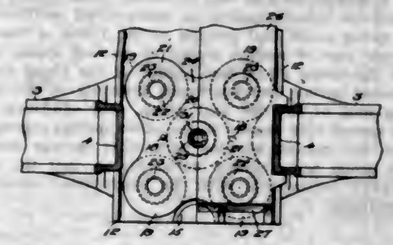
2. In a car truck, in combination, a side frame formed with a bolster opening and a spring plank seat portion beneath the bolster opening, a spring plank positioned on said spring plank seat portion of the frame, a standard five unit nest of springs supported on said spring plank above the spring plank seat portion of the frame and an additional spring unit positioned inwardly of the center spring unit of the five unit group, said additional unit being spaced with respect to the other springs corresponding to the spacing between said other springs and the entire group being shifted outwardly so that its center of gravity corresponds with the longitudinal center line of the frame.

1,630,568. CAR TRUCK. BYERS W. KADEL, Baltimore, Md. Filed Apr. 1, 1926. Serial No. 99,064. 17 Claims. (Cl. 105—197.)



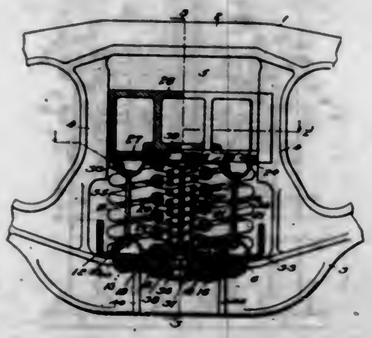
1. In a car truck, in combination, a side frame formed with a bolster opening and a spring plank seat portion

beneath said opening, a standard nest of springs supported by said spring plank seat portion and an additional spring unit located outward of the center spring of said nest,



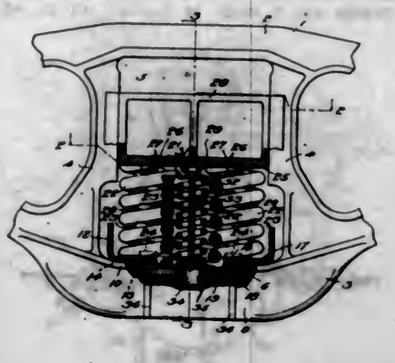
said standard nest being positioned inwardly so that the whole group balances about the center line of the side frame.

1,630,569. CAR TRUCK. BYERS W. KADEL, Baltimore, Md. Filed May 12, 1926. Serial No. 108,661. 19 Claims. (Cl. 105—197.)



1. In a car truck, in combination, a side frame formed with a bolster opening and a spring plank seat portion beneath said opening, a five unit nest of springs supported by said seat portion and arranged as two pairs of spring units, each pair being disposed longitudinally of said frame and the springs of each spaced with just sufficient clearance therebetween, said pairs being spaced transversely of said frame with the fifth spring unit centrally positioned with respect thereto and the entire nest being located so that it balances about the longitudinal center line of the frame.

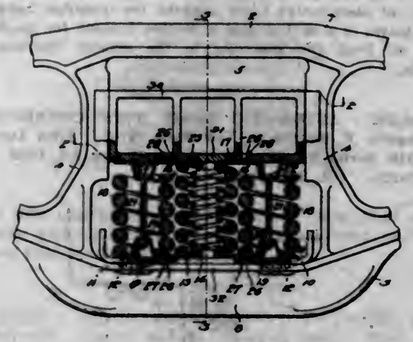
1,630,570. CAR TRUCK. BYERS W. KADEL, Baltimore, Md. Filed May 12, 1926. Serial No. 108,662. 19 Claims. (Cl. 105—197.)



1. In a car truck, in combination, a side frame formed with bolster columns leaving an opening therebetween normally adapted for a four unit nest of springs and a spring plank seat portion beneath said opening, a five unit nest of springs supported by said spring plank seat portion and arranged with two pairs of transversely arranged springs, longitudinally spaced to allow just sufficient clearance with respect to the bolster columns, the spring units of each pair being spaced sufficiently transversely of the frame for receiving the fifth spring unit centrally disposed with respect thereto, said five unit nest of springs being positioned so that it balances about the longitudinal center line of the side frame.

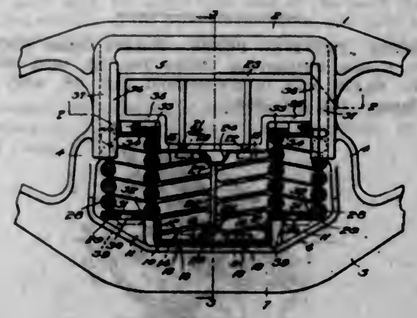
1,630,571. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., and DONALD S. BARROWS, Rochester, N. Y. Filed May 20, 1926. Serial No. 110,510. 15 Claims. (Cl. 105—197.)

1. In a car truck, in combination, a side frame formed with a bolster opening and a spring plank seat portion underlying said opening, a nest of springs of uniform normal height supported by said spring plank seat portion, and a bolster supported by said nest of springs, said bolster being so constructed that the springs will be successively loaded.



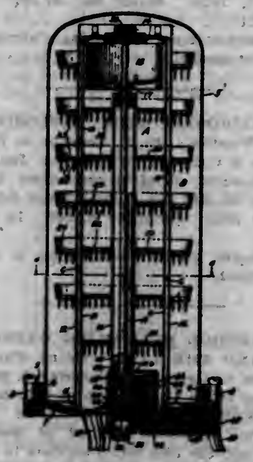
1,630,572. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., and DONALD S. BARROWS, Rochester, N. Y. Filed May 20, 1926. Serial No. 110,511. 17 Claims. (Cl. 105—197.)

1. In a car truck, in combination, a side frame formed with a bolster opening and a spring plank seat portion underlying said opening, a spring plank supported on said spring plank seat portion, a nest of springs of uniform



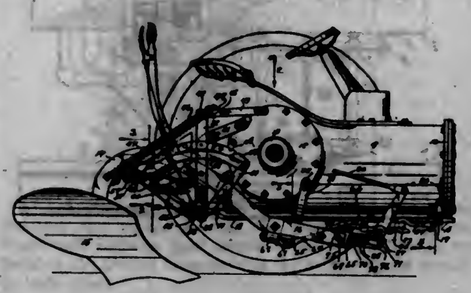
normal height supported by said spring plank seat portion and spring plank, and a bolster supported by said nest of springs, said spring plank being so constructed that the springs will be successively loaded.

1,630,573. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., and DONALD S. BARROWS, Rochester, N. Y. Filed June 9, 1926. Serial No. 114,739. 20 Claims. (Cl. 105—197.)



1. In a car truck, in combination, a side frame formed with a bolster opening and a spring plank seat portion underlying said opening, a nest of springs supported by said spring plank seat portion, a bolster supported by said nest of springs, and additional springs of approximately the same diameter positioned one on either side of said nest, the springs in said nest being longer than the additional springs whereby the latter are not stressed until after a predetermined compression of said nest of springs.

1,630,574. CAR TRUCK. BYERS W. KADEL, Baltimore, Md., and DONALD S. BARROWS, Rochester, N. Y. Filed June 9, 1926. Serial No. 114,740. 13 Claims. (Cl. 105—197.)



1. In a truck, in combination, a side frame formed with a bolster opening, a main spring supporting portion underlying said opening, an auxiliary spring supporting portion at a higher elevation adjacent said first mentioned spring supporting portion, a plurality of springs supported by said main spring supporting portion and a bolster supported by said springs, spring means disposed on the auxiliary spring supporting portion of the frame and extending toward said bolster, said spring means being of such a height that it is not stressed until after a predetermined compression of the other springs.

1,630,575. CARBONATOR. GEORGE H. MAAS, Milwaukee, Wis. Filed July 26, 1917. Serial No. 182,968. 12 Claims. (Cl. 261—19.)

1. In an apparatus of the class described including a casing, a movable chamber structure within the casing, means for supplying gas and liquid to the casing, and means operated by movement of the chamber structure for governing the flow of liquid into the casing.

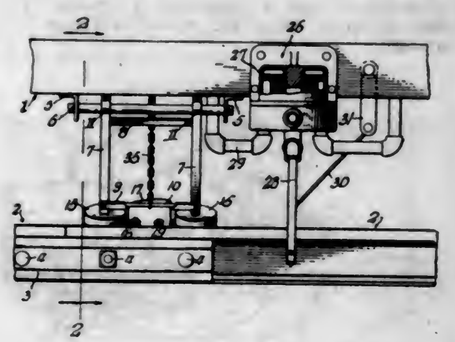
1,630,576. TRACTOR-SUPPORTED PLOWING ATTACHMENT. MARTIN B. MONSON, Jefferson County, near Wheatridge, Colo., assignor, by direct and mesne assignments, to The Moro Plow & Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 20, 1925. Serial No. 16,981. 8 Claims. (Cl. 97—47.)

1. In combination with a tractor and paired plow elements including rear and forward plow beam portions, of supporting means directly mounted upon said tractor, for suspending said rear plow beam portions therefrom, embodying rocker crank-like elements pivotally mounted at their lower ends and at their upper ends provided with a cross-member disposed in arcuately operative association with the under side of its complementary rear plow beam

portion, adjustable means for swinging said crank elements, and means for pivotally connecting the forward plow beam portions with said tractor at positions forwardly of the rear of said tractor.

1,630,577. NITROGLUCOSIDE EXPLOSIVE. ROBERT C. MORAN, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Original application filed Jan. 23, 1923, Serial No. 614,455. Divided and this application filed Nov. 6, 1925. Serial No. 67,207. 20 Claims. (Cl. 52—13.)

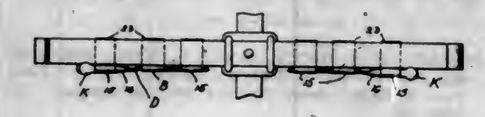
1. An explosive mixture comprising a nitrated glucoside of a polyhydric alcohol.



1,630,578. NITROGLUCOSIDE EXPLOSIVE. ROBERT C. MORAN, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Original application filed Jan. 23, 1923, Serial No. 614,455. Divided and this application filed Nov. 6, 1925. Serial No. 67,208. 19 Claims. (Cl. 52—13.)

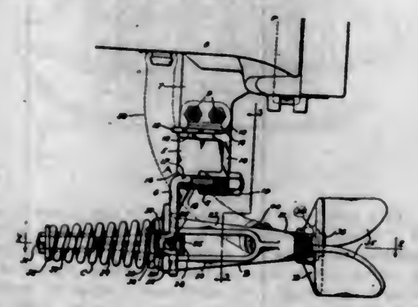
1. An explosive mixture comprising a nitrated glucoside of a glycol.

1,630,579. METHOD OF MAKING GYPSUM STUCCO BLOCKS AND THE LIKE. CALEB PAYNE, Chicago, Ill., assignor to Gypsum Engineering & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1924. Serial No. 743,136. 3 Claims. (Cl. 18—55.)



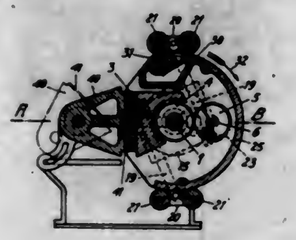
1. The herein described method of making gypsum stucco blocks and the like which consists in confining the mass during hydration and subjecting the mass at the time of initial set to a substantial amount of pressure, thereby compacting the mass and eliminating surplus water.

1,630,580. AUTOMATIC MAKE-AND-BREAK CONTACTOR. HARRY W. PROTZELLER, East Chicago, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Apr. 8, 1926. Serial No. 100,767. 10 Claims. (Cl. 104—279.)



1. A contactor of the kind described embodying therein, a supporting plate, means thereon adapted for a guiding engagement along a track rail, relatively movable contact members mounted on said plate and normally inactive means mounted on said plate and adapted to engage a part of a joint in said rail to cause a relative movement of said members into contact and to hold the same therein as long as said normally inactive means engages said rail joint part.

1,630,581. LUBRICATING DEVICE FOR VEHICLE SPRINGS. WILLIAM K. RILEY, Huntington Park, Calif. Filed Dec. 8, 1923. Serial No. 679,404. 8 Claims. (Cl. 184—1.)



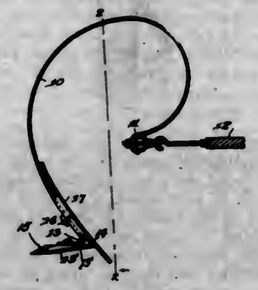
1. A spring lubricating device comprising an oil reservoir, oil distributing units adapted for insertion between the leaves of a spring, and a flexible conduit for conducting oil from the reservoir to the several distributing units.

1,630,582. AUTOMATIC TRAIN PIPE CONNECTER. JOSEPH V. ROBINSON, New York, N. Y. Filed Dec. 5, 1919, Serial No. 342,806. Renewed Aug. 16, 1926. 13 Claims. (Cl. 285—58.)

1. In an automatic train pipe connecter, the combination of a coupling head, a base having oppositely disposed bearings which project rearwardly from the rear side of the base, a universal joint mounted in said bearings for permitting universal movement to said head, a conduit connected with said coupling head, means extending from said conduit to the rear of said base, a projection mounted on the rear end of said means and cooperating with the rearwardly projecting portion of said bearings to resist undue rotary movement of said coupling head about its longitudinal axis, and a spring for extending said head.

1,630,583. PRINTING PRESS. JOHANN GEORG SCHICK, St. Gallen, Switzerland. Filed Jan. 22, 1926, Serial No. 83,129, and in Switzerland Jan. 28, 1925. 2 Claims. (Cl. 101—313.)

1. In a printing press a bed to hold a form, a revoluble shaft extending through the bed from end to end, an ink cylinder concentric with said shaft and provided with a fountain, inking roller carrying means mounted for rotation and the axis of rotation of which is concentric with said shaft and ink cylinder, a countershaft geared

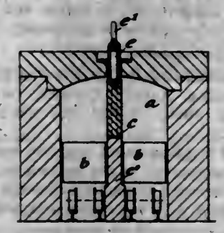


to the first named shaft and to said inking roller carrying means, and means actuated by said countershaft to impart reciprocating motion to said ink cylinder, said means including cams on said countershaft and tappet members in said cylinder coacting with said cams.

1,630,584. RAILWAY-TRACK JOINT. WILLIAM H. SCHNEIDER, Freeport, N. Y. Filed Feb. 17, 1926. Serial No. 88,742. 13 Claims. (Cl. 238—151.)

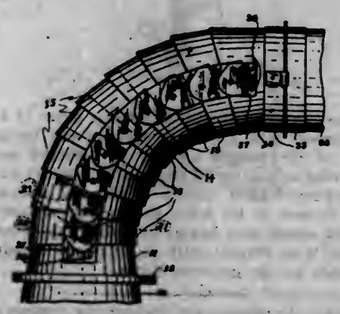
1. The combination with a railway track joint of a fibrous packing therein adapted to receive and retain a track joint lubricant.

1,630,585. COMBINED CULTIVATOR TOOTH AND SWEEP. PHILIP SIMONS, Pewamo, Mich. Filed Dec. 3, 1924. Serial No. 753,668. 3 Claims. (Cl. 97—205.)



1. The combination of a harrow tooth, and a triangular horizontally disposed blade provided with a shank at its tip secured to the rear side of said tooth supporting the blade with its apex at the rear of the tooth and in spaced relation to the point of the tooth, said blade being upwardly and inwardly curved from each cutting edge thereof.

1,630,586. THERMOSTAT SWITCH. IRA EDWARD SMITH, Stockton, Calif. Filed May 8, 1925. Serial No. 28,847. 1 Claim. (Cl. 200—140.)

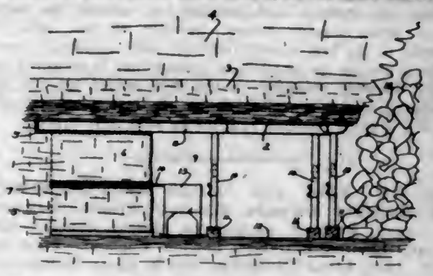


A thermostat switch comprising a contact structure consisting of a substantially horizontal tube containing a conducting liquid and spaced contacts depending into the tube adjacent one end thereof, a turnable bracket on which said tube is mounted, an element movable by varying temperature conditions, connecting means between the element and bracket for turning the latter when said element moves, another contact structure similar to the first named structure and including a second tube, a bracket in which said second tube is mounted and itself turnably mounted on the first named bracket, and clamping means for maintaining the last named bracket in any desired position relative to said first bracket.

1,630,587. KILN AND OTHER HEAT-TREATMENT FURNACE. CHARLES WILLIAM SPEIRS, Battersea, London, England, assignor to Morgan Crucible Company Limited, Battersea, London, England. Filed Jan. 21, 1926, Serial No. 82,749, and in Great Britain Sept. 9, 1925. 13 Claims. (Cl. 25—142.)

1. A tunnel kiln wherein the firing zone is formed by an electric resistor fixed vertically in the centre of the tunnel so that the heat is radiated equally from both sides on to two streams of articles passing either in the same or opposite directions.

1,630,588. BLOWER PIPE FOR WIND STACKERS. HERBERT B. SPERRY, Chicago, Ill., assignor to Appleton Manufacturing Company, a Corporation of Illinois. Filed Apr. 20, 1923. Serial No. 633,390. 10 Claims. (Cl. 193—26.)



1. A flexible elbow comprising a plurality of pivoted sections, and means forming the pivotal connection between said sections, said means having stops thereon for limiting the pivotal movement of the sections with respect to each other.

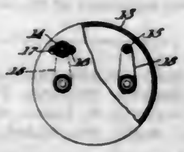
1,630,589. METHOD OF AND MEANS FOR SUPPORTING ROOF STRATA DURING THE MINING OF MINERALS. WILLIAM P. TABER, Adena, Ohio. Filed June 6, 1925. Serial No. 35,444. 4 Claims. (Cl. 61—84.)

1. The herein described method of supporting roof strata during the mining of minerals, which consists in excavating at the top of a mineral vein, a hole which

extends beyond the vertical plane of the section of minerals next to be removed, then inserting in said hole a support to rest at its inner end upon the solid minerals

beyond the section thereof to be taken out, and then sustaining said support at its outer end in the space from which the minerals have previously been removed.

1,630,590. PROCESS OF MOLDING FACED CONCRETE UNITS. WILLIAM ROSCOE TUCKER, Dawsonville, Ga. Filed Nov. 22, 1926. Serial No. 150,151. 1 Claim. (Cl. 18—60.)



The process of molding faced concrete units which consists in placing aggregate in the bottom of a mold, pouring in sufficient mercury to partly submerge the aggregate, and filling the mold with a concrete mixture.

1,630,591. FURNACE-DAMPER DEVICE. JAMES VRBA, Marshalltown, Iowa, assignor to Lennox Furnace Company, Marshalltown, Iowa. Filed Nov. 24, 1924. Serial No. 751,959. 4 Claims. (Cl. 126—285.)

3. The combination with a radiator drum of a deflector plate formed with a damper opening and having at the bottom of the damper opening an enlarged socket, and also having at the top of the damper opening an enlarged body portion formed with a socket, and a damper body having formed at its lower end a tapered bearing fitted into said socket and having formed at its upper end an enlarged body formed with a pivot pin opening at its upper end, for the purposes stated.

1,630,592. ELECTRICAL MEASURING INSTRUMENT. EDWARD F. WESTON, Elizabeth, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a Corporation of New Jersey. Filed Nov. 2, 1925. Serial No. 66,350. 4 Claims. (Cl. 171—95.)

1. An electrical measuring instrument having pin-shaped terminals arranged parallel to each other and means for adjusting the spacing of the latter while maintaining their parallel arrangement.

1,630,593. PROCESS OF MAKING ESTERS FROM ALDEHYDES. CHARLES O. YOUNG, Jackson Heights, N. Y., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,838. 4 Claims. (Cl. 260—106.)

2. Process of making esters which comprises bringing anhydrous aldehyde into contact with a catalyst comprising the aluminum alkoxy derivative of ethylene glycol monoethyl ether having the formula $(C_2H_4(OC_2H_5)O)_3Al$.

1,630,594. WINDOW VENTILATOR. VICTOR M. ALLEN, Waverly, N. Y. Filed Aug. 14, 1920. Serial No. 403,568. 5 Claims. (Cl. 98—99.)

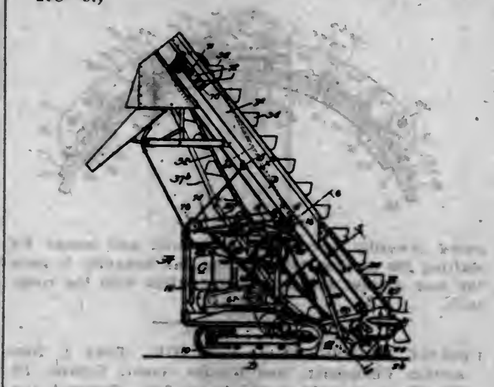
1. In a window ventilator, the combination of a frame having a longitudinal recess in the under side of its top bar and provided with an upturned longitudinal rib on the front wall of said recess, a plurality of panels pivotally mounted in the frame, the pivot of one of the panels being elongated, a worm wheel fixed on said elongated pivot, a shaft disposed transversely to the worm wheel, means for setting said shaft, a worm on said shaft meshing with the worm wheel, and an overhanging lip extending along the top of the uppermost panel and playing in the recess in the frame to engage over and bear upon the upturned rib.

1,630,595. SAFETY STARTING CRANK FOR INTERNAL-COMBUSTION ENGINES. ARTHUR E. BABCOCK, Dolores, Colo. Filed Sept. 16, 1926. Serial No. 135,921. 3 Claims. (Cl. 123—185.)

3. In a device of the type described, a shaft adapted at one end for engagement with the shaft of an internal combustion engine, a crank for rotating the shaft comprising an arm and an angular extension on said arm forming a hand grip, said arm being formed in two relatively rotatable sections one of which is rotatably engaged with the opposite end of the shaft and the other of which bears said hand grip, a ratchet mechanism connecting the

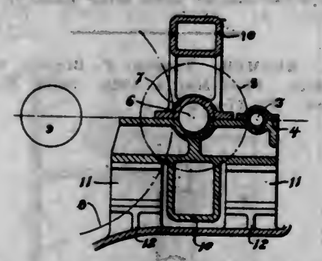
shaft and the first named section of the arm including a pawl carried by the arm, a cam for disengaging said pawl to render the same inoperative and a connection between the cam and the last named section of the arm, shifting the cam to disengage the pawl when the arm is rotated.

1,630,596. ANTISEPTIC ADHESIVE TAPE. PETER BANFF, Chicago, Ill. Filed Nov. 16, 1925. Serial No. 69,396. 2 Claims. (Cl. 128—268.)



1. An antiseptic adhesive tape comprising an impervious web of appropriate width having one face thereof provided throughout with an adhesive substance and its other face non-adhesive throughout, a lengthwise extending folded medicated element secured to said web by the adhesive coating and coextensive with said web, said element of materially less width than the width of the web and spaced equi-distant from each side edge of the latter, and a pair of removable, oppositely extending protecting elements for said adhesive coating and said medicated element, each of said protecting elements having its outer side edge flush with the side edge of said web and its inner face at the outer portion thereof removably secured throughout to the adhesive face of the web at one side of the medicated element to provide a normally connected outer portion and a permanently disconnected inner portion, said protecting elements when removed exposing portions of said adhesive face to permit of said portions anchoring the web to retain the medicated element in position, said protecting elements having the inner portions thereof extending in opposite directions, normally overlapping each other, disconnected from each other, opposing and disconnected from said medicated element and providing oppositely disposed finger grips for removing said protecting elements.

1,630,597. ADHESIVE TAPE. PETER BANFF, Chicago, Ill. Filed Dec. 2, 1926. Serial No. 152,173. 3 Claims. (Cl. 128—268.)



1. An antiseptic adhesive tape comprising an antiseptic web impervious to water and pervious to air and having its outer face non-adhesive throughout and its inner face adjacent the longitudinal median thereof and on each side provided with an adhesive coating, said coatings spaced from each other to provide the inner face of the web with a central portion free of adhesive, a medicated element having each side marginal portion of one face thereof secured with said web by an adhesive coating, and a pair of oppositely extending, overlapping protecting elements for said medicated element, said protecting elements being removably secured to said web by said coatings adjacent the sides of said medicated element.

1,630,598. LOADER. HARRY H. BARBER, Aurora, Ill., assignor to Barber-Greene Company, Aurora, Ill., a Corporation of Illinois. Filed July 30, 1923, Serial No. 654,534. Renewed Feb. 21, 1927. 58 Claims. (Cl. 198—9.)

1. In a machine of the class described, a supporting structure, a track upon said structure, a conveyor boom having a forward loading end, a pair of parallel rollers upon said boom and being so located as to cause an overbalance of said loading end and to engage said track, said boom being adapted to travel and tilt upon said track and said track forming the sole downward thrust resisting support for said boom in predetermined positions.

1,630,599. DOUBLE-REDUCTION GEAR. KARL BAUMANN, Urmston, England, assignor, by mesne assignments, to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed July 16, 1923, Serial No. 651,778, and in Great Britain July 25, 1922. 7 Claims. (Cl. 74—7.)

1. In a double reduction gearing embodying a high speed shaft, an intermediate speed shaft and a low speed shaft, a rigid frame member carrying two of said shafts so as to maintain them in parallel relationship, and mounting means for said frame member comprising a section of I-beam having the plane of its web substantially normal to the axis of the third shaft, whereby said frame may tilt with respect to said third shaft by flexure of said web.

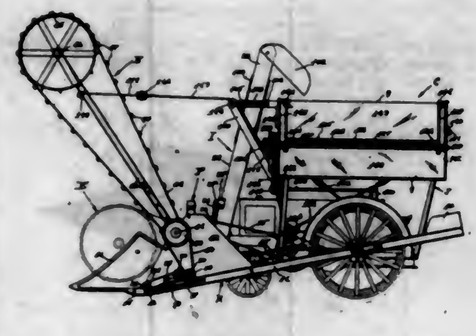
1,630,600. DOOR CLOSURE FOR ROTATABLE RECEPTACLES. MAURICE F. BENTHAM and RAYMOND H. MOORE, Harvey, Ill., assignors to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Oct. 16, 1926. Serial No. 141,909. 21 Claims. (Cl. 220—55.)

1. The combination with a rotatable receptacle having an opening therein, and a door for the opening having marginal engagement with the receptacle, of a door-securing device comprising a member outside of and movable relatively to and across the door, a link, pivotal connec-

tions between the link-ends and the member and receptacle respectively, one of which is detachable, the pivots being disposed so the connection with the member will

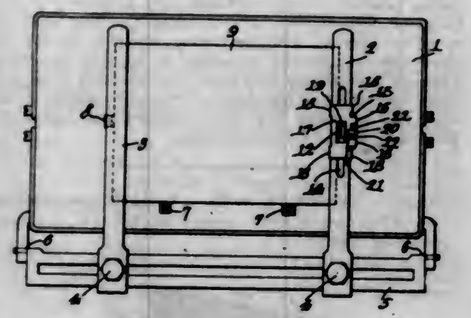
swing inwardly toward the receptacle, and means for shifting the member to swing the link inwardly to force the door against and into tight relation with the receptacle.

1,630,601. CORNER-BEAD ERECTOR. JOHN J. BERSCHEID, Champaign, and GEORGE GARST, Urbana, Ill. Filed Mar. 18, 1926. Serial No. 95,740. Renewed Apr. 23, 1927. 4 Claims. (72—128.)



1. In a device of the character described, an elongated body member having a substantially V-shaped channel extending throughout one edge thereof to receive a corner bead strip, said body further having a groove formed therein at the crotch of said channel to receive a portion of said strip, and means carried by the body for holding the strip in the channel while being placed in position.

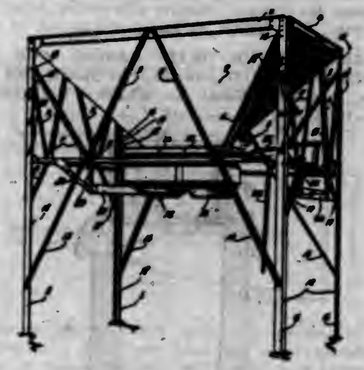
1,630,602. REAMER. FLORINO F. BLANCO, San Jose, Costa Rica. Filed May 4, 1925. Serial No. 27,970. 2 Claims. (Cl. 77—72.)



1. A reamer comprising a body having spaced rows of teeth, the teeth of the several rows similarly inclining throughout their length, and the teeth of alternate rows inclining in a reverse direction to the teeth of the intermediate rows.

1,630,603. ENSILAGE HARVESTER. ALF M. BOXRUD, Minneapolis, Minn. Filed Dec. 21, 1920. Serial No. 432,224. 20 Claims. (Cl. 56—16.)

1. In a device of the class described, a cutter for ensilage material, a central and adjacent outer conveyors passing rearwardly from said cutter, the latter occupying higher positions than that of the central conveyor, an ensilage chopper at the delivery end of the central conveyor and cross feed mechanism at the rear extremities of the outer conveyors to direct ensilage material therefrom to said central conveyor.



1,630,604. PUSHER. WALTER R. BRANHAM, Fort Valley, Ga. Filed Sept. 14, 1926. Serial No. 135,456. 7 Claims. (Cl. 101—414.)

1. The combination with the platen and the gripper of a printing press, of a feeder arm adapted to ride along the platen as the gripper approaches the platen, and means for mounting the arm intermediate its ends on the gripper for swinging movement transversely of the gripper, one end of the arm forming a stop to hold the other end of the arm at an acute angle to the platen when the gripper is spaced from the platen and when the arm is in an inoperative position.

1,630,605. MATERIAL-HANDLING EQUIPMENT. MORGAN R. BUTLER, Waukesha, Wis. Filed Apr. 11, 1925. Serial No. 22,343. 5 Claims. (Cl. 214—1.)

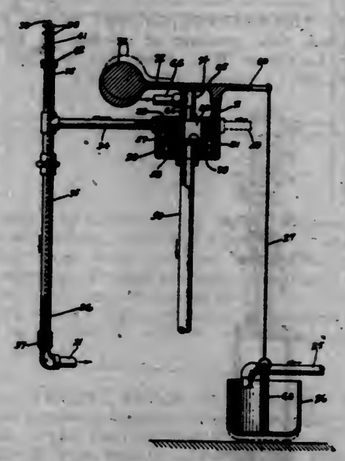
1. An apparatus for handling material, such as sand, gravel and the like, comprising, in combination, a supply bin, a supporting frame for mounting the supply bin above the ground to permit the passage thereunder to receive material therefrom, said supporting frame including vertical standards spaced apart to permit the passage of the motor vehicle or the like beneath the supply bin be-

tween any adjacent standards, and means for controlling the discharge of material from the supply bin and including an actuating lever positioned adjacent one standard.

1,630,606. PAPER BAG AND TWINE HOLDER. ENOCK A. CARLSON, Delvalle, Tex. Filed Apr. 21, 1926. Serial No. 103,554. 2 Claims. (Cl. 211—2.)

2. A paper bag holder comprising a metal strap reversely bent to provide a series of oppositely facing U-shaped loops, one member of each of the loops having a slot extending inwardly from an edge thereof and the other member having an opening, and a pin having its point inserted in an opening of one loop and its head engaging the slot of the adjacent loop.

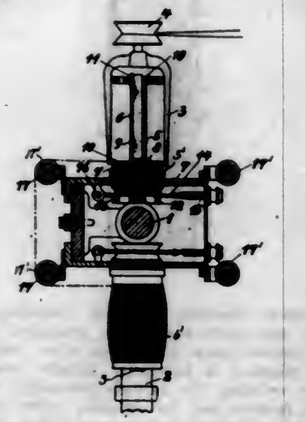
1,630,607. ANIMAL TRAP. WINFIELD CATLIN, Rockville, Ind., assignor of one-half to Clarence A. Weaver, Hillsboro, Ind. Filed Apr. 6, 1926. Serial No. 100,145. 3 Claims. (Cl. 43—88.)



1. A trap including a pair of bars forming jaws having their inner ends pivoted in overlapping relation and having outer free ends, means to regulate contact between the inner portions of the bars in overlapping set position, springs connected at their outer ends to the outer ends of the jaws, said springs being flexibly connected to the jaws adjacent to their inner ends, a holder to which the inner ends of the springs are connected, said holder being otherwise free of connection with the jaws, and an anchor chain connected to said spring holder.

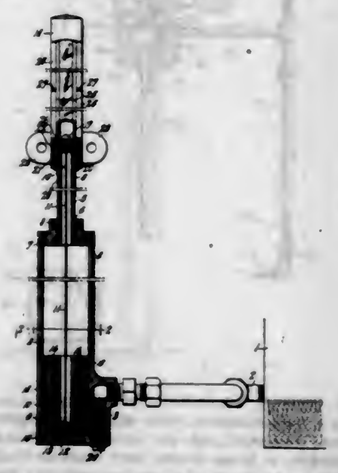
1,630,608. VEHICLE-DIRECTION INDICATOR. FARRO W. CHADWICK, San Francisco, Calif. Filed May 17, 1926. Serial No. 109,584. 11 Claims. (Cl. 116—51.)

1. A vehicle direction indicator comprising separate head and tail portions pivotally suspended in normal vertical position upon a common pivot mounting and normally disposed in proximate parallel relation; and means for swinging the portions outwardly together to horizontal position and for swinging either of said portions further outwardly independently upon the common pivot mounting into longitudinal alignment with the other portion to form an indicator pointing to right or left as desired.



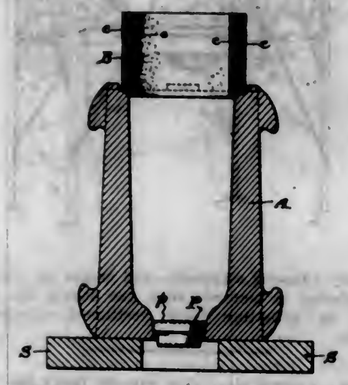
1,630,609. PRESSURE-CONTROLLED FLUID-FEEDING APPARATUS. CHARLES H. CHALMERS, Minneapolis, Minn. Original application filed Aug. 4, 1922, Serial No. 579,671. Divided and this application filed Nov. 14, 1925. Serial No. 69,099. 12 Claims. (Cl. 158—42.1.)

1. A pressure controlled fluid feeding apparatus including a fluid chamber, fluid supply and discharge pipes connected therewith, an air intake also connected with the chamber, a flange within said chamber encircling the air intake, said flange co-operating with the fluid level to define a pressure chamber within said fluid chamber, a fluid return pipe communicating with said pressure cham-



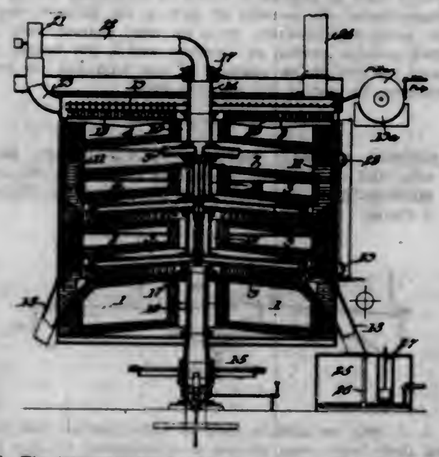
ber, and means adapted upon normal operation of the apparatus to maintain a pressure in said pressure chamber to prevent the return of the fluid from said fluid chamber to its source and to cause it to be discharged from said fluid chamber through said discharge pipe.

1,630,610. SUPPORT AND BRAKE FOR BOBBINS OF SPINNING MACHINES. HERMANN DEPPERMANN, Nowawes, near Potsdam, Germany. Filed Sept. 22, 1925, Serial No. 57,819, and in Germany Sept. 27, 1924. 10 Claims. (Cl. 118—55.)



1. In a spinning machine, a lifter frame, a spindle having a floating bearing in said frame, one end of said spindle projecting from one side of the frame for engagement of a bobbin thereon and arranged with means for positively coupling and releasably holding a bobbin on the spindle, and a friction wheel constituting one member of a brake mechanism to retard the rotation of the spindle fixed to the spindle at the opposite side of the lifter frame in proximity to the bearing of the spindle in the lifter frame.

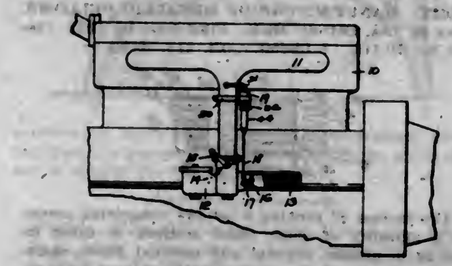
1,630,611. LIQUID-LEVEL GAUGE. GEORGE F. FALK, La Crosse, Wis., assignor of one-half to Stanley A. Taylor, La Crosse, Wis. Filed May 29, 1923. Serial No. 642,281. 3 Claims. (Cl. 73—82.)



2. A device of the class described comprising a chamber, means whereby liquid may be admitted into said chamber to correspond in level therein with the level of the liquid in the tank or reservoir from which it flows, a float movable in said chamber responsive to the liquid level in said tank or reservoir, an indicator rod having a ball and socket joint with said float to be moved by said float for indicating the liquid level in said tank or reservoir.

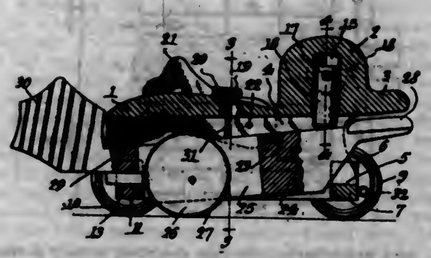
1,630,612. SHRINK-HEAD CASING FOR INGOT MOLDS. EMIL GATHMANN, Baltimore, Md. Filed Mar. 8, 1926. Serial No. 93,136. 3 Claims. (Cl. 22—189.)

1. An ingot mold top or shrink head casing made of porous, refractory material, the melting or slagging point of which is lower than the temperature of liquid steel and which has its surface structure impregnated and coated with material, the melting or slagging point of which is higher than the temperature of liquid steel.



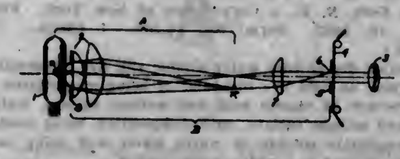
1,630,613. PROCESS OF DRYING AND CALCINING LITHOPONE. WALTER G. GRAVES, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 23, 1926. Serial No. 83,304. 2 Claims. (Cl. 134—78.)

1. The improvement in the process of making lithopone, which comprises carrying on the entire drying and calcining thereof as one continuous operation in one vessel.



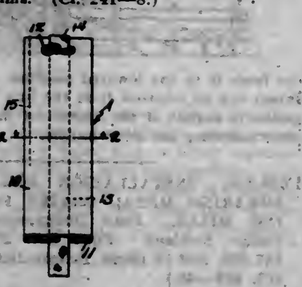
1,630,614. AUTOMATIC CHOKE ACTUATOR. ERNEST J. HIPNER, Lexington, Ky. Filed May 13, 1926. Serial No. 108,875. 15 Claims. (Cl. 261—64.)

1. The combination with the intake manifold of an internal combustion engine and carburetor connected therewith, said carburetor having a choke valve and throttle valve, of a cylinder associated with the intake manifold, a head for the cylinder having an inner bore in communication with the interior of the intake manifold above the throttle valve, a suction operated valve disc mounted within the cylinder beneath the head and adapted to be seated upwardly against the head, said



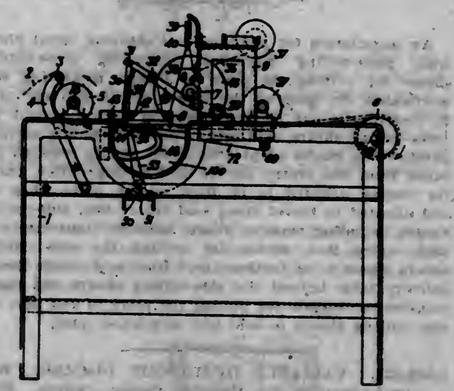
valve disc having an inner opening in permanent communication with the inner bore and outer opening or openings in communication with said bore when the valve disc is unseated and out of communication with said bore when the valve disc is seated, a plunger operating within the cylinder beneath the valve disc, and connecting means between the plunger and choke valve.

1,630,615. FIGURE WHEELED TOY. ALBERT L. HIGGINS, Bar Harbor, Me. Filed June 19, 1926. Serial No. 117,081. 8 Claims. (Cl. 46—45.)



1. A figure wheeled toy including a body having a head portion, there being a bottom recess within the body, wheels supporting the body, a member comprising a part of the figure pivotally mounted within the body and having an extension at one end movable relative to the head portion, and an eccentric ground engaging wheel journaled on and supporting one end portion of the pivoted member.

1,630,616. OPTICAL SYSTEM FOR PROJECTION APPARATUS. ROGER M. HILL, Washington, D. C. Filed Nov. 21, 1923. Serial No. 676,089. 6 Claims. (Cl. 88—24.)

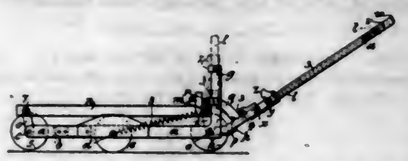


6. An illuminating system for projection apparatus the combination with a radiant, a primary condenser system, a diaphragm disposed intermediate the radiant and primary condenser system, a film aperture, an objective system to the front of the film aperture, the two systems being optically arranged with respect to each other and the film aperture for projection purposes, of an auxiliary condenser interposed between the film aperture and the primary condenser, said condenser being of such focal length and so positioned with respect to the radiant image and the film aperture as to image at the plane of the film aperture the field of light defined by said diaphragm.

1,630,617. METHOD FOR MAKING BELTS. ANNA JEWETT, Lawrence, Kans. Filed Dec. 28, 1925. Serial No. 78,066. 3 Claims. (Cl. 241—8.)

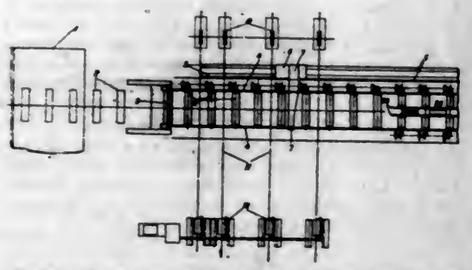
1. A method of the character described consisting of first providing a length of folded material of the desired size, attaching a flexible strip to one of the folds, stitching the adjacent longitudinal free edges of the folds and subsequently pulling the strip whereby to turn the material.

1,630,618. METHOD OF AND MEANS FOR MANUFACTURING LATHING FOR WALLS AND CEILINGS. KARL MARTIN JOHANSSON, Stockholm, Sweden. Filed Sept. 16, 1926, Serial No. 135,884, and in Sweden May 20, 1926. 7 Claims. (Cl. 140—71.)



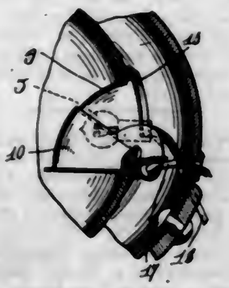
1. A method of manufacturing lathing which comprises taking a wire-netting, stretching a number of substantially parallel single wires over one side of said netting, bending said wires through meshes of the netting so as to form loops on the opposite side of the netting, introducing reinforcing bars through said loops, and contracting the loops so as to cause the wires to hold the bars firmly to the wire-netting.

1,630,619. LIFTING TRUCK OR TROLLEY. WALTER EDWARD KIMBER, Highgate, London, England, assignor to Ajax Trucks Limited, Manchester, England, a Corporation of Great Britain. Filed Oct. 11, 1926, Serial No. 140,851, and in Great Britain July 13, 1925. 6 Claims. (Cl. 254—10.)



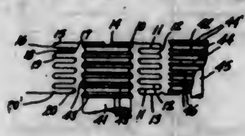
1. A liftable truck or trolley comprising a wheeled frame pivotally supporting a liftable frame adapted for receiving the load, a pivoted lever handle, a pivoted link device adapted for engagement by the lever handle for elevating the liftable frame, toothed detent means pivoted above the said link device on the wheeled frame and

adapted to engage the link device and retain the liftable frame in the elevated position, and trigger means on the lever handle adapted for engaging the detent means when



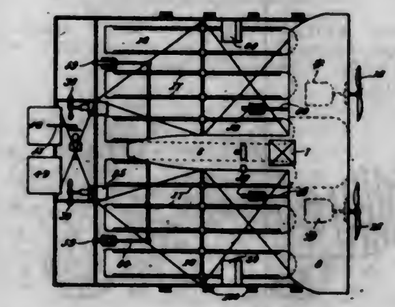
the lever is in the lowered position, whereby the toothed detent can be released from the link device by the trigger means to permit of the descent of the liftable frame only after lowering the lever handle.

1,630,620. INSTALLATION FOR HANDLING AND SHEARING METAL PLATES FROM PLATE-ROLLING MILLS. JOHN ROBERTSON LAMBERTON, Coatbridge, Scotland. Filed Dec. 27, 1926, Serial No. 157,358, and in Great Britain Oct. 9, 1926. 1 Claim. (Cl. 164—49.)



An installation for handling and shearing metal plates from plate-rolling machines comprising cross-cutting shears for cutting the plate to length, measuring stop mechanism for gauging the length cut, a delivery table to receive the cut length, a setting device beyond the cross-cutting shears, said setting device including movable parallel side guides adapted to be set at any required distance from the centre line of said setting device, transfer clamps adapted to be fixed to the plate when set and adapted to travel along said centre line, side-cutting shears including massive slides movable transversely of said centre line, means for setting the side cutting shears closer to or further apart from said centre line, a delivery table beyond the side-cutting shears and clamp transfer mechanism for pulling the plate to and past the side cutting shears to said last mentioned table.

1,630,621. VARIABLE HEADLIGHT DIMMER. WILLIAM LAVENTURE, Ste. Madeline, Quebec, Canada. Filed Nov. 8, 1926. Serial No. 147,120. 3 Claims. (Cl. 240—45.)



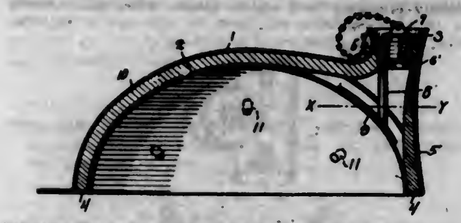
1. A headlight including a casing, a reflector mounted therein, and a lamp mounted in the reflector, in combination with a pair of telescopic shield members pivotally mounted with respect to said casing and reflector and adapted to cover said lamp, a flange provided at the rear end of the inner member, said flange engaging the outer wall of the reflector and being engageable by the rear end of the outer section.

1,630,622. MANUFACTURE OF METALLIC BELLOWS. JOHN M. LEA, Detroit, Mich. Filed Nov. 19, 1925. Serial No. 70,115. 7 Claims. (Cl. 113—116.)

1. The process of forming a bellows comprising assembling a plurality of sheet metal sections so fitted together as to present internal and external joints, maintaining said assembled sections under pressure, and applying solder simultaneously to the internal and external joints by rotating the assembly in contact with rotary soldering tools.

1,630,623. HYDROCRAFT. AKOS LUDASY, Wilkinsburg, Pa. Filed July 21, 1925. Serial No. 45,078. 11 Claims. (Cl. 114—66.5.)

1. In a hydrocraft of the type described, a body portion, a cross shaft journaled therein, a transverse series of pontoons, upwardly converging supporting bars for the pontoons with the upper ends of the bars fixed to the shaft, means for rotating the shaft to vary the angularity of the pontoons in respect to the surface of the supporting water, a cabin carried by the upper part of the body portion, marine propulsion means carried by the frame and projecting below the pontoons, and a rudder carried by the body portion and depending below the propulsion means.



1,630,624. DYE COMPOSITION. JOSEPH MERRITT MATTHEWS, New York, N. Y., assignor to Glorient, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 18, 1925. Serial No. 24,265. 1 Claim. (Cl. 8—6.)

A stable dry powder water soluble silk dye composition comprising an acid dye incapable of being precipitated in the presence of maleic acid and sodium sulfate, maleic acid, and sodium sulfate, said composition being readily and completely soluble in warm water and being non-hygroscopic and non-caking when packed.

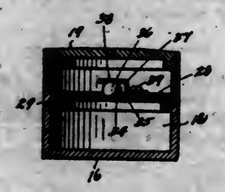
1,630,625. SCALP-TREATMENT HOT-WATER CAP. RALPH MAURIELL, Oceanport, N. J. Filed July 3, 1926. Serial No. 120,478. 4 Claims. (Cl. 128—259.)

1. A hot water bottle for the treatment of the scalp comprising a flexible dome shaped receptacle to form a

cap for the head including double walls, a filling neck at one end of the receptacle communicating therewith

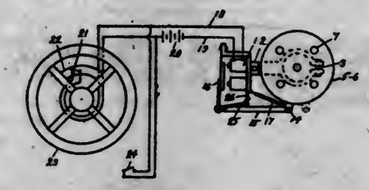
between the walls and a vertical reinforcement extending from the bottom of the receptacle to the filling neck, and a stopper for the filling neck.

1,630,626. WINDOW JACK. SAM MENNEILEY, Lincoln Park, Mich. Filed Apr. 8, 1926. Serial No. 100,499. 2 Claims. (Cl. 304—24.)



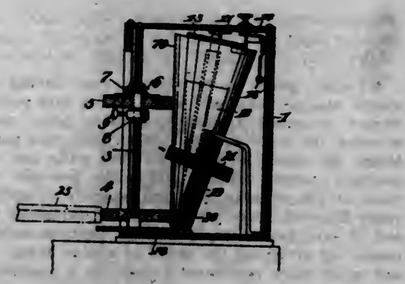
1. A window jack of the class described adapted for use on a building wall having an opening formed therein comprising: a cross bar for extending across said opening and for engaging one side of the wall of the building at opposite sides of said opening; a pair of bars connected to said cross bar and projecting therefrom through the opening in said wall; a pair of curved depending bars pivotally connected at one end to the outer ends of said bars; a platform pivotally mounted on the free ends of said depending bars, said depending bars moving upon downward pressure being exerted upon said platform into engagement with the opposite side of said wall, said side being tangent to the curve of said bars; and means for preventing the swinging of said platform on its mountings.

1,630,627. CUTLERY. HANNIBAL E. MILLER, Charlotte, N. C. Filed Oct. 10, 1925. Serial No. 61,762. 4 Claims. (Cl. 22—163.)



1. A pattern for forming a handle for cutlery, said pattern comprising a plate, a tang adapted to be inserted in the shell of the handle, said tang having a spring arm spaced from the body portion of the tang, means to allow metal to be poured around the tang, means to prevent the metal from filling the space between the spring arm and the body portion of the tang, and means to allow removal of the tang from the handle when the metal has cooled.

1,630,628. AUTOMATIC DRAIN DEVICE. ARTHUR L. MITCHELL, Dallas, Tex. Filed July 19, 1926. Serial No. 123,502. 1 Claim. (Cl. 277—45.)



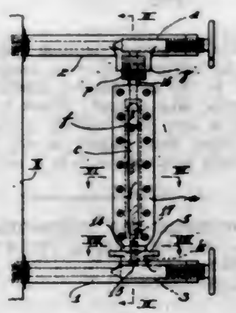
A controlling valve for a water heater system comprising a disk having an aperture therethrough countersunk at its upper end to form a valve seat, a freely movable valve operable upon said seat to open said aperture only upon the relief of the inlet pressure to drain the system, and a retaining plate secured to the upper face of the disk and extended over said valve to limit its upward opening movement.

1,630,629. ELECTRICALLY-OPERATED IGNITION CONTROL. JOHN P. NIKONOW, New York, N. Y. Filed Sept. 14, 1926. Serial No. 135,475. 1 Claim. (Cl. 123—146.5.)

In an electrically operated ignition control, the combination with an ignition unit of a magnet adapted to turn said unit to the position for retarding the spark, means to operate said magnet, means to support said magnet, means to keep said unit in a position for advanced spark when said magnet is not operated, and means to manually lock said unit in a retarded position.

1,630,630. GOVERNOR FOR PHONOGRAPHS. SUKEJIRO NISHIDA, Osaka-Fu, Japan. Filed Sept. 8, 1925, Serial No. 55,128, and in Japan Sept. 19, 1924. 3 Claims. (Cl. 188—187.)

1. In a governor for disc type phonograph, comprising a wheel adapted for engaging with the disc of said phonograph at its periphery, a rotatable shaft therefor, a second wheel slidably mounted on said shaft and rotatable with the same, a rotatable threaded rod disposed in parallel with said shaft, a nut member locked of its rotation but adapted to travel as the rod rotates and associated with said second wheel, a rotatable conical body having a side line parallel to said shaft along which side line



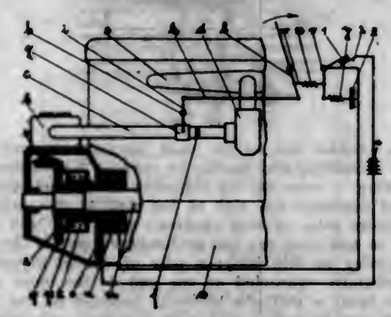
said second wheel engages frictionally, governor elements associated with said body for retarding the rotation of said disc, and means for transmitting the rotation of said body to said threaded rod.

1,630,631. COMPOSITE STEEL BAR. PETER J. PAULY, St. Louis, Mo., assignor to Pauly Jail Building Company, St. Louis, Mo., a Corporation of Missouri. Filed May 16, 1925. Serial No. 30,818. 1 Claim. (Cl. 148—31.)

A composite steel bar comprising an inner core and an outer sheath, said core constituting the bulk of the bar and consisting of mild steel, and the sheath consisting of self hardening non-annealable manganese steel.

1,630,632. WATER GAUGE. MICHAEL PERICH, Pittsburgh, Pa. Filed Nov. 28, 1923. Serial No. 677,400. 1 Claim. (Cl. 73—54.)

A water gauge comprising a case having laterally spaced edge portions, end walls uniting said portions and formed integrally therewith, a glass plate, means for securing the plate to one side of said edge portions to bridge the space between said end walls and the edge portions, means bridging the edge portions and end walls at the opposite side, and laterally extending oppositely disposed flange portions formed integrally with one end of said gauge, the said flange portions serving as a means for attaching the gauge to a pipe flange, and said end walls being perforated to provide a conduit through the gauge.



1,630,633. SIGNAL DEVICE. EARL H. PITNEY, Minneapolis, Minn., assignor of one-half to James W. Hamilton, St. Paul, Minn. Filed Apr. 26, 1923. Serial No. 634,742. 3 Claims. (Cl. 177—327.)

2. A signal device, comprising a casing, solenoids mounted therein, a rack-like core reciprocable by the solenoids, signal means pivotally mounted on said casing, means operatively connecting the rack-like core to the signal means, said connecting means having a limited movement independently of said signal means, and means lockingly engaging said signal means when the core is

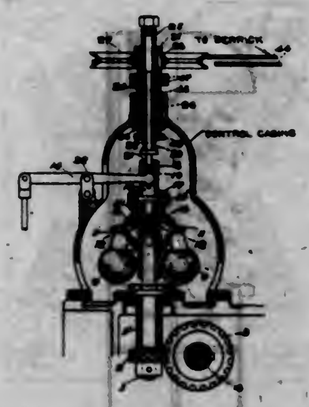
in a normal condition and having operative engagement with said core to be withdrawn from locking engagement with said signal means upon an actuation of said core.

1,630,634. COUPLING DEVICE FOR BLOWERS OF COMBUSTION MACHINES. FERDINAND PORSCHE, Stuttgart-Unterturkheim, Germany, assignor to Daimler-Motoren-Gesellschaft, Wurttemberg, Germany, a Corporation of Germany. Filed Jan. 14, 1925, Serial No. 2,457, and in Germany Sept. 3, 1923. Renewed May 19, 1926. 7 Claims. (Cl. 123—119.)

1. In an internal combustion engine having a carburetor, an air inlet conduit connected to said carburetor and having an inlet opening therein normally communicating with the atmosphere, a movable valve adapted to control said inlet opening, a blower connected to said air inlet conduit and adapted to force air through it and through said carburetor, said blower being adapted to be connected to a driven member of said engine by means of a clutch embodying two relatively movable clutch members adapted to be moved into operative position and into inoperative position, said clutch members embodying cores capable of being magnetized, spring means adapted to normally separate said clutch members, a coil associated with one of said clutch members, a source of electric current, a switch embodying a switch lever and adapted to connect said coil to said source of current and to disconnect it therefrom, a spring associated with said switch lever and adapted to urge it into a position in which said switch lever is in the inoperative position, a control lever connected to said valve, and a lost-motion connection between said control lever and said switch lever, said lost-motion connection being adapted to urge said switch lever into the operative position when said control lever is actuated, before said valve is moved to close said inlet opening.

1,630,635. METHOD OF IMPROVING THE COLOR OF PULP. FRANCIS G. RAWLING, Knoxville, Tenn. Filed Sept. 1, 1926. Serial No. 133,085. 5 Claims. (Cl. 92—21.)

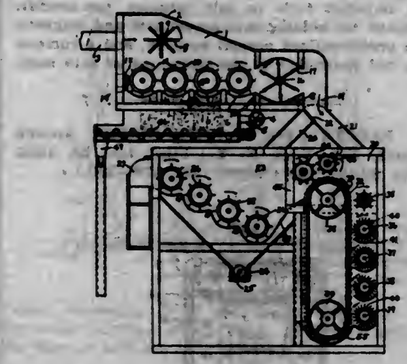
1. In the pulping of vegetable fibrous material containing organic acids the process of making lighter the color of the pulp after it has been treated with apparatus con-



taining parts formed of iron and dark colored iron and acid compounds have been formed, which process comprises adding an oxide of an alkaline earth to the pulp and effecting a reaction between the alkaline material and the acid and the formation of ferric hydroxide with resulting lightening of color.

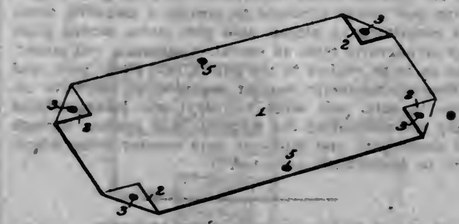
1,630,636. DEMOUNTABLE RIM. EUGENE REYNOLDS, Albuquerque, N. Mex. Filed Mar. 31, 1924. Serial No. 703,133. 5 Claims. (Cl. 301—35.)

1. A demountable rim comprising a pair of circumferentially divided rim sections, a plurality of levers each pivotally attached at one end to one rim section and having a split in the other end, a grappling link pivoted to each lever for engagement with the other rim section, and locking means cooperating through the splits with the levers to hold them in locked position.



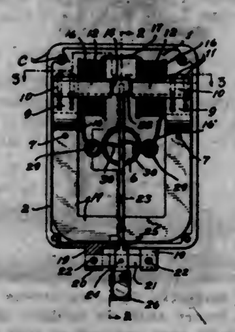
1,630,637. COMBINED AUTOMATIC AND MANUAL CONTROL FOR DRILLING ENGINES. CHARLES H. SHEARSLEY and EDGAR H. CROSSEN, Franklin, Pa. Filed Apr. 7, 1924. Serial No. 704,890. 8 Claims. (Cl. 264—3.)

1. In a drilling engine, the combination of a centrifugally operated motive-fluid controlling device driven by the engine, a support, a control sleeve threaded in said support whereby said sleeve is capable of fine adjustment, abutments on said sleeve forming maximum and minimum adjustment stops, a tubular adjusting screw threaded into said sleeve, a rod having one end in operative engagement with said controlling device and the other end extending into said tubular adjusting screw, a spring reacting between said tubular adjusting screw and said rod, and means operable from a distance for turning said control sleeve.



1,630,638. HULL AND COTTON SEPARATOR AND CLEANER. JOHN ARNOLD STRAUN, Sherman, Tex., assignor to Hardwicke-Etter Company, Sherman, Tex. Filed Sept. 16, 1925. Serial No. 56,614. 7 Claims. (Cl. 19—36.)

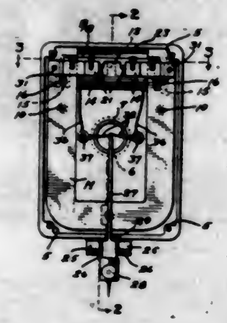
1. In a device of the character described, a breaker chamber, means to feed cotton thereto, means to break up said cotton, an agitating chamber below said breaker chamber, a belt having saw teeth thereon, a series of vertically spaced conveyer rolls adjacent said belt where-



by said cotton may be moved back and forth across said belt, a cleaning chamber, and means to remove the cotton from said belt and discharge it to said cleaning chamber.

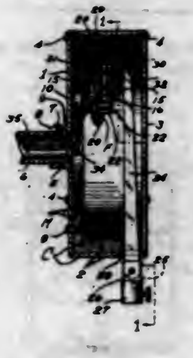
1,630,639. DRIP SHEET. THOMAS MILTON TAYLOR, York, Pa., assignor to Keystone Roofing Manufacturing Company, York, Pa., a Corporation of Pennsylvania. Filed July 23, 1924. Serial No. 727,794. 6 Claims. (Cl. 184—106.)

1. A drip sheet adapted to be suspended beneath a motor vehicle or the like in such a manner as to assume a trough-like form, said sheet being made of water or oil proof paper.



1,630,640. ELECTRIC PHONOGRAPH REPRODUCER. ADOLPH A. THOMAS, New York, N. Y. Filed Dec. 30, 1925. Serial No. 78,279. 20 Claims. (Cl. 179—100.1.)

1. In an electric phonograph reproducer free from an acoustic diaphragm, a vibratory lever adapted to be actuated by the vibrations of a record needle, said lever



comprising a short arm and a long arm, a permanent magnet having pole pieces, a magnetic member mounted on the free end of said long arm in operative relation to said pole pieces, whereby the needle vibrations are transmitted in amplified ratio to said member, non-acoustic resilient means for holding said needle arm and magnetic member in predetermined normal position, and a current-generating coil controlled by the movement of said member.

1,630,641. ELECTRIC SOUND REPRODUCER. ADOLPH A. THOMAS, New York, N. Y. Filed Jan. 23, 1926. Serial No. 83,191. 20 Claims. (Cl. 179—100.1.)

1. An electric sound reproducer comprising a magnet having pole pieces arranged to provide a magnetic shunt path containing an airgap, said pole pieces having polar faces arranged to form an operative airgap, a coil mounted so as to be subject to the flux in said shunt path, and a vibratory magnetic member mounted in operative relation to said pole faces to vary said last-mentioned airgap for controlling the magnetic flux passing through said shunt path and said coil, said member being adapted to be acoustically actuated.

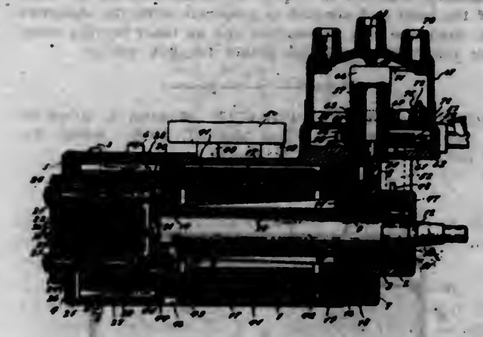
1,630,642. ELECTRIC SOUND REPRODUCER. ADOLPH A. THOMAS, New York, N. Y. Filed Mar. 10, 1926. Serial No. 93,547. 18 Claims. (Cl. 179—100.1.)

1. In an electric phonograph reproducer, means for establishing a magnetic field, a coreless coil mounted centrally on a rotary shaft to oscillate in said field, a needle arm pivoted near one end so that the needle vibrations are transmitted to the other end in amplified ratio, and an amplifying connection between said other end of the arm and said shaft.

1,630,643. ELECTRIC PHONOGRAPH REPRODUCER. ADOLPH A. THOMAS, New York, N. Y. Filed Jan. 18, 1927. Serial No. 161,947. 10 Claims. (Cl. 179—100.1.)

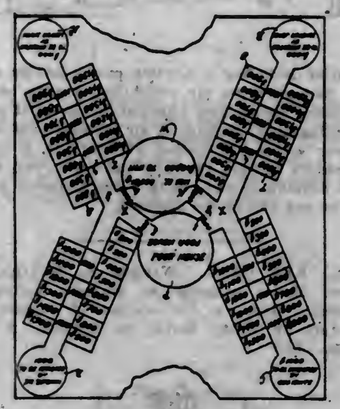
1. An electric phonograph reproducer comprising a vibratory stylus arm carrying a pair of magnetic members arranged to provide parallel magnetic paths, a magnet having pole pieces so arranged with respect to said magnetic members that vibratory movements of said arm cause simultaneous flux variations in said members, and a coil influenced by said flux variations.

1,630,644. ROTARY ROASTING RANGE. ARTHUR E. TROISEL, Berkeley, Calif., assignor to Montague Range and Furnace Co., San Francisco, Calif., a Corporation of California. Filed Oct. 30, 1923. Serial No. 671,723. 6 Claims. (Cl. 126—41.)



1. In a range of the character described, an elongated horizontally disposed plate, said plate being substantially semi-circular in cross-section and having its concave side open, unobstructed and exposed to the atmosphere, and means for applying a gas flame to the convex side of the plate so that heat may be conducted and radiated to an article to be roasted which is placed in front of the convex side of the plate.

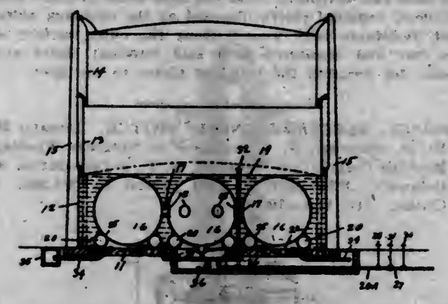
1,630,645. MAGNETO. RICHARD VARLEY, Englewood, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Filed Aug. 14, 1924. Serial No. 731,957. 25 Claims. (Cl. 123—149.)



1. A magneto comprising a casing having an elongated bearing extending axially into the casing and rigidly connected to one end thereof, a shaft passing through

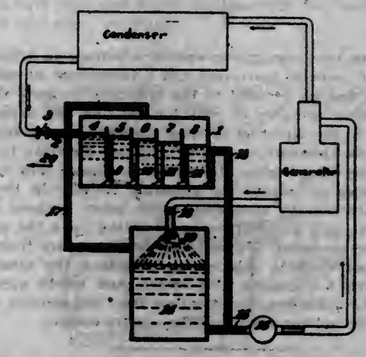
and rotatably mounted in the bearing and having a radially extending support on its inner end, a pair of magnet bars secured intermediate of their ends to the radial

support and extending substantially parallel to the shaft, and a stator member having an induced winding thereon disposed in the space between the bars beyond the support.



1,630,646. GAME APPARATUS. ELIZABETH H. WATERMAN, Binghamton, N. Y. Filed Oct. 17, 1925. Serial No. 63,011. 3 Claims. (Cl. 275—34)

1. In a game, a board provided at its central portion with a representation of a winning station and a losing station, sets of columns exteading from said stations towards the edge of the board, the representation of a starting station being arranged at the outer end of each set of columns, each column of each set of columns being subdivided into spaces marked with indicia decreasing in value from one end of the column to the other, and representations of gateways placing each set of columns in communication with the winning and losing terminals, the gate-way leading to the losing station bearing indicia of the lowest value, and the gate-way leading to the winning station bearing indicia of the highest value.



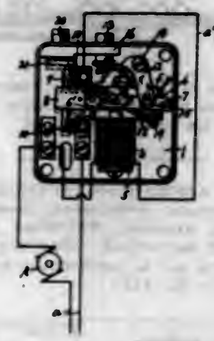
1,630,647. GAS HOLDER. ARTHUR H. T. WILLIAMS, Portland, Oreg. Filed July 12, 1926. Serial No. 121,801. 4 Claims. (Cl. 48—177.)

1. A gas holder having, in combination, a low pressure gas container; a plurality of high pressure spherical gas containers within said low pressure container; means for supplying gas from said high pressure containers to said low pressure container; and means for preventing the accumulation of water under said high pressure con-

tainer consisting of a water-tight connection between the outer portions of said high pressure containers and the floor of said low pressure container.

1,630,648. ABSORPTION REFRIGERATOR. ELIAS WIRTH, Winterthur, Switzerland, assignor to Sulzer Frères Societe Anonyme, Winterthur, Switzerland, a Corporation of Switzerland. Filed Nov. 18, 1924, Serial No. 750,534, and in the Netherlands Dec. 22, 1923. 6 Claims. (Cl. 62—119.)

1. In an absorption refrigerating system including a generator, condenser and absorber an evaporator comprising a plurality of liquid chambers, connecting passages between said chambers, a vapor chamber above said liquid chambers, means for connecting one of said liquid chambers to said condenser, means for connecting another of said liquid chambers to said absorber, and means for connecting said vapor chamber to said absorber.

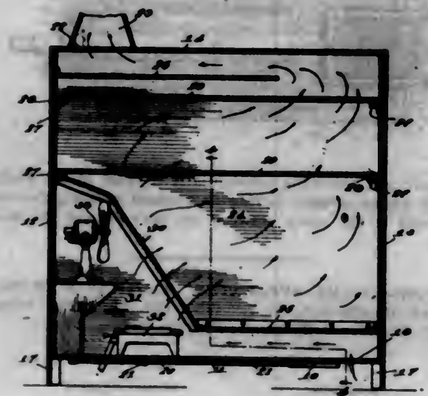


1,630,649. ELECTRIC HEATER. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartsbaugh Mfg. Co., Toledo, Ohio, a Corporation. Filed July 21, 1924. Serial No. 727,361. 4 Claims. (Cl. 201—71.)

1. As a new article of manufacture, a heating unit for electric stoves comprising a hollow core of refractory substance having an integral base at one end, and formed

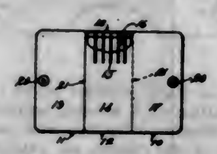
with openings through its wall at approximately the point where the body of the core joins the base, and also formed with a partition integral with the core and with the base and extending from the base some distance into the core, terminal plates disposed at the openings aforesaid, resistance wire wound about the outer surface of the core and connected with said terminal plates and means for securing the terminal plates to the base.

1,630,650. ELECTROMAGNETIC SWITCH. DONALD M. BLISS, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of Delaware. Filed Mar. 11, 1924. Serial No. 698,393. 3 Claims. (Cl. 200—106.)



3. In an electro-magnetic switch, a detent, an armature having an endwise movement and a transverse movement, a switch member secured to the armature to move therewith, means operable at will for shifting the armature endwise in one direction to close the switch, a spring for moving the armature transversely in one direction for engaging the detent when the switch is closed, said spring serving also to retract the armature endwise in the opposite direction to open the switch when released from the detent, and an electro-magnet acting upon the armature when energized for releasing said armature from the detent and allowing said spring to return the armature and switch for opening said switch, and means operable at will for releasing the armature from engagement with the detent independently of the electro-magnet.

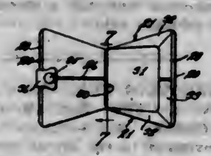
1,630,651. WHEEL. JEROME BOLICK, Conover, N. C. Filed May 13, 1922. Serial No. 560,645. 1 Claim. (Cl. 301—9.)



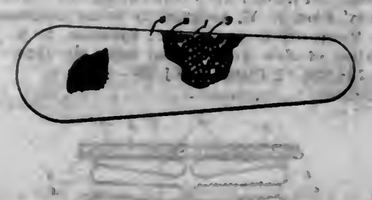
A wheel construction embodying a one-piece hub section, said hub section having radiating openings to receive spokes, said hub section having transversely disposed openings arranged between the first mentioned openings, a disk mounted at one side of the hub section, bolts extending through the transversely disposed openings and having enlargements defining shoulders, said shoulders adapted to engage the disk, nuts on the ends of the bolts and adapted to cooperate with the shoulders to clamp the disk in position, and an inner bearing member removably supported within the hub section.

1,630,652. DRYING APPARATUS. MARTHA E. BUSSLER, New Orleans, La. Filed May 17, 1926. Serial No. 109,697. 3 Claims. (Cl. 34—19.)

1. A drier including a box-like casing having a lower air inlet and an upper air outlet, and having baffles extending partly thereacross adjacent to the inlet and outlet preventing direct passage of air therebetween, a heater and blower within the casing at one side, a series of article hangers between the inlet and outlet, and a reticulate wall defining in the casing a compartment in which said heater and blower are disposed.



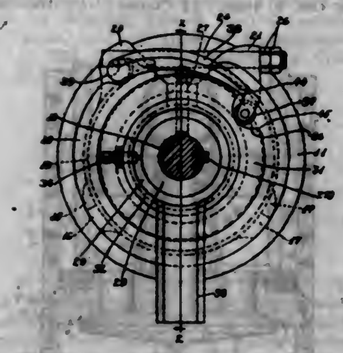
1,630,653. KEY CASE. WARNER R. BUXTON, Longmeadow, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a Corporation of Massachusetts. Filed July 24, 1924. Serial No. 728,031. 5 Claims. (Cl. 150—40.)



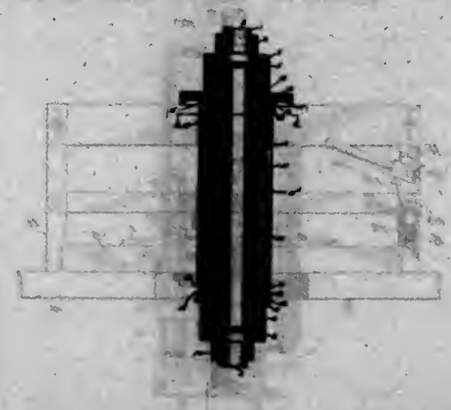
1. In a key case, a case made up of two pieces of flexible material partially overlapped with the corresponding side edges of the overlapping portions of each in substantially coincident relation, said overlapping portions being fastened together along the coincident side edges, and a key support secured to one of said overlapping portions.

1,630,654. FLEXIBLE POCKET RECEPTACLE. WARNER R. BUXTON, Longmeadow, Mass. Filed Sept. 16, 1925. Serial No. 56,771. 9 Claims. (Cl. 150—37.)

1. A pocket receptacle, comprising, a casing made up of flexible material in the form of a flattened down tube, means for closing the ends of the latter, said casing affording a pocket and a winged tray formed as an extension of the mouth of the pocket and adapted to be folded over upon the pocket to close the latter, both walls of said casing being constructed to bend along predetermined lines, which extend one from each corner of the casing inwardly at an acute angle with the adjacent side edge of the casing.

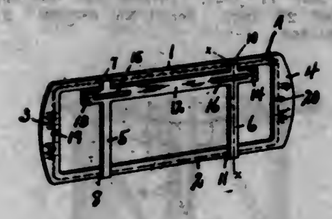


1,630,655. SPRING-PAD CONSTRUCTION. ALBERT B. CLISSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,639. 3 Claims. (Cl. 68—9.)



1. A spring pad comprising upper and lower plates and a padding consisting of coiled springs connected by connecting pieces at their upper ends and at their lower ends by connecting pieces forming continuations of the end coils of the springs, the connecting pieces being arranged against the opposing sides of the plates.

1,630,656. FRICTION CLUTCH. ALFRED A. CONWAY, Cincinnati, Ohio. Filed Dec. 31, 1924. Serial No. 759,210. 8 Claims. (Cl. 192—80.)

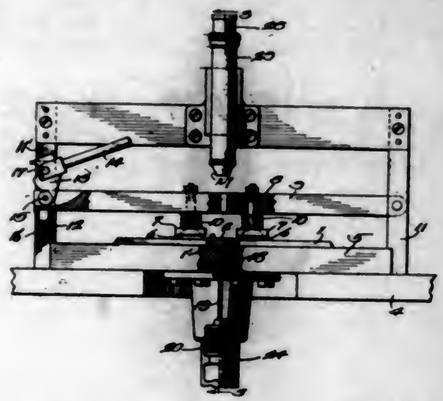


1. A clutch of the class described comprising a split friction band, a friction hub, a lever pivotally mounted on the band, a pair of cams engaged by the lever, and means carried by the cams for actuating the cams relative to one another for positively clamping the band on the hub.

1,630,657. INSULATING SECTION FOR PIPES. MARK V. CROKER, Newton Upper Falls, Mass. Filed Oct. 29, 1924. Serial No. 746,701. 13 Claims. (Cl. 285—14.)

1. An insulating section for pipes comprising a tube of insulating material, a coupling secured to each end of said tube and forming therewith a self-contained liquid conduit, a metal protecting sleeve surrounding and spaced from said tube and insulating material interposed between said tube and sleeve and between the ends of said sleeve and said couplings.

1,630,658. LICENSE-PLATE HOLDER. IRVING J. DAVIS, Syracuse, N. Y. Filed Mar. 4, 1927. Serial No. 172,630. 2 Claims. (Cl. 40—125.)



1. A license plate holder for automobiles comprising an integral frame formed of two elongated horizontal bars connected at their ends by vertical bars to form a rectangular frame having an opening adapted to disclose the body portion of a license plate, a pair of vertical bars traversing the opening in the frame near its opposite ends, and integrally connected to and spaced from the frame by comparatively short legs to permit a license plate to be slid between the frame and the vertical bars, and a horizontal bar connecting the vertical bars near their upper ends and projecting to opposite sides of the vertical bars, and formed with a pair of slots, each slot intersecting one of the vertical bars, and means connected to the end bars of the frame for limiting horizontal movement of a license plate.

1,630,659. IMPLEMENT FOR MARKING OBJECTS. HORACE W. HACKER, Chicago, Ill., assignor to Hacker Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 17, 1924. Serial No. 714,023. 4 Claims. (Cl. 33—46.)

1. In a marking implement, the combination of a marking element and a microscopic gauge having a sighting

index, means for supporting said microscopic gauge with its index located in the axis of the marking element,

whereby an object positioned with an index thereon in registration with the index of the gauge will be located with its index in alinement with the marking element.

1,630,660. PROCESS OF MAKING AN ADSORBENT AND THE PRODUCT THEREOF. KIKUNAE IKEDA and HAJIME ISOBE, Tokyo, and TSURUJI OKAZAWA, Kitatoshima-Gori, Japan, assignors to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Original application filed June 2, 1922, Serial No. 565,431, and in Japan Mar. 17, 1921. Divided and this application filed Dec. 27, 1923. Serial No. 683,069. 2 Claims. (Cl. 25—156.)

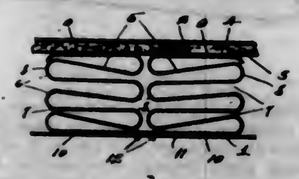
2. A process of treating fuller's earth, Florida earth, or other acidic clay for use as an adsorpting agent consisting in first kneading the clay with water then forcing the kneaded clay through a relatively small opening in a receptacle so as to shape the same into a stick-like form having indented surfaces, breaking the portions into pieces of the desired length, and finally baking the pieces to a temperature between 150° C. to 600° C. to increase the rigidity thereof.

1,630,661. PROCESS OF STERILIZING FOOD AND BEVERAGE PRODUCTS. ISAAC JARSON, Cincinnati, Ohio. Filed Sept. 15, 1925. Serial No. 56,547. 4 Claims. (Cl. 99—1.)

1. The process of heating a flavoring syrup to approximately the boiling point, admixing same with milk at substantially room temperature and of such volume that the resultant product attains a temperature intermediate approximately 160 degrees F. and 180 degrees F., admixing with the resultant product a 3% peroxide of hydrogen solution, and permitting the then resultant mixture to cool without further artificial agitation thereof.

1,630,662. METHOD OF MANUFACTURE OF AGGLOMERATED FUEL. LUCIEN LIAIS, Paris, France. Filed Apr. 5, 1926, Serial No. 99,987, and in France Apr. 30, 1925. 7 Claims. (Cl. 44—23.)

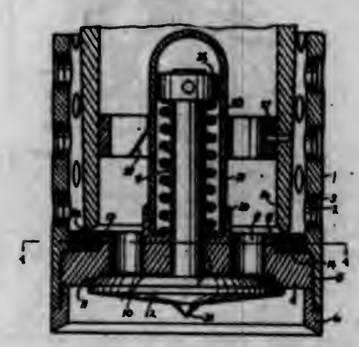
1. A fuel substance comprising, in combination, a pulverulent carbonaceous material, a viscous binder, and a sodium salt of carbonic acid.



1,630,663. CARROTING FUR. JOHN H. MARTIN, Central Park, N. Y. Filed Dec. 17, 1924. Serial No. 756,553. 6 Claims. (Cl. 8—21.)

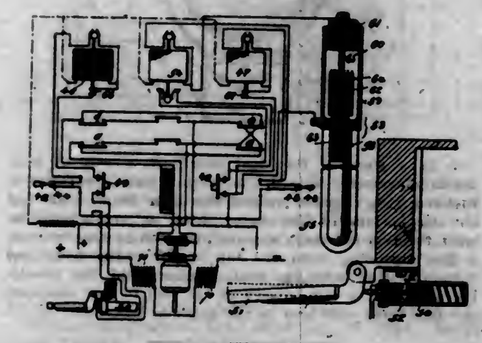
1. The improvement in the art of carroting fur which consists in subjecting the fur to the action of a solution of a persalt.

1,630,664. PREPARATION OF FUR FOR SHRINKING AND FELTING. JOHN H. MARTIN, Central Park, N. Y. Filed Mar. 3, 1925. Serial No. 13,005. 2 Claims. (Cl. 8—21.)



1. The improvement in the art of preparing fur for felting and shrinking, which consists in subjecting the fur to the action of a solution of a compound of an ortho perboate of an alkali metal.

1,630,665. SPRING-PAD CONSTRUCTION. ALFRED D. MAURY, Ilion, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 20, 1924. Serial No. 738,926. 2 Claims. (Cl. 68—9.)

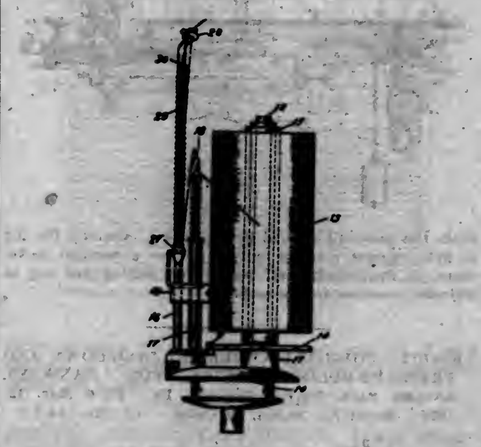


1. A spring for pressing machine pads, comprising a flat strip bent upon itself to form loops, one above the other, the open end of each loop being narrower than the opposite end of each loop.

1,630,666. WASH PLUG. JOSEPH HENRY MCEVOY, Jr., Houston, Tex. Filed Mar. 25, 1926, Serial No. 97,215. Renewed Oct. 5, 1926. 12 Claims. (Cl. 166—20.)

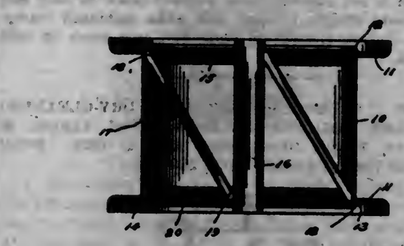
1. In combination with a well strainer perforated to a point closely adjacent the lower end, and having an internally threaded seat at said lower end, the combination of a wash plug comprising a disc of metal threaded to fit said seat, said disc having a central guide opening and fluid opening adjacent thereto, a valve plate closing the lower sides of said openings, a guide on said plate slidable in said guide opening, means to hold said valve resiliently in its seat, and means in the path of the fluid to house said guide for the purpose described.

1,630,667. DOOR OPERATING ENGINE AND SAFETY SYSTEM. GEORGE W. MEYERS, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed May 6, 1922. Serial No. 559,046. 6 Claims. (Cl. 105—341.)



1. In a door engine for operating car doors to permit passengers to enter or leave the car, a prime mover mounted to rotate in either direction, means for initiating rotary motion in said prime mover in either direction, means for reducing said rotary motion and converting the same into rectilinear motion to oscillate within predetermined limits, means for automatically confining said movements within said limits to open and close doors, and means controlled by a passenger in a doorway for preventing said doors from closing.

1,630,668. METHOD OF CONNECTING TWO MEMBERS WHICH ARE NOT ADAPTED TO BE WELDED TOGETHER. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Nov. 1, 1921. Serial No. 512,070. 3 Claims. (Cl. 219—10.)

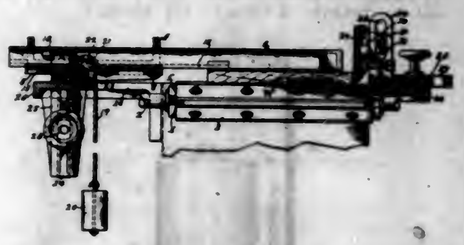


1. An improved method of attaching a member to a plate of electrically conducting material, which consists in forming a hole through the member, enlarging the hole at its inner end positioning the member on the plate, inserting a pin of material weldable to said plate in said hole with its end engaging said plate, passing an electric current through the plate and the pin to weld them together at one end and simultaneously exerting an endwise pressure on the pin to spread its inner end into the enlarged portion of the hole.

1,630,669. CARRIER FOR BRAIDING MACHINES. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1924. Serial No. 759,015. 9 Claims. (Cl. 96—15.)

1. A carrier for braiding machines, having a yarn package spindle, a tension weight, a guide standard therefor, a coil compression spring on said standard acting upon said weight, a vertically-guided feed-control latch having a latch lift arranged to be operated upon by said weight to lift said latch to release the package.

1,630,670. REEL. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Sept. 25, 1925. Serial No. 58,527. 8 Claims. (Cl. 242—123.)

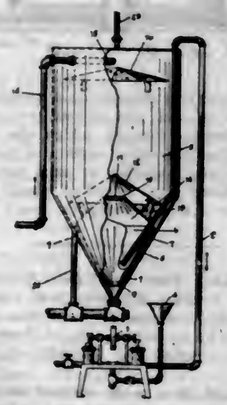


1. A sheet metal reel comprising a tubular body member, a head-plate at each end thereof provided with central annular openings through which the ends of said body project beyond the outer surface of the head plates providing an annular shoulder at each end thereof, and welding metal fused and deposited about said annular shoulder to form a fillet joining the head plates to the body member.

1,630,671. GUARD FOR PLANING MACHINES AND THE LIKE. ANDREW J. RETZ, New York, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed May 3, 1924. Serial No. 710,863. 1 Claim. (Cl. 144—251.)

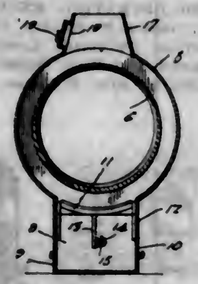
The combination of a work support having a slot, a cutting tool working through the slot, a guard normally extended over the slot, means for effecting a reciprocating movement of the guard, a frame including side plates, crossed webs and curved connecting webs in which the

guard is supported, said frame having sliding connection with the support, a hub carried by the frame, a socket depending from the work support, a leg depending



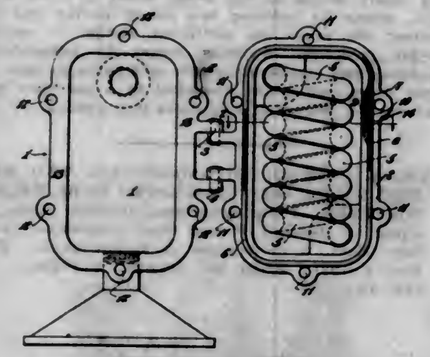
from the hub and splined in the socket, whereby the leg is held against rotation but may have a vertical movement in the socket, and means for locking the leg in adjusted position in the socket.

1,630,672. COMBINED COVER HOLDING-DOWN AND PRESSURE-RELIEF DEVICE FOR MANWAYS. ANDREW SAGE, Farrell Borough, Pa. Filed Mar. 12, 1925. Serial No. 14,994. 1 Claim. (Cl. 220—44.1.)



In combination with a manway ring and a cover therefor, one of said elements being provided with a pressure-relief port leading to atmosphere, cover-securing and pressure-relief means comprising a bolt adapted to clamp the cover to the manway, and a closure element embracing the bolt and having a projecting portion to cover the port, and a nut adapted to be screwed down on said bolt against said closure element and when tightened clamping said closure element in place and said cover on said manways.

1,630,673. CAUSTIC TANK FOR DRY-CLEANING SYSTEMS. MAURICE M. SCHWAB and SAMUEL S. SCHWAB, Toledo, Ohio. Filed Aug. 2, 1924. Serial No. 729,704. 5 Claims. (Cl. 210—58.)

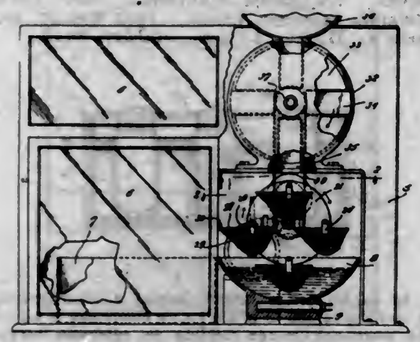


1. In a fabric cleansing system, a caustic treating cleansing liquid container, the container having a drum located in spaced relation with respect to the walls and bottom of the container and near the bottom of the container the drum having relatively small openings at the top and the bottom of the drum and means for directing the cleansing liquid to a point within the drum.

1,630,674. HEATING STOVE. PATRICK SCULLY, Lewiston, Idaho. Filed June 14, 1926. Serial No. 116,054. 2 Claims. (Cl. 126—61.)

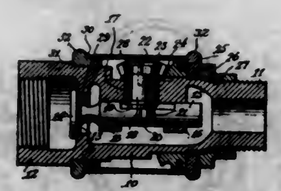
1. In a stove of the class described, a pair of horizontally arranged spaced concentric drums, providing a fuel receiving chamber around the inner drum, a fire box on the bottom of the outer drum in communication with the fuel chamber, a grate arranged in the fire box, a flue extending from the top of the outer drum and communicating with the fuel chamber, said flue providing an inlet for the delivery of the fuel to said chamber, the fuel being delivered to the grate by gravity.

1,630,675. JOINT PACKING. PETER S. SINCLAIR, Holyoke, Mass., assignor to Holyoke Heater Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1926. Serial No. 90,349. 3 Claims. (Cl. 220—46.)



2. A packing construction for water, steam, or air enclosing casings comprising a cover member which is formed with substantially a semi-circular groove, a portion of the groove being of substantially double width, a packing material of a diameter of greater thickness than the groove, the length of the said material being greater than the length of the groove and with only its free ends placed side by side in the part of the groove of double width.

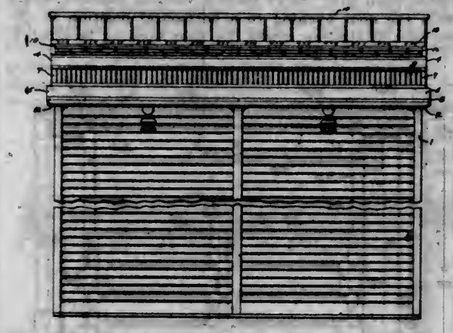
1,630,676. COOKING DEVICE. FREDERICK HOBSON SMITH, Dover, N. H. Filed Jan. 17, 1927. Serial No. 161,587. 6 Claims. (Cl. 53—7.)



2. In a cooking device of the class described, a trough for a cooking fluid, a rotary plate mounted in position above the trough, a plurality of circularly spaced

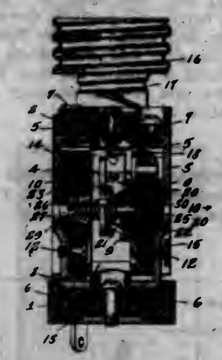
material receiving baskets suspended from the face of the plate and adapted to be unitarily moved into the cooking fluid trough, means for normally preventing the swinging of the baskets, said means being operable to

permit the tilting of the basket to facilitate the dumping thereof at a predetermined time, and additional means for locking the plate against rotation while said basket is submerged in the trough for its predetermined length of time.



1,630,677. TUBE-CLEANER VALVE. HARRISON L. STALEY, Martinsville, Ind. Filed Oct. 27, 1924. Serial No. 746,092. 6 Claims. (Cl. 121—35.)

6. A throttle-valve for tube-cleaners embodying a tubular casing, a reciprocable valve located therein and adapted to open against the fluid pressure, and means for opening said valve against fluid pressure embodying a tubular bearing extending radially through the casing and having a valve-face at its inner end, a stub-shaft journaled in said tubular bearing and having a valve at its inner end and also an eccentric wrist-pin for actuating the aforesaid valve, a pinion affixed to the outer end of said stub-shaft, a ring-like partial gear surrounding the valve-casing and journaled thereon and in constant mesh with said pinion, an operating sleeve surrounding the valve-casing and enclosing the gears and affixed to said ring-like gear, and means for holding the gears and the sleeve in assembled relation, so that the sleeve will enclose both gears.

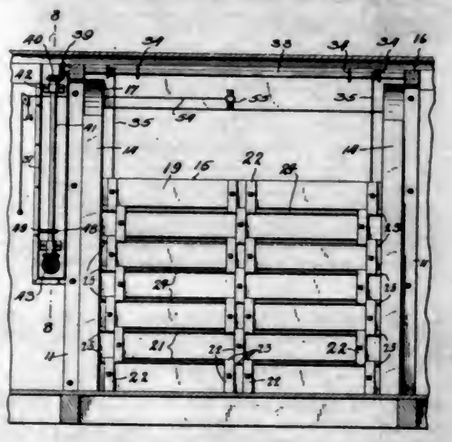


1,630,678. COMPOSING-ROOM CABINET. WILLIAM STEPHENS, Somerville, Mass., assignor to Samuel Stephens and Wickersham Quoin Company, Boston, Mass., a Corporation of Massachusetts. Filed June 5, 1926. Serial No. 113,887. 7 Claims. (Cl. 276—44.)

1. In combination with a type cabinet having one or more tiers of type cases accessible from the cabinet front, a working top for said cabinet comprising a base adapted to seat on the cabinet, a permanently positioned, exposed work-bank, a lead and slug rack, and a spacing material case, said work-bank, rack and case being all positioned for access from the same side of the cabinet and being so mounted on said case that said side is the cabinet

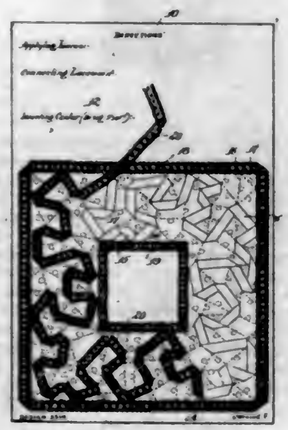
front, whereby the tiers of type cases and all of said elements of the top are readily accessible to a compositor facing the cabinet.

1,630,679. ELECTRIC-LAMP SOCKET. DON N. THOMPSON, Syracuse, N. Y., assignor to Pass & Seymour Inc., Solvay, N. Y., a Corporation of New York. Filed July 23, 1920. Serial No. 398,511. 2 Claims. (Cl. 173—349.)



1. An electric lamp socket, comprising a body, including opposing heads of insulation, metal uprights supporting the heads in spaced-apart relation, and being secured at their ends to the heads, blocks of insulation carried by and secured to the uprights and extending lengthwise of such uprights substantially the entire distance between the heads, lamp terminals mounted on one of the heads, one lamp terminal being electrically connected to one of the uprights, a switch contact located on the inner side of said head, and the other lamp terminal being connected to such switch contact, and switch mechanism including a switch contact carried by one of the blocks and electrically connected to the other upright, and a movable switch member carried by th blocks between the same, and coacting with the switch contacts, the uprights being provided with wire terminals.

1,630,680. GRAIN-CAR DOOR. CARL I. TWEDT and MARTIN HAGE, Leonard, N. Dak. Filed Nov. 20, 1924, Serial No. 751,163. Renewed Apr. 12, 1927. 7 Claims. (Cl. 20—32.)

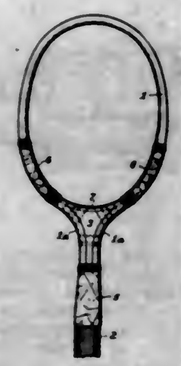


1. The combination with a freight-car having the usual side door opening and shiftable door upon the exterior of the car closing said opening, of vertical tracks located at

opposite sides of the door opening within the car and having a sealing engagement with the sides of the door opening, horizontal tracks connected with said vertical tracks and extending transversely of the car, a door shiftable upon said tracks from a vertical position where it seals the door opening to a horizontal position in the upper part of the car where the door opening is vacated.

means for shifting said door upon the tracks from said vertical to said horizontal position operable from the exterior of the car, and means operable from the exterior of the car for engaging said door while in horizontal position and shifting it toward the door opening a distance sufficient for said door to complete its movement into vertical position by gravity.

1,630,681. PATTERN FOR PRODUCING LACEWORK. JOHANN H. WACHTER, New York, N. Y. Filed Nov. 12, 1924. Serial No. 749,555. 1 Claim. (Cl. 33—12.)

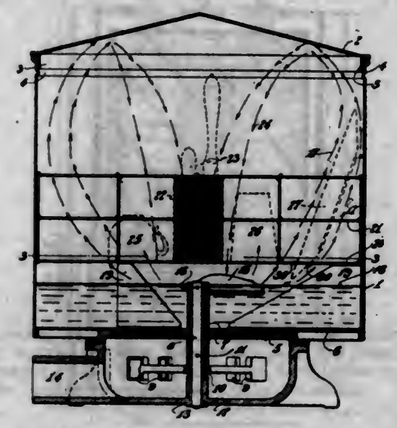


Means for use in producing by handwork the artistic effects of antique and historical laces in making lacework articles consisting of a permanent pattern-sheet to which the material is temporarily applied and having printed thereon in full lines a pattern outlining the ribbons of lace and manner of arranging and folding the same according to the particular design, and dotted lines to indicate the connecting stitches and manner of forming said connecting stitches in producing the complete article.

1,630,682. ICE-CREAM CABINET. JOHN CANNON WATKINS, Vancouver, Canada. Filed May 27, 1926. Serial No. 112,119. 4 Claims. (Cl. 217—30.)

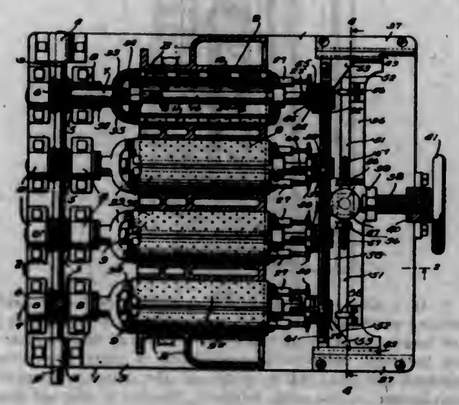
1. In an ice cream cabinet having a cover provided with an opening and in which an ice cream can is adapted to be positioned, means forming an extension between the can top and the opening, said means comprising a band of sheet material forming a cylindrical body with its opposing ends overlapping, and means for expanding the band to engage the can top and the rim of the opening within the cover.

1,630,683. TENNIS RACKET. FRANK SHAVER WILLIAMSON, Chicopee, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed May 14, 1926. Serial No. 109,135. 1 Claim. (Cl. 273—73.)



A tennis racket having a joint covered with plastic material in sheet form wrapped thereon with edges overlapping to various degrees along lines running in various directions at an angle to each other, and forming a homogeneous sleeve.

1,630,684. DISHWASHING MACHINE. CHARLES L. WOODWARD, West Springfield, Mass., assignor to United States Machinery Manufacturing Company, Springfield, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1922. Serial No. 542,674. 2 Claims. (Cl. 141—9.)



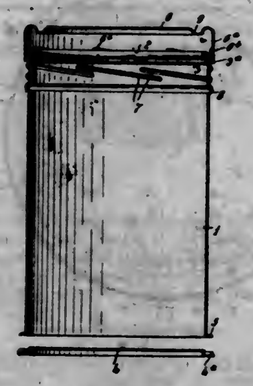
2. In a dish washing machine the combination of a cylindrical casing, a propeller therein, a plurality of trapeziform deflector plates having the base portions thereof attached to the bottom portion of the casing and having the top portions thereof forming supporting surfaces parallel to the bottom of the casing, a framework for holding dishes having a portion of its flat bottom

surface resting upon said supporting surfaces of said deflectors and the inner sides of said deflectors extending downwardly and inwardly towards the centre of the

bottom portion of the casing and defining with the bottom surface of said framework a clear space of inverted cone shape in which said propeller is disposed.

1,630,685. METHOD AND APPARATUS FOR GRINDING SURFACES. JACOB LOWE YOUNG, New York, N. Y. Filed Jan. 14, 1925. Serial No. 2,314. 14 Claims. (Cl. 51—263.)

1. An apparatus for grinding surfaces, comprising a hollow rotatable grinding tool adapted to be filled with grinding paste, means for rotating the tool, and an automatic mechanical means carried by the grinding tool for maintaining a pressure on said paste to positively force it between the grinding face of the tool and the surface to be ground.

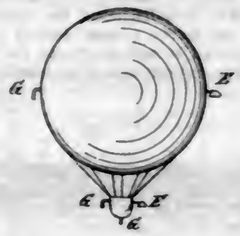


1,630,686. APPARATUS FOR GRINDING GUN BARRELS. JACOB LOWE YOUNG, New York, N. Y. Filed Jan. 14, 1925. Serial No. 2,315. 1 Claim. (Cl. 51—263.)

An apparatus for grinding the bore of a gun barrel comprising a supporting frame including track means; a carriage mounted to travel upon said track means and adapted to support a gun barrel; an elongated, hollow, tapered grinding tool formed with a perforated grinding face, said tool being open at one end and closed at the other end and adapted to be filled with grinding paste; a plunger adapted to be shifted within the open end of the tool to force the paste out through the perforations and provided with an outwardly projecting stem; a tool-rotating shaft mounted upon the supporting frame at one end of the track; a loose driving connection between the closed end of said shaft and the tool; bearing means designed to rotatably and releasably support the

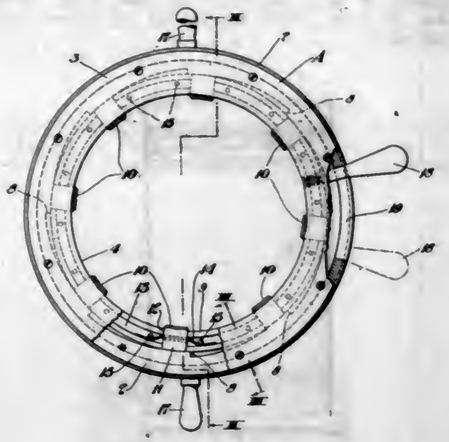
open end of the tool; releasable clamping means to hold the barrel upon the carriage; means to adjust the carriage and barrel longitudinally with relation to the tool; and mechanical pusher means supported by the frame to engage the plunger stem and force the plunger inwardly, the said pusher means, bearing means, clamping means, and tool-driving connection being adapted to permit the barrel, the tool and the plunger to be removed transversely as a unit from the carriage and the supporting frame.

1,630,687. CONTAINER. CHARLES J. AULBACH, Passaic N. J., assignor to Passaic Metal Ware Company, Passaic, N. J., a Corporation of New Jersey. Filed Nov. 15, 1924. Serial No. 750,054. 4 Claims. (Cl. 220—27.)



1. A container comprising a body having an inner non-metallic sealing member adjacent to one end, the sealing member having a flange extending along the inner wall of said body, the container having a portion adjacent to its open end curled inwardly and projecting outwardly against the flange, the flange being substantially uncurled, the container portion having its free edge pressing the flange against said wall of the body.

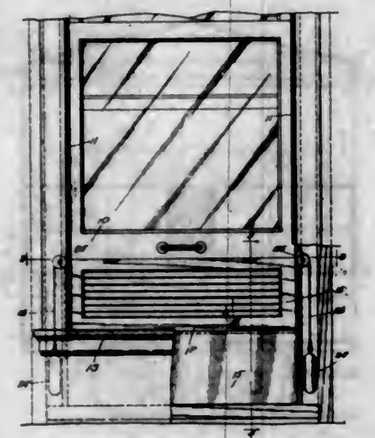
1,630,688. CHROMIUM-PLATED CARBON ARTICLE. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Dec. 1, 1924. Serial No. 753,356. 2 Claims. (Cl. 22—174.)



2. A chromium-plated graphite chill.

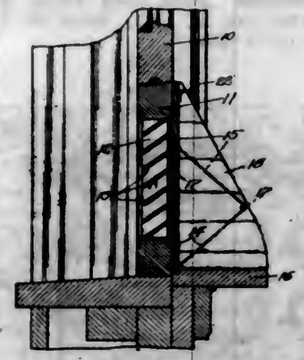
1,630,689. METHOD FOR ASCERTAINING THE FLYING HEIGHT OF FLYING MACHINES. ALEXANDER BEHM, Kiel, Germany. Filed June 2, 1922, Serial No. 565,502, and in Germany June 11, 1921. 3 Claims. (Cl. 181—0.5.)

3. The combination with an air craft or the like including a body, of a sound transmitter arranged to emit sounds towards the earth, and a receiver arranged to respond to the echo of such sounds, said transmitter and said receiver being acoustically screened from each oher, said receiver being arranged behind said transmitter relative to the direction of sound emission, for the purpose set forth.



1,630,690. GAUGE. JACOB P. BOSLE, Mount Oliver, and ANDREW TELFER, Pittsburgh, Pa., assignors to National Tube Company, a Corporation of New Jersey. Filed Apr. 16, 1926. Serial No. 102,464. 4 Claims. (Cl. 33—199.)

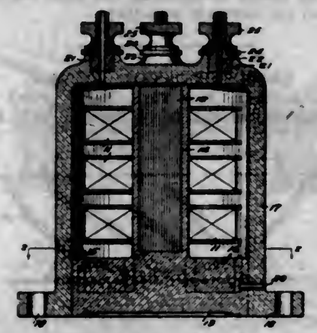
1. A size ring gauge for gauging pipe and casing ends, comprising a ring-like casing, a segment ring mounted in and revolvably movable relative to said casing, segments mounted in said segment ring and movable diametrically thereof, spring means for normally tending to move said segments outwardly, and cam means in said casing adapted to force said segments inwardly when relative movement is had between said casing and segment ring in one direction and to release said segments for outward movement when relative movement is had between said casing and segment ring in the other direction.



1,630,691. VENTILATOR AND THE LIKE. RALPH L. CROSTHWAITE, Chicago, Ill. Filed July 18, 1925. Serial No. 44,523. 4 Claims. (Cl. 98—88.)

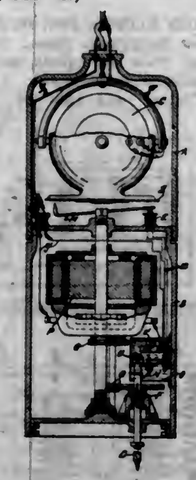
1. In combination with a window having a sliding sash; a ventilator mounted in said window for vertical sliding movement below said sash; and means for detachably securing said ventilator to said sash, said securing means adapted to yieldingly hold the ventilator and

sash in engagement, permit separation thereof under tension, and automatically engage upon the bringing of said sash and ventilator together.



1,630,692. VENTILATOR. RALPH L. CROSTHWAITE, Chicago, Ill. Filed July 18, 1925. Serial No. 44,525. 2 Claims. (Cl. 98—99.)

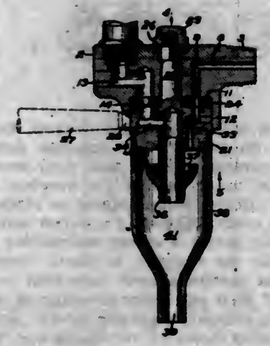
1. In a window opening; a ventilating device in said opening provided with ventilating openings therethrough; and means for varying the effective area of said ventilating openings, said means comprising, a plate extending substantially the entire width of the window opening and hinged at one edge adjacent the lower edge of the ventilating device, a second plate hinged to the other edge of the first plate, means for raising or lowering the upper edge of said second plate whereby said plates may be moved to a substantially vertical position in the same plane entirely closing the ventilating openings, or collapsed into horizontal positions on the window-sill, means for holding said plates in their intermediate positions, and means for closing the opening at the ends of said plates, said means comprising triangular-shaped plates attached to the window-sill.



1,630,693. TRANSFORMER. ERNEST G. DANIELSON, San Francisco, Calif., assignor to E. T. Cunningham, San Francisco, Calif. Filed May 27, 1924. Serial No. 716,168. 1 Claim. (Cl. 175—361.)

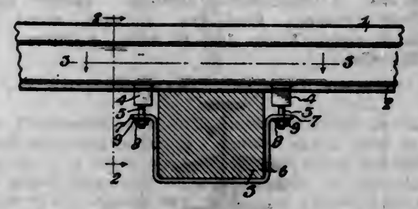
A transformer having a circular, flanged base of molded insulation material, a hollow tube coaxial with the base and extending therefrom, said tube being formed integrally with the base, a core located within the tube, coils independently supported around the tube, a casing

of molded insulation material, a cylindrical inner surface cooperating with the circular base, and telescoping thereover, means for fastening the base and casing together, and binding posts carried by the casing.



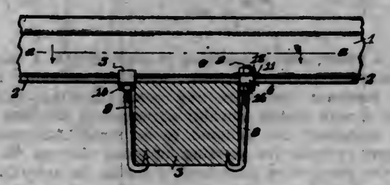
1,630,694. APPARATUS FOR ORIENTING GEOLOGICAL SPECIMENS IN BORE HOLES. ABNER FAISON DIXON, New York, N. Y., assignor of one-third to Thomas C. Bannon and one-third to Donald Upham, New York, N. Y. Filed Sept. 19, 1924. Serial No. 738,602. 5 Claims. (Cl. 234—1.)

1. In apparatus for the purpose set forth the combination of a rock indenting tool, a holder for said tool arranged to be lowered into a bore hole, a compass device connected with said tool holder and rotatable about a vertical axis in relation to said tool holder, an index sheet carrier whose azimuth position is governed by said compass device, and a device for marking an index sheet, said device being carried by said carrier, said sheet marking device being in fixed positional relation to said tool-holder.



1,630,695. MIXING FAUCET. WILLIAM A. ENGLAND, San Francisco, Calif. Filed Dec. 8, 1924. Serial No. 754,557. 3 Claims. (Cl. 225—26.)

1. A mixing faucet comprising a head having a valve seat and formed with passages opening on said valve seat for fluid to be mixed, a valve mounted to rotate on said valve seat and provided with ports adapted by rotation of the valve to register with said passages, an inner nozzle mounted on said valve and forming an unobstructed continuation of one of said ports, a splash cup on said inner nozzle forming an obstruction to flow from the



other of said ports, and an outer nozzle mounted in said valve and surrounding said inner nozzle, said outer nozzle being constructed to form substantially a continuation of said inner nozzle.

1,630,696. RAIL-TYING DEVICE. STANLEY W. FINCH, Washington, D. C. Filed Feb. 12, 1927. Serial No. 167,781. 9 Claims. (Cl. 238—314.)

1. In a device of the class described, grab hooks adapted to embrace a rail flange, a tie contacting element, bolt-like members adapted tensionally to connect the grab hooks and the tie contacting element, the upper portion of each bolt-like member protruding through openings in the grab hooks.

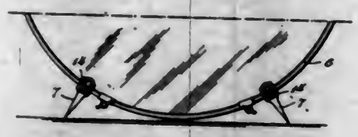
1,630,697. RAIL-TYING DEVICE. STANLEY W. FINCH, Washington, D. C. Filed Feb. 12, 1927. Serial No. 167,782. 22 Claims. (Cl. 238—314.)

1. A rail-tying means, including a tie-hook with an upstanding prong, for fastening a rail to a tie.

1,630,698. CONCRETE BUILDING UNIT. TILGHMAN J. FLOREY, Washington, N. J. Filed Aug. 21, 1926. Serial No. 130,655. 5 Claims. (Cl. 72—44.)

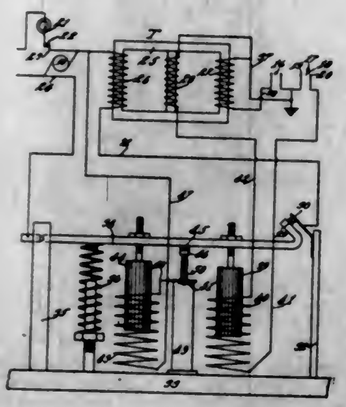
1. A building unit comprising a block of material having vertically directed circular openings formed therethrough, the openings tapering from their lower to their upper ends, the upper ends of the openings being surrounded by a circular ledge adapted to extend into the lower end of a similar opening of a second unit, the upper face of the unit having a groove surrounding each ledge and adapted for the reception of plastic material and a pair of straight parallel grooves tangential to the ledge, the grooves of each pair communicating at their inner ends with the associated annular groove and at their outer ends opening through a vertical face of the block at spaced points.

1,630,699. FURNITURE CLEANING AND POLISHING COMPOSITION. CARL E. FROSTMAN, Seattle, Wash. Filed Nov. 28, 1925. Serial No. 72,047. 1 Claim. (Cl. 134—24.)



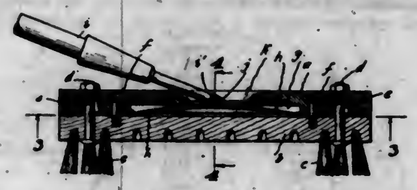
A furniture cleaning and polishing composition consisting of the following ingredients in substantially the following proportions: linseed oil, one-half pint; turpentine, one-half pint; kerosene, one-half pint; vinegar, one-half pint; white of one egg.

1,630,700. LUBRICATING DEVICE. ERNEST GASS, Clichy, France. Filed Dec. 8, 1925, Serial No. 74,185, and in France Dec. 17, 1924. 8 Claims. (Cl. 221—47.4.)



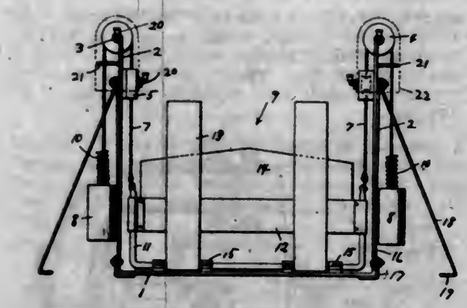
1. A grease gun, comprising in combination, a lubricant container, a pressure cylinder arranged coaxially to the said lubricant container and communicating with the same, a push piston movably arranged in the said lubricant container and adapted to be forced into the said pressure cylinder for pressing lubricant through the same into the place to be lubricated, a spring for returning the said push piston to its normal position after each operative stroke of the same, a differential piston consisting of a tube-shaped stem sliding on the said pressure cylinder and a piston disc adapted to move in the said lubricant container in order to keep the lubricant in the same under pressure, a tube surrounding the said tube shaped stem and being connected at one end to the said lubricant container, operating means for said differential piston and packing means surrounding the push piston at the outer end of the lubricant container.

1,630,701. DRUM-SUPPORTING DEVICE. WILLIAM DAVID GLADSTONE, New York, N. Y. Filed July 22, 1925. Serial No. 45,206. 4 Claims. (Cl. 84—421.)



1. In a drum supporting device, a spur capable of attachment to one side of the shell of a drum, an adjustable element carried by said spur and movable transversely thereof, a fastening member carried by the opposite side of said shell, a flexible connection having one end connected to said fastening member, an intermediate portion thereof extending through said adjustable element and its other end capable of attachment to another intermediate portion of the connection, and means on the adjustable element engageable with said spur to move said element relative to the spur to thereby tauten said connection.

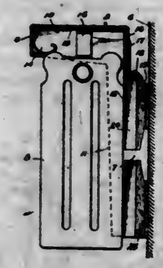
1,630,702. IGNITION SYSTEM FOR BURNERS. HARRY C. HUBBELL, West Springfield, Mass., assignor to Wico Electric Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1925. Serial No. 20,249. 9 Claims. (Cl. 158—28.)



1. In combination, a burner, an ignition device therefor having an active condition for ignition of fuel from the burner and an inactive condition, means to automatically start and stop the burner and to render the ignition device active simultaneously with the starting of the burner, means to render the ignition device inactive independently of the first named means, electrical means to operate the last named means, a source of electrical energy for said electrical means, a control device associated with the burner and including two terminals with an air gap therebetween, and a series circuit including said source, electrical means and terminals, said gap adapted to be heated by the burner flame and when so heated to permit sufficient current to flow in said circuit to operate said electrical means.

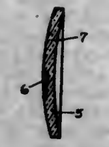
1,630,703. BRUSH WITH DETACHABLE HANDLE. WILLIAM R. JAMES, Portland, Oreg. Filed Nov. 4, 1925. Serial No. 66,714. 1 Claim. (Cl. 306—19.)

In a brush of the character described, a body part provided with an elongated interior recess communicating with an elongated narrow slot in the top of said body part, the roof of said recess being provided with a transverse central groove, and a flat spring bearing against the edges of said groove, in combination with a handle, provided with a T-end adapted to be inserted through said elongated slot into said recess, and thence turned at right angles therewith, thereby to seat the lateral portions of said T-end in said transverse groove, the said lateral portions being held in place by said spring.



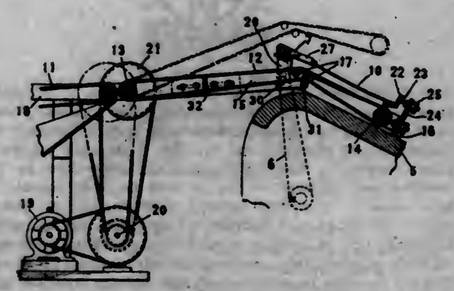
1,630,704. GATE. AUGUSTON D. KAISER, Mountain Home, Tex. Filed July 27, 1926. Serial No. 125,232. 2 Claims. (Cl. 39—5.)

1. In a structure of the class described, a substantially U-shaped supporting frame, supporting means for the frame, a closure, said closure comprising a substantially U-shaped frame, a cross piece connected with the arms of the closure frame, vertical plates connected with the central portions of said closure frame and with said cross piece, and disposed at right angles thereto, said plates being adapted to function as tracks, and bearing brackets attached to the bight portion of the first named frame, the said bight portion of the closure frame being rockably connected with said brackets and yieldable means for maintaining said gate normally in a closed position.



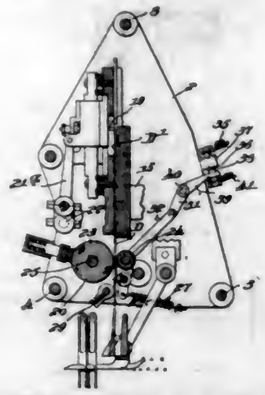
1,630,705. RADIATOR SHIELD. DAVID H. KING, Seattle, Wash., assignor to Pacific Radiator Shield Company, Seattle, Wash. Filed Apr. 3, 1926. Serial No. 99,605. 1 Claim. (Cl. 237—79.)

The combination with a radiator, of a shield comprising a top portion, a dust trap member attached to and disposed below said top portion, side members having flanges deflected at right angles therefrom forming an open space therebetween at the rear of said shield, side pieces secured to said flanges on said side members and having flanges extending inwardly therefrom, a back wall secured to said top portion, a back piece secured to said back wall and extending the full width of said shield, and



flexible strips carried by said back piece and said last named flanges to form a closure for the top and side portions of said shield.

1,630,706. PROCESS OF PRODUCING MONOCENTRIC FUSED BIFOCAL LENSES. MAX A. LAABS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 22, 1924. Serial No. 733,566. 4 Claims. (Cl. 49—82.1.)

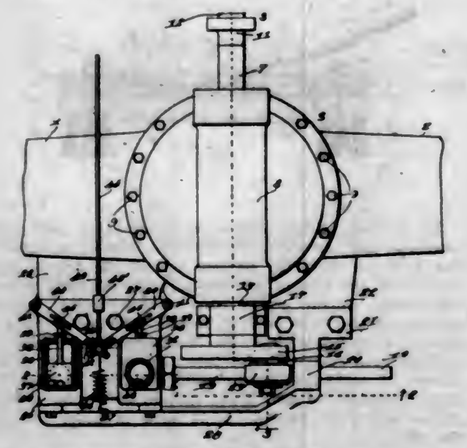


1. The process of producing monaxial fused multifocal lenses consisting in fusing a segment of one index of refraction to a major blank of different index, separating the major blank and segment through the geometrical center of the segment, and then fusing a piece of glass of same index as the major blank to the separated edge.

1,630,707. SHEET FEEDER. SAMUEL LIPSIUS, New York, N. Y. Filed Feb. 19, 1926. Serial No. 89,295. 16 Claims. (Cl. 271—50.)

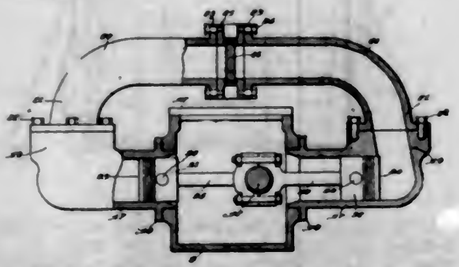
1. A conveyor frame, a conveyor carried thereby, a paper stop carried by said frame and having a member above said conveyor and a rear-stop member above the conveyor for supporting a sheet until the gripper has released the front end of the sheet.

1,630,708. STOP MECHANISM. SEBASTIANO MAGNANO, Lawrence, Mass., assignor to Magnano Corporation, Lawrence, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1924. Serial No. 705,647. 8 Claims. (Cl. 28—41.)



1. In a machine of the class described, feed means for propelling elongate thin sheet material elements, said feed means comprising a pair of cooperating feed members to one at least of which a feed motion is normally imparted, said members being disposed simultaneously to engage opposite surfaces of one of said elongate elements one of said parts being movable bodily toward and from the other, means resiliently urging said members relatively toward each other to produce a gripping feed pressure, said members being separated in the normal operation of the machine solely by the elongate element which is gripped between them, and means responsive to abnormal approach of said parts in the absence of such element from between them to stop the normal feed movement of said parts.

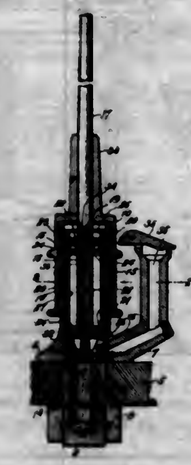
1,630,709. SWITCH. THOMAS C. MAHON, Vancouver, British Columbia, and JOHN ERNEST HARRISON, Victoria, British Columbia, Canada. Filed Apr. 22, 1925. Serial No. 25,025. 3 Claims. (Cl. 200—6.)



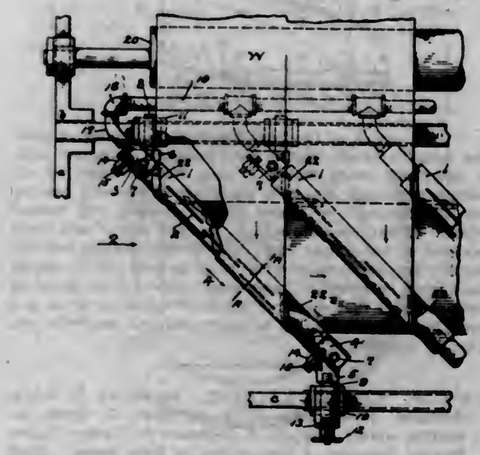
1. A multiple circuit switch comprising a pivotally mounted movable contact, a plurality of stationary contacts adapted to cooperate with said movable contact for controlling a plurality of circuits, a housing enclosing said contacts, a movable locking pin supported by the housing and adapted to engage said movable contact to hold same in a switch opening position out of engagement with all of said stationary contacts, a spring acting automatically on release of said locking pin to shift said movable contact into engagement with one of said stationary contacts to close one of said circuits, said movable contact being manually operable subsequent to the action of said spring to dispose the movable contact in a second position engaging another of said stationary contacts without disengaging said first mentioned stationary contact whereby a second circuit is completed by the movable contact subsequent to completion of the initial circuit and without occasioning disruption thereof.

1,630,710. HYDRAULIC BRAKE. ROY E. MCCLEARY, Seattle, Wash., assignor to McCleary Hydraulic Brake Company, a Corporation of Washington. Filed June 3, 1924. Serial No. 717,521. Renewed Dec. 18, 1926. 11 Claims. (Cl. 188—90.)

1. In combination, a vehicle worm drive having the worm shaft extended through the rear axle housing, a crank member on said extended shaft, and brake mechanism mounted on said housing and operatively connected with said crank member.



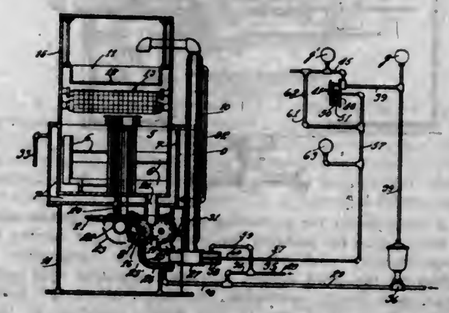
1,630,711. HYDRAULIC-BRAKE MECHANISM. ROY E. MCCLEARY, Seattle, Wash., assignor to McCleary Hydraulic Brake Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 1, 1924, Serial No. 747,879. Renewed Dec. 18, 1926. 14 Claims. (Cl. 188—91.)



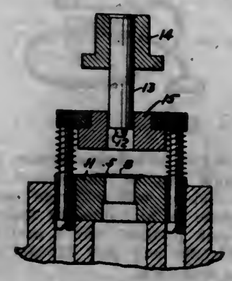
1. In a hydraulic brake mechanism, the combination with a driven member and a pair of pistons operated thereby and extending in opposite directions therefrom, and having outwardly facing pressure ends, of a hydraulic casing comprising cylinder sections housing said pistons and a manifold section forming a continuation of and connecting said cylinder sections to form an oil path, the bore of said manifold and cylinder sections being substantially uniform to eliminate drag, and a controlling valve interposed in said casing and having a full open position equal to the bore of said casing to eliminate drag and heat when the brake mechanism is not in braking operation.

1,630,712. TEXTILE SPINDLE. ARTHUR MEDER, Carlstadt, N. J., assignor to Norma-Hoffman Bearings Corporation, New York, N. Y., a Corporation of New York. Filed June 20, 1919. Serial No. 305,650. 7 Claims. (Cl. 308—169.)

1. In a textile spindle, a support having a lubricant well, a bolster fitted in said support and having an elongated hollow lower portion with open lower end projecting down into the well having the wall of such lower portion spaced a slight distance from the wall of the well to receive a film of lubricant, the well wall and the wall of such lower portion being substantially parallel throughout the space therebetween being of approximately equal width at all times, and a spindle rotatably supported in said lower portion of the bolster and projecting into the lubricant body in the well, said projecting end of the spindle being of conical form with the base directed downwardly so that upon rotation of the spindle the lubricant is forced by capillary attraction and centrifugal force downward into the space between the well wall and the lower portion of the bolster.

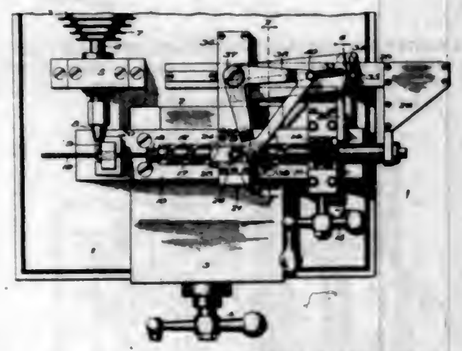


1,630,713. WEB-FEEDING MECHANISM. JOSEPH E. METER, Woodside, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 3, 1925. Serial No. 47,731. 2 Claims. (Cl. 101—420.)



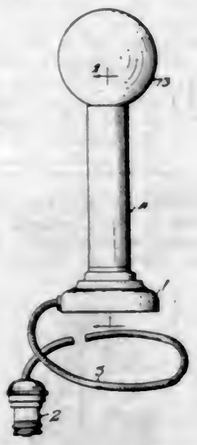
1. In a web feeding mechanism, the combination of a hollow roll or bar over which a web is led, perforations in the bar widthwise thereof and means for supplying air under pressure through the perforations, margin bearers on the bar, brackets in which the bar is mounted, mechanism for moving the brackets for adjusting the bearers relatively to the web, and adjusting mechanism for adjusting the angle of the bar relatively to the web.

1,630,714. CONDITIONING APPARATUS FOR CHOCOLATE AND THE LIKE. WILLIAM A. MOIR, Halifax, Nova Scotia, Canada. Filed June 11, 1925. Serial No. 36,486. 8 Claims. (Cl. 257—4.)



1. The combination with a container of chocolate or the like, of means associated therewith to quickly increase the temperature of the chocolate, means associated with said container to quickly decrease the temperature of the chocolate, means responsive to variations in the viscosity of the chocolate to control the application of said heating and cooling means and arranged to effect the application of the same alternately, so that when the chocolate thickens up the heating medium is applied and when the chocolate becomes thinner the cooling medium is applied to cause a quick reduction in temperature of the chocolate, independently of such reduction as may be effected by the cessation of the application of the heating means.

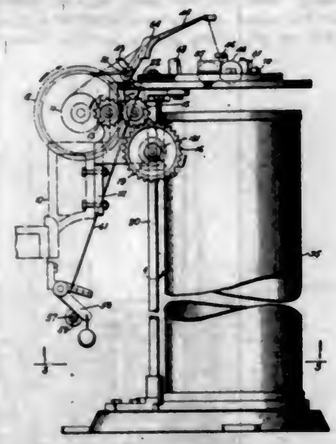
1,630,715. METHOD OF MAKING BALL-CONE ELEMENTS. BUDD G. NICE, Ogontz, Pa., assignor to Arthur N. Goodfellow, Philadelphia, Pa., trustee. Filed Jan. 18, 1923. Serial No. 613,489. 1 Claim. (Cl. 29—149.5.)



The method of making ball-cone elements in two stages and at one operation from metal blanks of flat ring form which consists in flaring the inner rim parts of the blank laterally out of the plane of the outer rim parts and into flaring tubular and cylindrical form by pressure applied to the portion of the face of the blank which lies between the rim of the hole and the margin of the blank while the outer part of the blank is unconfined, and then flattening the previously unconfined outer rim portion of the blank by continued pressure applied in the same direction while the flaring tubular part is confined.

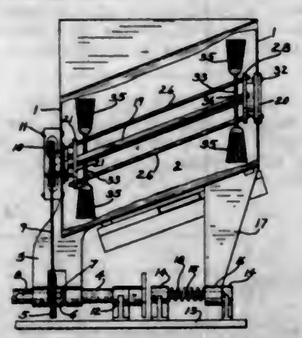
1,630,716. SPIRAL-FORMING MACHINE. ROBERT C. PIERCE, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Feb. 4, 1922. Serial No. 534,020. 15 Claims. (Cl. 90—20.)

1. In a device for producing spirals, a work holder and a tool, means for rotating the work holder, and moving it longitudinally with respect to the tool, comprising a spiral on the work holder, a tracker engaging with said spiral and means controlled by movement of the work holder for moving the tracker during rotation of the work holder.



1,630,717. TARGET DEVICE. GENEROSO PISANO, Orange, N. J. Filed Nov. 5, 1925. Serial No. 67,119. 5 Claims. (Cl. 124—15.)

1. A target device including a holder, a lamp and a destructible target member independent of said lamp, adapted to be held by said holder in position to cause said target member to be lighted by the rays from said lamp, and in such position that a projectile may pass through substantially any part of said target member without striking said lamp.

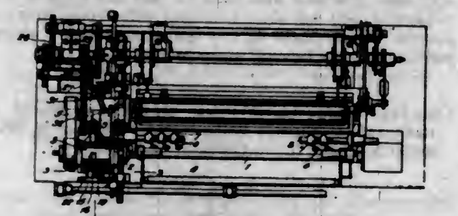


1,630,718. TEXTILE COILING MACHINE. EDWIN O. ROE, New Bedford, Mass., and LEONARD P. FRIEDER, New York, N. Y., assignors to National Spun Silk Co., Inc., New Bedford, Mass., a Corporation of Massachusetts. Original application filed Aug. 1, 1924, Serial No. 729,452. Divided and this application filed Oct. 3, 1925. Serial No. 60,163. 2 Claims. (Cl. 19—159.)

1. In a machine of the class described, the combination of a rotary can, a head for the can rotatable above and on a different axis than the axis of the can and having an opening through the head large enough for material to pass through said opening free from engagement with the edges of the opening, feeding devices operable in close

juxtaposition with said opening, a pivoted guide for conducting the material to said feeding devices, and means for driving the can, the head and the feeding devices.

1,630,719. STREET-CLEANING MACHINE. ALBERT SCHROEDER, Piqua, Ohio. Original application filed Mar. 4, 1924, Serial No. 696,873. Divided and this application filed Apr. 16, 1925. Serial No. 23,488. 2 Claims. (Cl. 15—183.)

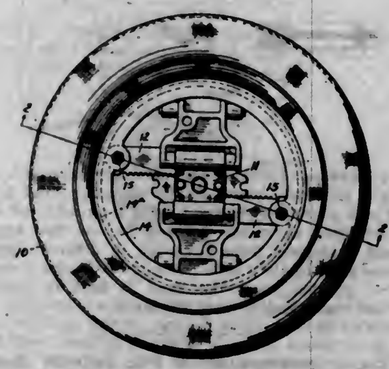


1. In a device of the type described, a housing, a driving member therein formed with a central polygonal hole, a polygonal shaft which at one end projects at an oblique angle into said hole, a member within said housing out of alignment with said driving member and formed with a central hole into which the other end of said shaft projects at an oblique angle, the driving member and the second member formed with holes around their central ones, rods received at an oblique angle by the holes in said members that surround the shaft receiving holes, and brushing means mounted on said rods and shaft for the purpose specified.

1,630,720. WINDING MACHINE. ARCHIBALD D. SCOTT, deceased, Jersey City, N. J., by Mary V. Scott, executrix, Jersey City, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Filed Oct. 31, 1923. Serial No. 671,903. 5 Claims. (Cl. 242—10.)

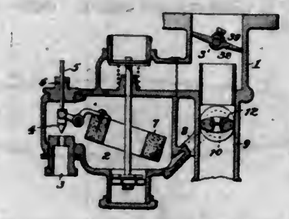
1. In a winding machine, a winding spindle, means for rotating said spindle, a guide for conducting to the spindle the material to be wound thereon and shiftable in

directions endwise of the spindle to cause the material to be wound thereon in spiral form, means for causing repeated back and forth movements of the guide to form superposed layers of the material, and a geared driving connection comprising only rotatable elements including intermeshing gear wheels between the last named means and the spindle rotating means for effecting their normal



concomitant operation, said connection including therein a rotatable driving member, a rotatable driven member, a one way clutch for normally driving the latter member from the former, and an operating member enabling manual operation of the guide moving means more rapidly than its normal operation with the spindle rotating means whereby the material may, when desired, be laid in a coarser spiral than that laid in its normal operation.

1,630,721. SPONGE RUBBER. WALTER O. SNELLING, Allentown, Pa. Filed Jan. 18, 1926. Serial No. 82,159. 8 Claims. (Cl. 18—53.)

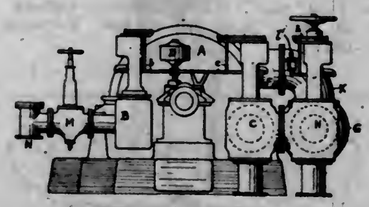


1. The process which comprises cooling rubber latex until at least a part of the water crystallizes, and coagulating the resulting rubber network.

1,630,722. BEAD-PLACING DEVICE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 17, 1925. Serial No. 44,357. 1 Claim. (Cl. 154—9.)

The combination with a collapsible core and chuck, said chuck having apertures therein, of a bead-placing ring, said ring being adapted to be guided into position to set a bead on said core by pins secured thereon and adapted to slide into said apertures.

1,630,723. CARBURETOR. JOHN W. SWAN, Stamford, Conn. Filed Sept. 25, 1919. Serial No. 326,284. 3 Claims. (Cl. 261—62.)



1. A carburetor comprising a casing having an air passage therein, a valve mounted in the air passage, a Venturi tube passing entirely through the valve for the passage of air, said tube being perforated at its restricted portion, and means for feeding fuel through the perforations into the tube whereby it is atomized by the air passing therethrough.

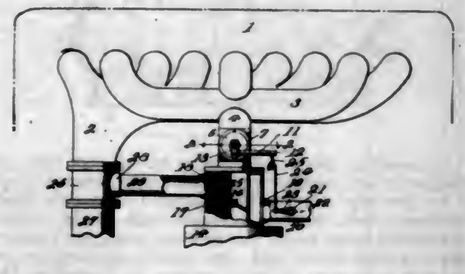
1,630,724. APPARATUS AND PROCESS FOR PRODUCING OPHTHALMIC LENSES. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 30, 1925. Serial No. 19,456. 9 Claims. (Cl. 49—82.1.)

1. The process of producing multifocal lenses comprising finishing a piece of glass to a polished lens surface, heating the glass to plasticity and drawing up a portion of the polished surface to a different curvature by suction applied to the polished surface without the said displaced polished surface coming in contact with anything to shape it.

1,630,725. GOVERNING MEANS FOR TURBINES. CARL R. WALLER, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed May 19, 1922. Serial No. 562,215. 5 Claims. (Cl. 137—158.)

1. Governing means for turbines having high and low pressure stages, comprising a high pressure steam control, a low pressure steam receiver adapted to receive steam exhausted from the high pressure stage of the turbine and deliver steam to the low pressure stage, low pressure steam control means, and other means actuated by the pressure in the low pressure receiver for controlling the passage of steam from said receiver to the low pressure stage, thereby tending to maintain the pressure in the receiver constant.

1,630,726. LIGHTER-THAN-AIR AIRCRAFT. BARNES NEVILLE WALLIS, Westminster, London, England, assignor to Airship Guarantee Company, Limited, Westminster, England. Filed Dec. 16, 1925, Serial No. 75,884, and in Great Britain Jan. 21, 1925. 2 Claims. (Cl. 244—3.)



1. A method of maintaining taut the outer cover of an airship which consists in providing a space completely surrounding the gas bags and located between the outer cover and the gas bags, said space being placed in communication with the atmosphere by air admission means situated at the extreme nose of the airship in the region of maximum pressure and zero velocity so that the outer cover is distended by the air pressure at the nose of the ship.

1,630,727. RAILWAY SIGNAL SYSTEM. JOSEPH L. WOODBRIDGE, Philadelphia, Pa. Filed Nov. 3, 1921. Serial No. 512,525. 5 Claims. (Cl. 246—41.)

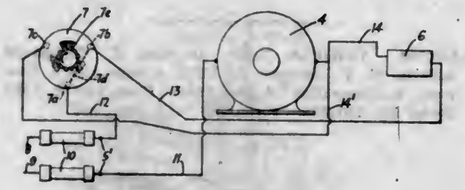
1. In a railway signal system, the combination of a signal operating circuit, and a track circuit comprising the two opposite rails of a track section having a source of electric current connected across said rails at one point and a relay having its actuating coil connected across said rails at another point and having its contacts connected into the signal operating circuit, and an auxiliary relay provided with an actuating coil connected between two separated points of one of the rails and having its contacts connected in series with the contacts of the first mentioned relay in the signal operating circuit.

1,630,728. THERMOSTATIC HEAT CONTROL FOR INTERNAL-COMBUSTION ENGINES. REA P. WRIGHT, Washington, D. C., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Indiana. Filed Nov. 18, 1920. Serial No. 424,909. 3 Claims. (Cl. 123—122.)

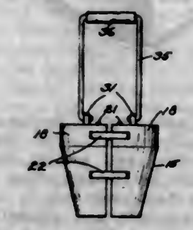
1. An internal combustion engine having an exhaust pipe, intake manifold and charge forming devices connected thereto, a heater arranged to heat the charge in its passage to the internal combustion engine in communication with said exhaust pipe, said heater being provided with an outlet pipe, a valve mounted in said outlet pipe, said intake manifold being provided with an opening, a cup shaped casing mounted in said opening, a thermostat mounted within said casing having a stem, a shaft provided with an arm having a connection with said stem, a second arm fixed on said shaft and a link connecting said second arm to said valve controlling the position of said valve by the temperature of the charge passing into the internal combustion engine.

1,630,729. DENTAL COTTON HOLDER. ROBERT J. BERKINSHAW, Niagara Falls, N. Y. Filed Mar. 6, 1924. Serial No. 697,274. 1 Claim. (Cl. 32—5.)

A dental cotton holder, comprising a supporting member, a receptacle for cotton pellets rotatably mounted on said member and including a base section having a conical bottom and provided in its side wall opposite the conical bottom with a series of discharge openings, the latter being wide enough at one end to pass the pellets and constricted at their opposite ends to prevent the discharge of the pellets, a head section disposed above said base section and provided in its top with a filling opening, a substantially cylindrical body section interposed between said top and bottom sections, and a tie-bolt extending axially through said supporting member and said several sections.



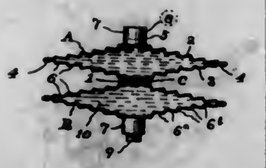
1,630,730. SIGNALING DEVICE. GEORGE H. DAUGHERTY, Berkeley, Calif. Filed May 10, 1926. Serial No. 107,969. 4 Claims. (Cl. 116—35.)



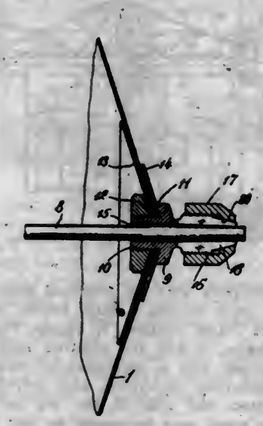
1. A signaling device of the character described, comprising a glove adapted to fit the signaling hand of the driver of a motor vehicle and having a plurality of direction indicating characters marked on one face thereof, the said characters being arranged in different reading positions so as to allow each character to assume a correct readable position when the hand is held to give the signal corresponding to said character.

1,630,731. CONTROL CIRCUIT FOR MOTORS. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 2, 1926. Serial No. 91,853. 7 Claims. (Cl. 236—1.)

1. An electrical circuit comprising a motor, a source of electrical energy for operating said motor, automatically operated means for connecting said motor to and disconnecting it from said source, and a single manually operable control device interposed between said automatic means and said source for connecting and disconnecting said motor either through said automatic means or directly to said source.

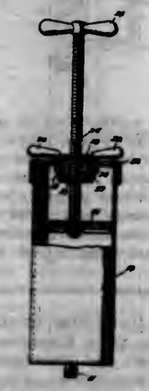


1,630,732. PIPE SLIP. WILLIAM D. DAVIDSON, Los Angeles, Calif., assignor, by mesne assignments, of one-half to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California, and one-half to Titusville Forge Company, Titusville, Pa., a Corporation of Maryland. Filed Mar. 29, 1924. Serial No. 702,804. 2 Claims. (Cl. 24—263.)



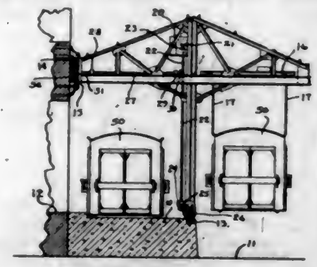
2. A casing slip of the character described, comprising a plurality of sectors having upper and lower recesses in their opposing lateral faces, upright pivot rods carried by said sectors and intersecting said recesses, and links disposed between adjoining sectors and having their ends engaging the companion recesses and pivot rods thereof.

1,630,733. THERMOSTAT DIAPHRAGM. PETER F. DODUNSKI, Solon, Ohio. Filed Aug. 29, 1925. Serial No. 53,234. 2 Claims. (Cl. 297—9.)



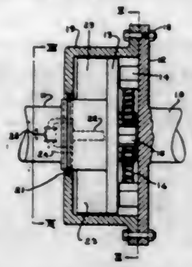
1. A thermostat including a pair of circular diaphragm plates having spaced central seats and converging toward their peripheries where they are connected to form a closed chamber, each of the diaphragm plates being formed with concentric annular corrugations having flat sides arranged in an angular relation to provide sharp ridges and angular valleys, one side of each of the corrugations being longer than the other side and the short side being arranged at an angle to the direction of movement of the plate.

1,630,734. LOUD SPEAKER. CLAIR L. FARRAND, Forest Hills, N. Y., and ERNEST ROSS, East Orange, N. J.; said Ross assignor to Farrand Mfg. Co. Inc., Long Island City, N. Y., a Corporation of New Jersey. Filed Nov. 5, 1926. Serial No. 146,350. 4 Claims. (Cl. 181—31.)



1. A loud speaker comprising a diaphragm, actuating mechanism therefor including a driving rod, and connecting means between the driving rod and the diaphragm comprising a clutch member secured to the diaphragm having resilient jaws, and a collet cooperating with the clutch member adapted, when actuated, to force the resilient jaws of the clutch member into engagement with the driving rod.

1,630,735. HIGH-PRESSURE LUBRICATOR. ROBERT M. FERRELL, Irvine, Calif. Filed Mar. 3, 1926. Serial No. 92,039. 2 Claims. (Cl. 74—40.)

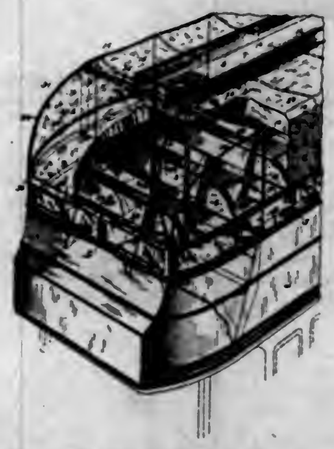


1. The combination with a threaded plunger rod, of a socket having a relatively coarse threaded bore, and a sectional nut engaged about the rod and in the socket, the sections of the nut being hinged together at one side and provided at the opposite side on their meeting faces intermediate their ends with an interengaging tapered lug and notch whereby the sections will be caused to register as they are closed about the rod.

1,630,736. FREIGHT-HANDLING APPARATUS. BENJAMIN F. FITCH, Greenwich, Conn. Filed Sept. 27, 1924, Serial No. 740,102. Renewed Apr. 25, 1927. 9 Claims. (Cl. 105—147.)

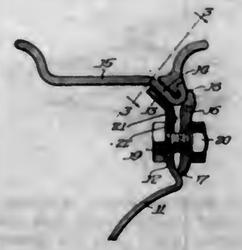
1. The combination with an overhead guide of a one-legged gantry crane having a main frame, two opposed wheels on said frame adapted to engage the guide for moving the frame, means for rotating said wheels in opposite directions, and a supplemental frame provided with load supporting mechanism and traveling on the main frame from one side of the leg to the other, whereby either wheel may be caused to bear against the guide to the exclusion of the other wheel.

1,630,737. COUPLING. WARREN B. FLANDERS, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 18, 1924. Serial No. 726,779. 1 Claim. (Cl. 64—96.)



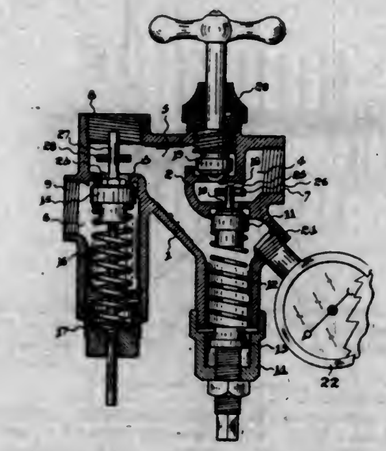
In a coupling, the combination of a driving member, a driven member, resilient power-transmitting means interposed between the driving and driven members, a casing containing fluid, damping vanes associated respectively with the driving and driven members and disposed within the casing, means communicating with the casing for by-passing fluid around the damping vanes, and means provided in said communicating means for regulating the quantity of flow.

1,630,738. RETORT UNIT FOR STOKERS. ROBERT A. FORESMAN and OTTO ARAM, Essington, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,796. 9 Claims. (Cl. 110—44.)



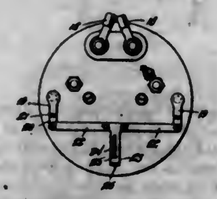
4. A unit construction for stokers comprising a fuel feeding mechanism, an inclined fuel retort, a member supporting the lower end of the retort, the length of the member being approximately equal to the width of the retort, symmetrical elements secured one adjacent each end of said member, the combined length of the supporting member and adjacent symmetrical elements being equal to the width of the unit.

1,630,739. VEHICLE TOP. MICHAEL J. FORRESTER, Astoria, N. Y., assignor to Fifth Avenue Coach Company, a Corporation of New York. Filed Apr. 8, 1924. Serial No. 704,925. 7 Claims. (Cl. 296—107.)



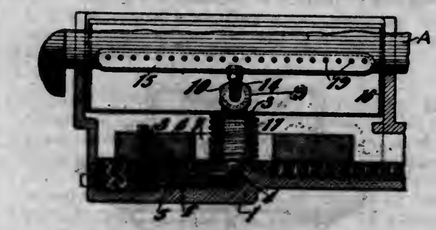
1. In combination with a vehicle having a row of seats extending longitudinally thereof, a top for said vehicle comprising a longitudinal roof member and a series of up-and-down swingable curtain-supporting members pivoted side by side at their lower ends to the side of the vehicle on fore-and-aft axes, and adapted when swung upwardly to be engaged at their upper ends with, and be supported by, said roof member so as to extend in operative position over the seats and thereby form supports for a foldable curtain, said members being swingable downwardly and inwardly transversely of the vehicle to inoperative positions, out of the way between the seats, when the curtain is to be folded.

1,630,740. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Jan. 29, 1923. Serial No. 615,493. 5 Claims. (Cl. 301—18.)



1. A disk wheel having a peripheral portion adapted for bearing contact upon a correspondingly disposed portion of a tire-carrying rim under the influence of spaced clamping means, one of the bearing portions having an undulate contour as viewed circumferentially in the wheel plane.

1,630,741. CONTROL MECHANISM FOR WATER-HEATING SYSTEMS. WILLIAM J. GRIFFITHS, Toronto, Ontario, Canada. Filed Dec. 6, 1926, Serial No. 152,988, and in Canada Aug. 4, 1926. 3 Claims. (Cl. 277—54.)



1. In a control device for water heating systems, a hollow body member having its interior divided by two partitions to form three compartments, said body having a water inlet communicating with one compartment; an opening communicating with the second compartment and adapted to be connected with the water heating system and an exhaust opening communicating with the third compartment, the partition between the first and second compartments having two passages formed therethrough; a valve adapted to close one of said passages; resilient means normally tending to hold said valve in seated position; means for varying the resistance of said resilient means; a manually operable valve controlling the other passage, the partition between the second and third compartments having a passage therethrough; a valve adapted to close said last mentioned passage; resilient means normally tending to hold said valve in seated position; means for varying the resistance of said resilient means; and means extending outside the body for unseating the last mentioned valve without disturbing the adjustment of the resilient means.

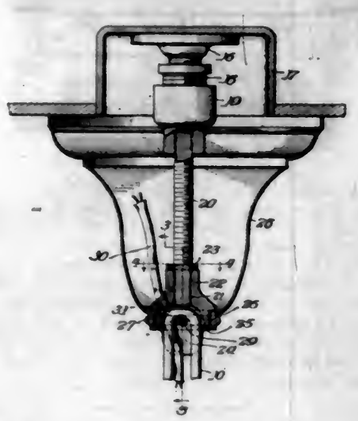
1,630,742. SOUND REPRODUCER. WILLIAM C. GRUNOW, Chicago, Ill., assignor of one-half to Bertram J. Grigsby, Chicago, Ill. Filed Mar. 10, 1925. Serial No. 14,527. 3 Claims. (Cl. 179—114.)

1. Sound reproducing means comprising in combination a casing, a diaphragm, electrical means for vibrating said diaphragm, and means for varying the air pressure against said diaphragm, said means including openings in said casing and pivotally mounted shutter members serving as adjustable closures for said openings, links extending from the ends of said shutter members, and an operating element pivotally connected to said links for common control of said shutters at a remote point from said openings.

1,630,743. LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed July 27, 1922. Serial No. 578,019. 8 Claims. (Cl. 308—84.)

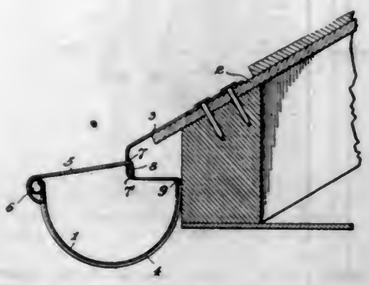
1. In a lubricator for railway journal boxes, a lubricant reservoir, a pump including a vertical discharge passage having a circular opening in its side, a hollow ball in said passage seated against the periphery of said opening and provided with an inlet for lubricant in said passage, an L-shaped pipe leading outwardly and upwardly from said ball, a trough extending longitudinally of a journal to be lubricated and connected to said pipe and carried thereby in a position vertically disaligned with said passage with its edges adapted to contact with the journal, and a spring support for said trough.

1,630,744. DISPLAY DEVICE. JOSEPH P. HOHMANN, Flemington, N. J. Filed Apr. 15, 1925. Serial No. 23,253. 4 Claims. (Cl. 240—49.)



1. A display device in the form of a toy lighthouse comprising, a tower including a tubular body, a ventilated conical top and a bottom secured to said body, a circular series of continuous windows in the upper end of the body, a source of light located within the body below said series of windows, and a horizontally disposed shutter suspended from said top within the body and rotated by the ascending column of heated air generated by said source of light, said shutter being provided with a depending outwardly flared peripheral flange having an opening in the horizontal plane of the circular series of windows to disclose a revolving ray of light therethrough.

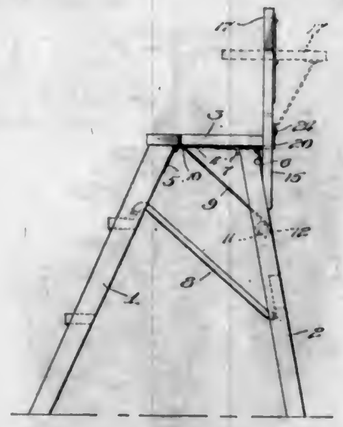
1,630,745. SUSPENDING DEVICE FOR LIGHTING FIXTURES. PAUL M. HOTCHKIN, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,218. 8 Claims. (Cl. 240—85.)



1. In a canopy construction for lighting fixtures, the combination with a suspensory device, of a chain support connected thereto, said support being provided at its lower

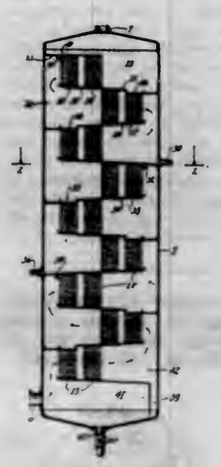
end with a downwardly opening slot for receiving the suspending chain of the fixture, said support also being provided with diagonally disposed passages therethrough for receiving the current leads of the fixture and to permit

their threading through the support while the suspending chain is engaged therewith, one of said passages being arranged at each side of said slot and having its lower end in communication therewith and its upper end opening at the exterior of said support.



1,630,746. EAVES-TROUGH HANGER. CLARENCE G. INMAN, Chicago, Ill. Filed June 13, 1923. Serial No. 645,122. 3 Claims. (Cl. 108—29.)

2. The combination with a trough or gutter of a one-piece hanger cooperating therewith, said hanger consisting of an attaching and intermediate portions and a supporting portion extending around the trough with a locking tongue punched therefrom and integral therewith extending over the top of the trough and engaging an opening in said intermediate portion of the hanger, substantially as set forth.

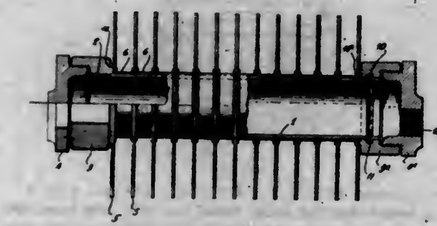


1,630,747. COMBINATION STEPLADDER AND CHAIR. AUGUST I. JOHNSON, Chicago, Ill. Filed Sept. 13, 1926. Serial No. 135,036. 3 Claims. (Cl. 228—2.)

1. A step ladder having a member projecting above the top along one edge of the latter, said member having a movable part adapted to be swung between an upright position and a horizontal position, a rod bent into a V and hinged at the apex to said movable part near a free end of the latter, and sockets on the ladder in position

to receive the ends of said rod when said movable part is in its horizontal position and lock said part in that position.

1,630,748. FLUID SEPARATOR. GEORGE M. KIRKPATRICK, Pittsburgh, Pa. Filed May 23, 1924. Serial No. 715,366. 5 Claims. (Cl. 196—139.)

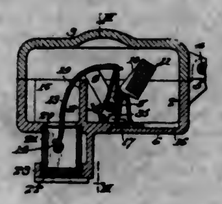


1. A fluid separator comprising a casing having an inlet and an outlet, a plurality of banks of baffles in said casing between said inlet and outlet, said banks being arranged in pairs, means for passing a liquid through one only of the banks of each pair, and means for passing a gas through each of said banks successively.

1,630,749. RADIATOR. RAGNAR L. KJERNER, Crestwood, N. Y. Filed Dec. 31, 1926. Serial No. 158,142. 5 Claims. (Cl. 257—262.)

1. In a radiator, a tube provided at its opposite ends with fixed abutments, a plurality of disks or fins embracing the tube between the abutments and spacers

interposed between consecutive disks to space them from one another, said spacers embodying cylindrical portions embracing the tube and substantially outwardly extending resilient radial flanges bearing against the con-

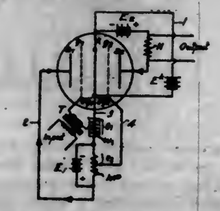


tiguous disks with the flanges under compression, whereby said resilient flanges will grip and hold the disks firmly in position irrespective of expansion and contraction of the parts.

1,630,750. INTERNAL-COMBUSTION-ENGINE VALVE. PHILIP KRASNO, Milwaukee, Wis. Filed June 15, 1925. Serial No. 37,229. 2 Claims. (Cl. 123—188.)

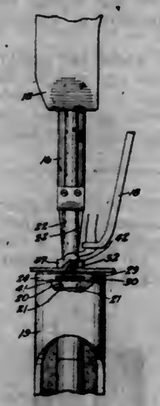
1. A valve for an internal combustion engine, said valve comprising a stem, a disk formed integrally with said stem and having an inwardly directed peripheral flange, said flange having converging inner and outer walls and terminating in a relatively restricted surface, said restricted surface being rounded, whereby it may seat upon a flat surface without cutting.

1,630,751. LIQUID-FEEDING DEVICE. GEORGE W. LEIMAN, Newark, N. J., assignor to Leiman Bros., a Copartnership consisting of William H. Leiman, George W. Leiman, Gustave A. Leiman, Edward C. Leiman, and John Leiman, Newark, N. J. Filed Aug. 27, 1926. Serial No. 131,929. 11 Claims. (Cl. 184—64.)



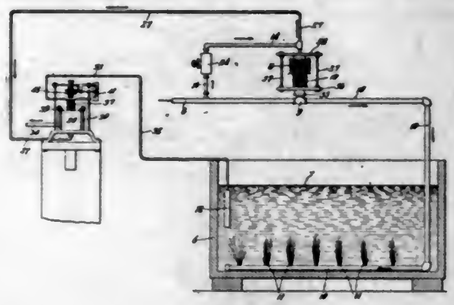
1. A liquid feeding device comprising, a reservoir, a member coacting with the liquid in said reservoir to control the movement of the liquid therefrom, a fluid actuated device for oscillating the member in one direction, and a gravity operated means controlled by said device for rocking the member in the other direction.

1,630,752. CELLULOSE COMPOSITION. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Apr. 25, 1922. Serial No. 556,533. 4 Claims. (Cl. 106—37.)



1. A composition containing a cellulose ester and an aromatic phosphate and in close association therewith hexachlorethane.

1,630,753. AMPLIFIER. JOSEPH MASSOLLE, Berlin-Grunewald, HANS VOGT, Berlin-Wilmersdorf, and JOSEF ENGL, Berlin-Grunewald, Germany, assignors to Tri-Ergon Limited, Zurich, Switzerland. Filed Apr. 4, 1921, Serial No. 458,628, and in Germany Dec. 2, 1919. (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.) 8 Claims. (Cl. 179—171.)

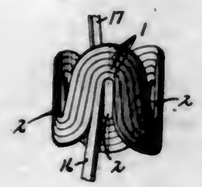


1. A multiple-stage amplifier, comprising a single evacuated container, a single integral undivided heated cathode, common, as a whole, to the several stages of amplification, and a plurality of anodes and grids in said container, spaced away from the cathode and from each other, and all arranged outside the entire cathode, connections for impressing an input potential difference across the cathode and first grid, external circuits connecting each anode with the cathode, and means for coupling the anode-cathode external circuit of each stage except the last with the cathode and grid of the next stage.

1,630,754. METHOD AND APPARATUS FOR EMBOSSING FLEXIBLE MATERIAL. PETER C. McNULTY, Milwaukee, Wis. Filed Dec. 7, 1925. Serial No. 73,917. 7 Claims. (Cl. 112—136.)

7. In a sewing machine for forming an imitation moccasin seam, the combination of a pair of needles, a guide plate having a pair of parallel slots through which said needles work and having a supporting portion between said slots for supporting a tape, a fixed die associated with said plate, a tape guide through which a tape may be passed beneath said die, and a presser foot having a grooved lower face cooperating with said die to press the work between said die and said foot whereby the work is upwardly arched and the tape is stitched to the under side of the work on opposite sides of the upwardly arched portion.

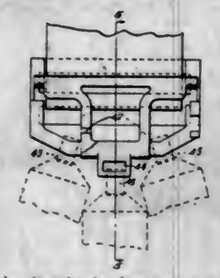
1,630,755. TEMPERATURE-CONTROL SYSTEM. HERBERT MILKER, Queens, N. Y., assignor to American Schaeffer & Budenberg Corporation, a Corporation of New York. Filed May 6, 1924. Serial No. 711,351. 16 Claims. (Cl. 236—80.)



1. In a temperature control system the combination with a part to be heated and means for supplying a heating fluid thereto, of means for regulating the supply of the heating fluid comprising a valve operated by the pressure of the heating fluid including differential pressure operated members both supplied with fluid pressure from the same side of said valve and working against atmospheric pressure.

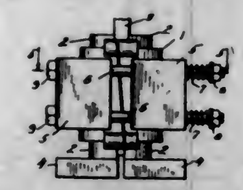
1,630,756. EGG PRODUCT AND METHOD OF MAKING SAME. CLINTON H. PARSONS, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1924. Serial No. 748,527. 11 Claims. (Cl. 99—14.)

7. The method of producing a homogeneous frozen egg product which comprises subjecting the eggs to a grinding operation, whereby the non-liquid parts of the eggs such as the germs, strings, and interior membranes are finely divided and effectively admixed with the other constituents of the eggs to form a substantially homogeneous liquid egg product, and rapidly freezing the homogeneous liquid egg product to produce a homogeneous frozen egg product.



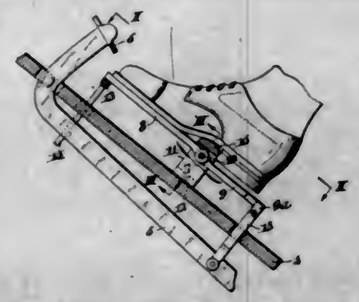
10. A homogeneous frozen egg product containing the non-liquid parts of the egg such as the germs, strings and interior membranes in finely divided condition, and effectively admixed with the other constituents of the eggs, said product being capable of being thawed without liquid separation.

1,630,757. FIELD WINDING. LAURENCE M. PERKINS, Syracuse, N. Y., assignor of one-half to Owen-Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Filed Apr. 13, 1922. Serial No. 552,311. 3 Claims. (Cl. 171—206.)



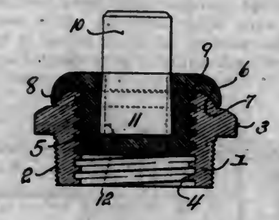
1. A field winding for a multi-polar machine substantially circular in lateral cross section and consisting of a series of longitudinally arranged sinuous U-shaped pole-receiving layers of conductor each transversely curved and arranged substantially parallel to the operative axis of the machine, alternate U-shaped layers opening in opposite directions.

1,630,758. BUCKLE. HATTIE MAY PFALTZGRAFF, Lakewood, Ohio. Filed Aug. 5, 1924. Serial No. 730,145. 6 Claims. (Cl. 24—191.)



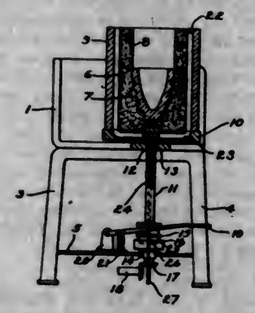
1. A buckle having back, front and side portions, the front and back portions being rigid relative to the side portions to form a frame closed at the corners on the front, sides and rear but open at the top and bottom, the back portion being provided with an opening extending thereacross, a clasp member mounted in place opposite the back portion, spaced therefrom and intermediate the upper and lower extremities of the front portion and in position to have its tongue opposite the opening to force the strap into engagement with the opposite edges of the opening when the clasp member is placed in operative position and means for holding the clasp in operative position.

1,630,759. BREAKING DEVICE FOR HOLLOW CYLINDERS. WINSLOW S. PIERCE, Jr., Bayville, N. Y. Filed Apr. 23, 1926. Serial No. 104,110. 21 Claims. (Cl. 29—66.)



1. A breaking device for hollow cylinders comprising an internal, expanding member for applying force to the inner surface of the cylinder to break it into sections and an external restricting member for restricting the movement of said sections.

1,630,760. FOOT CONTROL. GEORGE R. POWELL, Merion, Pa. Filed Oct. 2, 1926. Serial No. 136,066. 6 Claims. (Cl. 74—81.)

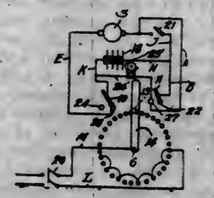


1. A foot control comprising a pedal, a pivot located intermediate the ends of the pedal, and a stationary bridging bar over the pivot functional as a fulcrum rest for the foot in actuating the pedal.

1,630,761. WASHOUT PLUG. ORTON L. PRIME, Milwaukee, Wis. Filed Aug. 29, 1925. Serial No. 53,364. 1 Claim. (Cl. 220—39.)

A plug comprising a bushing having an aperture therethrough, said aperture being threaded, said bushing having an externally threaded portion and having a projecting flange adjacent its outer end and having a beveled seating surface spaced both from the outer edge of the flange and from the outer end of the bushing, a removable plug screwed into the internally threaded aperture of said bushing, said plug having a projecting flange provided with a surface contacting with the beveled seating surface of said bushing, the flange of said plug being inwardly turned towards the flange of said bushing and stopping short of the flange of said bushing, the flange of said plug having a cut-away portion spaced from the end of said bushing when said plug is screwed into place.

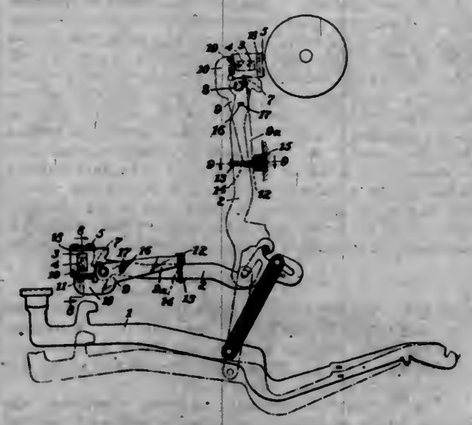
1,630,762. METHOD OF AND APPARATUS FOR FORMING INSULATORS. KARL C. RANDALL, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1921, Serial No. 468,701. Renewed Apr. 27, 1927. 4 Claims. (Cl. 25—129.)



1. An apparatus for forming bodies of plastic material comprising a plaster-of-Paris mold, a hollow container secured to a base plate having an annular groove formed therein, said mold having a plurality of annular openings communicating with said annular groove, a hollow spindle secured to said base plate, the opening thereof communicating with said annular groove, a friction member attached to the lower end of said hollow spindle, a cooperating friction member secured to a source of power, means for directing an air blast through said hollow spindle to said groove and into the openings of said mold, and means for bringing said friction members into engagement to rotate said spindle.

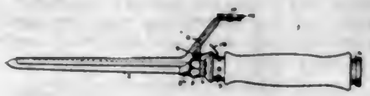
1,630,763. CHEWING GUM. PAUL H. RAYMER, East Orange, N. J. Filed June 26, 1925. Serial No. 39,832. 5 Claims. (Cl. 167—9.)

1. A chewing gum composition containing magnesium hydroxide, the quantity of the magnesium hydroxide being sufficient to neutralize the acidity of the mouth throughout the normal life of the gum, while being chewed, and being insufficient to injuriously affect the chewing quality of the gum.



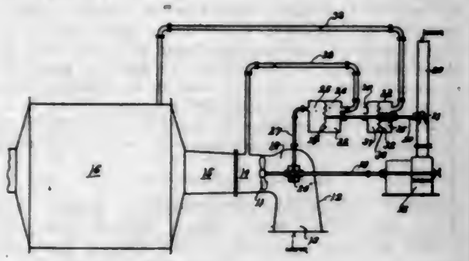
3. A chewing gum pellet comprising an inner body of chewing gum composition, an outer coating of sugar composition, and magnesium hydroxide distributed in both said inner body and said coating, the total quantity of magnesium hydroxide being less than three percent by weight of the pellet.

1,630,764. SIGNAL TRANSMITTER. FELICE RIZZO, Schenectady, N. Y. Filed Feb. 27, 1925. Serial No. 12,012. 1 Claim. (Cl. 177—380.)



A transmitter of the class described including, in combination, a casing, an annular series of spaced stationary contacts arranged on one wall of the casing, a shaft journaled through said wall of the casing centrally of the series of contacts, a motor operatively associated with the shaft for imparting rotary motion thereto, a movable contact on said shaft associated with said stationary contacts to move thereover, a switch mounted on said wall of the casing outside of the annular series of contacts, and including a movable element and a stationary element, said elements being in circuit with the motor, and an arm mounted on the shaft to move synchronously with the movable contact for engaging, when in a predetermined position, the movable element of the switch, so as to disengage the movable element from the stationary element for the purpose of breaking the motor circuit.

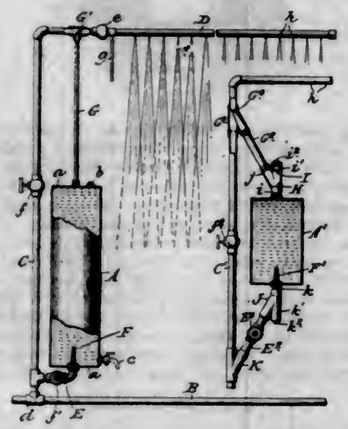
1,630,765. NOISELESS TYPEWRITER. JOHN A. RUFFIN, Middletown, Conn., Horace Edward Ruffin and Allan F. Ruffin, executors of said John A. Ruffin, deceased. Filed Apr. 11, 1923. Serial No. 631,414. 7 Claims. (Cl. 197—35.)



4. In a typewriting machine, a type bar, a platen a type slidable on the type bar for printing by pressure in combination with means mounted on the type bar for exerting said pressure, and a stop on the frame for operating said means when the type bar is moved to a position adjacent the platen.

1,630,766. CURLING IRON. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 23, 1926. Serial No. 83,193. 6 Claims. (Cl. 132—37.)

1. The combination of an elongated heating member, a hair clamping member mounted on the heating member and movable to and from the same, an operating arm connected with the clamping member, and a connection between the heating and the clamping members to lock the said two members against relative and rotary movement, said connection comprising a polygonal portion at the inner end of the heating member, a part having similar form on the clamping member adapted to fit thereon and means at the outer end of said polygonal portion to laterally guide the connection on the clamping member to a position of coincidence when moved longitudinally onto the polygonal portion.



1,630,767. REGULATOR SYSTEM FOR CONDENSER CIRCULATING PUMPS. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 3, 1920. Serial No. 427,995. 12 Claims. (Cl. 257—24.)

3. In combination, a surface condenser, a turbine-driven circulating pump comprising turbine and pump units, a throttling valve to control the supply of motive fluid to the turbine unit, and controlling means for the throttling valve comprising a primary balance motor having a diaphragm, means to render one side of the diaphragm subject to variations in the pressure existing in the discharge outlet of the pump, means to subject the other side of the diaphragm to pressures responsive to changes in speed of the pump, a secondary balance motor having a diaphragm, means to render one side of the diaphragm responsive to variations in air pressure, and means to render the other side of the diaphragm responsive to variations in pressure within the condenser.

1,630,768. METHOD OF DISTRIBUTING FERTILIZER IN SOLUBLE CONDITION. GUSTAVE C. C. SCHRADER, Forest Hills, N. Y., assignor to Harry I. Bernhard, New York, N. Y. Filed Apr. 13, 1922. Serial No. 552,418. 4 Claims. (Cl. 47—58.)

1. In the art of fertilizing growing vegetation, the method which consists in preparing a saturated solution of manurial salts, setting up a flow of water through an appropriate distributor for effecting the distribution over plants in a given area of surface, charging a container with a determined volume of such saturated solution, admitting to the saturated solution some of the water and displacing such solution from the container in a dilute condition and mixing the dilute solution so displaced with the flowing water for effecting the distribution of solution in a progressively diluted condition over the growing plants, and continuing the flow of water after the charge container shall have been emptied and distributing such water over the plants for a desired period of time, whereby the plant foliage is washed clear from traces of such manurial salts solution and the salts with the water become absorbed by the plant soil.

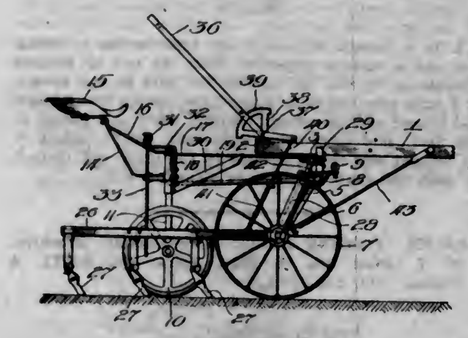
4. In the art of fertilizing growing vegetation, the method which consists in preparing a saturated solution of manurial salts composed of nitrate of soda, acid phosphate, and muriate of potash, placing in a container such solution the quantity of which is apportioned to the area of growing vegetation to be fertilized, setting up a flow of water through an appropriate distributor, admitting water to the container and diluting the salt solution progressively, feeding the diluted salt solution to the flowing water and further diluting the salt solution by admixture with the flowing water, distributing the admixture of water and salt solution over a given area of growing vegetation for discharging the salt solution in progressively diluted condition until the charge container is emptied of salt solution, and thereafter continuing the flow of water and distributing the same over the growing vegetation for washing the salt solution from the plant foliage whereby the water and salt solution are absorbed by the plant soil.

1,630,769. PROCESS OF MAKING DISUBSTITUTED GUANIDINES. WINFIELD SCOTT, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 15, 1923. Serial No. 619,318. 20 Claims. (Cl. 260—125.)

1. The process of making disubstituted guanidines which comprise desulfurizing the corresponding disubstituted thiourea by the action thereon of a basic salt of a metal selected from a group consisting of lead, zinc, cadmium and tin in the presence of ammonimum hydroxide.

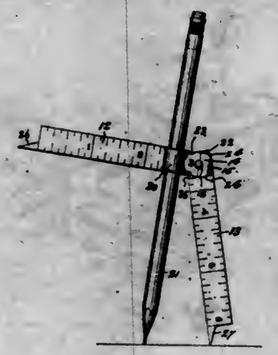
6. The process of desulfurizing thioureas which comprises inducing a reaction between a thiourea and a finely subdivided basic salt of lead.

1,630,770. CONTROL FOR CURTAIN AND AWNING ROLLERS. HENRY SMITH, Chicago, Ill. Filed Mar. 8, 1924. Serial No. 696,564. 5 Claims. (Cl. 156—44.)



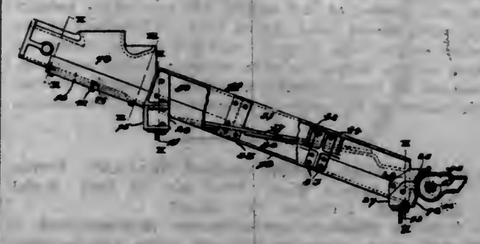
1. In a device of the class described, a sectional casing having a longitudinal chamber and opposite heads integral with the casing and forming end abutments, a threaded gudgeon journaled in the heads and having an angular end projecting beyond one of the heads, a nut on the thread to abut against either head, and co-operating devices between the nut and casing constructed to rotate these parts in unison on the gudgeon to move the nut along the gudgeon to abut against one of the heads to lock the gudgeon and casing together.

1,630,771. PROCESS OF SOLDERING ARTICLES. EUGEN THOMA, Pforzheim, Germany. Filed July 17, 1924, Serial No. 726,637, and in Germany Sept. 7, 1922. 19 Claims. (Cl. 204—1.)



1. The process of soldering articles having connected links which consists in depositing, between the adjoining ends of the links, by electrolytic action, material capable of having a soldering effect with respect to the metal of which the links are made and subsequently softening the material to solder the link ends together.

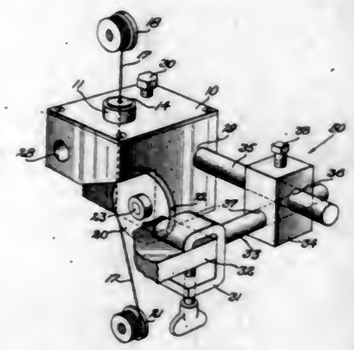
1,630,772. RIDING CULTIVATOR. SAMUEL H. TINSMAN, Morris, Ill. Filed Feb. 24, 1925. Serial No. 11,080. 17 Claims. (Cl. 97—155.)



1. In a riding cultivator, the combination of a wheeled structure, cultivator gangs connected thereto and adapted to swing laterally, a rear seat for the driver, a seat-supporting structure having draft connection to and trailing behind the wheeled structure to swing laterally relatively thereto, and provided with steering means engaging the ground to sustain the weight of the driver, means whereby the driver has control over said steering means, thereby to swing the seat-supporting structure laterally at will, and connecting means between said seat-supporting structure and said cultivator gangs, whereby swerving of the seat-supporting structure to one side or the other by the action of said steering means will necessarily cause said gangs to swing laterally in the same direction.

1,630,773. COMBINATION DIVIDER. ALFRED VAN GALE, Newark, N. J. Filed Dec. 27, 1922. Serial No. 609,195. 4 Claims. (Cl. 33—149.)

1. In a device of the kind described, a pair of leg members made of flat stock and having their inner ends in mutually overlapping relation, a pivotal rivet joining said inner ends of said leg-members, one of said leg-members having a stop-lug, the other of said leg-members having on one side a stop notch engageable by said stop lug to hold said leg-members in a relative extension of one hundred and eighty degrees and having on the opposite side a second stop notch engageable by said stop lug to hold said leg-members in relative extension of niety degrees, a tension element interposed between one end of said rivet and said leg-members which is adapted to force the meeting surfaces of said leg-members into strong frictional mutual engagement, and each leg-member having a longitudinally projecting sharpened spur at its free end.



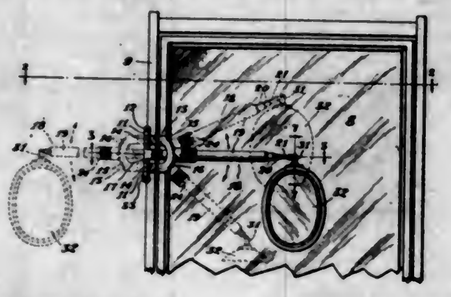
1,630,774. UNDERFEED STOKER. OTTO ARAM, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 10, 1923. Serial No. 638,118. 13 Claims. (Cl. 110—44.)

5. In an underfeed stoker having a combustion grate formed of alternately disposed retorts and tuyère rows, a retort frame comprising a front end member, a rear

end member, two parallel beam members secured to said end members and extending forwardly of the front end member and a ram box mounted on said beam members forwardly of the front end member.

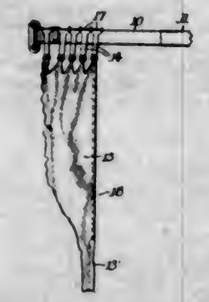
1,630,775. APPARATUS FOR TREATING DIES. HAROLD PETER ARKEMA, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 24, 1924. Serial No. 715,665. 7 Claims. (Cl. 51—62.)

1. In an apparatus for treating dies, means for passing a wire through the orifice of a die and simultaneously rotating the die subjecting the die to the polishing action of the said wire, and means controlled by the wire passing therethrough for controlling the rotation of the said die.



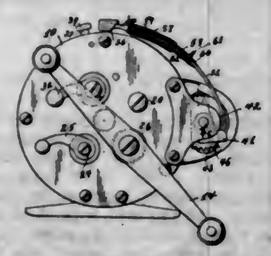
1,630,776. RESILIENT TIRE. HENRY BONAWITZ, Brooklyn, N. Y. Filed May 9, 1925. Serial No. 29,101. 5 Claims. (Cl. 152—8.)

2. A device of the class described comprising two annular resilient sections adapted to be mounted within a tire shoe and spaced from each other, each of said sections being composed of a plurality of similar and independently formed members, radially extending means on each member of each section, the ends of the radially extending means being spaced from the members of the other section, and a curved spring for each member of each section having its ends contacting with said member and its central portion engaging the radially extending means of the adjacent member of the other section.



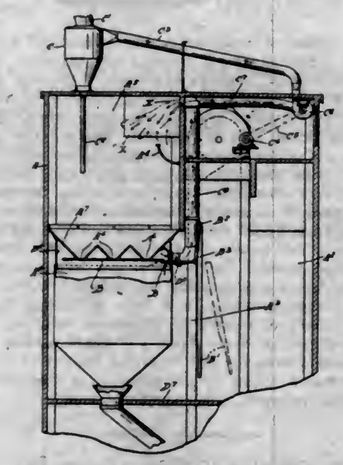
1,630,777. ADJUSTABLE MIRROR BRACKET. VICTOR BOURDON, Seattle, Wash. Filed Mar. 21, 1925. Serial No. 17,252. 4 Claims. (Cl. 45—97.)

1. In an adjustable mirror-bracket, in combination, a fixed base, a vertically disposed hinge pin mounted therein, a yoke member mounted upon said hinge pin for horizontal swinging movement only relative to said base, a knuckle member mounted upon said hinge pin midway the length thereof for horizontal swinging movement only relative to said base, a mirror supporting arm pivotally connected to said knuckle member midway the length thereof and embraced by said yoke member for vertical swinging movement relative to said members



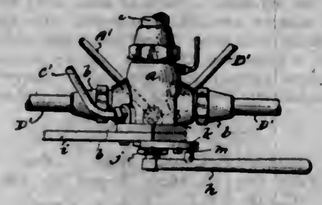
and horizontal swinging movement therewith, and means for retaining the arm in selective vertically adjustable positions upon said yoke member.

1,630,778. CURTAIN FIXTURE. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1926. Serial No. 93,002. 5 Claims. (Cl. 156—21.)



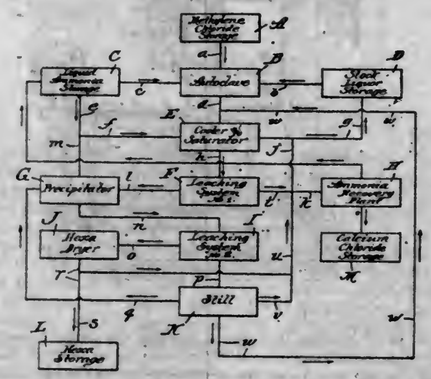
1. In a curtain fixture of the type having a curtain rod and a curtain suspended from the rod by hangers slidable on the rod, the combination with an end hanger, of a strip attached to an edge of the curtain beneath said end hanger and extending to within reach of a person on the floor, said strip being sufficiently stiff to adapt it, by manual side thrust applied to the lower end thereof, to push and draw the hangers along the rod.

1,630,779. FISHING REEL. JOHN BRISLIN, Brooklyn, N. Y. Filed Feb. 8, 1926. Serial No. 86,772. 4 Claims. (Cl. 242—84.4.)



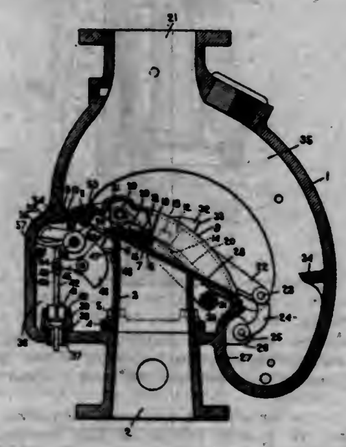
3. In a reel having side-plates and a level-winding mechanism, a screw-shaft, a relatively fixed bearing on one of said plates for one end of said shaft, a swinging lever mounted on the other of said plates and forming a bearing for the opposite end of said shaft, a pinion on said screw-shaft adjacent said lever and arranged to mesh with a gearwheel on the spool-shaft of the reel, and means for swinging said lever.

1,630,780. DUST-COLLECTING SYSTEM FOR GRAIN-ELEVATOR GARNERS. THOMAS D. BUDD and WILLIAM R. SINKS, Chicago, Ill. Filed Jan. 15, 1925. Serial No. 2,500. 22 Claims. (Cl. 209—147.)



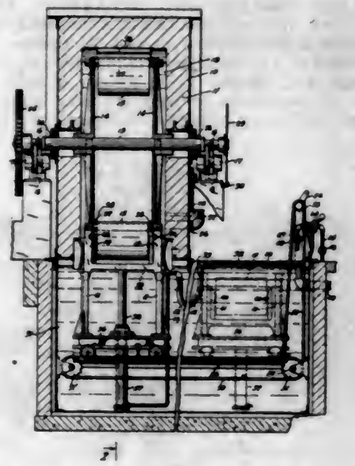
1. In a grain elevator, a garner, and means for holding therein the grain received thereby, a leg adapted to discharge grain to said garner, an air circulating and dust separating system associated with said leg and garner, comprising an air withdrawal passage in communication with said garner, means for withdrawing air therealong, means for separating dust from the air so withdrawn and means for returning said dust to the grain in said garner.

1,630,781. MULTIWAY VALVE. GEORGE A. BURMAN, Detroit, Mich., assignor to E. J. Woodison Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 28, 1923. Serial No. 665,336. 4 Claims. (Cl. 251—104.)



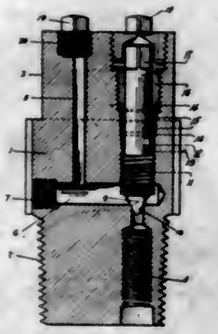
1. A valve for controlling a plurality of machine operations having in combination, a valve body provided with ports arranged in different horizontal planes and connected with conduits leading to the machine parts, a hollow valve rotatable within the valve body having its interior connected to a fluid pressure supply, this valve body having openings extending through its walls which are of sufficient length to align with the ports in the valve body as the valve is rotated, the valve also having grooves in its exterior surface which extend to the end of the valve and communicate with the atmosphere, these grooves being adapted to align with ports in the valve body to permit exhaust thereof.

1,630,782. PROCESS AND APPARATUS FOR PRODUCING HEXAMETHYLENETETRAMINE AND AMMONIUM CHLORIDE. CARNIE B. CARTER, deceased, Pittsburgh, Pa., by Myrtice G. Carter, executrix, Pittsburgh, Pa., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed July 30, 1926. Serial No. 125,958. 10 Claims. (Cl. 260—141.)



1. In effecting the separation of hexamethylenetetramine from ammonium chloride, the step which comprises: leaching with liquor saturated with respect to ammonium chloride a series of charges comprising ammonium chloride and hexamethylenetetramine.

1,630,783. DRIP VALVE FOR DRY-PIPE VALVES. EZRA E. CLARK, Newtonville, Mass. Filed July 22, 1926. Serial No. 124,173. 8 Claims. (Cl. 169—22.)

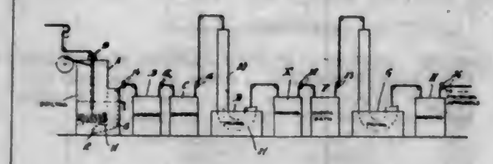


1. A dry pipe valve comprising a casing with an air valve and a water valve therein with valve seats for said valves and having a neutral chamber between said valves, provided with a drip valve port, a drip valve for said port, and means operable by the force of a stream of water discharged upon initial opening of the water valve to effect a quick closing of said drip valve.

1,630,784. ANNEALING OR HEATING FURNACE JAMES R. COE, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 11, 1926. Serial No. 93,970. 18 Claims. (Cl. 263—7.)

1. In a heating furnace, a heating chamber, a carrier in said chamber mounted to revolve in a vertical plane and having means at its periphery for carrying holders for the material to be heated, and mechanical means for inserting the holders in and removing them from the carrier.

1,630,785. CLOSURE. CHARLES D. COLLINS, New York, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Jan. 23, 1925. Serial No. 4,171. 12 Claims. (Cl. 221—74.)



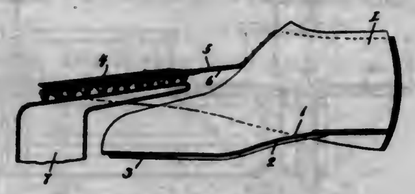
1. A closure for shipping containers comprising a block having an exit opening and a spring valved air inlet opening, and valves seated in said block adapted to close off said openings.

9. A closure for shipping containers comprising a block having an exit opening and an air inlet opening, valves seated in said block adapted to close off said openings, and means for inserting a spring valve in said air inlet opening.

12. A closure for shipping containers comprising a block having an exit opening and a spring valved air inlet opening, and valves seated in said block adapted to close off said openings, said valves and openings being at the top and bottom only of said block.

1,630,786. PROCESS FOR CONDITIONING TEXTILE MATERIALS. WILLIAM L. CONRAD, Boston, Mass. Filed May 25, 1923. Serial No. 641,326. 4 Claims. (Cl. 8—2.)

1. A method of conditioning textile material which consists in continuously progressing the material with the same end always foremost successively through a boiling vat or keir containing a cleaning solution in which the material is permeated with the cleansing liquid submerged in zigzag folds and withdrawn, passing the material through a washing machine, extracting the surplus washing fluid from the material, then saturating the material in a bath of bleaching liquor, extracting therefrom the excess liquor with which the material has been saturated, passing the material through a piling device by force derived from the weight of the material, the material in its passage through the piling device being subjected to air bleaching, again washing the material, extracting the surplus liquor therefrom and then saturating the material in a bath of chemic or equivalent solution, extracting therefrom the excess liquor and again passing the material under force derived from the weight of the material through a piling device, where it is subjected to air bleaching, and again washing the material.

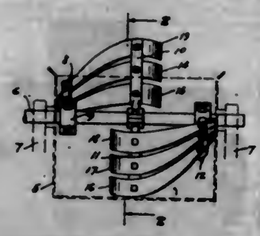


1,630,787. COOKING UTENSIL. CATHERINE F. CULLEN, New York, N. Y. Filed Sept. 18, 1925. Serial No. 57,159. 1 Claim. (Cl. 53—8.)

In combination, a container, a triangular shaped receptacle adapted to be positioned within the said container, the walls of said receptacle being imperforate and the front wall curved to conform to the shape of the container, the top edges of the said walls being reenforced, an arched member overlying and rigidly attached to the top edge of the said front curved wall, said arched member having a depending extension and an outwardly extended handle portion formed integral therewith protruding considerably beyond the wall of the said container.

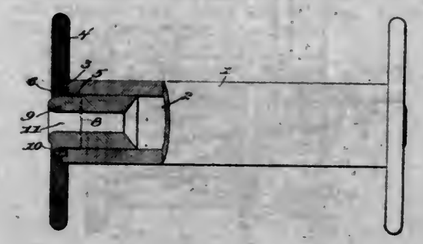
1,630,788. BOX-TOE SHOE. JOHN J. DALY, Newton, Mass. Filed Oct. 22, 1923. Serial No. 669,948. 2 Claims. (Cl. 12—145.)

1. The method of forming a box toe which consists in coating a portion of the toe area of the insole with a normally stiff thermo-plastic material, in temporarily positioning said insole on a last to which is lasted a box toe blank of normally stiff thermo-plastic material and a toe tip, in applying to the box toe blank heat in a degree sufficient to soften said blank but insufficient to injure the toe tip or soften the thermo-plastic coating of the insole, in pulling over the softened box toe blank and the toe tip and temporarily tacking them to the last, in subjecting the lasted box toe to a heat application sufficient to again soften the box toe blank and to also soften the thermo-plastic coating of the insole, in wiping in the formed toe while so softened whereby to



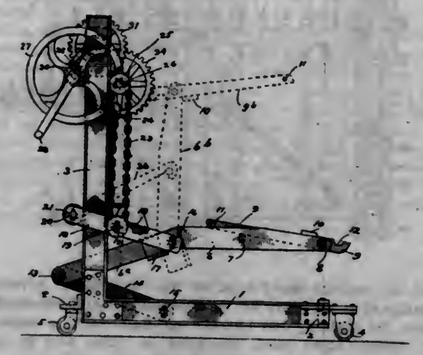
cause the box toe blank, toe tip and insole to adhere to each other, and in subsequently hardening the softened thermo-plastic coating of the box toe blank and insole to cause the box toe blank, top tip and insole to intimately unite with each other.

1,630,789. PLASTER MIXER. NEWMAN ESSICK, Los Angeles, Calif. Filed Sept. 8, 1924. Serial No. 736,466. 3 Claims. (Cl. 83—73.)



1. A mixer comprising a frame having spaced standards, a horizontally disposed shaft journalled between said standards and having mixing blades thereon, a drum suspended so as to be turned about said shaft and having an opening for the introduction and discharge of a charge of material said frame being arranged to permit free lateral discharge of said drum on both sides, abutment members extending from the heads of said drum, and locking members on said standards arranged to be disposed at will in front of said abutment members whereby to hold said drum against rotation in one direction.

1,630,790. PLASTER-MIXING DEVICE. NEWMAN ESSICK, Los Angeles, Calif. Filed Sept. 21, 1925. Serial No. 57,653. 3 Claims. (Cl. 83—73.)

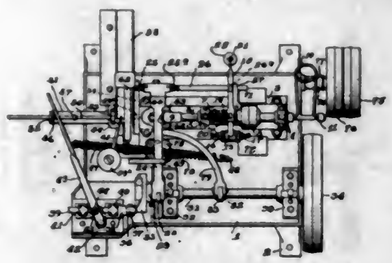


1. In a plaster mixer, the combination of a cylindrical mixing chamber, a shaft journaled in said chamber, a beater element secured to said shaft and comprising helical blades secured to and extending along said shaft, said blades being closely spaced radially and lying in a common plane throughout their length, the blades being scooped at one end.

1,630,791. SPOOL AND METHOD OF MAKING THE SAME. STEPHEN R. GLEASON, Lowell, Mass., assignor to Walter L. Parker Company, a Copartnership consisting of H. Hutchins Parker and Allan D. Parker, Lowell, Mass. Filed Dec. 8, 1926. Serial No. 153,324. 2 Claims. (Cl. 242—118.)

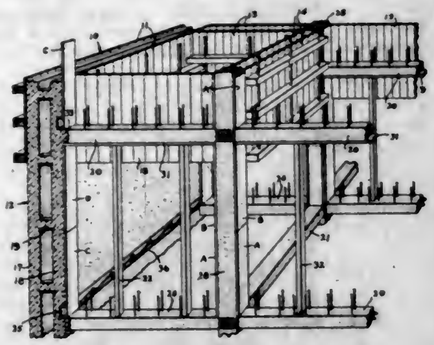
1. A spool having a barrel with a cylindrical hole in its end, a head provided with a frusto-conical hole, a reinforcing ferrule having its outer end frusto-conical to fit the hole in the head and its inner end preliminarily frusto-conical and provided with outwardly extended projections, and a plug having its outer end frusto-conical to fit the inside of the ferrule and its inner end cylindrical to expand the inner end of the ferrule to fit the hole in the barrel and to force the projections on the inner end of the ferrule into the wall of the barrel hole, the barrel, head and plug being glued together.

1,630,792. AUTOMOBILE JACK. OTTO W. HAHN, San Francisco, Calif., assignor to Universal Jack & Hoist Corporation. Filed Jan. 4, 1926. Serial No. 79,087. 11 Claims. (Cl. 254—4.)



1. A jack of the character described comprising a supporting frame including an upright, a laterally extending jack arm, a link at the rear end of said jack arm pivotally connected to the same and to the frame to permit vertical pivotal movement to said arm, and means pivotally connected to said arm intermediate its ends and guided for vertical movement on said frame.

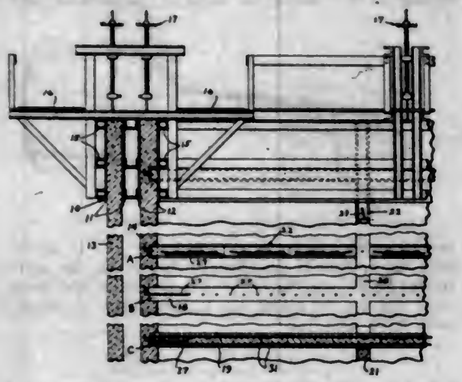
1,630,793. APPARATUS FOR PRODUCING THREADED PINS. FREDERICK W. HEUSMER, Jersey City, N. J. Filed Dec. 22, 1924. Serial No. 757,384. 2 Claims. (Cl. 10—101.)



2. In a thread cutting machine adapted to press a chasing cutter upon the goods to be treated, the combination comprising means regulating the depth to which the chasing cutter is to be pressed, said regulating means

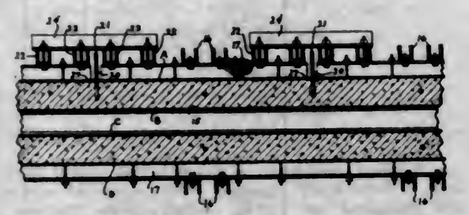
consisting of a pivotally arranged and periodically ascending and descending lever arm, having its free end form an inverted V with a fork-shaped terminal, a guide-wheel arranged in said terminal, a set screw arranged in the lever arm, a chasing cutter vertically adjustably arranged

in aforesaid lever between its pivot and aforesaid screw, a pivotally arranged bent arm, having a fork-shaped end, co-operatively disposed below and engaging aforesaid set screw, a guide-wheel arranged in the fork-shaped end of said bent arm, and a cam with a curved-in periphery engaging the guide-wheel of said bent arm.



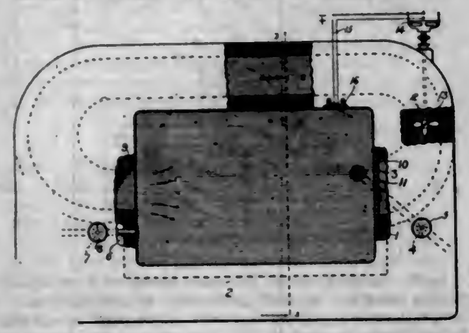
1,630,794. CONCRETE-MOLD FORM. WILL E. KELLER, Los Angeles, Calif. Filed Sept. 1, 1926. Serial No. 132,957. 8 Claims. (Cl. 25—131.)

1. A concrete mold form of the "slip form" type consisting of a plurality of vertical mold walls arranged in pairs for forming the outside building walls, a plurality of similar mold walls arranged in pairs and in cross formation between the first mentioned mold walls, said walls adapted to form the floor beams, and a plurality of mold walls at the meeting ends of the second mentioned mold walls for forming the beam supporting columns, said walls arranged to provide openings at the ends of the beam molds, whereby to permit concrete to flow from the columns and outside wall mold forms to the beam mold forms during a concrete pouring operation.



1,630,795. MOLD FORM FOR BUILDING STRUCTURES. WILL E. KELLER, Los Angeles, Calif. Filed Sept. 1, 1926. Serial No. 132,958. 4 Claims. (Cl. 25—131.)

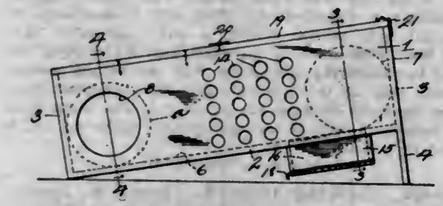
1. In combination with a mold form of the "slip" type for forming vertically disposed concrete building walls, of a mold form carrying a plurality of metal attaching rods adapted to be inserted within the movable "slip" form mold for forming recessed seats in the building walls for the attachment of concrete floor and partitions, the free ends of the attaching rods being disposed and lying within the forms during the wall pouring opera-



tions and adapted to be bent outwardly from the form boxes after the walls are poured to form connections for floors slabs and wall partitions.

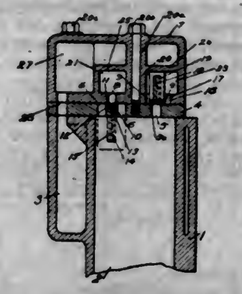
1,630,796. MOLD FORM. WILL E. KELLER, Los Angeles, Calif. Filed Sept. 1, 1926. Serial No. 132,959. 6 Claims. (Cl. 25—131.)

1. Concrete mold forms of the travelling type comprising a pair of mold walls spaced apart to form a mold cavity therebetween, said walls provided with vertically disposed slots, stationary closure boards mounted in the slots adapted to carry metal attaching devices projecting at an angle from said boards, means secured to said form walls for permitting the passage of the forms past the attaching devices as the same are elevated, and means to elevate the forms.



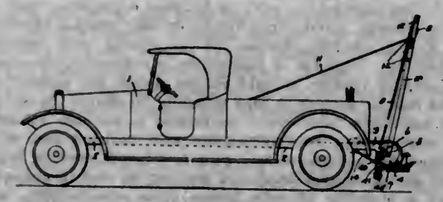
1,630,797. EXERCISING SWIMMING TANK. JAMES MARWICK, Santa Barbara, Calif. Filed Dec. 22, 1925. Serial No. 77,025. 5 Claims. (Cl. 4—172.)

1. In a swimming tank of the character described, the combination with means for circulating the water horizontally in the tank, of controlling devices for the



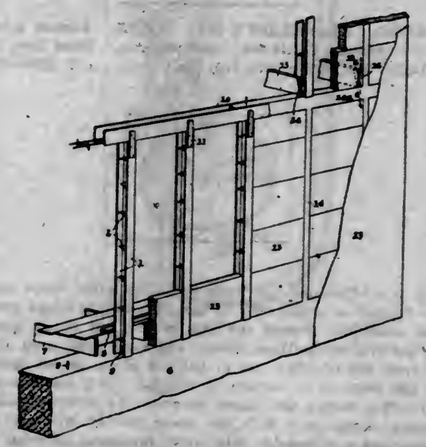
said circulating means carried by the tank above the water and arranged within reach of a bather in the tank, and mechanism carried by the tank and extending into the tank and adapted to act upon the said water circulating means independent of the said controlling devices.

1,630,798. ANIMAL TRAP. SAM MORELLI, Gaston, Oreg. Filed Dec. 24, 1926. Serial No. 156,874. 5 Claims. (Cl. 43—60.)



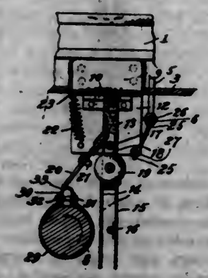
1. A trap comprising a casing having side walls, an inclined bottom, an entrance passage in one of the side walls adjacent the lower end of the inclined bottom, an inclined track way adjacent the entrance passage side of the casing, and a gravitationally propelled round disc closure mounted on said trackway and forming means for closing the trap after an animal enters the same.

1,630,799. COMPRESSOR. DONALD GRAHAM MURRAY, Grove City, Pa., assignor to The Bessemer Gas Engine Company, Grove City, Pa., a Corporation of Pennsylvania. Filed June 8, 1925. Serial No. 35,654. 6 Claims. (Cl. 230—34.)



1. In a compressor, the combination of a cylinder; a valve plate on the cylinder having an exhaust port and an inlet passage therethrough; a head on the plate having an inlet port and an outlet passage therefrom; inlet and exhaust straight-sided leaf valves controlling the ports; coil springs pocketed in the head acting on the exhaust valve; and coil springs in the plate acting on the inlet valve.

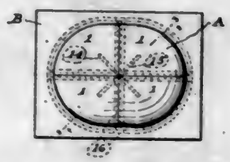
1,630,800. AUTOMOBILE WRECKING CAR. GORDON W. PAGE, San Francisco, Calif. Filed May 4, 1926. Serial No. 106,634. 4 Claims. (Cl. 212—8.)



1. An automobile wrecking car provided with extensions at the rear end of the chassis frame, a hoisting drum mounted on said extensions geared through a plurality of transmission elements to the engine of the vehicle, and a hoisting boom pivotally mounted at the rear of the vehicle on said extensions adapted for lowering of its outer end to the ground.

1,630,801. WALL CONSTRUCTION. FLOYD Y. PARSONS, Paterson, N. J. Filed July 31, 1926. Serial No. 126,130. 4 Claims. (Cl. 25—131.)

1. In the constructing of a wall, the hereindescribed method which consists in first fixing pairs of opposed elongated form members in upright position at intervals from each other along the line of the wall to be constructed and so that said members in each pair are spaced apart and opposed to an upright plane common to the several pairs, then stacking in each interval wall elements, each of a thickness approximately to fit between the members of and each of a length less than the center-to-center distance between the pairs flanking but exceeding the width of such interval, so that each wall element projects into both of the spaces between the members of those pairs which flank such interval and is spaced from each next adjoining stack, and introducing cementitious material into each space formed between adjoining stacks on the one hand and the members of one such pair on the other and thereby forming in such space a pier bonded to such adjoining stacks.

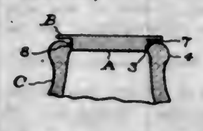


1,630,802. SIGNAL. EDWIN C. POMEROY, New Milford, Conn. Filed July 7, 1924. Serial No. 724,618. 2 Claims. (Cl. 116—56.)

1. A signal of the character described for motor vehicles comprising a member adapted to be connected to the drive shaft of the vehicle, a member connected to the vehicle for swinging movement, an alarm carried by the swinging member, means carried by the swinging member and adapt-

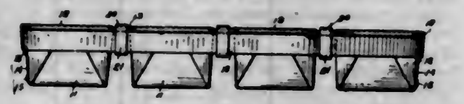
ed to be engaged by the member carried by the drive shaft for operating the alarm, means connecting the swinging member with the emergency brake operating mechanism of the vehicle whereby when the emergency brake is on the swinging member will be so positioned that the alarm operating mechanism carried thereby will be engaged by the member connected to the drive shaft, and means for returning the swinging member to inoperative position when the emergency brake is released.

1,630,803. ADJUSTABLE HAT BLOCK. ALFRED RYDER and ALFRED C. RYDER, Sheffield, Ala. Filed Dec. 10, 1923. Serial No. 679,570. 2 Claims. (Cl. 223—21.)



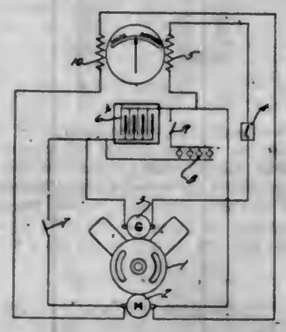
2. An adjustable hat block including a hat block member formed in a plurality of complemental sections which are assembled around the axis of the hat block, means for moving the sections toward and away from each other to vary the effective size of the hat block, plates applied to the bottoms of certain of the hat block sections and extending across the joints between the sections into a sliding engagement with the lower face of adjacent sections, and a removable filler strip insertable between the sections and adapted to be initially supported by the said plates in position with the outer edges thereof flush with the outer surface of the hat block member.

1,630,804. POST. DANIEL R. SCHOLES, Chicago, Ill., assignor to Aermotor Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1925. Serial No. 40,024. 4 Claims. (Cl. 189—21.)



1. A ground anchorage for a tower or similar structure comprising a length of angle iron adapted to be inserted in a hole in the ground, the upper end portion of said angle iron being adapted for connection with the tower or similar structure and being of normal configuration with the side walls thereof disposed at or substantially at right angles to one another to resist bending strains imposed thereon by the tower, the lower end portion of said angle iron having the side walls thereof collapsed together, and a mass of cementitious material surrounding the collapsed lower end portion of said angle iron.

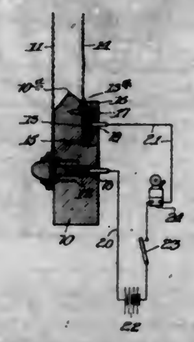
1,630,805. BOTTLE CLOSURE. CARL J. SCHUSTER, Milwaukee, Wis. Filed May 8, 1925. Serial No. 28,825. 5 Claims. (Cl. 215—51.)



1. A one piece bottle cap formed from paper pulp and comprising a comparatively thick and substantially cylindrical body portion having a wide peripheral edge, said body portion being provided with an integral annular lip projecting outwardly from the bottom portion thereof, said lip being flexible and being adapted to be flexed upwardly between the interior of the bottle neck and peripheral edge of the body portion when the cap is forced in position.

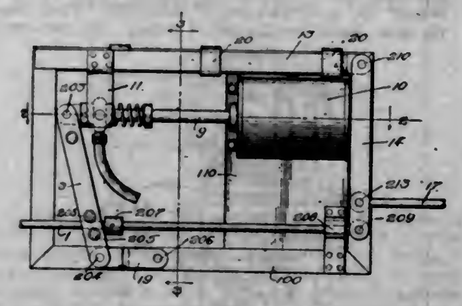
1,630,806. COOKING UTENSIL. HENRY M. SCHWAB, Dormont, Pa., assignor to Byrnes & Kiefer Company, a Corporation of Pennsylvania. Filed Aug. 17, 1926. Serial No. 129,786. 5 Claims. (Cl. 53—6.)

1. A baking utensil having in combination a plurality of individual baking pans having beaded outer edges adapted to receive a wire extending therethrough for holding said pans in assembled relation, end plates secured to said pans, relatively heavy straps secured to said end plates and extending longitudinally beneath said wire, cross members for supporting the inner adjacent edges of said pans, the ends of said cross members being formed so as to rigidly secure said wire to said straps.



1,630,807. INDICATOR FOR AUTOMOBILE CIRCUITS. HARRY I. SHIRE, Detroit, Mich. Filed Mar. 7, 1921. Serial No. 450,478. 5 Claims. (Cl. 177—311.)

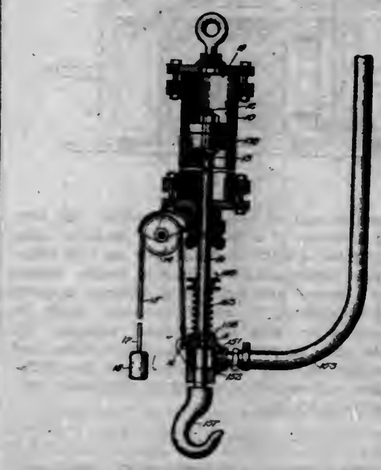
1. The combination with an internal combustion engine, of a starting motor connected in driving relation thereto, a storage battery, means for connecting said battery across the terminals of said motor, a generator connected in driving relation to said engine, means for connecting said storage battery to said generator to charge the same, an indicating instrument comprising a movable pointer, a scale having an intermediate zero position and calibrated on one side of said zero position to read in volts and on the other side of said position to read in amperes and a plurality of coils acting upon said pointer, one of said coils being connected across the terminals of said motor and the other of said coils being connected in series between said generator and battery, said coils being so



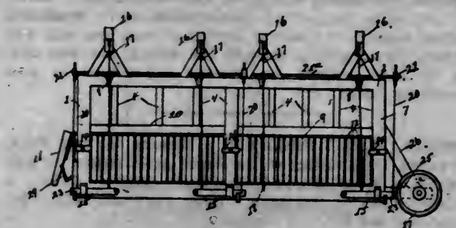
wound and connected that current supplied from the battery to the starting motor causes the said pointer to move in one direction from said zero position and current through the coil in the generator circuit flowing from the generator to the battery causes said pointer to move in the opposite direction from said zero position, a starting switch for connecting and disconnecting said motor and the instrument coil connected across its terminals in and from operative relation to said battery and a reverse current switch adapted to connect and disconnect said generator with said battery.

1,630,808. ALARM DEVICE. ERICH T. SIEGERDT, Chicago, Ill. Filed Nov. 27, 1925. Serial No. 71,637. 1 Claim. (Cl. 200—52.)

A circuit closing device for alarm systems comprising a frame, two parallel normally separated metallic screens carried by said frame and insulated from each other, the frame having a recess adapted to receive one screen, the bottom of the recess being inclined toward the other screen, a strip adapted to fit into said recess, and means for tightening said strip on the screen to stretch the screen.



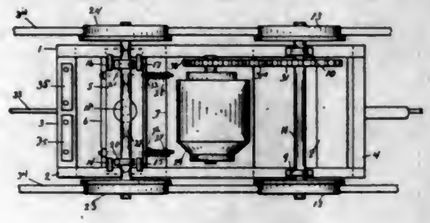
1,630,809. POWER MECHANISM. GEORGE N. SIMPSON, Chicago, Ill. Filed Oct. 30, 1922. Serial No. 597,868. 17 Claims. (Cl. 121—14.)



1. A device of the character described comprising an air cylinder having a piston therein provided with a hollow piston rod, a valve slidably mounted on the piston rod, a power rod, a lever connecting the piston rod to the power rod, a link connected to the sliding valve and the power rod, and a control rod connected to the link.

1,630,810. POWER MECHANISM. GEORGE N. SIMPSON, Chicago, Ill. Filed June 13, 1925. Serial No. 36,988. 1 Claim. (Cl. 121—41.)

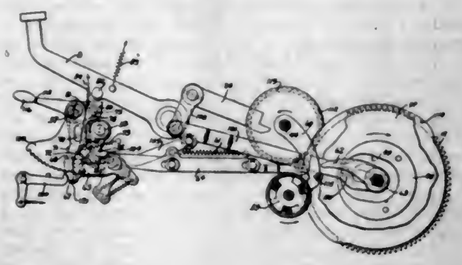
In a device of the character described; an air cylinder having a piston therein provided with a hollow piston rod; a valve part slidably mounted on the piston rod; a fluid pressure connection to said valve part; a port in said piston rod communicating with the lower end of the bore therein, said port adapted to be closed by said valve part when in its neutral position on said piston rod, put into communication with the pressure connection by relative upward movement of said valve part on said piston rod and opened to the atmosphere by relative downward movement of said valve part on said piston rod; and a communication between the upper end of said bore and the interior of said cylinder.



1,630,811. STARTING CAGE FOR DOG RACING AND THE LIKE. OWEN P. SMITH, Miami, Fla. Filed Dec. 8, 1926. Serial No. 74,086. 2 Claims. (Cl. 119—15.5.)

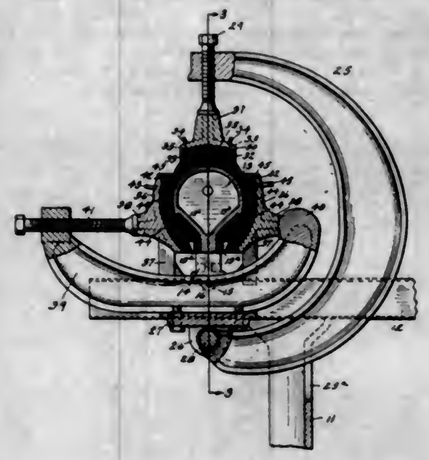
1. A starting cage for racing dogs and the like, comprising a box like structure divided into a plurality of separate compartments, a door hinged at the top to the box and extending across the front of the same to close the compartments, a plurality of arms carried by the box and extending forwardly at the front of the same, resilient means connected with the arms and with the lower end of the door for automatically opening the same, a latch located at the bottom of the door for holding the latter in its closed position, a bell crank lever mounted upon the box above the door and having an approximately horizontal arm connected with the latch, said bell crank lever being also provided with a substantially vertical arm, an operating device connected with the vertical arm of the bell crank lever, a guide located at the outer end of a projecting arm, and a stay rope passing through the guide and connected with the door at the bottom thereof and extending from the guide to the bell crank lever and connected therewith whereby when the bell crank lever is actuated to unlatch the door, the stay rope will be simultaneously pulled to assist the opening of the door.

1,630,812. TRACTION CAR AND THE LIKE. OWEN P. SMITH, Miami, Fla. Filed May 24, 1926. Serial No. 111,153. 3 Claims. (Cl. 105—165.)



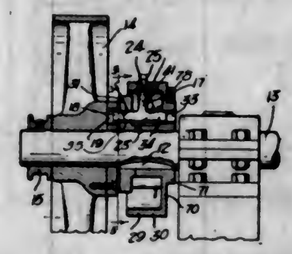
1. In a traction car of the class described, the combination with a frame, of a motive power mounted upon said frame, traction wheels mounted upon an axle rotating in bearings rigidly attached to said frame, wheels mounted upon a second axle rotating in bearings mounted upon a support adapted to rotate pivotally about its mid-center, guides on said support and engaging the frame to hold said support in horizontal position and springs connected between said support and the frame adapted to hold said wheels normally in alignment with the aforementioned wheels.

1,630,813. BED-SPRING ATTACHMENT. FRANK J. VIDA, Staten Island, N. Y. Filed Mar. 20, 1926. Serial No. 96,197. 4 Claims. (Cl. 5—226.)



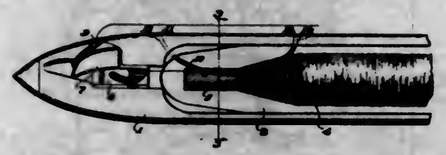
1. In combination with a bed spring including end rails and a woven spring mat supported between the rails, of means for ridging the spring mat longitudinally thereof, comprising supporting plates disposed in depending relation beneath the central portion of each end rail, and a ridge bar extending beneath the spring mat and having its ends adapted for vertical adjustment in said supporting plates.

1,630,814. CASH REGISTER. EDWARD J. VON FEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 29, 1923. Serial No. 648,477. 15 Claims. (Cl. 235—3.)



2. The combination of a control key, a pivoted manipulative means having a normal position and an operated position, means for returning said manipulative means to normal position, and means actuated by said control key for engaging said manipulative means with said returning means.

1,630,815. TIRE-REPAIR VULCANIZER. HERBERT K. WHEELOCK, Akron, Ohio, assignor to The Akron Tyrwelder Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 27, 1925. Serial No. 52,755. 12 Claims. (Cl. 18—18.)

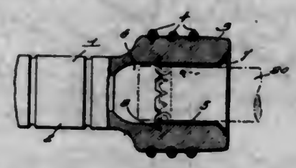


1. A tire repair vulcanizer comprising, a hollow core having deformable rubber cushions in the bead seating portions thereof, means for supplying a fluid heating medium to the core, a pivoted clamp operable over the core, a tread plate, means on said clamp to urge said plate against the tread of a tire on said core, said plate having a rubber cushion on its tire engaging surface conformable to the shape of the tread of said tire, side plates, and a clamp embracing the core and adapted to urge both of said side plates against said tire on said core, each of said side plates having rubber tire engaging cushions thereon conformable to the shape of the sides of the tire.

1,630,816. CLUTCH MECHANISM. GEORGE WILCOX, Riverside, Calif., assignor to California Canning Machinery Co., a Corporation of California. Filed June 12, 1924. Serial No. 719,500. 4 Claims. (Cl. 192—25.)

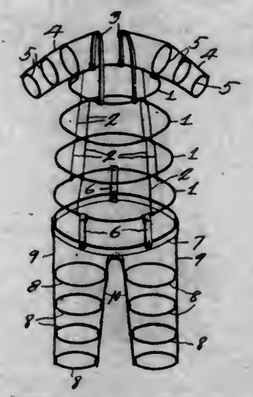
1. In combination: a driving member rotatably disposed on a shaft; a driven member non-rotatably disposed on said shaft comprising a housing having a peripheral slot formed in the periphery thereof; an engagement member arranged to provide driving engagement between said driving and driven members comprising a cylindrical bar slidably and rotatably disposed within said driven member, and an operating arm extending from said cylindrical bar and through said slot and to the exterior of said driven member; and actuating mechanism comprising an actuating pawl for engaging the exterior extension of said operating arm of said engagement member, and a control bar for removing said pawl from said engagement with said operating arm of said engagement member for allowing said engagement member to move into engagement position.

1,630,817. LOOM SHUTTLE. GEORGE H. WILLARD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 28, 1926. Serial No. 125,335. 6 Claims. (Cl. 139—213.)



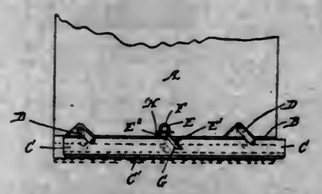
1. An automatic filling replenishing shuttle for looms having a bobbin chamber, a filling unwinding control member having its two ends secured to the shuttle body at the same side of the bobbin chamber, and forming an inwardly projecting bowed portion between the ends of the control member unobstructing automatic replenishment of filling and adapted to engage the unwinding filling near the tip end of the bobbin as the filling is withdrawn from the shuttle during weaving.

1,630,818. SULPHUR-BLACK DYE. OTTO ZELLER, East Aurora, and CLEMENS WALDMAN, Buffalo, N. Y., assignors to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed May 12, 1922. Serial No. 560,438. 35 Claims. (Cl. 8—6.)



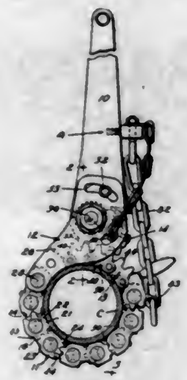
1. The method of stabilizing sulphur black dyestuffs, which comprises drying moist sulphur black dyes in admixture with proportions of alkali metal sulphide in excess of that which chemically combines at ordinary temperature with said dyes in the moist condition.

1,630,819. METHOD OF MAKING BOBBINS. JOHN NORMAN ANDERSON, Methuen, Mass. Filed June 26, 1926. Serial No. 118,615. 2 Claims. (Cl. 242—120.)



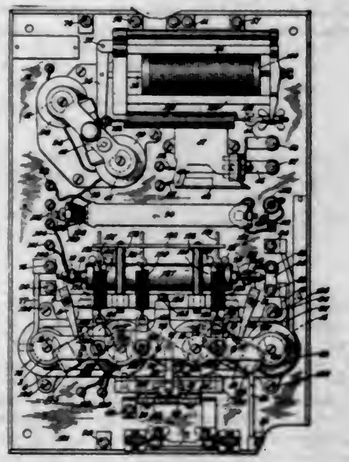
1. The method of making bobbins which consists in making a bobbin of soft material provided with a cylindrical hole in the butt end, in making a ferrule having a cylindrical body whose length at least equals its inside diameter to form a shield to protect the soft material of the bobbin butt, provided at one end with an outwardly-extended flange and at the other end with an inwardly-extending flange forming an annular shoulder, this flange being provided with a plurality of holding hooks located entirely within the outside diameter of the body and directed outwardly, placing the ferrule in the hole in the bobbin with its flange abutting the end of the bobbin, and then, while holding the ferrule in position in the bobbin butt, driving a cylindrical mandrel, fitting the ferrule into the same to cause the end of the mandrel to press against said annular shoulder and straighten out said flange and thus cause the hooks to penetrate the wall of the bobbin hole so as to leave the inside of the entire ferrule cylindrical to engage the spindle over a large area.

1,630,820. CLOTHES FORM. BUTLER BAKER, Haymarket, Va. Filed Aug. 25, 1925. Serial No. 52,343. 1 Claim. (Cl. 2—1.)



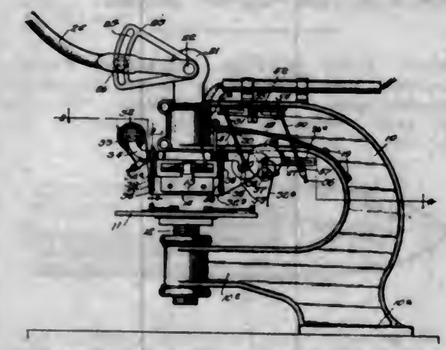
A garment form of the character described, and comprising a body section, a pants section detachably connected thereto, said body section and pants section being formed from a plurality of horizontally disposed annular members, flexible connections between the annular members, shoulder straps carried by the upper annular member, sleeve sections, said sleeve sections comprising a plurality of spaced annular members and flexible members connecting the shoulder straps and the sleeve section annular members all of said sleeve flexible members being in the same vertical plane.

1,630,821. DRAFT AND RAIN EXCLUDER ATTACHMENT FOR DOORS. REGINALD BASHAM, Onehunga, New Zealand. Filed June 9, 1924. Serial No. 718,887. 1 Claim. (Cl. 20—68.)



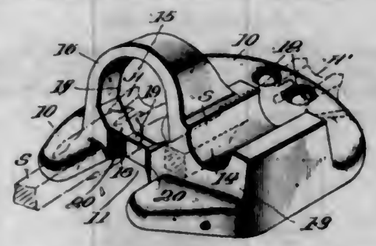
The combination, with a hinged door provided along its bottom edge with a rebate, of a solid batten disposed in the rebate with its outer face flush with the adjacent face of the door and capable both of rising-and-falling movement and of endwise movement, said batten having a central, inclined slot which opens through its upper edge and said door face having a recess which alines with said slot; parallel-motion link connections between the batten and the door; and a looped swing mounted in said door recess and having legs of unequal length, the longer leg projecting loosely into said slot; said spring also embodying a connecting bow between said legs which tends to spread them apart so as to normally hold the batten in raised position in said rebate with one end projecting axially through the corresponding end of the rebate and beyond the hinged edge of the door, said projecting end adapted to strike against the adjacent portion of the door jamb when the door is being closed, thereby to force the batten inward and downward in the rebate into engagement with the floor.

1,630,822. TONGS. WILLIAM L. BESSOLO, Clearwater, Calif. Filed Oct. 4, 1922. Serial No. 592,365. 7 Claims. (Cl. 81—67.)



1. A tool of the character described including, an operating lever, a casing engaging mechanism, and means for operating said mechanism from the lever including a flexible rack connected with the casing engaging mechanism, an eccentric rack pivotally mounted on the lever, and a spring holding the eccentric rack in position to cooperate with the first mentioned rack to operate the casing engaging mechanism.

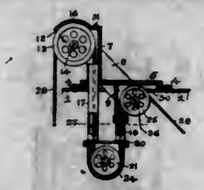
1,630,823. ELECTRICAL REGULATING APPARATUS. ELI J. BLAKE, Buffalo, N. Y., assignor, by mesne assignments, to Gould Car Lighting Corporation, New York, N. Y., a Corporation of Maryland. Filed Jan. 3, 1923. Serial No. 610,419. 18 Claims. (Cl. 171—229.)



1. In an apparatus of the class described the combination of a compressible variable resistance, a magnet having two pole pieces, an armature therefor pivotally mounted between said pole pieces, means whereby said armature acts to vary said resistance, a current coil energizing said magnet to cause the armature to increase said resistance, and another current coil acting on said magnet to oppose the action of said first coil, said coils being wound on separate legs of said magnet.

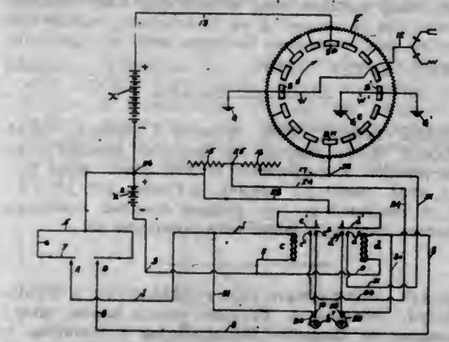
1,630,824. STAMPING MACHINE. JACOB P. BOEHNER, Aurora, Ill. Filed Jan. 23, 1926. Serial No. 83,246. 2 Claims. (Cl. 41—7.)

1. A stamping machine of the character described comprising; a work supporting table; a vertically reciprocable head arranged above said work supporting table; means for attaching impression characters to said head; means for heating said impression characters; a strip of flexible marking material lying below said impression characters and adapted to be pressed down onto work on the work supporting table by said impression characters upon the lowering of said head; means for feeding said marking material along upon each operation of the head, said feeding means operated by movement of the head; and means for rendering said feeding means inoperative during movement of the head from a point immediately before the stamping operation to a point immediately after the same.



1,630,825. DRILL-ASSEMBLING UNIT. EDWARD J. BOWMAN, Anaconda, and JOHN S. MYHRE, Butte, Mont., assignors to Hawksworth Drill Company, Butte, Mont., a Corporation of Delaware. Filed Mar. 9, 1926. Serial No. 93,444. 4 Claims. (Cl. 29—89.)

1. A block for assembling and dismounting separable drills comprising a metal base plate, an integral metal arch formed with said plate and projecting therefrom, a closing wall at one end of said arch integral with said plate, said plate being cut away at the opposite end of said arch, and a projection on said plate forming in conjunction with one wall of said arch an open-ended groove, so that the head of a separable drill may be laid upon said base within said arch and the shank after detachment by a blow may move freely downward in said cut away portion, and so that a shank may be laid in said groove while a drill head is being driven thereonto.

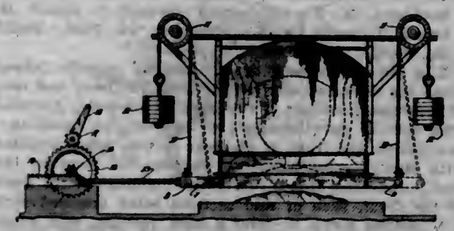


1,630,826. GAS-TIGHT CABLE SUPPORT FOR TANKS. STEPHEN H. BROOKS, Los Angeles, Calif., assignor to Brooks Engineering Corporation, Los Angeles, Calif., a Corporation of California. Filed Nov. 15, 1926. Serial No. 148,598. 7 Claims. (Cl. 220—85.)

1. In cable supports for tanks, a tank structure having an opening therethrough, a closure for the opening, a cable sheave mounted on the closure outside of the tank, a plurality of sheaves attached to the closure on the inside of the tank, an enclosed casing for the lowermost interior sheave, a plurality of vertical passageways con-

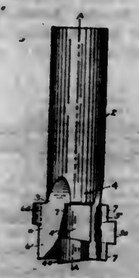
nected with the casing, a sealing medium in the casing and extending into the passageways, and a movable cable in engagement with the several sheaves one of said sheaves directing the cable through the sealing medium.

1,630,827. ALTERNATING-CURRENT TELEGRAPH SYSTEM. WILLIAM M. BRUCE, Jr., Springfield, Ohio. Filed Apr. 28, 1924. Serial No. 709,349. 21 Claims. (Cl. 178—66.)



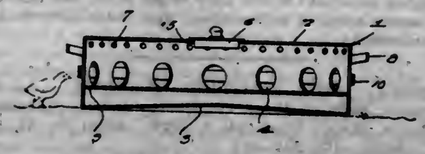
1. In a telegraph system, means for producing alternating current reversals of an approximately sine wave form from a direct current supply, and means for varying the amplitude of individual half cycles in phase with the alternating current frequency and employing impulses of different current values to produce signal elements.

1,630,828. COMPOSITION FOR STOPPING LEAKS. WILLIAM L. CAMPBELL, Spearfish, S. Dak. Filed May 7, 1926. Serial No. 107,469. 1 Claim. (Cl. 106—8.)



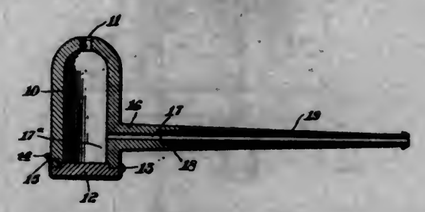
A composition adapted to be used for sealing leaks in automobile radiators or the like comprising a mixture of ginger, lime, sulphur, and gum arabic in substantially the proportions described.

1,630,829. POURING DEVICE FOR GLASS FURNACES. ARTHUR HOWE CARPENTER, La Grange, and PHILIP C. HUNTLEY, Riverside, Ill., assignors to The Vitrolite Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Dec. 10, 1925. Serial No. 74,631. 3 Claims. (Cl. 49—55.)



1. A glass furnace chamber having a short downwardly extending spout of comparatively large cross-sectional area, one side of the spout being inclined and the opposite side, at the upper end of the spout, extending inwardly to a vertical plane not far distant from the lower end of the first-mentioned side.

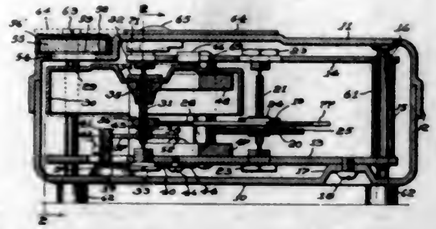
1,630,830. ROUTER BIT. RAY L. CARTER, Phoenix, N. Y. Filed Oct. 28, 1926. Serial No. 144,803. 8 Claims. (Cl. 144—240.)



1. A routing tool formed at one end with longitudinal side cutting ribs, a portion of each rib being cut away for providing a relatively narrow cutting spur, the said spurs being arranged to cut in different planes sequentially, and the combined cutting range of the several spurs being substantially equal to the length of said ribs.

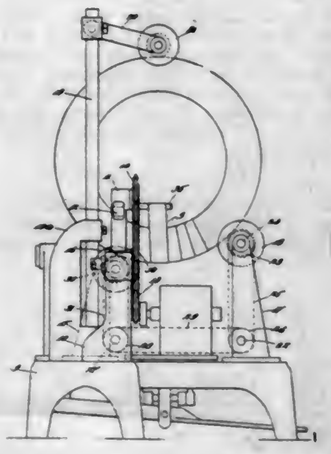
1,630,831. POULTRY-FEEDING DEVICE. CHARLES E. CLOWARD, Jr., Payson, Utah. Filed Oct. 26, 1925. Serial No. 64,901. 2 Claims. (Cl. 119—61.)

1. A poultry feeding device comprising a cylindrical receptacle provided with a series of spaced openings in the sides thereof, an annular guard flange arranged on the inner face of the sides of the receptacle at a point directly below said openings, means for reducing the size of said openings, said means comprising a band encircling the receptacle, said band being of a width slightly less than the diameter of said openings, and adapted to partially cover the openings, said band being adapted for vertical slidable movement.



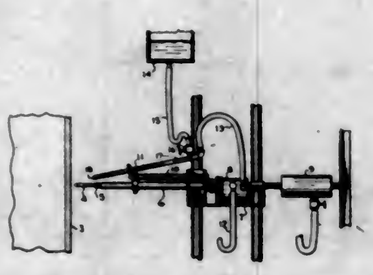
1,630,832. PIPE FOR SMOKING TOBACCO. CHARLES FOSTER CORBETT, Edmonton, Alberta, Canada. Filed May 9, 1925. Serial No. 29,130. 1 Claim. (Cl. 131—12.)

In a pipe for smoking tobacco, the combination of a bowl open at the lower end and formed with an arched top having a draft orifice therein, of a hingedly mounted airtight trap door for the open end adapted in closed position to hold tobacco in the bowl and when opened to permit access of the unburned tobacco remaining in the



bowl, a stem opening in the side of the bowl spaced from the lower end to provide in combination with the trap door for said end, a receptacle therebetween for unburned tobacco, and retaining means carried by the bowl detachably associated with engaging means on the trap door.

1,630,833. INDICATING INSTRUMENT. CHARLES F. COWDREY, Fitchburg, Mass., assignor to Muther Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed July 9, 1925. Serial No. 42,443. 14 Claims. (Cl. 264—1.)

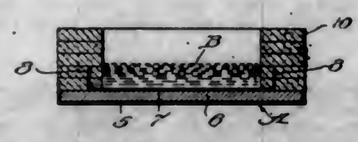


4. An instrument for testing the brakes of an automobile, comprising in combination, a casing, a pair of vertical shafts mounted in the casing in spaced relation, a weighted lever mounted upon each shaft to swing in a horizontal plane and each positioned to extend past the shaft of the other lever, spring means for normally holding each lever in abutting engagement with the shaft of the other lever, cooperating means for imparting the swinging movement of one lever to the other, and indicating means actuated by the levers to indicate their swinging movement.

1,630,834. TIRE-WRAPPING MACHINE. JASPER DERRY, Medford, Mass., assignor to Andrew Terkelsen, Boston, Mass. Filed Feb. 1, 1926. Serial No. 85,183. 5 Claims. (Cl. 242—6.)

1. In a wrapping machine for applying helical windings of a strip to annular articles of different sizes, in combination, an adjustably positioned rotatable shuttle carrying a strip to be wrapped around the article, and a plurality of fixed work supporting members located one above the other on opposite sides of said shuttle.

1,630,835. METHOD AND MEANS OF UTILIZING EXPANDING AIR. JOHN W. DOYLE, Seattle, Wash. Filed May 3, 1926. Serial No. 106,429. 4 Claims. (Cl. 77—5.)

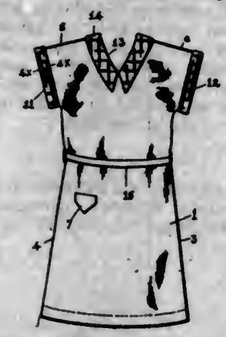


4. The method of cooling a driven tool and the material being operated upon by said tool which consists in conveying an expanding air in a suitable conduit and directing said expanding air upon said tool and said material to cool the same.

1,630,836. INSECTICIDE. WILLIAM A. DRUSHEL, Grand Rapids, Mich., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Oct. 17, 1923. Serial No. 668,981. 2 Claims. (Cl. 167—6.)

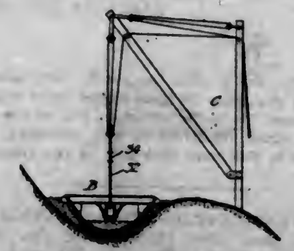
1. A compound for the purpose specified, consisting of carbon disulphide mixed with cedar leaf oil.

1,630,837. CONTAINER FOR DISSIPATING A FUMIGANT. WILLIAM A. DRUSHEL, Grand Rapids, Mich., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Feb. 25, 1926. Serial No. 90,504. 3 Claims. (Cl. 299—20.)



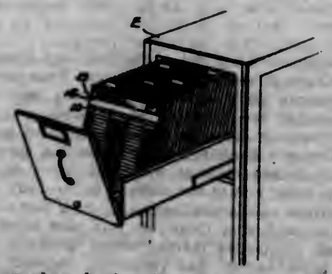
1. A container for liquid to be evaporated having a bottom impervious to said liquid and sides of absorbent material, and a ledge of impervious material extending upwardly from said bottom a short distance into said sides between and spaced apart from the inner and outer surfaces of the latter.

1,630,838. REVERSIBLE DRESS. BEULAH H. DRYER, Rochester, N. Y., assignor of one-half to Gerald H. Dryer, Rochester, N. Y. Filed Feb. 25, 1926. Serial No. 90,673. 2 Claims. (Cl. 2—74.)



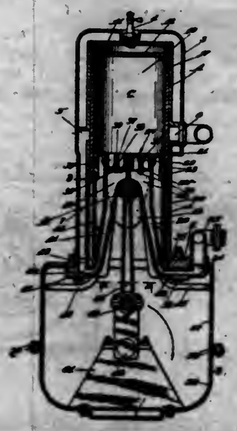
1. A dress composed of two similar sections joined along the sides and shoulders to form the front and rear of the dress, the front of the front section being provided with certain embellishments to improve its appearance and utility, the front of the rear section being provided with similar embellishments, whereby the front of the rear is converted into a substantial duplicate of the front of the front, each of said sections being provided with a V shaped notch to form a neck opening, said notch having the same appearance in both the front section and rear section, and a collar stitched to the edges of said

neck opening and adapted to hinge around said edges, said collar having the same appearance on each face thereof, all of said elements cooperating to permit said



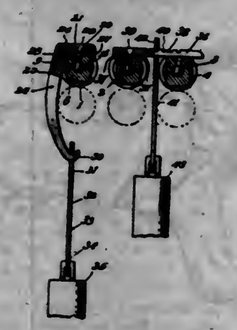
dress to be worn with either side out and to present the same appearance when turned inside out and half way around.

1,630,839. PROCESS OF LINING WATERCOURSES AND LINING THEREFOR. HARRY H. FISHER and WALTER B. RITTENHOUSE, Chicago, Ill., assignors to Byllesby Engineering and Management Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 17, 1922. Serial No. 575,467. 13 Claims. (Cl. 61—14.)



1. The process of lining water-courses which consists in constructing the lining in trough-shaped sections on mold-forms, detachably connecting said lining sections to said mold-forms whereby said mold-forms will provide means for lifting and handling said lining sections, depositing said lining sections together with the mold-forms to which they are secured in the water-course, backfilling behind said lining sections when in position, detaching the lining sections from the mold-forms, and removing said mold-forms.

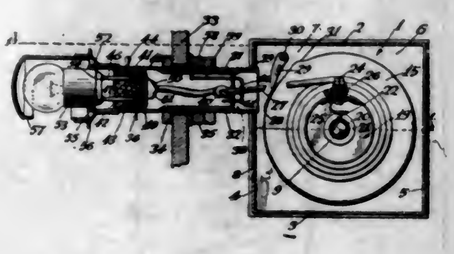
1,630,840. ACCOUNT SYSTEM. WILLIAM M. FREDENBURG, Paso Robles, Calif. Filed Apr. 20, 1925. Serial No. 24,573. 2 Claims. (Cl. 129—16.7.)



2. An envelope having front and rear walls and an open top, a U shaped band at the bottom of the envelope secured to the rear wall and free of the front wall to provide an exterior upwardly opening pocket and a second band adjacent the top of the envelope secured to the rear wall and extending across and free of the front wall to provide an exterior loop through which record sheets are adapted to be inserted from the top of the envelope into the pocket and co-operating with the pocket in removably holding the record sheets on the envelope.

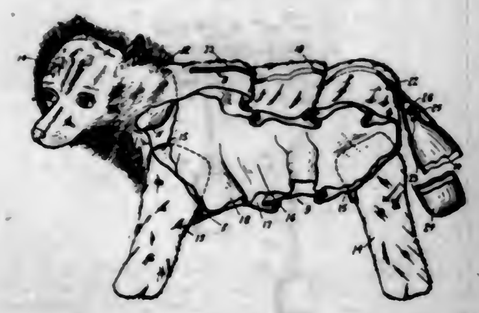
1,630,841. DOUBLE-PISTON TWO-CYCLE ENGINE. OTIS ORA FUSCH, Bellflower, Calif. Filed Oct. 29, 1924. Serial No. 746,565. 7 Claims. (Cl. 123—50.)

3. An engine having a crank case, a cylinder supported thereon, a stationary piston having a closed head and side walls partially open from their lower edge, the stationary piston being supported on the lower edge of the side walls inside the cylinder, a sliding piston having bearing surfaces on the cylinder and the stationary piston, oppositely positioned skirts depending from the sliding piston into the openings in the side walls of the stationary piston, a wrist pin between the skirts, a crank in the crank case, a connecting rod between the crank and the wrist pin, ducts leading through the side wall portions of the stationary piston, valves in the head of the stationary piston connected to said ducts, a water jacket in the side wall portions of the stationary piston and inlet and exhaust ports in the cylinder for the moving piston.



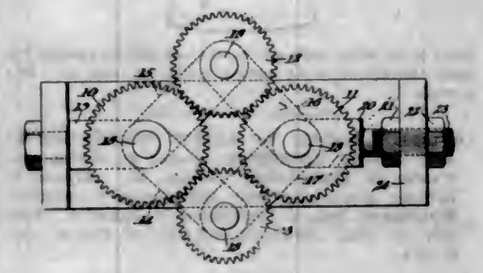
1,630,842. ARBOR FOR DRAFTING ROLLS. JAMES R. GRUBB, Abbeville, S. C. Filed Mar. 26, 1926. Serial No. 97,762. 3 Claims. (Cl. 19—142.)

1. An arbor of the class described having a lubricant containing bore therein, the arbor having an opening therein in communication with the bore and extending



diametrically with respect to the arbor, and means for supplying a lubricant from the bore to the bearing surface of the arbor comprising a plug fitted in the said opening with its intermediate portion extending across the bore and having its end flush with the surface of the bore, the plug having a bore extending longitudinally thereof and a bore intersecting the first mentioned bore and communicating with the bore of the arbor, and a wick element extending within the said bores of the plug whereby to have one end presented at the outer end of the plug and the other end presented at the surface of the intermediate portion of the plug and within the bore of the arbor.

1,630,843. DASH AND TROUBLE LIGHT. ANDREW L. HALIN, San Gabriel, Calif. Filed Apr. 13, 1925. Serial No. 22,696. 4 Claims. (Cl. 240—8.14.)

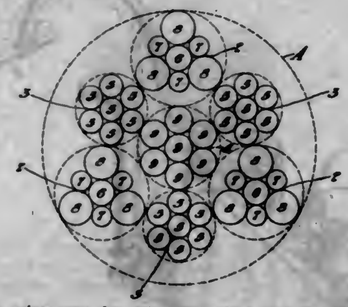


3. A dash and trouble light construction comprising a tubular support, means adapted to fasten said support to an instrument board with one end extending inwardly of said board, a box connected to the inner end of said support, a spring operated winding drum in the box, a lamp cord attached to the winding drum and extending through the tubular support, a portable lamp attached to the lamp cord, said lamp having a shank adapted to form a tight fit with the said tubular support, whereby the portable lamp may be drawn out to serve as a portable light and may be inserted in the tubular support to serve as a dash light, a circular spring casing having a stop on its periphery, a pawl adapted to engage said stop and means on the casing to prevent the engagement of said pawl with the said stop when the cord is quickly wound upon the drum.

1,630,844. VANITY HAND BAG. LYMAN D. HALL, New York, N. Y. Filed Feb. 10, 1927. Serial No. 167,185. 3 Claims. (Cl. 150—28.)

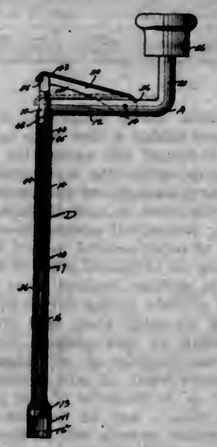
1. A hand-bag comprising an animal-shape in the form of a quadruped made of fur or fur-like material in hollow form and having fore legs and hind legs and head stuffed so as to be semi-solid and its midsection or body portion unstuffed and pliant, the mid-section being provided with an article receiving pocket adapted to be partially filled with articles placed therein to give the mid-section a natural appearance, the animal-shape being formed with fore legs and hind legs extended from the body and sufficiently spaced apart to embrace the arm of the user and thus prevent accidental displacement when the article is confined at its mid-section between the arm and the body of the user.

1,630,845. APPARATUS FOR FINISHING HIGH-GRADE GEARS. WILLIAM E. HOKE, Baltimore, Md. Filed Jan. 11, 1924. Serial No. 685,686. 8 Claims. (Cl. 51—26.)



1. Apparatus for wearing in gears, comprising means for mounting the gears to form a gear train closed upon itself and means for bodily adjusting one of the elements of the gear train relatively to the adjoining gears in mesh with it to eliminate back-lash in the train.

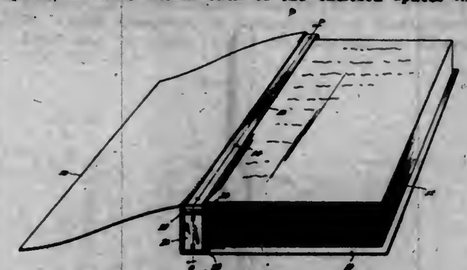
1,630,846. LUBRICANT-DISPENSING DEVICE. EDWIN J. HOLST, Lake City, Minn. Filed Jan. 11, 1926. Serial No. 80,648. 2 Claims. (Cl. 221—47.)



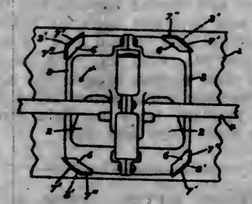
1. In a lubricating device of the character described, an elongated tubular body formed in two sections one thereof constituting an outer section and having means to receive or engage the outer end of the other or inner section, a removable cap upon the other end of said outer section having a discharge nozzle extending therefrom, a hand grip formed integral with said inner section adjacent the inner end of the same, a piston body normally housed within said outer section, a rack bar carried by said piston projecting therefrom into said inner section, and trigger controlled ratchet means pivotally mounted in said inner section and projecting through the wall thereof forwardly of the hand grip portion for engagement with and actuating of said rack bar, substantially as and for the purpose described.

1,630,847. MINE-SWEEPING ROPE. JAMES FORREST HOWE, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Nov. 5, 1925. Serial No. 66,975. 4 Claims. (Cl. 114—240.)

1. A wire rope for mine sweeping and the like operations, comprising a series of relatively large diameter strands, a series of relatively small diameter strands, and a core strand, said large diameter strands alternating with said small diameter strands and projecting materially beyond said small diameter strands to form cutting elements.



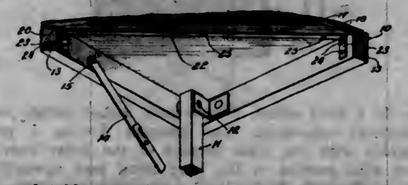
1,630,848. WRENCH. JOHN H. IVEY, Ponca City, Okla., assignor of one-half to Lory J. Mildren, Ponca City, Okla. Filed Mar. 6, 1926. Serial No. 92,847. 7 Claims. (Cl. 81—124.1.)



3. In a wrench the combination of a tubular wrench body having a socket at an end thereof, the tubular wrench body having a passageway therethrough, the wrench socket being aligned with said passageway and having an entrance opening at an end thereof aligning with the passageway, a plunger reciprocably mounted in the passageway of the tubular body, an extractor head connected with the plunger and operating in said wrench socket, spring means operating on the plunger to maintain the extractor head retracted into the inner end of the socket opposite the entrance end, and lever means pivoted on the wrench body and operating on the plunger to facilitate movement of the extractor head along said socket.

1,630,849. LOOSE-LEAF BINDER. HENRY B. JENNINGS, Jr., Leesburg, Va. Filed Nov. 6, 1926. Serial No. 146,782. 3 Claims. (Cl. 129—8.)

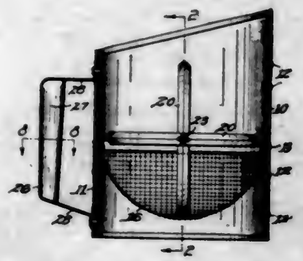
1. A loose leaf binder comprising complemental members provided with lose leaf securing means, one of the members having a body portion and opposite end portions bent laterally and rebent to provide enclosed spaces, a frame within each of the enclosed spaces including a flange which flange is disposed adjacent to and spaced from the body, and separable locking means housed within the said enclosed spaces and comprising cooperating elements carried by the respective members.



1,630,850. MEANS FOR FASTENING SEED DISTRIBUTORS TO METAL HOPPERS. HENRY D. JONES, Springfield, Ohio, assignor to The American Seeding Machine Company, Springfield, Ohio, a Corporation of Ohio. Filed May 10, 1926. Serial No. 107,960. 5 Claims. (Cl. 221—118.)

1. The combination, with a metal hopper bottom having an opening, and a feed distributor casing flanged at its upper end, of means for securing said distributor casing to the under side of said hopper bottom in line with said opening consisting of shelves formed on the under side of said hopper bottom about said opening arranged to be engaged by the flange of said casing by a partial rotation of said casing to secure the flange wholly to the lower surface of said hopper bottom.

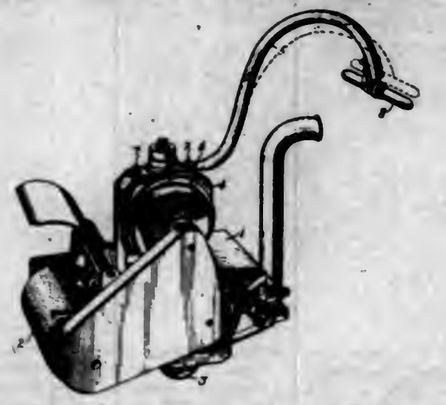
1,630,851. CARD TABLE. AUGUST W. KOEHN, Oshkosh, Wis., assignor to The Dearborn Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1923. Serial No. 634,427. 1 Claim. (Cl. 45—31.)



A card table comprising a polygonal frame, the upper face of which is provided with a surrounding shoulder, a top of the shape to conform to that of the frame, a cover drawn tightly over the surface of the top and around its edges and having the marginal edges thereof disposed upon the under side of the top, the marginal edges of said top being mounted on said shoulders, flat elongated straps each having downturned ends, the flat portion of each strap being secured to the under side of and across the corner of said top, and having its ends secured to the vertical faces of said frame, brackets secured adjacent each corner of said frame, and legs pivoted to said brackets to fold against the top.

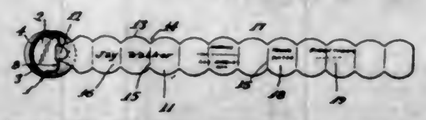
1,630,852. PIN-WHEEL TOY. OTTO KUESTER, Detroit, Mich. Filed Sept. 11, 1925. Serial No. 55,723. 1 Claim. (Cl. 46—14.)

A toy of the class described comprising: a staff having one face cut away at one end for providing a beveled surface; a pin mounted in said staff, adjacent said end, at the base of said beveled surface, and projecting outwardly from said face and upwardly inclined relatively to the longitudinal axis of said staff; a propeller blade mounted on said pin, said pin being projected through said propeller blade midway between the ends thereof, at right angles thereto; and a washer mounted on said pin between said propeller blade and said staff for spacing said propeller blade from said staff.



1,630,853. FLOUR SIFTER. PETER J. LEONARD and FRED J. CONNOR, Worcester, Mass., assignors, by mesne assignments, to The Chase National Bank of the City of New York, New York, N. Y. Filed Feb. 2, 1924. Serial No. 690,266. 2 Claims. (Cl. 209—278.)

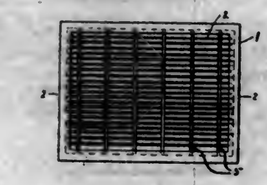
1. In a flour sifter, a removable dished screen and a cylindrical supporting band therefor, having a rib to interlock with the inner surface of the sifter body, the lower edge portion of the band being bent upwardly to form a clamping flange, said screen being bent over the upper edge of said flange and between same and the body of said band, and the upper edge portion of said band being bent downwardly to engage the inner side of said screen and enclose the edge thereof, said folded band being substantially tangential to the main screen body.



1,630,854. HANDLE FOR FLOOR-SURFACING MACHINES. RICHARD E. LEWIS, Chicago, Ill. Filed Sept. 28, 1925. Serial No. 58,988. 4 Claims. (Cl. 51—176.)

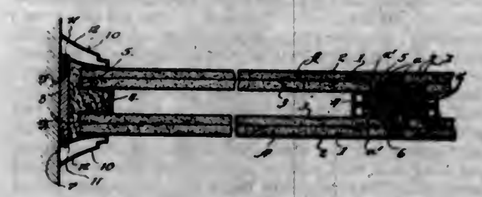
1. The combination with a floor-surfacing machine having a surfacing roller at the front end acting as a support and also as a traction member tending to move the machine ahead, of a handle extending rearwardly from said machine, said handle having a bowed spring section

so positioned therein that a pull on the handle tending to straighten the spring section produces a downward pressure on the roller.



1,630,855. IDENTIFICATION BUTTON. JOHN A. MAHNK, Los Angeles, Calif. Filed Mar. 22, 1926. Serial No. 96,552. 1 Claim. (Cl. 40—1.5.)

An identification device comprising in combination a hollow receptacle having a base with an upstanding annular rim, a U-shaped bar having its ends secured to said rim at points within the same semi-circular portion thereof, said bar lying adjacent and substantially parallel to said base, the bend of said U-shaped bar extending in substantially diametrical relation to said identification device, a strip of paper secured to said bar, said strip of paper comprising an elongated piece of flat material and being formed in sections adapted to be folded one upon the other, said sections having curved edges and straight sides, the fold occurring along said straight sides, the longitudinal width of said sections being substantially smaller than the diameter of said identification device, and the transverse width of said sections being substantially the same as the diameter of said pin, whereby said sections when folded, may be inserted within said pin snugly, and arcuate pockets will be formed between the upstanding rim and the folded paper, a tab on one end of said paper adapted to be folded over said U-shaped bar, said tab being of a width equal to the radius of said identification button, a cover having a flange extending over said rim, and notches in said flange whereby said cover may be removed from said base, a pin secured to the base projecting substantially at right angles thereto, and a thumb piece adapted to be inserted over said pin to hold the identification button in place on a garment, said cover presenting a substantially concavo-convex surface, whereby said identification device may simulate a button.

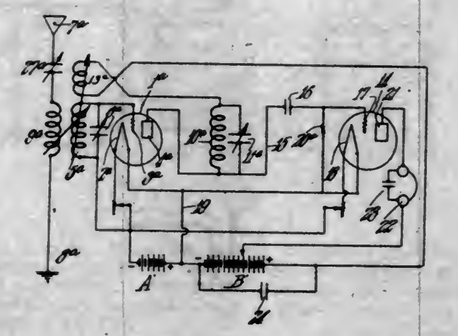


1,630,856. WIRE QUEEN EXCLUDER FOR BEEHIVES. GEORGE MARKLE, Brantford, Canada, assignor to The Ruddy Manufacturing Company, Limited, Brantford, Canada. Filed Mar. 17, 1927. Serial No. 176,145. 2 Claims. (Cl. 6—4.)

1. A queen excluder for bee hives comprising, a rectangular frame, a plurality of spaced apart wires extending thereacross and disposed parallel to two opposite marginal edges of the frame, the ends of each wire offset and imbedded in the frame, the wires lying in a common plane and forming a screen-like structure one face

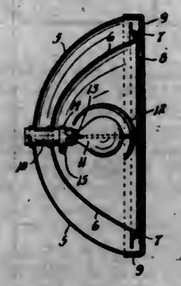
of which is substantially flush with one face of the frame and the other face of which is depressed below the plane of the opposite face of the frame.

1,630,857. PLY-METAL PANEL AND WALL CONSTRUCTED OF THE SAME. GEORGE R. MEYERCORD, Chicago, Ill., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Aug. 12, 1922. Serial No. 581,396. 6 Claims. (Cl. 189—34.)



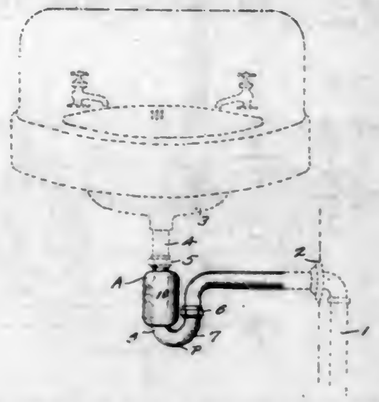
1. A panel composed of opposed metal-faced compound sheets held in spaced relation to each other by interposed spacing strips, said sheets being folded inwardly upon themselves at opposite sides.

1,630,858. CORNER FORMATION IN METAL-SHEATHED CONSTRUCTION MATERIAL. GEORGE RUDOLPH MEYERCORD, Chicago, Ill., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Oct. 19, 1925. Serial No. 63,459. 2 Claims. (Cl. 20—92.)



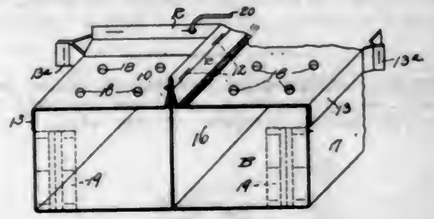
2. A structure comprising a metal-sheathed board bent to bring the parts thereof into two planes at an angle to each other with the metal facing outwardly, the body of the board being cut away to the metal-sheathing across a width sufficient to permit a strip of metal-sheathing thus exposed to be bent along the desired curve, and a filling piece fixed in the groove bounded by the inner surface of said strip of metal-sheathing and the bounding edges of the body portion of the board.

1,630,859. CIRCUIT SYSTEM FOR RADIOFREQUENCY CURRENTS. ROBERT S. MINER, West Hartford, Conn., assignor, by mesne assignments, of one-half to The C. D. Tuska Company, a Corporation of Connecticut. Filed Apr. 2, 1923. Serial No. 629,389. 4 Claims. (Cl. 250—20.)



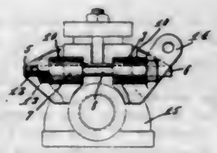
1. A circuit system for radio frequency currents comprising, a vacuum tube having a grid, plate and filament therein, a grid circuit therefor tuned to resonance including an inductance coil, a plate circuit therefor tuned to resonance including an inductance coil and a condeser in shunt therewith to furnish impedance of parallel resonance, said plate circuit also having a reverse feed back coil therein arranged in coupling relation to the coil in said grid circuit in a manner to oppose the effect of the inherent capacitative coupling between said grid and plate circuits, and a second vacuum tube having a grid, plate and filament therein and having its grid directly connected to the plate of said first tube through a condenser.

1,630,860. AUTOMOBILE HEADLIGHT. OSCAR NELSON, Breckenridge, Minn. Filed Oct. 2, 1924. Serial No. 741,127. 2 Claims. (Cl. 240—48.6.)



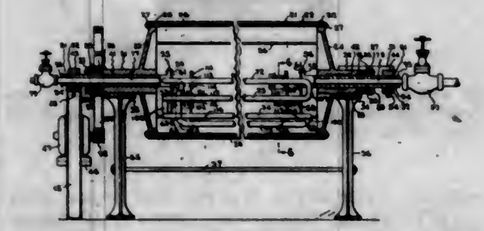
2. The combination with the reflector, lamp socket and lamp bulb of an automobile headlight, of an anti-glare device comprising a comparatively narrow substantially pear-shaped plate disposed over and in front of said bulb and curved substantially in the arc of a circle, said plate having its larger end of greater height and width than the diameter of said bulb and disposed centrally in front of said lamp bulb so as to entirely cover the bulb at the front, said plate terminating in front of said lamp socket, arms secured to the inner side of said plate and extending rearwardly at each side of said bulb, and a clamping ring to which said arms are connected adapted to be clamped on said lamp socket for holding the device in position.

1,630,861. SELF-SEALING TRAP. SCOTT OPDYKE, Billings, Mont. Filed Aug. 28, 1924. Serial No. 734,801. 2 Claims. (Cl. 182—12.)



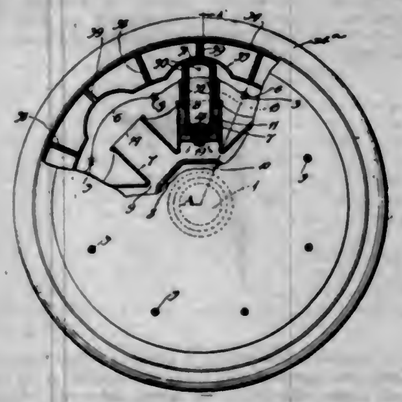
1. In combination, a water seal trap, a casing mounted about one member of the said trap, the trap having an opening therein adapted to communicate with the said casing, and a U-shaped tube connected to the trap having one end open within the casing, the said tube being adapted to act as a siphon to fill the trap.

1,630,862. SHIPPING CASE. JOSEPH W. PARKS, Altoona, Pa. Filed Nov. 15, 1923. Serial No. 674,946. 2 Claims. (Cl. 229—6.)



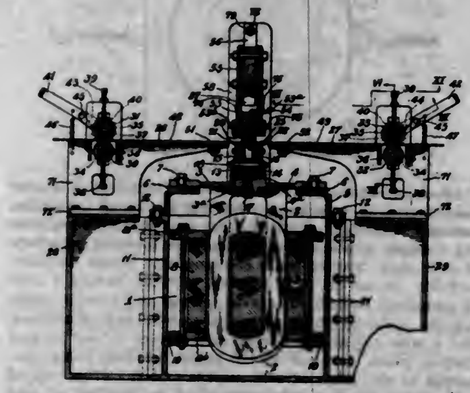
1. In a crate for shipping live chicks, the combination of a receptacle body having openings and a cover therefor, said cover comprising upstanding rib members crossing at the central portion thereof and providing interior grooves, and partitions of greater height than the side of the receptacle body adapted to engage in said grooves thereby to divide the receptacle into a plurality of compartments.

1,630,863. CLAMP. ALBERT D. PURTLE, Marietta, Ohio. Filed Oct. 2, 1924. Serial No. 741,271. 1 Claim. (Cl. 166—14.)



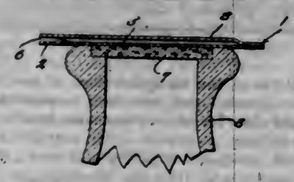
A casing head clamp including separable sections having curved cooperating edges adapted to fit around the curved surface of a casing head, said sections having upwardly extended integral fingers arranged adjacent to the curved surfaces to engage the straight portion of a casing head, lateral apertured ears, bolts extending through the ears for securing the clamp to a casing head, upwardly extended ears forming a part of one of the sections and having openings to receive a bolt for supporting a pump jack.

1,630,864. COOLING APPARATUS FOR CONGEALABLE SUBSTANCES. OSCAR C. SCHMIDT, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 12, 1924. Serial No. 725,636. 12 Claims. (Cl. 257—96.)



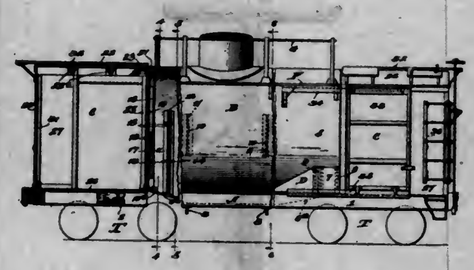
2. In cooling apparatus for congealable substances, the combination of a hollow roll, means for rotating the same, cooling piping in said roll having an inlet-extension and an outlet-extension, said extensions being substantially coincident with the axis of rotation of said roll, said piping between said inlet-extension and said outlet-extension being arranged in substantially horizontal loops, said loops located solely within the middle portion and the lower portion of said roll, and constructed and arranged for receiving a body of cooling fluid between said piping and the outer wall of said roll for abstracting heat from said wall by said body of cooling fluid and abstracting heat from the latter by said piping, means for feeding the substance to be congealed in liquid form against the outer periphery of said roll, and means for removing said substance in congealed form from said outer periphery.

1,630,865. RESILIENT WHEEL. ERNEST SCHULTZ, East Melbourne, Victoria, Australia. Filed Jan. 18, 1923, Serial No. 613,492, and in Australia Feb. 15, 1922. 13 Claims. (Cl. 152—28.)



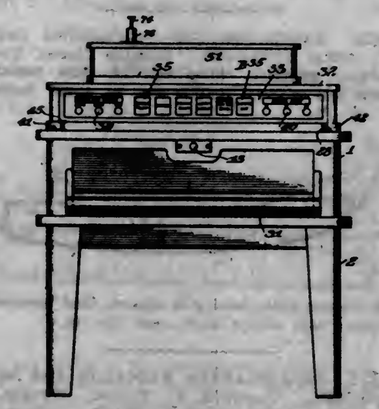
10. A resilient wheel consisting in the combination of a hub fitted with discs forming the wheel sides, the outer edges of the discs being turned inwardly towards each other and being fitted with rim members, the inner surface of each rim member being formed with concave surfaces, a tread ring concentrically of the discs and formed on its inner surface with concave surfaces, the said concave surfaces of the rim members and the tread ring being in radial alignment, air cylinders floating and radially disposed around the hub, air communication between each of the cylinders and an air piston pump in each of the cylinders, said pump comprising two piston elements, one a pump piston element with a suction valve and the other with a delivery valve communicating with the passage common to all the cylinders, a passage in the pumping piston element, a spring to assist the outward movement of the pumping piston member, and extensions on the piston members bearing respectively against the concave surfaces of the rim members of the discs and the tread ring substantially as described.

1,630,866. ELECTRIC BUTT-SEAM WELDING AND APPARATUS THEREFOR. FRANK L. SESSIONS, Lakewood, Ohio. Filed Nov. 5, 1925. Serial No. 67,063. 9 Claims. (Cl. 219—4.)



1. A method of welding together the contacting surfaces of an open butt-seam in metal which consists in pressing said contacting surfaces together, causing the metal adjacent to and upon opposite sides of the seam-cleft to contact with the respective opposite terminals of an electric welding circuit, applying localized pressure to said metal upon opposite sides of the seam-cleft to press small areas of the surfaces of said metal into good electrical contact with said terminals adjacent to the seam-cleft, and progressively traversing said localized pressure of the metal upon said terminals parallel and adjacent to the seam-cleft.

1,630,867. MILK-BOTTLE COVER AND RECEPTACLE. EDWARD D. SMITH, Erie, Pa. Filed Dec. 28, 1925. Serial No. 78,013. 3 Claims. (Cl. 215—51.)

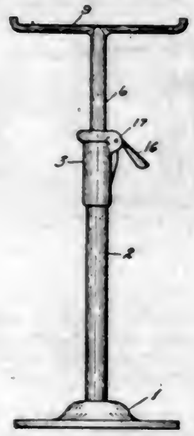


1. A device of the class described, comprising superposed disks connected by reduced bendable necks, one of the disks being of less diameter than a second of the disks, to form a reduced closure secured to the second disk, the third disk being secured to the second disk throughout a portion of its periphery to form a pocket having a reduced inlet opening.

1,630,868. FREIGHT-CAR CONSTRUCTION. LEWIS J. SPENCE, Brooklyn, N. Y. Filed Oct. 30, 1924. Serial No. 746,850. 12 Claims. (Cl. 105—359.)

1. A tank car including a tank of standard diameter having its longitudinal axis arranged lengthwise of the car and provided on the outside of its ends with supplemental cargo compartments of a height equal to the height of the tank.

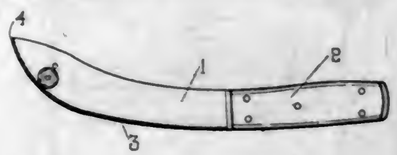
1,630,869. GAME APPARATUS. HERMAN STEINMETZ, Rochester, N. Y., assignor to Bat-A-Peny Corporation, Rochester, N. Y. Filed Mar. 5, 1924. Serial No. 697,127. 16 Claims. (Cl. 273—89.)



1. In a game apparatus, the combination with a playing field having electrically illuminated playing positions thereon including electric lamps, of switches in the circuits of said lamps and a projectile adapted to traverse the playing field and to subsequently gravitate to a position at which it will operate one of said switches, the latter forming a stop for the projectile.

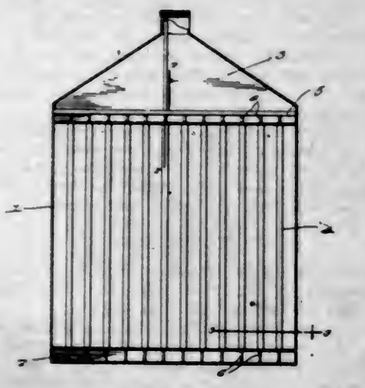
16. A game comprising an alley, a chute under said alley to receive a ball from the same, ball-receiving pockets at the lower end of said chute having different counting values, and ball-actuated indicating means for disclosing into which pocket the ball enters.

1,630,870. DISPLAY STAND. CARL F. STRUNCK, Hendersonville, N. C. Filed Apr. 27, 1926. Serial No. 104,966. 3 Claims. (Cl. 211—24.)



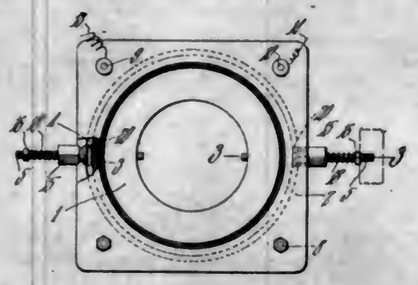
1. In a structure including a base, a tubular standard rising therefrom, and a casing member carried by the standard, a rod slidably mounted within the standard and extending through the casing member, said casing member having an inclined inner surface, a wedge slidably mounted within the casing member and having an inclined side coacting with said inclined surface whereby

to be crowded against the rod, an abutment element in the casing member, a spring engaging the abutment element and the wedge, and lever operated means slidable



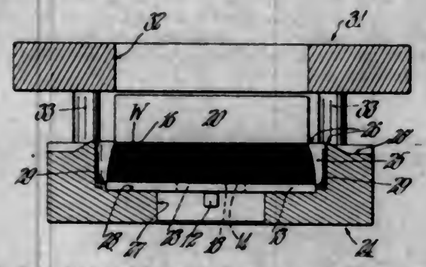
through the abutment member and connected with the wedge for moving the same out of engagement with the rod to permit movement of the latter.

1,630,871. KNIFE FOR USE IN FLAYING CATTLE AND LIKE PURPOSES. RICHARD HENRY TASKER, Liverpool, England. Filed Feb. 11, 1926, Serial No. 87,609, and in Great Britain Jan. 14, 1926. 8 Claims. (Cl. 17—21.)



1. A flaying knife having a smooth stud mounted on the convex side of the blade near the tip.

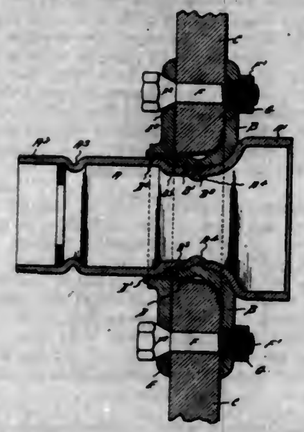
1,630,872. SELF-THAWING RADIATOR FOR MOTOR VEHICLES. CLARENCE E. TAYLOR, Watseka, Ill. Filed Feb. 4, 1926. Serial No. 85,955. 1 Claim. (Cl. 257—129.)



A radiator of the kind indicated having lower and upper water chambers, a header disposed in the upper water chamber and upright tubes interposed and effecting communication between said chambers and also having in the said tubes smaller tubes extending through the lower chamber and open at their lower ends to the atmosphere; the said comparatively small tubes being combined with and communicating with the interior of said header disposed in the upper chamber, and the said header being provided with an upright tube effecting communication between its interior and the upper portion of the interior of the upper chamber.

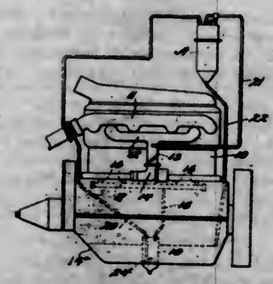
1,630,873. VARIOMETER. CLARENCE D. TUSKA, Hartford, Conn., assignor to The C. D. Tuska Company, Hartford, Conn., a Corporation of Connecticut. Filed June 17, 1922, Serial No. 569,082. Renewed Feb. 11, 1927. 12 Claims. (Cl. 171—119.)

12. In a device of the character described, a stator body including a pair of abutting blocks of insulating material with their abutting faces provided with registering notches, a stator winding on the internal periphery of said body, binding posts securing said blocks together, metallic sleeves in said notches, a rotor having a pair of trunnions journalled in said sleeves and a rotor winding the ends of which are connected to said trunnions, and a wire connecting one of said sleeves to one of said binding posts, one end of the stator winding being connected to the other of said sleeves and the other end of said stator winding being connected to another of said binding posts.



1,630,874. MOLD FOR VARIOMETERS. CLARENCE D. TUSKA, Hartford, Conn., assignor to The C. D. Tuska Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 8, 1923. Serial No. 623,816. 10 Claims. (Cl. 18—59.)

1. In a device of the class described, a mold for molding a holder around coil windings comprising, a core having a fixed shoulder and a removable shoulder between which the windings are placed on the mandrel and a mold having a mold cavity for receiving said core and for positioning the mandrel so that the windings are within the mold cavity.



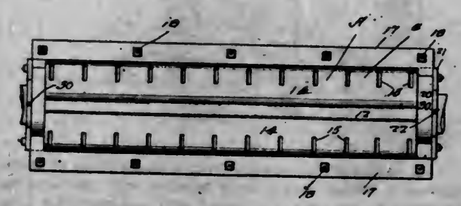
1,630,875. VEHICLE WHEEL. JAMES H. WAGENHORST, Jackson, Mich. Filed Aug. 19, 1921. Serial No. 493,508. 3 Claims. (Cl. 301—9.)

1. In a wheel the combination of an inner hub having an external bearing surface and a radially extending flange at the rear thereof, a set of spokes, a sheet metal liner sleeve engaging the inner ends of said spokes and shaped to fit the bearing surface of the hub, a front flange removably mounted on the hub and engaging the front surfaces of the spokes and a plurality of bolts passing

through the front flange and the spoke set and screwing into said hub flange said front flange and liner sleeve being connected whereby the liner sleeve and front flange hold the spokes in assembled relation upon the removal of the bolts to permit the demounting of the wheel.

1,630,876. OIL-PURIFYING APPARATUS FOR HYDROCARBON ENGINES. JAMES A. WATSON, Silver Spring, Md. Filed Apr. 13, 1925. Serial No. 22,791. 6 Claims. (Cl. 123—196.)

1. In an apparatus for purifying the oil in the lubricating system of a hydrocarbon engine, the combination with the engine having an oil supply reservoir, of a relatively small oil well separate from the reservoir, means for collecting the oil which drains from the engine cylinders and conveying the same to said well, a refining device, means for conveying the oil from the well to the refining device and means for returning the oil from the refining device to the reservoir, whereby oil draining from the cylinders is refined before its return to the reservoir.

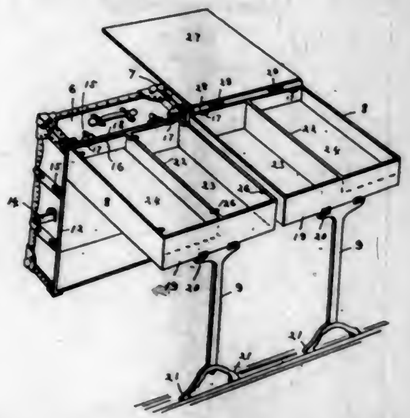


1,630,877. STAPLING TOOL. CHARLES J. WESTIN, Rockaway, N. J., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Mar. 10, 1924. Serial No. 698,052. 4 Claims. (Cl. 1—49.)

1. A stapling tool comprising means to hold a supply of staples, a staple-guide to receive and support a staple during a staple-driving operation, means to feed a staple to the staple-guide, a staple-driver, a hammer to impart driving force to the driver, means normally held in inoperative position for connecting said hammer and driver, and means for causing said last-mentioned means

to assume an operative position to cause said driver to be lifted with said hammer so that a staple may be fed beneath the driver into the staple-guide.

1,630,878. GAS BURNER. ALVA RAYMOND WILSON, Moline, Kans. Filed Aug. 27, 1926. Serial No. 131,945. 2 Claims. (Cl. 158—99.)



1. A gas burner of the class described including a drum formed in two sections, one section including a bottom, side walls rising from the bottom and end walls rising from the bottom, said end walls being provided with semi-cylindrical collars projecting outwardly, said side walls being provided with outwardly projected flanges, the other section including a top wall, side walls and end walls, the end walls being provided with semi-cylindrical collars complementary to the collars of the said one section and said side walls of said other section being provided with flanges, fastening elements piercing openings in the flanges for holding the sections together, stuffing boxes in the cylinders formed by the complementary collars, and a pipe extending through the stuffing boxes and through the drum and having openings therein.

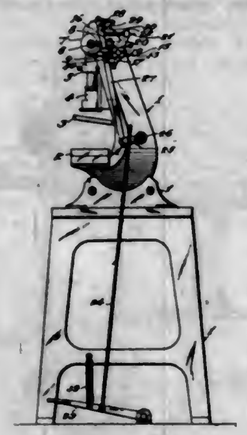
1,630,879. JOBBER'S DISPLAY TRUNK. ALBERT W. WINSHIP, Utica, N. Y., assignor to W. W. Winship & Sons, Inc., Utica, N. Y., a Corporation. Filed Feb. 29, 1924. Serial No. 695,979. 9 Claims. (Cl. 190—16.)

1. In a jobber's display trunk, the combination of two open-faced trunk sections hinged to each other along adjacent vertical edges of the open face at one side and adapted to be closed together and form a complete trunk, a covered fray for each section fitting therewithin and of substantially the full interior size of said section and

hinged at its upper forward edge to the top forward edge of its section and adapted to be swung outwardly and up to a horizontal position level with the top of

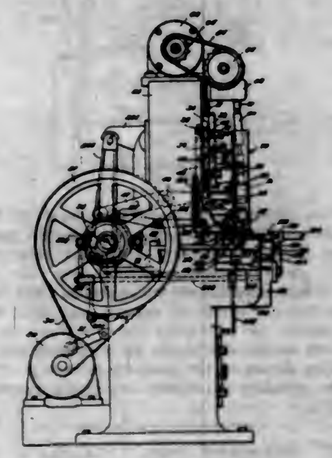
the trunk and with the loose contents of the trays held therein and means for supporting the trays in extended position.

1,630,880. CABLE SPLICER. HOMER YATES, Regina, Saskatchewan, Canada. Filed Feb. 16, 1927. Serial No. 168,631. 4 Claims. (Cl. 24—126.)



1. A cable splicer stamped from a single sheet of metal to form a trough shaped body member with curved sides and open at the ends, the top of said member being open wider at one end than at the other end and the sides being bent back outwardly to form guideways or flanges, a cover plate corresponding in formation to the opening in the body and formed with flanges adapted to slidably engage with said guideways, and lugs formed in the end of the cover plate adapted to be bent to lock the plate on the body.

1,630,881. MANUFACTURE OF FERRIC OXIDE. DEMETRIUS GEORGE ZALOCOSTAS, deceased, Sydney, New South Wales, Australia, by Andrianne Zalocostas, executrix, and John Velissaropulos, executor, Sydney, Australia. Filed Mar. 28, 1925, Serial No. 19,008, and in Australia Apr. 16, 1924. 1 Claim. (Cl. 23—200.)

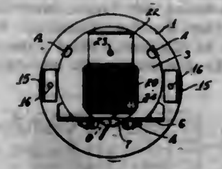


The herein described process of manufacturing ferric oxide from ferrous sulphate (heptahydrate) crystals, which consists in traversing a layer of ferrous sulphate crystals through a dehydrating chamber provided with gas burners arranged to project gas flames over the surface of the crystals, proportioning the heat so applied to the crystals to vaporize water of crystallization as rapidly as it is liberated therefrom, and to maintain a temperature above 64° C. in said chamber, educting the vapor as rapidly as it is formed, thereby producing a freely friable and substantially completely dehydrated product, grinding said product, submitting the ground product to oxidizing treatment, and finally roasting the dehydrated oxidized ground product.

1,630,882. CLUTCH-OPERATING MECHANISM FOR POWER PRESSES. EDMUND W. ZEH, Newark, N. J. Filed Aug. 29, 1925. Serial No. 53,239. 12 Claims. (Cl. 192—25.)

1. The combination with a power press having a clutch, and a throw-out for said clutch, of an operating member pivoted at one end and adapted to engage said throw-out, stops for positioning said member to engage different points of said throw-out, a spring for holding said operating member against either of said stops, and means for changing the direction of pull of said spring on said operating member to hold it in alternate positions, in one of which positions it will be automatically released from the throw-out by revolution of the press and in the other of said positions it will be unaffected by revolution of the press.

1,630,883. HINGE-MAKING MACHINE. WILHELM G. ALDEEN, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a Corporation of Delaware. Filed Mar. 10, 1924. Serial No. 698,336. 24 Claims. (Cl. 29—11.)



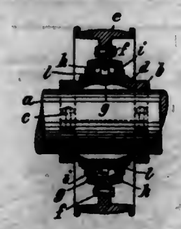
1. A machine of the class described having, in combination, a countersinking mechanism, a primary curling mechanism, a secondary curling mechanism, a support constituting a guideway for the work blanks, feeding means for advancing said work blanks along said guideway to be operated upon successively by said mechanisms,

a trimming mechanism, means for transferring said work blanks from said guideway to said trimming mechanism, a power shaft, and cam means on said shaft constructed and arranged to operate the different mechanisms in timed relation to each other whereby to perform a sequence of operations on said blanks.

12. A device of the class described having, in combination, a support, a pair of spaced guide blocks mounted on said support, said guide blocks constituting a guideway for a series of work blanks, a feed bar reciprocable between said guide blocks, a plurality of spring pressed feed fingers carried by said feed bar for advancing said work blanks along said guideway, and means for individually clamping said work blanks in position directly after each advance, said spring pressed fingers being adapted to slide beneath said work blanks in their rearward movement.

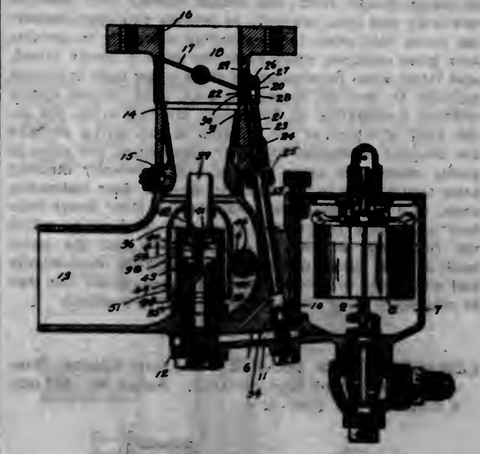
15. A machine of the character described having, in combination, a base, a pair of operating units for performing successive operations upon a work blank, a transfer mechanism for transferring said work blank from one unit to the other, said mechanism comprising a reciprocable and rotatable shaft, a transfer arm carried by said shaft, a pair of spring transfer fingers carried by said arm, means for revolving said shaft to oscillate said arm from one unit to the other, means for reciprocating said shaft to move said work blank into position in one unit, and to then shift said fingers out of engagement with said work blank, and a single power means for operating said units and said shifting mechanism in timed sequence.

1,630,884. ELECTRICAL INDICATING INSTRUMENT. JOS R. BARNHART, Lakewood, Ohio, assignor to Walter M. Scott, Lakewood, Ohio. Filed Mar. 8, 1922. Serial No. 542,176. 5 Claims. (Cl. 171—95.)



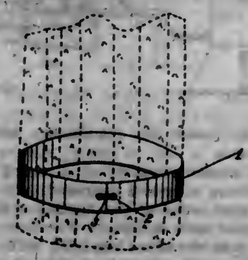
2. In an alternating current voltmeter or ammeter, the combination, with a solenoid, of a movable system mounted in operative relation to said solenoid, an armature carried by said movable system and arranged nearer one pole of said solenoid than the other, said armature being adapted to be attracted by said solenoid, and means for causing a higher concentration of the magnetic field on one side of said solenoid than on the other.

1,630,885. VARIABLE CONDENSER. JOE R. BARNHART, Lakewood, Ohio, assignor to Walter M. Scott, Lakewood, Ohio. Filed Apr. 9, 1924. Serial No. 705,181. 6 Claims. (Cl. 175—41.5.)



1. A variable condenser of the character set forth comprising a base of insulating material, a spacing element located adjacent each end of said base, a sheet of dielectric material positioned on said elements, a conductor plate located adjacent each end of said base, an eyelet securing each conductor plate and spacing element and dielectric sheet to said base, said dielectric sheet being provided with an aperture intermediate said conductor plates, and a conductor element interposed between said base and dielectric sheet and having a portion projecting through the aperture in said dielectric, said conductor element being rotatable about the axis of such projecting portion to vary the position of said element with respect to said conductor plates.

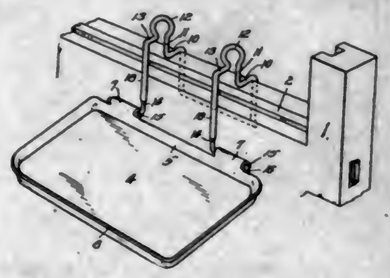
1,630,886. DRIVING WHEEL. ALBERT BEYER, Berlin, Germany. Filed Feb. 26, 1926, Serial No. 90,983, and in Germany Apr. 3, 1925. 5 Claims. (Cl. 64—98.)



1. A driving wheel comprising a hub member having an outer spherical bearing surface, a rim member having an inner spherical bearing surface resting on said surface of said hub member and slotted, and a pin mounted in said hub member and projecting into the slot of said rim member with lost motion in any direction.

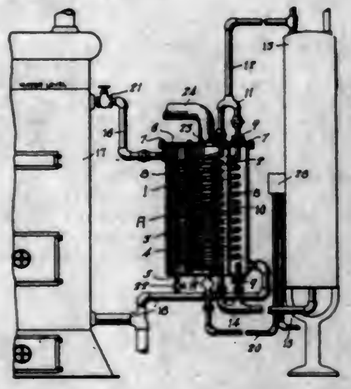
1,630,887. CARBURETOR. GEORGE M. BICKNELL, St. Louis, Mo. Filed Mar. 31, 1921. Serial No. 457,247. 1 Claim. (Cl. 261—41.)

In a carburetor comprising a casing having a float chamber, a mixing chamber, and an auxiliary chamber, said auxiliary chamber opening into the mixing chamber, a valve mounted in the mixing chamber, an adjustable idler tube provided with a plurality of discharge openings arranged circumferentially and longitudinally adjacent its upper end extending into the auxiliary chamber, and means for supplying fuel to said idler tube.



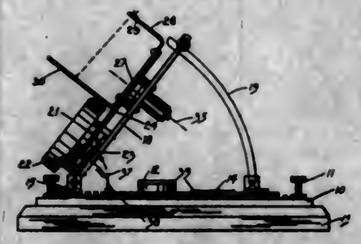
1,630,888. BAND FOR TYING VEGETABLES INTO BUNDLES. RALPH J. BROWN, Godfrey, Ill. Filed Apr. 30, 1926. Serial No. 105,681. 3 Claims. (Cl. 24—17.)

1. A band for tying moisture-exuding vegetables into bunches, and comprising a strip of pliant, flexible water-



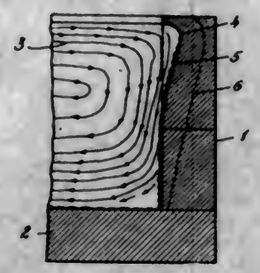
proof material adapted to encircle said bunch of vegetables, and means for yieldably holding said strip in place about said bunch and permitting expansion and contraction of the latter.

1,630,889. TRAY. ROBERT E. CLARKE, Jerseyville, Ill. Filed May 4, 1925. Serial No. 27,667. 2 Claims. (Cl. 45—51.)



2. In combination with a service tray, a hanger bent at equal points from the center thereof and directed upwardly and then inwardly to provide two door embracing arms, said arms then extending upwardly to provide door glass engaging arms when the glass is partly raised, said latter arms terminating at their upper ends in curved sections to provide spring sections, said curved spring sections terminating in outwardly directed arms, the inner ends of which at the junction of the spring sections are adapted to engage the door glass when the glass is partly raised, the outer ends of said outwardly directed arms terminating in downwardly directed door embracing arms, said door embracing arms having their lower ends bent outwardly to provide hinge pin sections to which the rear edge of the tray is pivoted, and the outer ends of said hinge pin sections being bent downwardly and outwardly to provide L-shaped supports for the tray to rest upon when disposed in a serving position.

1,630,890. WATER HEATER. WILLIAM COATES, Newark, N. J. Filed Sept. 8, 1922. Serial No. 587,033. 2 Claims. (Cl. 122—32.)



1. In a water heater, the combination with a boiler of a heating system, a coil to receive service water to be heated and a heater therefor, of a casing formed with two chambers one of which surrounds the other and is connected to said boiler of the heating system to permit hot water from said boiler to circulate therethrough, the other of said chambers receiving said coil and said heater, and a second coil independent of said first-mentioned coil mounted in said first-mentioned chamber and surrounding said second-mentioned chamber to receive service water, the water in said coils being directly heated by the heating medium in the corresponding one of said chambers and also indirectly heated by the other of said heating mediums when the latter is in operation, the outlet ends of said coils being connected to a common hot service water supply pipe.

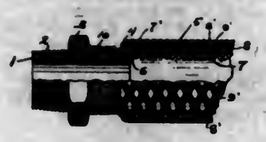
1,630,891. CLOCK. WILLIAM ERNEST COOKE, Sydney, New South Wales, Australia. Filed Dec. 20, 1924, Serial No. 757,118, and in Australia Feb. 16, 1924. 11 Claims. (Cl. 33—62.)

9. A sun clock comprising a clock dial, clock hands for the dial, a gear train controlling the movements of the hands, a sun pointer mounted on a member of the gear train a day chart mounted on the sun pointer, there being a graph of the equation of time on the chart.

1,630,892. TANK BLOCK FOR GLASS FURNACES. JAMES L. CRAWFORD, St. Louis, Mo., assignor to Laclede-Christy Clay Products Company, St. Louis, Mo., a Corporation of Missouri. Filed June 11, 1925. Serial No. 36,331. 3 Claims. (Cl. 49—54.)

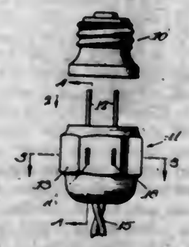
1. A block for glass melting tanks having an outwardly inclined corrugated face.

1,630,893. RESILIENT MEMBER. WILLIAM W. DOTY, Staten Island, N. Y., assignor of one-half to Sidney Rosenbaum, New York, N. Y. Filed Nov. 3, 1922. Serial No. 598,721. 8 Claims. (Cl. 293—55.)



1. A resilient member comprising a strip of resilient metal with each end bent into a spiral and the intermediate portion adapted to receive a load, and supporting means therefor secured to the spiral ends substantially at the centers thereof.

1,630,894. IRONING PAD. CHARLES EDWIN HAMILTON, Van Nuis, Calif. Filed May 1, 1923. Serial No. 635,853. 2 Claims. (Cl. 68—9.)

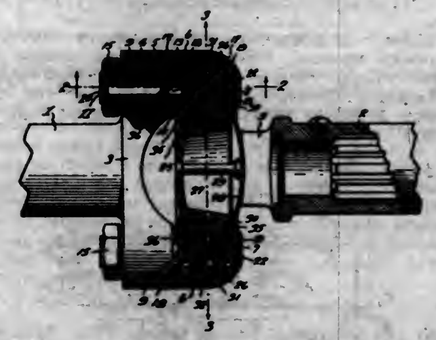


1. An ironing pad comprising a support composed of a plurality of adjacent resilient members, rigid retainer members carried thereby, and resilient and heat insulating members held therein to afford an ironing surface.

1,630,895. HOSE COUPLING. WILLIAM K. HERBST, Hillside, N. J., assignor, by mesne assignments, to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed Aug. 30, 1922. Serial No. 585,125. 7 Claims. (Cl. 285—84.)

1. The combination of a coupling provided with an extension, a shoulder between said extension and the rest of said coupling, a flexible tube secured to said coupling and abutting said shoulder at one side thereof and means for securing said tube to said coupling on the other side of said shoulder, said means comprising wire braid, said means and the abutting end of said flexible tube being spaced apart longitudinally of the tube.

1,630,896. ATTACHMENT PLUG. WILLIAM HERSKOVITZ, Chicago, Ill., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 24, 1925. Serial No. 11,046. 2 Claims. (Cl. 173—334.)

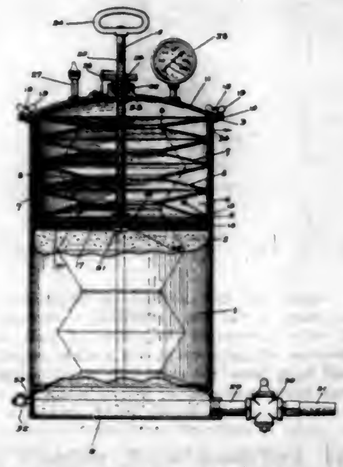


1. An extension cord attachment plug, comprising a body formed of non-conducting material and having a central opening extending lengthwise therethrough from end to end for the reception of the extension cord, and a pair of parallel slots which extend transversely of said central opening and open out through two sides of the body, there being one slot disposed at each side of said central opening, a pair of parallel contact fingers having attaching means for the extension cord, and secured to and projecting from one end of said body, and a pair of contact pieces in electrical contact with said contact fingers and extending into and in line with said slots in position for engagement at the sides of the body with the contact fingers of other attachment plugs.

1,630,897. CLOSURE FOR AUTOMOBILE RADIATORS AND THE LIKE. JEAN JACQUES and ADOLPH W. OSWALD, Philadelphia, Pa. Filed May 3, 1924, Serial No. 710,725. Renewed Mar. 17, 1926. 10 Claims. (Cl. 220—24.)

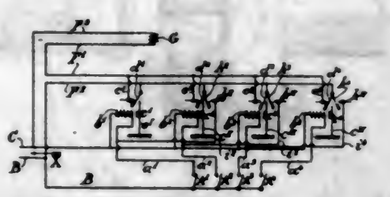
1. A closure for the inlet of an automobile radiator, gasoline tank or the like, affording a through passage, a plug valve interposed cross-wise of said passage, a back piece on the plug valve and a plate member formed with said back piece for externally covering the passage when the valve is closed.

1,630,898. UNIVERSAL JOINT. SAMUEL L. LAUGHLIN, Cleveland, Ohio, assignor to The Cleveland Universal Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 15, 1923. Serial No. 674,834. 4 Claims. (Cl. 64—102.)



1. In a universal joint, the combination with a pair of hubs each having a pair of bearing blocks projecting therefrom, a connecting member having trunnions journaled in said bearing blocks, said connecting member having a main lubricant reservior and said bearing blocks having auxiliary lubricant reservoirs adapted to receive lubricant from said main reservoir by centrifugal action, there being a restricted passageway between the ends of said trunnions and the wall of said bearing blocks for preventing excess pressure from lubricant in said auxiliary reservoir.

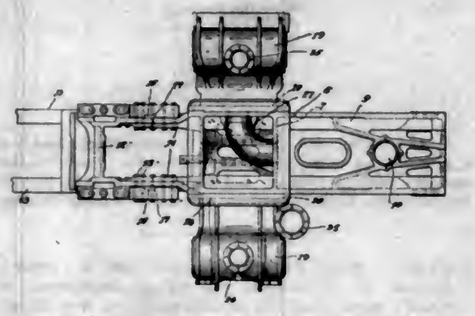
1,630,899. PRESSURE-OPERATED GREASE DISPENSER. ERNEST E. LYNCH, Alameda, Calif. Filed Mar. 29, 1926. Serial No. 98,179. 2 Claims. (Cl. 221—47.1.)



1. A grease dispenser of the class described, comprising a container forming a grease chamber, a valve-controlled discharge outlet for said grease chamber, a piston mounted in said container, a cap-plate for said container, an extensible-collapsible means in the form of a bellows mounted in said container between said cap-plate and said piston and forming an air-pressure chamber therebetween,

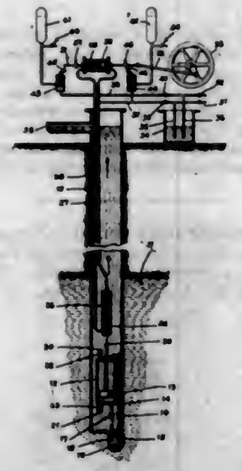
said extensible-collapsible means being coactively associated with said piston and adapted to normally extend itself to force said piston away from said cap-plate, a valvular means permitting the introduction of air under

pressure into said pressure chamber, a valve-controlled discharge outlet for said air-pressure chamber, and a check valve mounted in the lower end of said container to break the vacuum upon return movement of the piston.



1,630,900. ELECTRICAL TRANSMISSION DEVICE. ARNOLD MICHOUD, Yverdon, Switzerland, assignor to the Firm: "Cibles Automatiques Michoud-Société Anonyme," Neuchatel, Switzerland. Filed Aug. 26, 1922, Serial No. 584,472, and in Switzerland Sept. 7, 1921. 5 Claims. (Cl. 177—380.)

1. An electrical apparatus for sending a variable number of impulses over an impulse circuit, comprising a series of electro-magnets, means including a contact device associated with each electro-magnet for momentary energization of each electro-magnet to cause an impulse to be sent over the impulse circuit and also including a second contact device associated with each of the aforesaid contact devices except that associated with the first magnet in the series to cause the momentary energization of the next adjacent electro-magnet of the series, and means for selectively causing the momentary energization of any magnet of the series whereby the number of impulses imparted to the impulse circuit depends upon the particular magnet in the series selected for energization by the last aforesaid means.

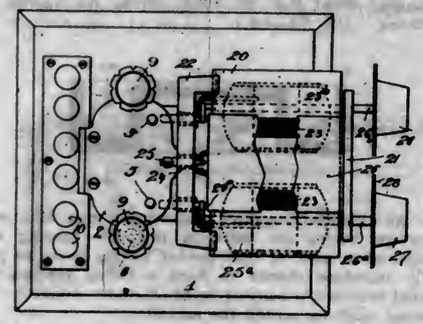


1,630,901. LOCOMOTIVE FRAME. JOHN E. MUHLFELD, Scarsdale, N. Y. Filed June 30, 1924. Serial No. 723,098. 14 Claims. (Cl. 105—44.)

1. As a new article of manufacture, a front frame for locomotives consisting of a one-piece integral casting including a body having side and end walls, parallel side frame members extending forwardly from said body, parallel extensions projecting rearwardly from said body

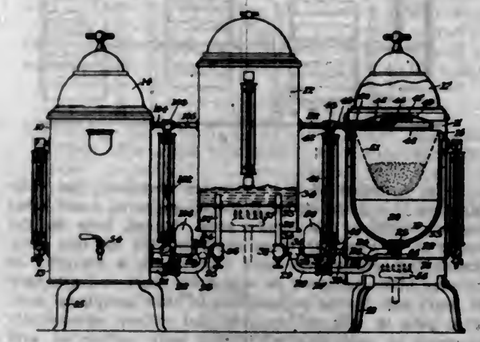
for connection with the rear frame of the locomotive, and a boiler seat saddle integral with the upper ends of said side and end walls of the frame body.

1,630,902. PUMPING SYSTEM. WILLIAM C. PARRISH, Port Arthur, Tex. Filed Apr. 16, 1924. Serial No. 706,798. 1 Claim. (Cl. 103—46.)



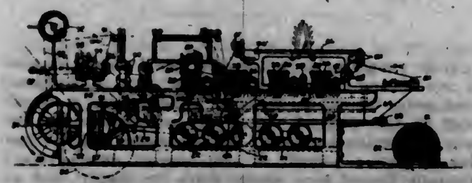
An apparatus for raising fluid in wells, a conduit extending into the well, a pump cylinder disposed in said conduit, an inlet pipe adapted to conduct the fluid to be raised to the pump cylinder, an outlet pipe arranged to conduct fluid from the pump cylinder to said conduit, an actuating cylinder disposed in said conduit, pistons in said cylinders and a piston rod connecting said pistons, a pair of pipes extending within said conduit and terminating at opposite ends of the actuating cylinder, to thereby deliver the actuating fluid thereto, and means for reciprocating the fluid in said pipes.

1,630,903. INDUCTANCE-COIL ATTACHMENT. HERBERT BROWN PEARSON, Brooklyn, N. Y., assignor to Ship Owners Radio Service, Inc., New York, N. Y., a Corporation of Washington. Filed Jan. 28, 1922. Serial No. 532,476. 2 Claims. (Cl. 171—119.)



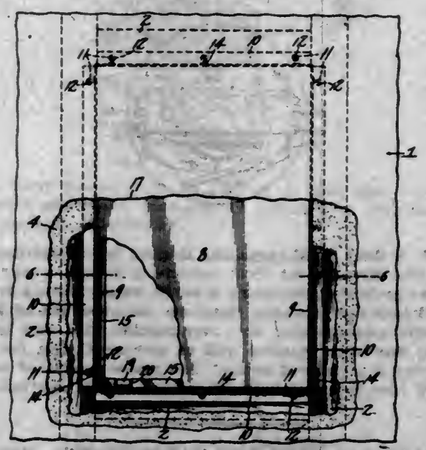
1. An inductance coil structure comprising a supporting body, a pair of spaced inductance coils supported thereby

on parallel axes, a fixed coil also supported by said body and positioned intermediate the inductance coils, and provided with portions inductively associated with said



inductance coils, a block also carried by said body, and plug and jack terminals for all of said coils carried by said block.

1,630,904. COFFEE-URN APPARATUS. HENRY L. RECKARD, New York, N. Y., assignor to Sloss Perfect Coffee Maker, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 1, 1923. Serial No. 654,968. 6 Claims. (Cl. 53—3.)



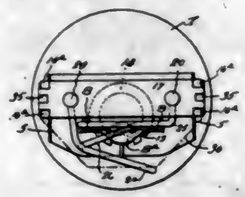
1. In a coffee urn apparatus and in combination with a coffee urn and an associated water heater, a coffee receptacle within the coffee urn, a pump, a connection from the coffee receptacle to the suction of the pump, a connection from the water heater to the suction of the pump, a connection from the discharge of the pump to the top of the coffee receptacle, and devices for actuating the pump whereby the pump is utilized to transfer a predetermined quantity of coffee from the coffee receptacle from the bottom to the top thereof and also to transfer a predetermined quantity of water from the lower end of the heater to the top of the coffee receptacle.

1,630,905. PRINTING PRESS. VERE LOCKSLEY REEVE, Ballarat, Victoria, Australia. Filed Sept. 28, 1921, Serial No. 503,879, and in Australia Oct. 15, 1820. 10 Claims. (Cl. 101—173.)

1. A printing press comprising two or more sets of printing cylinders, a reciprocating table supporting a plurality of forms, a number of inking sets for said printing cylinders, means for passing the paper to and from one printing set to the other, and a guide roller located between the printing sets, whereby when the table is reciprocated one or more impressions will be applied to different parts of the paper passing through the press, whereby when the paper has passed through the last printing set all of the different impressions will be arranged in correct registration thereon.

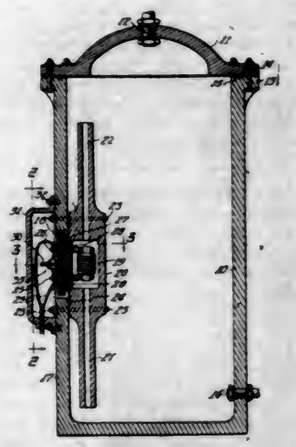
1,630,906. CONCEALED INCLOSURE. CHARLES B. RICKEN, Brooklyn, N. Y., assignor of one-half to Garry M. Ketcham, Brooklyn, N. Y. Filed Feb. 23, 1927. Serial No. 170,205. 2 Claims. (Cl. 4—173.)

1. The combination with a wall opening to contain bath tub fittings of a metallic frame composed of two rectangular elements, one of said elements having a band portion that fits said opening and extends out to the wall surface, and an outward flange that lies against and is secured to the wall studding, the other element having a band portion that fits within and is secured to the band portion of the first named element and also extends inwardly between the studding, said second named element having an inward flange that lies recessed below the wall surface, and a closure panel to be removably seated against said inward flange.



1,630,907. AUTOMATIC MEANS FOR RUNNING OFF LIQUID FROM CONTAINERS AT PREDETERMINED CONDITIONS OF TEMPERATURE. GEORGES GASTON ROYER, Paris, France. Filed May 8, 1925, Serial No. 28,871, and in France June 4, 1924. 10 Claims. (Cl. 137—34.3.)

1. In automatic means for running off liquid from a container at predetermined conditions of temperature, a hermetically closed tube filled with a material having a suitable coefficient of expansion, a plunger within the tube and projecting therefrom, a packing surrounding

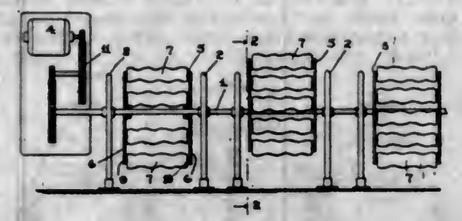


the plunger, a spring pressing against the plunger and the packing, a member adapted to close an outlet from said container, means for normally retaining said member in its closed position, and release means for said retaining means operated by the movement of the plunger at said predetermined temperature conditions.

1,630,908. ELECTRICAL MEASURING INSTRUMENT. WALTER M. SCOTT and RALEIGH E. TRESISE, Cleveland, Ohio. Original application filed Jan. 7, 1922, Serial No. 527,552. Divided and this application filed Feb. 8, 1924. Serial No. 691,385. 7 Claims. (Cl. 171—95.)

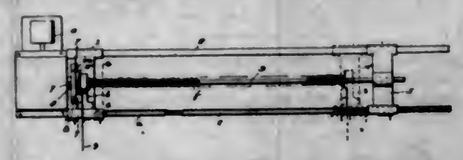
6. A sheet metal supporting member for an instrument of the character set forth comprising a base, a pair of arms projecting therefrom, a needle support struck from said base and extending therefrom, the outer end of said needle support being bent over parallel with said base, said base being provided with an aperture therein for receiving a permanent magnet, and means associated with said base for retaining said magnet in said aperture.

1,630,909. ELECTRIC WATER HEATER. ERNEST CHARLES STEERE, Sydney, New South Wales, Australia. Filed Nov. 19, 1925, Serial No. 69,981, and in Australia Dec. 16, 1924. 3 Claims. (Cl. 219—38.)



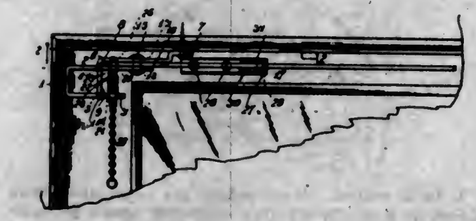
1. An electrical water heater, comprising a water container, a hollow casing mounted in said container, a heating element disposed within said casing, said casing having open tubular portions in communication with the container at opposite ends of the heating element whereby the latter is exposed to a continuous circulation of water passing through said casing, the relative disposition of said heating element and tubular portions being such as to provide a water column of high electrical resistance between the heating element and the ends of the casing.

1,630,910. ORNAMENTAL MANTEL. EMIL C. WEISSINGER, Milwaukee, Wis., assignor to Builders' Needs, Incorporated, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 27, 1925. Serial No. 71,769. 4 Claims. (Cl. 72—0.5.)



1. An ornamental mantel comprising a monolithic wall structure having an imitation fire-place opening and formed of a layer of lime mortar having particles partially embedded therein to form a facing representing jointed masonry, a backing layer of cinder concrete, and a metal reinforce within the mantel.

1,630,911. MASSAGE MACHINE. JERE L. WENTZ, Passaic, N. J. Filed Nov. 23, 1925. Serial No. 70,748. 3 Claims. (Cl. 128—57.)



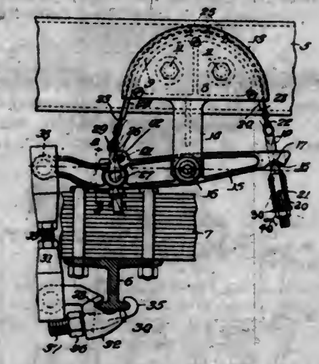
1. In a device of the character described, the combination of a plurality of U-shaped supports, hand holds thereon adjacent the upper ends thereof, bars on the supports, a rotatable drive shaft carried by said bars, means for rotating the said drive shaft, a plurality of circular plates mounted on said drive shaft and arranged in pairs and having perforations in their peripheral margins, pins in said perforations and rollers eccentrically mounted on said pins whereby a body resting on said rollers may be massaged thereby.

1,630,912. METHOD AND APPARATUS FOR MAKING EDGE-WOUND COILS. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 11, 1925. Serial No. 74,733. 10 Claims. (Cl. 153—64.5.)

1. In a machine for winding flat metal ribbons on edge, a core-bar and means for rotating the same, a die-support and means for moving the same along the bar, a die carried by said support and closely surrounding the bar, said die having a helically formed end, a die-plate having a portion secured to said support and having a helically formed horn spaced from the support and extending around the bar parallel with the helical end of said die, and removable means for drawing said horn toward said support.

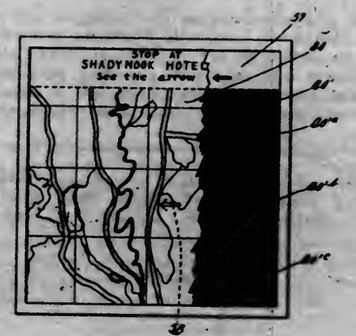
1,630,913. SWING-SASH LATCHING FIXTURE. GEORGE G. WILBY, Chicago, Ill., assignor to Streeter-Amet Weighing & Recording Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1924. Serial No. 732,161. 14 Claims. (Cl. 292—341.)

1. A swing-sash fixture including a wall-bracket adapted to be secured to a side-wall and the top wall of a window or door-casing at relatively widely separated points, a member pivotally secured at one end to said bracket between the points of its attachment to the casing, the pivotal axis of said member being substantially aligned with the points of attachment of the bracket to the casing, a spring-controlled latch element on said bracket normally interengaging therewith and selectively engaging with said member for holding the latter in predetermined positions relatively to the former, and means operatively engaging said member with the sash to thereby hold the latter in predetermined positions relatively to the casing.



1,630,914. FOOT-RAIL CONTACTOR FOR ELECTRIC BURGLAR-ALARM SYSTEMS. JOHN PRITCHARD WILLIAMS, Bayside, N. Y., assignor to Duplex Electric Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 8, 1925. Serial No. 21,477. 9 Claims. (Cl. 200—52.)

1. A foot-rail contactor mechanism of the class described, comprising a body structure constituted by a housing having a top and a rear and end walls, supplementary casings or housings separately located and carried at the under side of said top wall, electrical contact means respectively carried by said separate casings or housings and an operating bar pivotally mounted within the body structure and extended longitudinally of said supplementary casings or housings and operative in its swing to actuate the respective contact means carried by said spaced supplementary casings or housings.



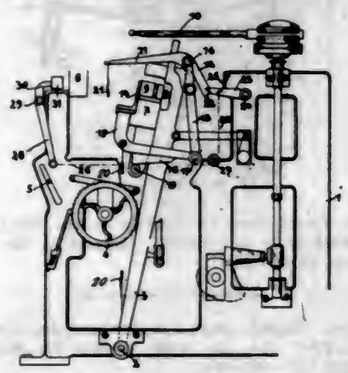
1,630,915. SHOCK ABSORBER. THERON H. WILLIAMS, Chicago, Ill. Filed Apr. 26, 1926. Serial No. 104,521. 19 Claims. (Cl. 188—129.)

15. A shock absorber adapted to retard the relative movement between two parts of a vehicle, comprising a rigid friction member on one of said parts, a friction band frictionally engaged between the ends with said member, a lever fulcrumed intermediate its ends and connected on opposite sides of the fulcrum with the respective ends of said band, said lever being so constructed and positioned that swinging movements thereof on its fulcrum will vary the friction between said band and said member to thereby control the relative movement between said vehicle parts, said lever being positively connected at

a point spaced from its fulcrum to the other of said parts whereby it is positively actuated by the relative movement of said parts.

1,630,916. CHART. FRANK WITTENBERG, Jr., Little Rock, Ark. Filed Jan. 25, 1926. Serial No. 83,549. 13 Claims. (Cl. 283—34.)

1. In a chart, a sheet of transparent material, basic designations on the face of said sheet and color designations at the back of such sheet and arranged to underlie and modify basic designations on the face thereof.



1,630,917. DISPLAY DEVICE. HARRY D. ANDREWS, Cincinnati, Ohio. Filed Apr. 13, 1926. Serial No. 101,768. 2 Claims. (Cl. 40—1.6.)

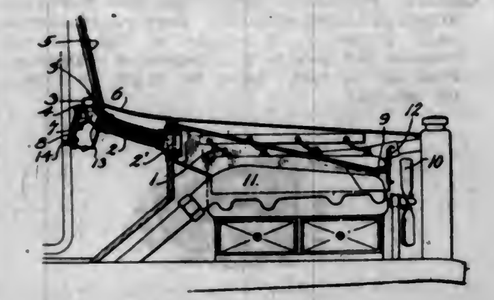
1. A device of the character described comprising a bar having a slot, a plate carried by the bar, a display element, a stem carried by the display element, said bar

having an opening in which the stem is slidably and rotatably fitted, the upper edge of the display element being engaged with the slot of the bar, spring means co-operable with the stem for engaging the display element and the slot, said spring and said stem being concealed by said plate.

1,630,918. SHUTTLE-CHANGING DEVICE FOR LOOMS. FRIEDRICH ANINGER, Markt Triebendorf, Czechoslovakia. Filed Dec. 22, 1923, Serial No. 682,263, and in Germany Oct. 29, 1923. 8 Claims. (Cl. 139—234.)

1. In a shuttle-changing mechanism, a lay provided with a shuttle-box comprising a movable front wall, and means for rocking the lay, in combination with means for imparting to said front wall a rocking movement away from and toward the shuttle-box and a simultaneous respectively downward and upward shifting movement.

1,630,919. HANGER FOR WALL RADIATORS. WILLIAM F. BACH, Cleveland Heights, Ohio. Filed Dec. 9, 1925. Serial No. 74,328. 1 Claim. (Cl. 248—17.)

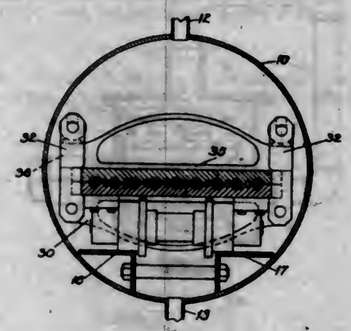


A wall radiator hanger comprising a body attachable to a wall and having a substantially reverse S-shaped lower portion, said portion having vertically alined bolt holes, the lower arm of said portion projecting forwardly and having a hole with a slot opening through the adjacent front edge of said arm, a shoe having a barrel vertically slidable through the lower hole, a bolt passing through the holes and barrel, means for vertically adjusting the shoe, and a forwardly extending blade carried by the barrel and projecting through said slot.

1,630,920. RESILIENT WHEEL FOR BICYCLES. LOUIS BALOGH, Niagara Falls, Ontario, Canada, assignor of one-fourth to Josef Katona, one-eighth to Imre Pacosdi, and one-eighth to Ilona Pacosdi, Niagara Falls, Canada. Filed Jan. 22, 1926. Serial No. 83,018. 2 Claims. (Cl. 152—50.)

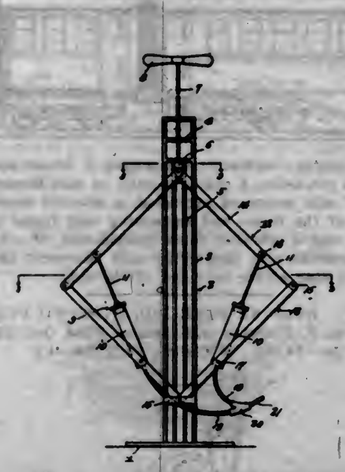
1. In a resilient bicycle wheel, the combination with a rim, of a hub, a plurality of arched spokes pivotally mounted at their inner ends on said hub and secured at their outer ends to said rim, a plurality of resilient separating means comprising cylindrical spring members disposed between and secured to adjacent pairs of said spokes, and a plurality of resilient supporting means comprising coil springs attached at one end to said rim, said coil springs being inclined relative to said spokes and engaging the latter for absorbing impact received by said spokes from road shock.

1,630,921. WINDSHIELD CLEANER. JESSE C. BIBELY, New Oxford, Pa., assignor of one-half to A. R. Brodbeck, Hanover, Pa. Filed Mar. 12, 1926. Serial No. 94,307. 1 Claim. (Cl. 20—40.5.)



In a windshield cleaner and heater for automobiles provided with an inwardly and upwardly sloping windshield with respect to the passenger space, a distributing nozzle connected to the source of heat on one end and terminating at the other on the inside of the windshield and at the bottom thereof to provide an impingement of the heated air outside the area of vision and a distribution of the same over the entire depth of the windshield.

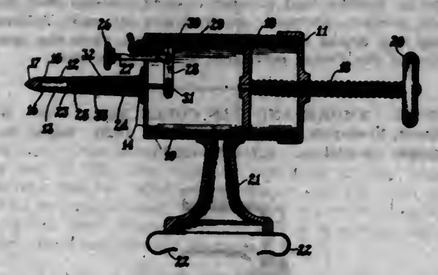
1,630,922. APPARATUS FOR THE MANUFACTURE OF ELECTRIC WIRES. HARRY B. BURLEY, Brookline, Mass., assignor to Boston Insulated Wire & Cable Company, a Corporation of Massachusetts. Filed Feb. 6, 1922. Serial No. 534,628. 4 Claims. (Cl. 18—17.)



1. An apparatus for the vulcanization of the rubber insulation of rubber covered electric wire comprising a plate having a plurality of longitudinal grooves on its face for receiving rubber covered wire of predetermined lengths, means near the end of the plates for fastening said wires, a series of wheeled trucks supporting said plate, a series of clamping elements disposed in pairs on opposite sides of said plate and pivotally attached

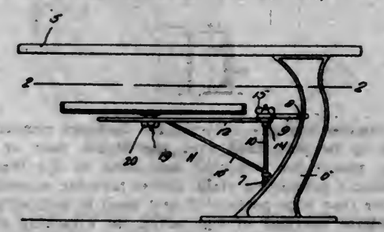
thereto, a series of fixed guides disposed in pairs on opposite sides of the plate, a cooperating plate having corresponding longitudinal grooves on its abutting face,

and cross members attached to the outer face of said second plate cooperating with the clamping members for clamping the plates together.



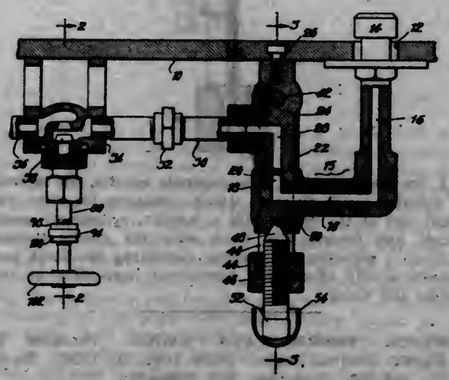
1,630,923. PNEUMATIC-TIRE PUMP. ERNEST RICHARD CARSON, Denver, Colo. Filed Dec. 17, 1926. Serial No. 155,456. 3 Claims. (Cl. 230—27.)

1. In an air pump of the class described, a base, a standard rising from said base, said standard being composed of a pair of vertically extending spaced parallel frames, a guide track extending vertically between said frames and connected thereto, a slide mounted upon said track, an operating rod for said slide, a handle carried by said rod, a pump including a cylinder and a piston slidable therein, an operating connection for said pump connected with said slide, said operating connection comprising leverage multiplying linkage connected with said slide and with said pump.



1,630,924. PASTRY-CREAM FILLING DEVICE. CHARLES CIESLAK, Milwaukee, Wis. Filed Jan. 2, 1926. Serial No. 78,750. 2 Claims. (Cl. 107—1.)

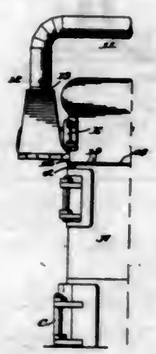
1. A device of the class described used for filling cream puffs, comprising a container and a conical spout, having radial outlets, projecting axially therefrom, means in the container for ejecting the cream into the puff, a conical valve fitting within the spout for controlling the flow



of cream, means for adjusting the valve, and means for agitating the cream to prevent caking before passing through the valve.

1,630,925. GARMENT TRAY FOR IRONING BOARDS. JOHN R. CLOVER, Enid, Okla. Filed Jan. 23, 1926. Serial No. 83,243. 3 Claims. (Cl. 68—10.)

1. In a garment supporting device for an ironing table, wherein the latter includes a board, and a supporting pedestal, a substantially triangular shaped frame arranged beneath the board, and comprising a horizontal arm, a vertical rod, and a brace extending between the arm and the rod, said vertical rod being pivotally supported on the pedestal whereby the frame is adapted to be swung in a horizontal plane, and a tray supported on the horizontal arm of the supporting frame.



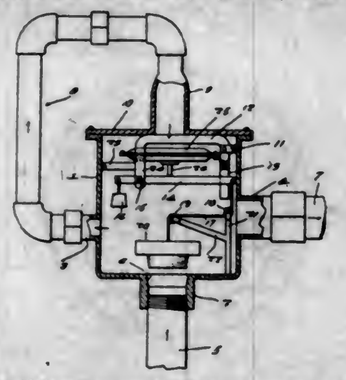
1,630,926. SAFETY DEVICE FOR BURNERS. SIGVALD DAHL, Myrvall Pr. Oslo, Norway, assignor of one-half to Harold Carlsen, Brooklyn, N. Y. Filed Apr. 8, 1925. Serial No. 21,564. 2 Claims. (Cl. 158—2.)

1. In combination with a burner, a pipe for supplying fuel thereto, means for detachably holding the burner in communication with said pipe, a valve in said pipe

having a movable valve stem, a shaft arranged to be actuated by said valve stem, a member loosely pivoted on said shaft and having a guard portion, a latch for normally holding said member in such position that the guard portion prevents manipulation of said holding means and means for tripping said latch upon the completion of the closing movement of said valve stem.

1,630,927. SMOKE AND GAS COLLECTOR. JOHN W. EBERT, Frederick, Md. Filed Mar. 6, 1926. Serial No. 92,854. 3 Claims. (Cl. 126—242.)

1. A smoke and gas collector for furnaces comprising a hood to be positioned over the stoker door of the furnace, means for attaching said hood to the furnace comprising a supporting strip, means movably connecting the lower rear edge portion of said hood to said strip at intermediate portions of the latter, an attaching strap adapted to encircle said furnace and adjustably connected to the end portions of said supporting strip.



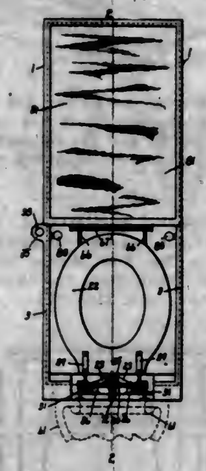
1,630,928. HYPODERMIC SYRINGE AND NEEDLE THEREFOR. SAMUEL JAMES EVERETT, Thornton Heath, England. Filed Apr. 19, 1926, Serial No. 102,991, and in Great Britain Apr. 30, 1925. 3 Claims. (Cl. 128—221.)

1. In the production of hypodermic needles, the method of forming heads thereon, which comprises inserting the blunt end of the needle into a tubular, cylindrical metal blank, and forcing the blank with the needle therein through a reducing die, thereby elongating the blank and simultaneously effecting a permanent connection of the needle and blank.

1,630,929. THERMOSTATIC VALVE. HILARION S. FAHEY, Grafton, Mass. Filed June 11, 1926. Serial No. 115,267. 2 Claims. (Cl. 236—42.)

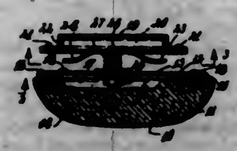
1. In a thermostatic valve of the class described, a casing provided with a valve seat, a gravity lowered valve cooperable with said seat, a standard supported in the casing adjacent said valve, an arm carried by said standard, pulleys mounted on the upper end of the standard and the outer end of said arm, a pivotally mounted counter-balanced lever supported above the valve and standard, a flexible operating connection between one end of the lever and said valve and a thermostat supported above said lever for operating it at a predetermined time.

1,630,930. TRACTOR LOCOMOTIVE. ALBERT E. FELLERS, Detroit, Mich. Filed June 28, 1926. Serial No. 119,000. 16 Claims. (Cl. 105—35.)



1. A tractor locomotive comprising a frame having a rearward extension, a cab supported on said frame in advance of said rearward extension, a wheeled truck independent of the frame and supporting said frame beneath the cab, and a wheeled truck independent of said rearward extension and supporting said rearward extension wholly in rear of the rear end of the cab.

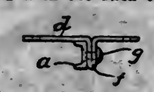
1,630,931. BELT SHIFTER FOR STEPPED PULLEYS. MICHAEL J. FLEMING, Ely, Minn. Filed Oct. 23, 1925. Serial No. 64,384. 3 Claims. (Cl. 64—4.)



3. In a belt shifting means for a stepped pulley, a shaft arranged adjacent to the pulley, a sleeve on said shaft and movable about and rectilinearly of the shaft, an arm carried by said sleeve and having a belt receiver, a hand lever fixed to the sleeve, a stationary abutment, spring means for cooperating with said abutment and with said sleeve to thrust the latter endwise in one direction, and a rack inclined correspondingly to the taper of the stepped pulley and having spaced keeper portions.

1,630,932. TOILET. ERNEST G. FRIEDRICH, Cincinnati, Ohio. Filed Aug. 30, 1926. Serial No. 132,417. 8 Claims. (Cl. 4—233.)

1. A toilet of the character described, comprising a seat, capable of upward and downward movement, a receptacle, into which said seat passes in its upward movement, and means for flushing said seat on both sides thereof, and means for drying the same while said seat is in said receptacle.

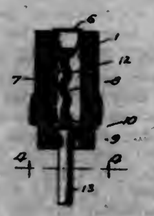


1,630,933. TRUSS FOR RUPTURE. SOLOMON FUTERMAN, Brooklyn, N. Y. Filed Sept. 17, 1926. Serial No. 136,021. 2 Claims. (Cl. 128—112.)

1. In a truss, the combination with a truss-pad, of a flat member adjustably securable thereto, an extended portion from the flat member being bent outwardly from the truss-pad, threaded members extending upwardly from the flat member, an attaching member having upper extended elements, set screws positioned between the attaching member and the upper extended elements, and threadedly engaged to the threaded members, and means associated with the attaching member for engaging a belt customarily used with truss devices.

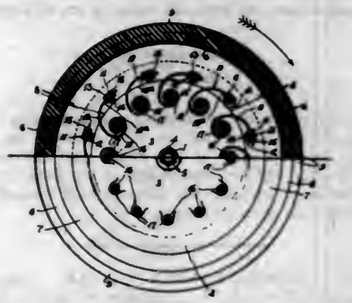
1,630,934. SUPPORT FOR GUTTER-HANGER CIRCLES. GEORGE B. GEISER, Philadelphia, Pa., assignor to Berger Bros. Company, a Corporation of Pennsylvania. Filed Jan. 27, 1925. Serial No. 5,030. 1 Claim. (Cl. 108—29.)

A support for a gutter hanger, comprising a plate having a base, a two ply flange extending laterally therefrom between its ends, there being securing openings through the base at each side of the flange, for the reception of fastening means for securing the base of the plate against a supporting surface, said flange being formed by doubling the intermediate portions of the plate, and a gutter circle supporting stem of channel cross section secured with the back of its web against a



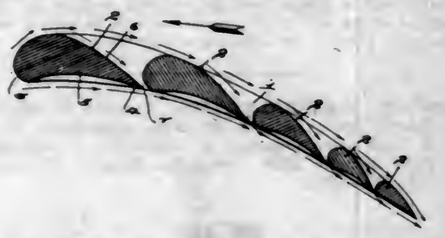
side face of the flange by securing means passing through the web of the stem and the two plies of the flange, whereby the two plies of the flange and the stem are drawn in close contact, one flange of the stem extending along the base, whereby the stem is held against movement about the securing means.

1,630,935. GUTTER-HANGER CIRCLE. GEORGE B. GEISER, Philadelphia, Pa., assignor to Berger Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1925. Serial No. 40,720. 3 Claims. (Cl. 108—29.)



1. A gutter hanger circle formed from a channel section, comprising a body portion for the support of a gutter and a hanger engaging portion formed by distortion of the web of the channel section, to form a seat engaging portion for engaging a seat on a hanger.

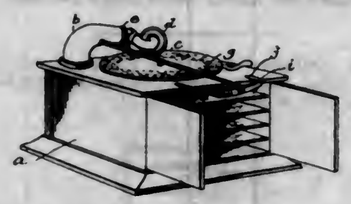
1,630,936. ELECTRIC FITTING. CHARLES E. GODLEY, Detroit, Mich., assignor, by mesne assignments, to C. M. Hall Lamp Company, a Corporation of Michigan. Filed Apr. 10, 1924. Serial No. 705,457. 5 Claims. (Cl. 173—361.)



1. A fitting for detachedly connecting a socket with a wire which has the insulation stripped from its end, comprising a shell having means thereof for interlocking it with the socket; an insulator mounted in the shell and having a smooth bore extending longitudinally through it, and a metal wire terminal comprising in the integral formation a head larger than the said bore and normally engaging the front of the insulator and a pair of rearwardly directed integral jaws normally spread apart by their own resiliency and forced toward each other by the engagement of the jaws with longitudinally spaced portions of the wall of the said bore when the jaws are slid into the bore from the front end of the bore; the wire having its said insulation free and extending into the bore and between the jaws from the rear of the insulator and tightly clamped between the jaws through the said forcing of the jaws towards each other.

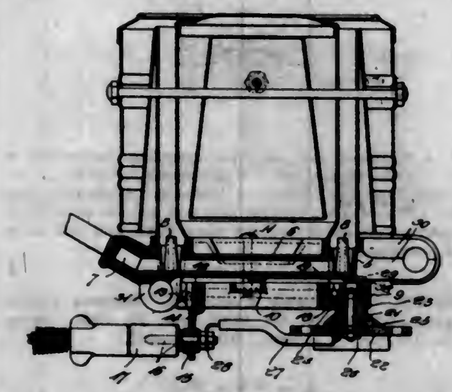
1,630,937. SPRING WHEEL FOR ROAD VEHICLES. GEORGE CHARLES GREEN, Johannesburg, Transvaal, South Africa. Filed Dec. 11, 1925, Serial No. 74,810, and in Union of South Africa Sept. 25, 1925. 1 Claim. (Cl. 152—37.)

A spring wheel for road vehicles, comprising a rim portion which carries the tyre and is constructed internally with two parallel inwardly directed annular flanges, cross-pieces connecting said flanges, a hub portion, discs connected to said hub portion between which the parallel inwardly directed flanges work and are guided, and coiled springs one end of each of which is attached to certain of the cross-pieces and the other to the discs, the means for attaching each spring to the cross-piece including a set-screw, a pin passing through the spring and a stop provided on the spring, as set forth.



1,630,938. AIRPLANE WING CONSTRUCTION. JOSEPH E. GRIFFIN, Savannah, Ga. Filed Nov. 19, 1925. Serial No. 70,142. 4 Claims. (Cl. 244—12.)

1. An airplane wing construction made up of a plurality of sections, each section having a relatively thick and blunt leading edge and having its upper surface bearing downwardly and rearwardly to a relatively thin trailing edge, the thin trailing edge of each wing section underlying the leading edge of the section immediately rearwardly thereof, the tapering upper surfaces and the leading edges of adjacent wings co-acting to define air passages extending through the wing construction, said air passages being relatively wide and of relatively great area at the top of the wing and gradually narrowing to a thin slit-like opening at the bottom of the wing whereby when the wing travels through the air, air will be withdrawn from above the wing and discharged beneath the same to create a rarefaction above the upper surface of the wing and a pressure on the lower surface thereof and to eliminate eddy currents.

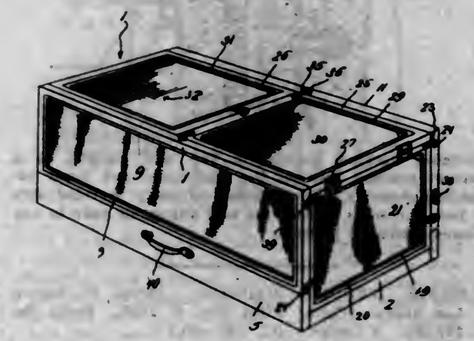


1,630,939. EDUCATIONAL APPLIANCE. JEAN JOSEPH ROBERT GUICHARD, Buenos Aires, Argentina. Filed July 29, 1925, Serial No. 46,875, and in Argentina Apr. 24, 1925. Renewed Apr. 16, 1927. 7 Claims. (Cl. 35—12.)

1. In combination with a phonograph having a sound arm; a record having grooves for producing certain sounds, a movable member connected with the sound arm of the phonograph, and extending beyond the side of the phonograph casing, and adapted to swing in an arc as the sound arm is moved; a fixed member extending from the phonograph casing, and having its outer end extending adjacent the outer end of the movable member; one

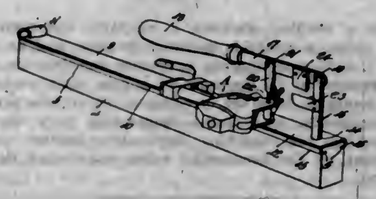
of said members carrying a scale bar, and the other carrying an indicator, the grooves in the record and the scale bar being so related that the indicator will point to the graphic representation of the sound emitted by the sound arm.

1,630,940. ELECTRIC PREHEATER FOR VAPOR BURNERS. GEORGE ALBERT HOFFMAN, Mansfield, Ohio, assignor to The New Method Stove Company, Mansfield, Ohio. Filed Nov. 18, 1926. Serial No. 149,210. 7 Claims. (Cl. 219—38.)



1. An electrical preheater for vapor burners, comprising a trough for disposition under a burner, a terminal support connected with and projecting rigidly downward from said trough, two relatively insulated terminals mounted on said support, electrical heating means within the trough, and conductors from said heating means to said terminals.

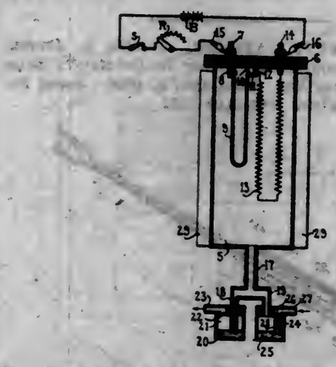
1,630,941. FOLDING CRIB. MARGARET M. HOOD, Jonestown, Miss. Filed Aug. 7, 1925. Serial No. 48,897. 1 Claim. (Cl. 5—97.)



A folding crib comprising a bottom bed section, a pair of boards extending upwardly from the respective side edges of said bed section, one of said boards being of greater height than the other one, a pair of in-folding side sections hingedly secured at their lower edges to the upper edges of the respective side boards, said side sections being of unequal widths, a pair of end sections hingedly secured at their lower edges to the respective ends of the bottom bed sections and adapted to fold inwardly, a pair of complementary cover sections hingedly secured at their outer ends to the upper edges of said end sections, the inner opposed free ends of the cover sections being provided with coacting shoulders, lugs formed on the inner sides of the intermediate portions of the respective hinged side sections, adjacent the upper edge thereof, and upon which said coacting shoulders are

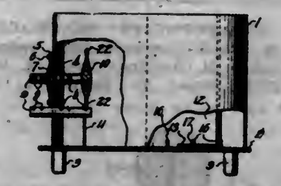
adapted to rest when the crib is assembled, coacting pivoted hooks and eyes associated with the several sections for holding the same in assembled relation, the end sections and the complementary cover sections being disposed in overlapping relation adjacent the bottom bed section when in a folded position, said sections being adapted to be disposed on top of the end and cover sections

in overlapping relation when folded, an additional hook carried by the end of the wider side section and adapted to cooperate with the adjacent eye carried by the end of the other side section for securing the parts in their folded position, and a handle attached to the side of the wider board to facilitate the carrying of the crib when in its folded position.



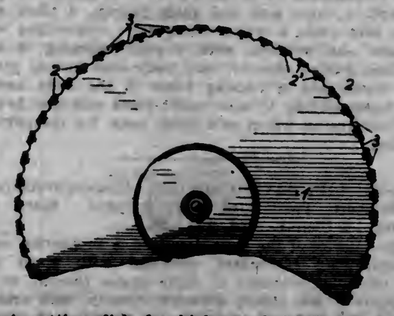
1,630,942. FLANGE-PIN REMOVER. ALBERT M. HUGHES, Pasadena, Calif. Filed Aug. 19, 1926. Serial No. 130,257. 3 Claims. (Cl. 29—86.1.)

3. A device of the class described comprising an elongated base recessed to receive flange pins, pin-removing means operatively connected with said base and movable downwardly toward the same, and a metal cover for said base formed of sections whose upper sides are flush to support the work, one of said sections being a cover for the recessed portion of the base and being movably mounted to give access to the contained flange pins.



1,630,943. APPARATUS FOR EFFECTING AND REGULATING A FLOW OF FLUID. ULRIC O. HUTTON, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 10, 1925. Serial No. 49,357. 5 Claims. (Cl. 230—16.)

1. In a device for effecting a flow of gaseous fluid, the combination with a source of such fluid at substantially atmospheric pressure, of means for intermittently withdrawing a predetermined quantity of fluid from said source and alternately discharging the same at a given point, said means comprising a suction operated inlet valve and a pressure operated outlet valve, a gaseous fluid chamber associated with said valves, adjustable means for heating said chamber to effect discharge of fluid through said outlet valve, thermally responsive means



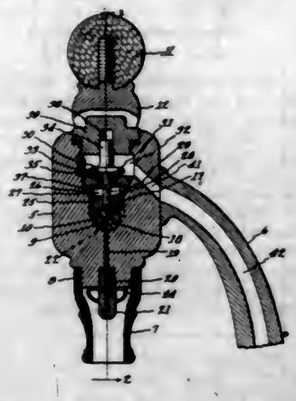
for periodically interrupting the supply of heat to said chamber, and means for thereafter cooling said chamber to create a suction for operation of said inlet valve.

1,630,944. EYE MODEL. LEONARD ROSS INGERSOLL, Madison, Wis. Filed Oct. 19, 1925. Serial No. 63,407. 4 Claims. (Cl. 35—16.)

1. An eye model comprising a vessel with opaque vertical walls, open at the top, representing the eyeball, having in horizontal section, and only in horizontal section, the general shape of the human eye, said vessel to be water-tight and designed for filling with water or other transparent liquid to represent the humors of the eye; an aperture in the front of said vessel representing the pupil; a glass lens fastened over said aperture, representing the cornea; a series of racks or guides in front of and behind said cornea for holding other lenses; a removable glass lens representing the crystalline lens; and a movable curved transverse opaque separating member representing the retina.

1,630,945. CUTTING DISK FOR HIGH-SPEED FRICTION SAWS. ADOLF JACOBOWITZ, Nuremberg, Germany. Filed Aug. 27, 1925, Serial No. 52,915, and in Germany May 18, 1925. 2 Claims. (Cl. 29—103.)

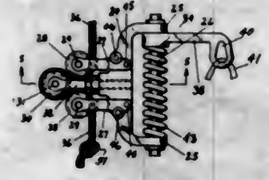
1. A cutting disk for high speed friction saws comprising a disk body having a thickened and enlarged edge,



said edge being roughened or furrowed at its circumference by cording or recessing and being provided with indentations arranged in a certain distance from each other.

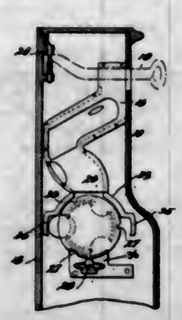
1,630,946. POULTRY CATCHER. JEROME D. JEFFERSON, Federalsburg, Md., assignor to Del-Mar-Va Sales Company, Laurel, Del. Filed Dec. 9, 1926. Serial No. 153,635. 8 Claims. (Cl. 119—152.)

1. In a catching device, a support, a holding member slidingly mounted thereon, a controlling trigger comprising a contact device and a finger disposed to engage the projected end of said member, and tension means connecting said trigger and latch to effect joint operation thereof.



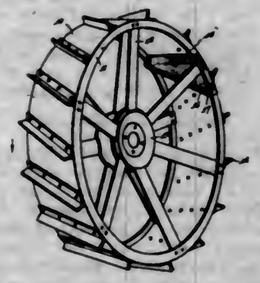
1,630,947. SODA-FOUNTAIN DRAFT-ARM VALVE. CHARLES R. JENKS, Cleveland, Ohio, assignor of one-half to Clifton M. Rawlins, Cleveland, Ohio. Filed Feb. 4, 1926. Serial No. 86,015. 1 Claim. (Cl. 225—24.)

The combination of a valve body having an inlet passage with a valve seat and guide therein, a block slidable in said guide, a reciprocating valve cooperating with said seat and provided with a stem engaging in said block and guided thereby, said body also having plural outlet ports, and a rocking valve in the body having ports corresponding to said outlet ports and also having a cam surface on which said block rests, for the purpose described.



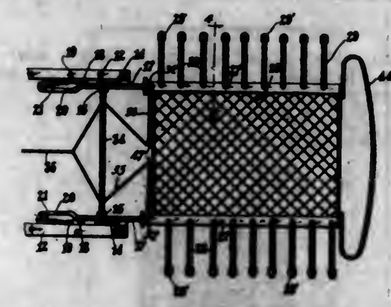
1,630,948. LIFE-SAVING DEVICE. ELIZABETH KIRIKAS, McKeesport, Pa. Filed Mar. 6, 1926. Serial No. 92,910. 2 Claims. (Cl. 227—28.)

1. In a device of the class described, a supporting member comprising a bracket, provided with upper and lower extending elements at right angles thereto, to accommodate a pin rigidly attached thereto, said bracket provided with yoke elements pivoted thereto and extending therefrom in opposite direction to the said upper and lower extending elements, and held in an extended position by pins, pulleys rotatively mounted on pins rigidly mounted in the said yoke elements, a pulley rotatively mounted on a pin rigidly attached to an adjustable yoke member provided with a threaded extremity to engage a



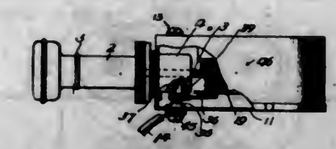
threaded aperture located in the said bracket, in a central position between the said upper and lower extending elements, said threaded extremity provided with a lock nut, so as to hold the said adjustable yoke in any desired extended position.

1,630,949. VENDING MACHINE. ORSON N. KELLY, Los Angeles, Calif. Filed Nov. 9, 1926. Serial No. 147,283. 8 Claims. (Cl. 194—85.)



1. In a vending machine, a rotatable commodity delivery roller, a rotatable operator therefor, and an interposed clutching mechanism to engage the delivery roller and operator in the presence of a coin, said mechanism being rotatable in either direction to secure discharge of the commodity, and means cooperating with the coin for locking the clutching mechanism against reverse movement as the commodity roller approaches delivery position.

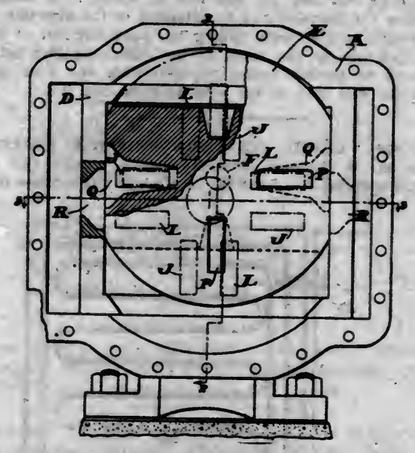
1,630,950. TRACTOR-WHEEL ATTACHMENT. BENJAMIN DEAN LANDON, Canton, Pa. Filed June 23, 1926. Serial No. 118,001. 3 Claims. (Cl. 301—5.)



1. A tractor wheel attachment including a plate adapted to be secured to the inner face of a tractor rim and including a trough shaped portion disposed at an angle to the transverse axis of the rim for gravitationally ejecting stones and other material from the inside of the rim.

1,630,951. AUTOMOBILE SAFETY FENDER. CARMINE LEONE, Waltham, Mass. Filed Mar. 26, 1925. Serial No. 18,392. 5 Claims. (Cl. 293—16.)

2. An automobile fender comprising a frame consisting of a pair of side rods, a net attached to said side rods, parti-tubular rock members extending along said rods and partially surrounding the same, rows of fingers projecting from said rock members, and means for swinging said rock members to cause said fingers to project across the said net.



1,630,952. SPRING-RETRACTED ELECTRIC CIGAR LIGHTER. WILLIAM LESCHMAN, Chicago, Ill., assignor, by mesne assignments, to Chicago Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1923. Serial No. 678,895. 5 Claims. (Cl. 200—153.)

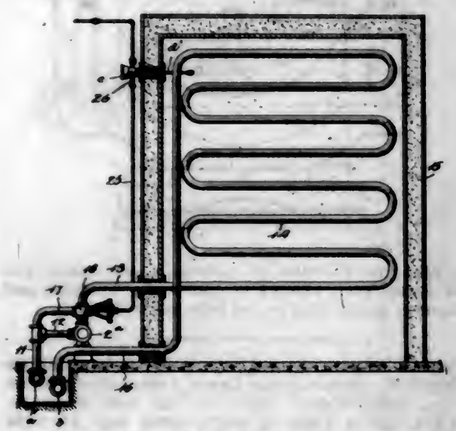
1. The combination with a current-consuming device and a pair of flexible conductors leading thereto, of a stationary tubular member in which a portion of the said device is normally socketed, a reel for the conductors, the reel having a metal side portion forming a terminal for one of the conductors, spring means for rotating the reel to wind the conductors thereon and to retract the said portion of the device into the said shell, the current-consuming device having a portion thereof engaging a rigid part of the said tubular member to limit the retraction of the said device, a stationary wire terminal, and a resilient switching member controlling the circuit through the conductors, the switching member having a contact portion forced into engagement with the said reel side portion by the resiliency of the switching member when the said device is drawn out of the said tubular member, the switching member also having an actuating portion extending laterally into the said tubular member and so disposed as to have its said contact portion moved out of contact with the said reel side when the current-consuming device is retracted into the said tubular member.

1,630,953. FLUID-ACTUATED ENGINE. HYMAN LEVINE, Denver, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 19, 1925. Serial No. 63,249. 3 Claims. (Cl. 121—52.)

3. A fluid actuated engine comprising a cylinder, a reciprocating piston within the said cylinder, a rotary piston adapted to reciprocate within said reciprocating piston, a set of distributing ports in said rotary piston, two sets of ports in said cylinder head adapted to cooperate with the distributing ports in said rotary piston, both of said sets of ports in said cylinder head being adapted to operate as admission or exhaust ports depending upon the direction of rotation of said piston and said piston being adapted to control the admission and exhaust of motive fluid to and from said cylinder.

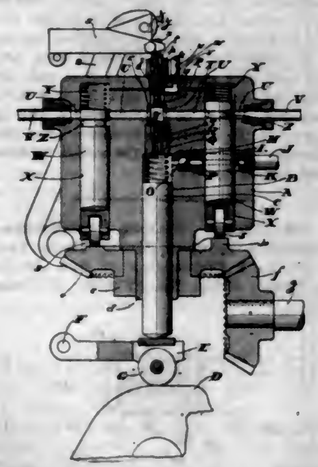
1,630,954. COMBINED SWITCH AND LIGHTNING ARRESTER. HENRY JAMES LEWIS, Johannesburg, Transvaal, South Africa. Filed Jan. 23, 1925, Serial No. 4,314, and in Union of South Africa Sept. 19, 1924. 4 Claims. (Cl. 175—30.)

1. A device of the kind described for use with outside radio or wireless aerials, comprising in combination a switch, a lightning arrester, and a safety earthing device, the switch including a slidable rod, a handle attached to said rod, a member to which is attached the aerial terminal for the receiving set, a bayonet joint between the slidable rod and said member, a further rod with which the slidable rod co-operates, and a part attached to said further rod which co-operates with the earth terminal to serve as the lightning arrester when the contact is made through the switch to the aerial terminal of the receiving set, as set forth.



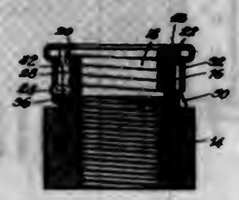
1,630,955. BRACELET. WILLIAM LICHTENFELS, Newark, N. J., assignor to New Jersey Chain Corporation, Newark, N. J., a Corporation of New Jersey. Filed July 12, 1926. Serial No. 121,808. 5 Claims. (Cl. 59—79.)

1. An expansible bracelet comprising a series of outer box links each having top, bottom, side and end walls, yoke links substantially rectangular in shape and one



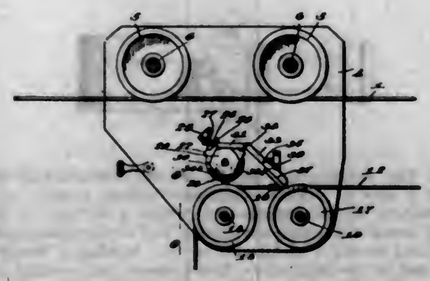
being partly housed in each box link and embracing the end wall of the box link partly housing it and the end wall of an adjacent box link, and a spring acting between said yoke link and the box link in which it is housed whereby the bracelet may be extended in the direction of its length by yieldingly sliding the yoke link out of the box link, one of the walls of the outer box link being resilient to permit flexing for detaching the yoke link from the end wall of the said adjacent box link.

1,630,956. LIQUID HEAT-TRANSMISSION SYSTEM. DANIEL M. LUEHRS, Cleveland, Ohio. Filed Oct. 6, 1924. Serial No. 742,016. 5 Claims. (Cl. 236—19.)



1. The combination with the supply and return pipes of a hot oil distributing system, of a heat-utilizing apparatus, a branch pipe connecting said apparatus with the supply and return pipes, and a pump connected in said branch pipe for forcing the oil through the latter.

1,630,957. FUEL DISTRIBUTOR FOR INTERNAL-COMBUSTION ENGINES. ARTHUR G. LUNDSTROM, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 30, 1926. Serial No. 145,245. 5 Claims. (Cl. 123—140.)

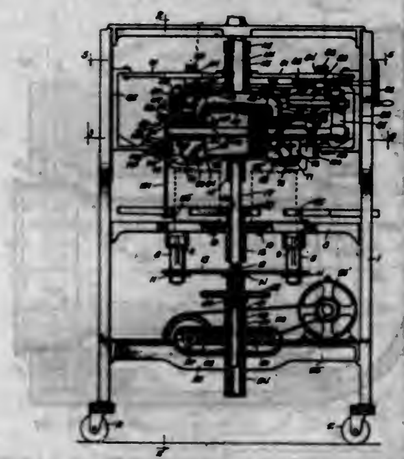


1. A fuel pump for a multi-cylinder internal combustion engine comprising a pump cylinder and plunger adapted to reciprocate therein, a discharge chamber for said cylinder, a plurality of passages adapted to convey liquid fuel from said cylinder to the spray nozzles of an engine, and a piston valve in each of said passages adapted to control the flow of fuel therein.

1,630,958. NUT LOCK AND THE LIKE. JOHN L. MAUCH, Brooklyn, N. Y. Filed Oct. 18, 1924. Serial No. 744,316. 12 Claims. (Cl. 151—14.)

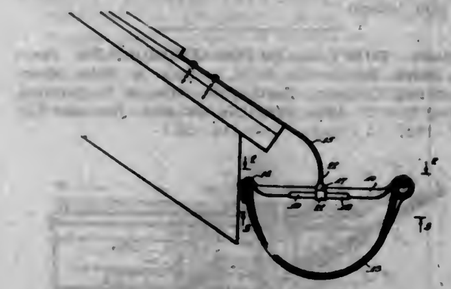
10. A device of the class described comprising a threaded lock nut, a spring locking member mounted in a recess within the nut, said recess having grooves formed to fit the convolutions of the spring, a release cap mounted on the exterior of the nut having a portion adapted to cooperate with an offset end of said spring.

1,630,959. OVERHEAD CONVEYER. ROY A. MCCOURRY, Knappa, Oreg. Filed June 29, 1926. Serial No. 119,501. 7 Claims. (Cl. 212—110.)



1. In a conveyer, a cable having an end portion attachable to a load that is to be carried and having an enlarged portion adjacent to said attaching end portion, a movable overhead supporting sheave over which said cable is trained, a rotary holding wheel disposed in edgewise alignment with said supporting sheave and adjacent to said supporting sheave, said holding wheel having a plurality of regularly spaced projections on its periphery, each of said projections being adapted when in a position proximate to the periphery of said supporting sheave to cooperate with said supporting sheave to prevent passage of the enlarged portion of said cable between said projections and the periphery of said supporting sheave, and means for actuating said holding wheel to dispose said projections successively in or out of position proximate to the periphery of said supporting sheave.

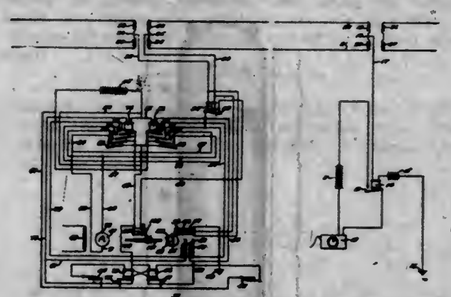
1,630,960. FILLING MACHINE. HELMER A. MELUM, River Forest, and GEORGE P. BROOKS, Oak Park, Ill. Filed June 22, 1922. Serial No. 570,009. 28 Claims. (Cl. 226—97.)



1. A filling machine having a platform for supporting receptacles to be filled, an actuator for moving receptacles in a curved path over the platform, a liquid measuring

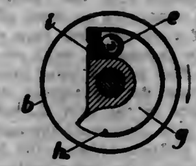
cylinder having an inlet valve and an outlet valve adjacent each end, a piston adapted to reciprocate within the cylinder, means for rotating the cylinder and the

actuator, and mechanism whereby the rotation of the cylinder reciprocates the piston and alternately operates the valves at opposite ends of the cylinder.



1,630,961. GUTTER HANGER. CHARLES A. MEUNIER, Great Neck, N. Y. Filed Dec. 24, 1926. Serial No. 154,784. 8 Claims. (Cl. 108—29.)

1. In a gutter hanger, a bridge piece of inverted U-shaped cross-sectional configuration, a suspension strap having a bifurcated lower end, the defining furcations twisted laterally outward to straddle the bridge piece, a slotted clip underlying the bridge piece, the slotted portions of which receive therethrough the furcations with the terminals of the furcations bent outwardly and upwardly to establish a rigid connection between the suspension strap and bridge piece.



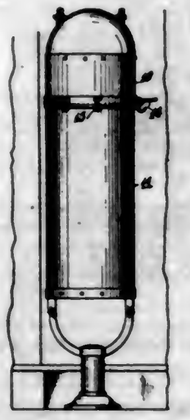
1,630,962. SIGNALING SYSTEM. FRANK A. MILLER, Oakland, Calif., assignor to San Francisco-Sacramento Railroad Co., Oakland, Calif., a Corporation of California. Filed June 11, 1923. Serial No. 644,638. 21 Claims. (Cl. 246—3.)

1. In a railroad signaling system, a plurality of remote automatic transmitters, a common receiver associated with said transmitters, each transmitter being adapted to be operated to effect either one of two characteristic responses at the receiver, means associated with a railroad track section adjacent a corresponding transmitter to initiate operation of such transmitter to produce one characteristic response when a train passes in one direction and another characteristic response when a train passes in another direction and means for delaying the

operation of a subsequently initiated transmitter until termination of the signal from said first initiated transmitter.

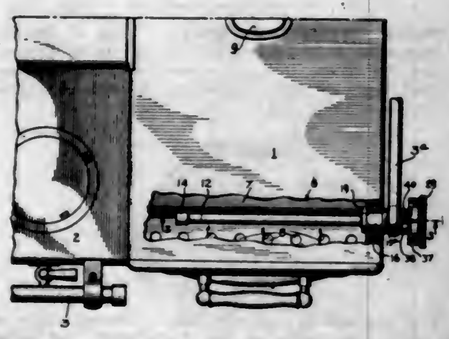
1,630,963. SPEED INDICATOR. FRANTZ MORTENSEN, Helsingfors, Finland. Filed July 13, 1926, Serial No. 122,250, and in Germany July 17, 1925. 2 Claims. (Cl. 116—74.)

1. An indicator for indicating the speed of a revolving shaft characterised thereby that a channel in which a member for instance a ball moves when the shaft revolves, is bent round the shaft to be controlled and revolves with the shaft, and a resonant body in the path of the ball, whereby the ball will strike against the resonant body and create a sound for each revolution of the shaft until a certain speed is attained.



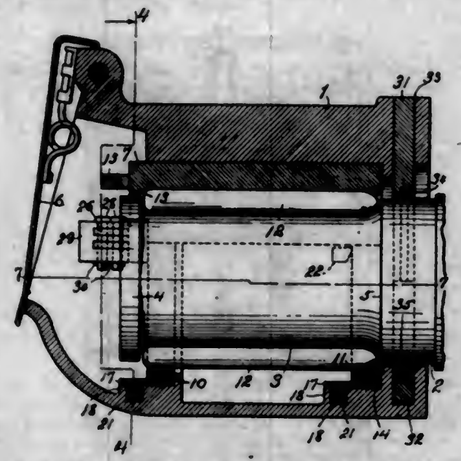
1,630,964. SPECTACLE TEMPLE. JOHN N. NELSON, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 25, 1924. Serial No. 739,851. 8 Claims. (Cl. 88—52.)

1. A non-metallic spectacle temple member curved at its end to extend over the ear of the wearer and having an enlarged separate end-piece or member connected to its free end portion by providing one of said members with a socket and the other with a reduced portion to fit tightly in said socket.



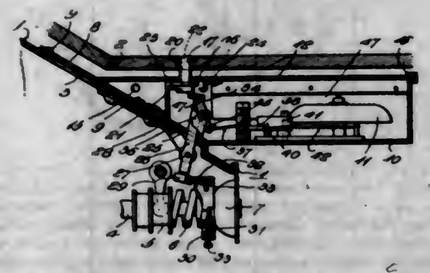
8. A spectacle temple formed of a hollow non-metallic tube curved at its end and helically cut on said curved portion to increase its flexibility, an enlarged flattened skull engaging end piece on the extremity of said tube, and a wire core extending through the tube and into said end piece.

1,630,965. CLOTHES-DRIER ATTACHMENT FOR HOT-WATER TANKS. DANIEL H. NOYES, Athol, Mass. Filed Apr. 22, 1926. Serial No. 103,687. 2 Claims. (Cl. 211—17.)



1. In a drying rack of the class described, a band adapted to be clamped upon the cylindrical surface of a cylindrical body comprising an upper offset portion and a lower portion of a diameter less than said upper offset portion adapted to engage the walls of said cylindrical body, said upper offset portion being provided with open slots extending from the top thereof, and hanger pins having enlargements on the ends thereof adapted to be inserted into said slots from above through the upper open end thereof to a position between the inner surface of said offset portion and the outer surface of said cylindrical body, said hanger pins being removable bodily from said band.

1,630,966. GAS STOVE. HENRY W. O'DOWD, Jersey City, N. J., assignor to Standard Gas Equipment Corporation, a Corporation of Maryland. Filed Apr. 9, 1925. Serial No. 21,742. 5 Claims. (Cl. 126—39.)

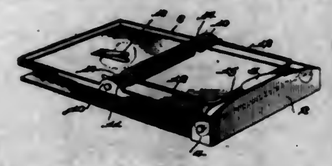


1. In a gas stove, the combination of a heating chamber adapted to be heated by a gas burner and having an outlet for the escape of the heat currents, means for supplying gas to the burner, a thermostatic element located outside the heating chamber but in the path of the heat currents flowing therefrom and in position to be acted on by said currents immediately upon their leaving the heating chamber, and means operated by said thermostatic element for controlling the supply of gas to the burner.

1,630,967. JOURNAL BEARING. ALBERT POWELSKI, Kansas City, Kans. Filed July 18, 1924. Serial No. 726,745. 6 Claims. (Cl. 308—180.)

1. In a journal bearing, a journal box adapted to receive a journal and provided with fastening lugs, upper and lower bearing members in said box having respectively arcuate inner surfaces adapted to form with said journal an annular race and bearing at their rear sides against said box, removable locking members bearing respectively against the front sides of said members for holding the latter in operative position and respectively engaging said lugs, releasable means for locking said locking members to said lugs respectively, and rollers adapted for travel in said race in contact with said bearing members and said journal.

1,630,968. THEFT ALARM FOR AUTOMOBILES. ISAAC L. RIDGE, Bartlesville, Okla., assignor to Ridge Manufacturing Company, Bartlesville, Okla., a Corporation. Filed Feb. 27, 1924. Serial No. 695,560. Renewed Feb. 17, 1927. 5 Claims. (Cl. 116—33.)



3. In combination, a transmission case; transmission mechanism in said casing including a shaft, a clutch spring surrounding said shaft, and a shaft-carried member at one end of said spring; an annular shaft-encircling cam having a portion held by said spring between the latter and said shaft-carried member, an alarm having an operating member extending into the path of said cam, and locking means for holding said operating member out of the path of said cam.

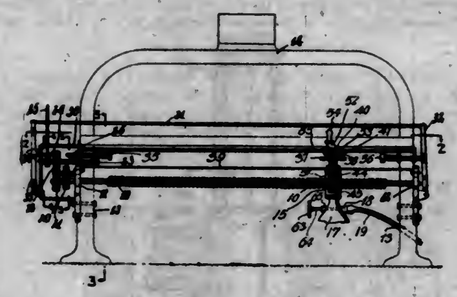
1,630,969. ANIMAL TRAP. JAMES EDWARD RUDY, Waynoka, Okla. Filed Nov. 6, 1925. Serial No. 67,341. 3 Claims. (Cl. 43—82.)

1. A trap comprising a base plate, a trigger plate having a width approximately equal to that of the base plate and being swingingly attached to the base plate

at one end of the latter, a spring pressed jaw carried by said trigger plate, and a stop supported on said base plate at said one end of the latter, said stop being adapted to be engaged by said spring pressed jaw when said spring

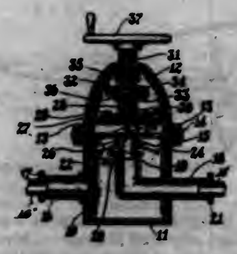
pressed jaw is in "set" position to releasably hold the free end of the trigger plate above the base plate and to releasably hold the spring pressed jaw against swinging from "set" position against the trigger plate.

1,630,970. BRAKING DEVICE FOR SLEDS. HENRY RUZICKA, New York, N. Y. Filed Jan. 2, 1925. Serial No. 5. 6 Claims. (Cl. 188—8.)



1. In combination with a sled having a pair of runners with upwardly curved front ends, a slidable carriage supported by the said upwardly curved front ends of the runners, braking elements depending from said carriage, and releasable means retaining the said carriage engaged with the top portions of the said upwardly curved runner ends.

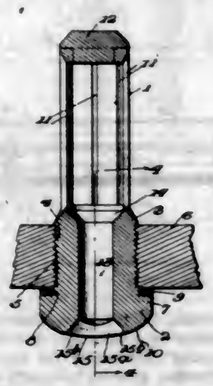
1,630,971. FUEL-FEED APPARATUS FOR INTERNAL-COMBUSTION ENGINES. BASIL H. SAVAGE, Los Angeles, Calif., assignor of four-sixteenths to Norman B. Bennett, one-sixteenth to Oscar F. Bowman, four-sixteenths to Mansell A. Davis, and two-sixteenths to Harry B. Newcomb, Los Angeles, Calif. Filed May 19, 1926. Serial No. 110,132. 11 Claims. (Cl. 158—36.1.)



I. In a fuel feed system for internal combustion engines, a main reservoir having an outlet for the flow of liquid fuel to the carburetor, an auxiliary reservoir having an outlet for the flow of liquid into said main reservoir, a valve adapted to keep the latter outlet closed while the pressure in the auxiliary reservoir is below atmospheric pressure, said auxiliary reservoir having an inlet for liquid fuel adapted to be connected to the source of fuel supply and having a suction outlet adapted for connection to the intake of the engine, a hollow float in the auxiliary reservoir, a valve operable by the float during its upward movement for closing the suction outlet, and means for admitting air into said float to increase its buoyancy, near the end of its upward movement.

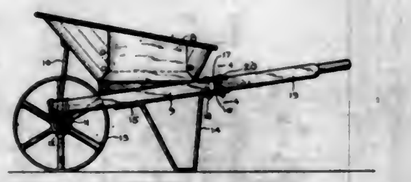
1,630,972. SUCTION DEVICE FOR REMOVING WASTE AND DUST. KARL SCHMID, Milwaukee, Wis. Filed May 24, 1926. Serial No. 111,268. 2 Claims. (Cl. 15—15.)

1. In an apparatus of the class described, a receiver having an air suction tube attached, and the said receiver secured to supporting elements of the following construction, a vertical frame, a lever pivotally secured to the said frame, threaded blocks in a box compartment of the said frame and having pins protruding therethrough and the said pins engaging inclined slots in the sides of the said lever, a horizontally split bushing in the upper extremity of the said vertical frame, a bevel plate bearing on the upper portion of said bushing and a shoulder on the said lever adapted to engage the said bevel plate, and the whole supported on a lead screw passing between the said threaded blocks, and itself supported on a suitable frame structure, and a horizontal rod passing through the aforesaid split bushing and supported at its ends by the aforesaid frame structure, and means to rotate the said lead screw and means to automatically reverse the rotation thereof.



1,630,973. VALVE CONSTRUCTION. JOHN SCHMIDT, Camden, N. J. Filed Dec. 18, 1925. Serial No. 76,163. 2 Claims. (Cl. 251—156.)

1. A valve comprising upper and lower casings, an outlet pipe communicating with said lower casing, a valve seat interposed between said upper and lower casings having a plurality of spaced openings therein located between the periphery and center thereof and a center opening, a valve comprising a disc portion adapted to cover said spaced openings, a cone shaped projection depending from said disc member adapted to be disposed in said center opening, and operating means for simul-

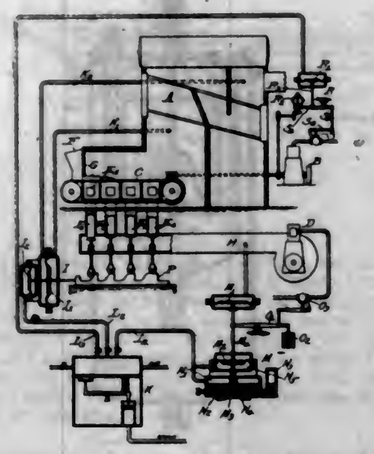


taneously retracting said projection from said center opening and lifting said disc portion from the upper surface of said valve seat to permit liquid to flow upwardly through said center opening and through said spaced openings into said lower casing, said cone-shaped projection being adapted when in its retracted position to spray said upwardly flowing liquid for distributing the same to said spaced openings.

1,630,974. SPRAY NOZZLE. OLIE WARREN SHELOR and EDWARD G. BUTTS, Salem, Va. Filed July 23, 1925. Serial No. 45,662. 1 Claim. (Cl. 299—106.)

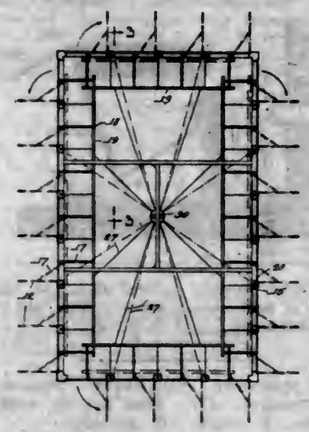
A spray nozzle for applying viscous fluids, particularly for applying the same to roadways, comprising an elongated tubular body closed at its inner end and provided with a plurality of slots extending the entire length of the body, and an integral and flanged head at the outer end of the body, said head being externally screw threaded inward of its flange and provided with a passage of less cross sectional area than that of the tubular body, said passage terminating at its inner end in a frusto-conical opening communicating with said tubular body and at its outer end in a discharge opening flaring outwardly in a single plane.

1,630,975. WHEELBARROW. IRVING R. SMITH, Wauwatosa, Wis., assignor to Sterling Wheelbarrow Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 26, 1925. Serial No. 64,863. 2 Claims. (Cl. 280—52.)



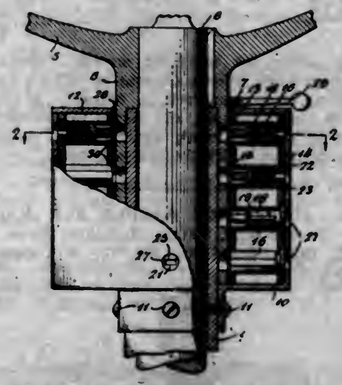
1. A sectional wheelbarrow, comprising a pair of arms, a hopper removably mounted thereon, a bearing member removably bolted to the forward end portion of each of said arms, an axle journaled in said bearing members, a wheel carried by said axle, a pair of legs engaging said arms and having flanged end portions extending beyond the extremities of said arms, plates engaging said arms and extending beyond the extremities of the same, bolts engaging said plates, arms, and the flanged end portions of said legs, handles engaged by the projecting portions of said plates and leg flanges, and bolts engaging the handles, plates and leg flanges.

1,630,976. VALVE-CORE EXTRACTOR. JACK R. C. SMITH, Victoria, British Columbia, Canada. Filed Oct. 30, 1925. Serial No. 65,830. 4 Claims. (Cl. 29—84.)



2. A tool comprising a shaft having a pair of spiral grooves running in opposite directions, a handle carrying a shiftable button, a pair of nuts carried by the handle and having studs engaging the respective grooves and having toothed rims, a double pawl pivotally mounted in the handle and having a recess at each side, a curved spring carried by the button having its extremities engaging the respective recesses so that shifting of the button will rock the pawl upon its pivots and lock one or the other of the nuts upon the pawl, a socket swivelly carried by the shaft, and a spring interposed between the socket and handle to resist movement of the handle along the shaft in one direction.

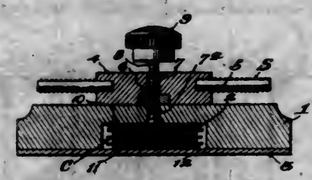
1,630,977. FURNACE REGULATION. CHARLES H. SMOOT, Maplewood, N. J. Filed Oct. 22, 1926. Serial No. 143,415. 15 Claims. (Cl. 236—14.)



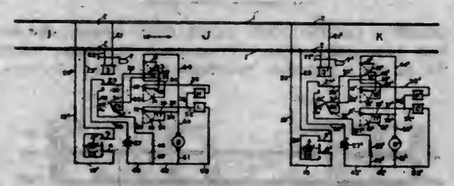
1. In a system of combustion control for stokers, the combination of a grate and means for varying in sections the area of air supply to the grate, with means for successively admitting air to such sections, and means responsive to changes in boiler rating for controlling said air admission means.

1,630,978. VENTILATOR. JOSEPH SOBEL, New York, N. Y. Filed Aug. 16, 1926. Serial No. 129,519. 4 Claims, (Cl. 98—85.)

1. A ventilator including a plurality of walls, each having a plurality of apertures, a horizontally swingable closure for each aperture, an arm hinged to the inner side of each closure, a link connecting the arms of the closures of each wall, means connected with each link for normally shifting the same in a direction to open the closures, and a common means connected with the links for manually moving the same in a direction to close the closures.



1,630,979. LOCK FOR STEERING WHEELS. LOUIS STABILE, Brooklyn, N. Y. Filed Nov. 20, 1926. Serial No. 149,550. 9 Claims. (Cl. 70—129.)



1. In a lock, the combination with a steering wheel and a steering column therefor; of a lock casing carried by said column, a plurality of locking elements in said casing movable into and out of engagement with a portion of said wheel to lock the same to said column and unlock said wheel therefrom, and means rotatable relative to each element to move the same to locking and unlocking positions.

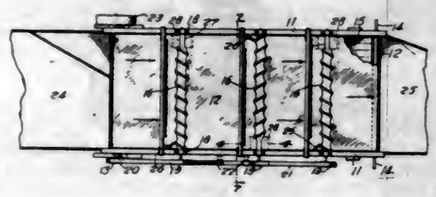
1,630,980. RADIO INTERFERENCE ELIMINATOR. FRED WILLIAM STEIN, Atchison, Kans. Filed Apr. 30, 1925. Serial No. 27,118. 2 Claims. (Cl. 250—40.)

2. An interference eliminator for radio apparatus including an insulating base, a variable condenser carried by said base and consisting of arched spring metal plates and dielectric members alternately arranged and spaced apart, a coil mounted on said base and including a hub portion fixed to said base, a nut having a threaded opening registering with corresponding openings in the hub and base, a micrometer screw engaging the threaded opening of the nut and having an exterior manipulating knob whereby the screw may be moved to compress and release the plates of the condenser thereby to vary its capacity.

1,630,981. SNUBBING CIRCUITS FOR SEMAPHORE SIGNALS. JAMES E. STEPHENSON, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed May 25, 1925. Serial No. 32,751. 5 Claims. (Cl. 246—45.)

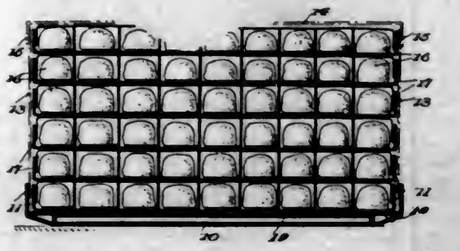
5. In a railway signal of the type having a semaphore blade movable to three indicating positions and biased to one of its extreme positions, a motor for lifting said blade from its biased position to either of its other two indicating positions, means for maintaining said blade in either of said other two positions, a track relay, and means to short circuit the motor through a contact of the track relay for opposing the biased motion of said blade.

1,630,982. FEEDER. BERTHA E. STONE, Great Falls, Mont. Filed Oct. 25, 1926. Serial No. 144,108. 9 Claims. (Cl. 119—71.)



1. A lamb feeder comprising a housing, a plurality of vertically disposed, depending, spaced independent feed cups arranged therein and each adapted to contain a predetermined amount of liquid food whereby a plurality of animals can be fed simultaneously with like amounts of liquid feed, said housing including means at the upper portion thereof to provide a supply trough common to and suspending said cups, a plurality of nipples extended from the front of the housing, said nipples positioned above the tops of said cups, and conducting tubes leading from the bottoms of said cups to said nipples and arranged within said housing.

1,630,983. FRUIT CLEANING AND POLISHING MACHINE. BOYD C. SUTHERLAND, North Garden, Va. Filed Nov. 15, 1926. Serial No. 148,543. 15 Claims. (Cl. 146—201.)

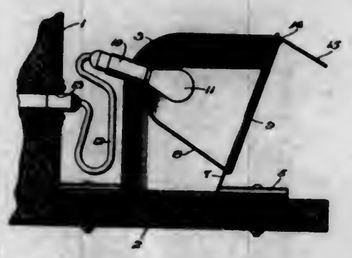


13. A fruit cleaning and polishing machine, comprising a frame, a cloth movably mounted upon said frame for supporting the fruit, a spiral roller having a reduced por-

tion at one end thereof and mounted to rotate on the upper portion of the movably mounted cloth for feeding the fruit transversely with respect to the movement of said cloth, said cloth being yieldable adjacent the re-

duced portion of said roller for permitting the fruit to pass under the roller in the direction of the movement of said cloth and means extending lengthwise of said spiral roller for assuring the contact between the fruit and said cloth.

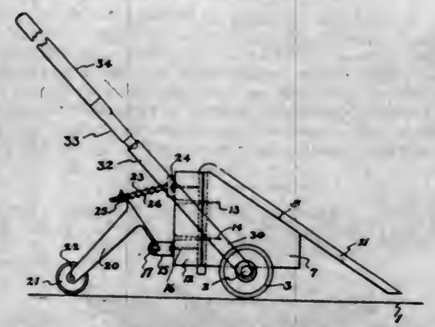
1,630,984. CONFECTION PACKAGE. ARTHUR SWEET, Salt Lake City, Utah. Filed Aug. 25, 1925. Serial No. 52,433. 1 Claim. (Cl. 206—44.)



A confection package including a base section in the form of a display tray having upwardly and outwardly inclined side walls equipped with upturned peripheral flanges, a false bottom supported within and resting on the inclined walls of the base section, a support under said false bottom resting on the bottom of the base section, said false bottom and support being removable from the base section or tray, side and end walls and a cover removable from said base section or tray, and confection holding trays on the base section or tray and arranged in superposed relation to support confections in exposed position thereon when said side walls and cover are removed, the side and end walls being inserted within the flange of the base section between it and the bottom confection holding tray whereby said walls are held against bulging.

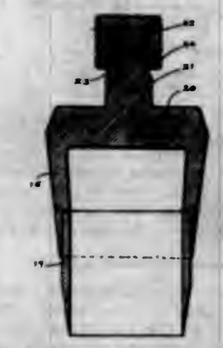
1,630,985. MEANS FOR PREPARING PRODUCTS OF ORGANIC ORIGIN. HENRI LOUIS PAUL TIVAL, Le Pecq, France. Filed Apr. 24, 1922, Serial No. 556,305, and in Belgium Apr. 26, 1921. 4 Claims. (Cl. 99—11.)

1. A method for treatment of organic matter to preserve the principal ingredients and active principles when said matter is desiccated or the active principles thereof are extracted, which consists in first congealing the organic matter, then pulverizing, then sterilizing the same, and finally drying it.



1,630,986. ILLUMINATING DEVICE FOR VEHICLES. JAMES H. TUDOR, Cincinnati, Ohio. Filed Sept. 8, 1923. Serial No. 661,629. 2 Claims. (Cl. 240—8.26.)

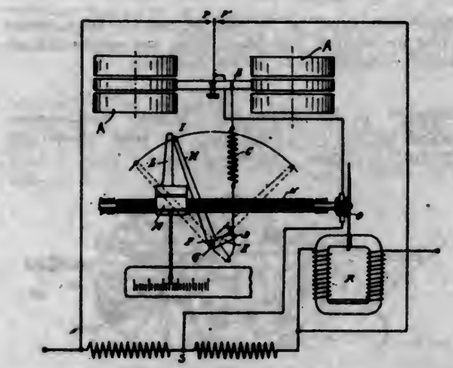
1. The combination with a vehicle body having a running-board on either side thereof, guide-ways arranged transversely of said running-board, a light casing adjustably received in said guide-ways, said casing having an inclined outer wall provided with an opening, a light reflector and light received in said opening, and an ad-



justable deflector pivotally secured along the upper horizontal edge of said casing whereby the light rays are deflected downwardly.

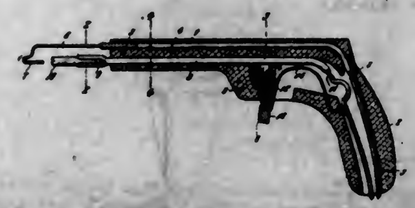
1,630,987. MAGNETIC SWEEPER. FANNIE LITTLE TURNER, Charlotte, N. C. Filed Apr. 24, 1926. Serial No. 104,390. 6 Claims. (Cl. 209—215.)

1. In a device for collecting metallic objects from floors, a framework, wheels adapted to roll on the floor for mounting the framework, a plurality of magnets mounted on the framework, and means for adjusting the angularity of the framework with relation to the floor or other surface on which the device is used.



1,630,988. ADJUSTABLE HANDLE FOR MACHINE DIES. THADDEUS F. TYLER, Haverhill, Mass. Filed Apr. 22, 1926. Serial No. 103,937. 6 Claims. (Cl. 164—29.)

1. In a die structure for use in the manufacture of shoes, a cutter receiver in the form of a hollow body having an open inner and a closed outer end, a handle

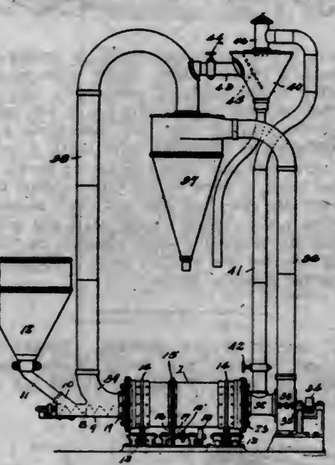


element, said element consisting of a pair of interengaging sections arranged exteriorly of said outer end and adjustable lengthwise relatively to each other to increase and decrease the length of said element exteriorly of said receiver, one of said sections being integral with the outer face of said closed end axially thereof, and means for maintaining said sections from movement when adjusted relatively to each other.

1,630,989. ELECTRICAL MEASURING INSTRUMENT OF THE TYPE EMPLOYING A CONTROL MOTOR. BRUNO USIGLI, Milan, Italy, assignor to the Firm Instrumenti di Misura C. G. S. Societa Anonima, Milan, Italy. Filed Sept. 7, 1926, Serial No. 133,950, and in Italy Sept. 24, 1925. 2 Claims. (Cl. 171—95.)

1. An electrical measuring instrument of the type operated according to a zero method by means of a servomotor acting upon the movable parts through the medium of a tension spring controlled by a nut adapted to slide along a screw rotated by the said motor, characterised in that the connection between the nut and spring is effected by means of a bell crank lever having arms of different lengths arranged to rotate in a plane parallel to the axis of the screw and about an axis contained in a plane perpendicular to the said screw and containing the axes of rotation of the movable parts, the short arm of the said bell crank lever being directly connected to the free end of the tension spring fixed to the movable parts of the instrument, while the long arm is in sliding engagement with a straight guide perpendicular to the axis of the screw and rigidly connected with the nut.

1,630,990. SOLDERING IRON. HARLEY A. WAGG, Wapello, Iowa. Filed Oct. 20, 1926. Serial No. 142,952. 2 Claims. (Cl. 219—26.)



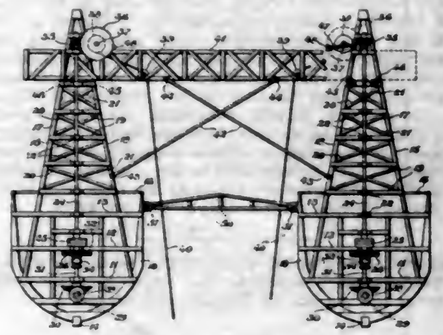
1. A soldering iron comprising a body of insulating material, longitudinally arranged copper tubes therein, a wire electrode having one end frictionally received in one of the tubes and having a hooked end in a line with the axial center of the second tube, said last mentioned tube having a clamp on the outer end thereof for the reception of a carbon stick, electric conductors connected with both of the tubes and means for imparting longitudinal movement to the carbon stick carrying tube.

1,630,991. SUBGRADE TEMPLATE. ADOLPH N. WALSTAD, Tacoma, Wash. Filed Aug. 20, 1925. Serial No. 51,521. 9 Claims. (Cl. 94—44.)

1. A subgrade template comprising a main piece; a detachable shoulder-forming plate attached to the outer end thereof; a grade-ribbon gage shoe mounted on the said end, above said shoulder plate, and riding on one grade ribbon of the roadway; and a flat extension mounted on the inner end of said main piece and adapted to slide longitudinally and laterally on the other grade ribbon of the roadway, thereby permitting the second grade ribbon to vary in distance from the first grade ribbon, whereby the template is guided along the roadway and whereby its form is controlled to form the desired incline of the subgrade from the center to the edge on straight or curved roadways or constant or varying widths.

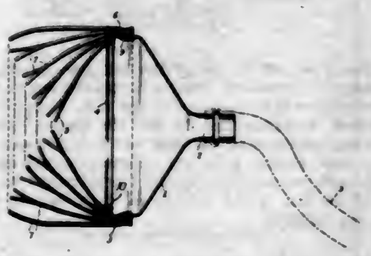
1,630,992. AIR-SWEPT BALL MILL. HARRY H. WATERMAN, Strasburg Junction, Va. Filed Nov. 25, 1924. Serial No. 752,133. 3 Claims. (Cl. 83—9.)

1. In an air swept mill of the ball type having a substantially unobstructed interior, a fan blower having its intake connected to one end of the mill, a dust collector connected to the exhaust of the fan blower, means for supplying material at one end of the mill, and an air supply pipe leading from the collector to the other end of the mill, whereby the material is conveyed to the intake of the fan by the velocity of the spent air supplied from the collector.



1,630,993. VISE. DERRICK S. WEST, Portland, Oreg. Filed June 8, 1925. Serial No. 35,691. 4 Claims. (Cl. 77—63.)

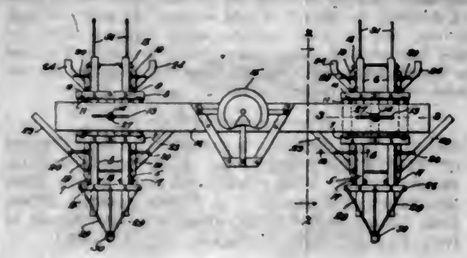
1. A vise comprising relatively movable jaws, each of said jaws formed on the inner face with an article sup-



porting ledge, and article supporting elements removably cooperating with both jaws and bridging the space between them, the article engaging surface of such elements being in the supporting plane of the ledges.

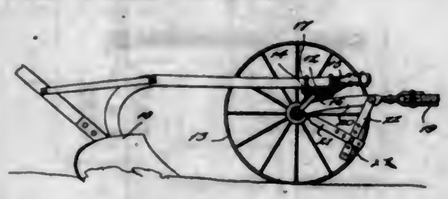
1,630,994. WRECK-LIFTING DEVICE. HERBERT WICKS, Midland, Ontario, Canada. Filed May 5, 1926. Serial No. 106,945. 4 Claims. (Cl. 114—51.)

1. A wreck lifting device comprising, in combination, a barge or boat, a skeleton tower rigidly mounted in said boat, hoisting drums rotatably mounted in said tower, lifting cables for said drums, and means for operating said drums from within the boat comprising a prime mover, a horizontally extending drive shaft, a vertically extending shaft rotatably supported in the tower, a gear on the drum shaft, a worm on the vertical shaft adapted to mesh with said gear, and gear and shaft means intermediate of the tower carried vertical shaft and said drive shaft operatively connecting same whereby, on the drive shaft being operated, the vertical shaft is operated to in turn rotate the hoisting drums.



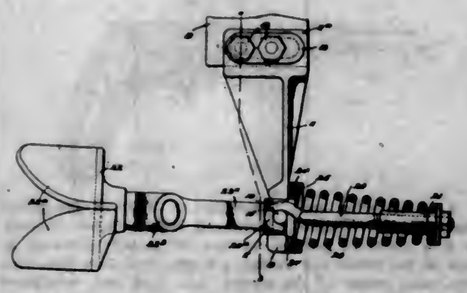
1,630,995. BATH SPRAY BRUSH. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed Mar. 31, 1925. Serial No. 19,708. 4 Claims. (Cl. 15—128.)

1. A bath spray brush comprising a rose having a face bevelled at its edge and provided with jet perforations, filamentous layers helically wound around the periphery of said rose and drawn inwardly over the bevelled edge of said face into substantially conical form, the innermost layer intersecting the paths of jets of liquid emanating from said perforations.



1,630,996. CULTIVATOR. JAMES D. WRIGHT, Almena, Kans. Filed May 1, 1926. Serial No. 105,976. 2 Claims. (Cl. 97—143.)

1. An agricultural machine including sleds, each of said sleds embodying a frame, the frame of each sled including pairs of vertical spaced bars, eye bolts disposed between the bars of each pair, supporting bars having



reduced ends fitted in the eyes of the eye bolts, blades carried by the last mentioned bars, and means for adjustably connecting the blades and bars.

1,630,997. PLOW SUPPORT. MARYAN YAKUBOWSKI, White Haven, Pa. Filed Dec. 24, 1925. Serial No. 77,510. 2 Claims. (Cl. 97—131.)

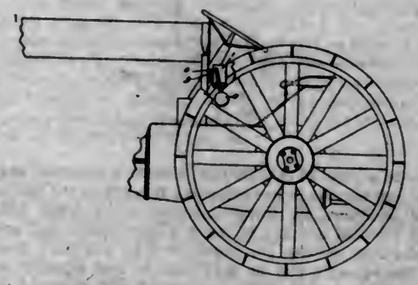
1. A support for use upon agricultural plows comprising a shaft forming a yoke at an intermediate point in its length and including wheels journaled upon its opposite ends, a plow beam supported by said yoke, a draft bar and tongue secured thereto, members connecting said draft bar with said shaft, an apertured plate secured to one of the members and extending rearwardly and downwardly therefrom, and a correspondingly shaped plate fixed upon the shaft and extending in an opposite direction in juxtaposition with respect to the first mentioned apertured plate and adapted to receive a fastening element within its apertures registering with the apertures of the first mentioned plate for regulating the height and throw of the yoke and incidentally the inclination and pitch of the plow share.

1,630,998. TRAIN-PIPE CONNECTER. GEORGE E. BALDWIN, Plainfield, N. J., assignor to Joseph Robinson, Westmount, Quebec, Canada. Filed Apr. 9, 1921, Serial No. 459,881. Renewed Nov. 6, 1925. 14 Claims. (Cl. 285—58.)

1. In a train pipe connecter, a bracket having a bearing portion adjacent its lower end, a pivot block having a seat intermediate its ends engaging said bearing por-

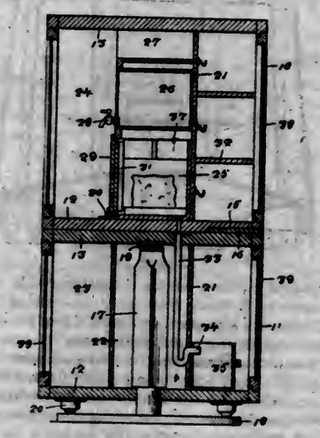
tion of the bracket, trunnions on said block at opposite sides of said seat, a stem having portions pivotally engaging said trunnions, an abutment on said stem, a coupling head, a member connected therewith and extending to the rear of said bracket and carrying a flange or projection adapted to contact with the rear of the bracket, and a coiled spring arranged between said flange and said abutment.

1,630,999. WROUGHT-METAL ARTICLE. WILLIAM H. BASSETT, Jr., Ansonia, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 28, 1926. Serial No. 84,508. 5 Claims. (Cl. 75—1.)



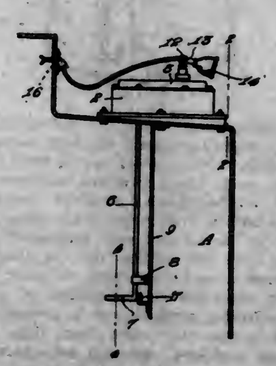
1. A new wrought metal article composed of an alloy consisting essentially of copper and tin with aluminum, approximately in the proportions copper 95.5%, tin 2%, aluminum 2.5%, the aluminum being in excess of the tin.

1,631,000. PIPE CARRIER. WILLIAM F. BOSSERT, Utica, N. Y., assignor to Signal Accessories Corporation, Utica, N. Y., a Corporation of New York. Filed July 2, 1924. Serial No. 723,712. 1 Claim. (Cl. 248—30.)



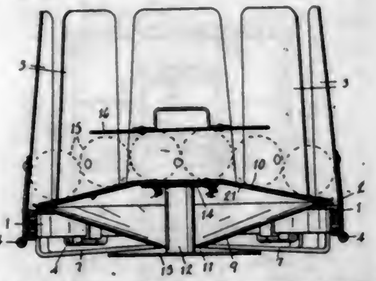
A pipe carrier comprising a body portion provided with an elongated slot through which a bolt is adapted to extend for adjustably securing the carrier to a support, and upright pairs of complementary pipe clamping members integral with the base, each member having an arcuate upper portion so that each pair is adapted to receive a pipe, the upright members of each pair being spaced apart throughout substantially their entire length, and means disposed below the arcuate portions for drawing the uprights of each pair toward each other to tightly grip a pipe.

1,631,001. SWITCH. ARTHUR E. BOST, Waelder, Tex. Filed Oct. 13, 1923. Serial No. 668,415. 1 Claim. (Cl. 200—52.)



A switch of the class described, comprising a bracket having a pair of outwardly extending arms thereon, one arm being slotted, a block pivotally connected with one arm and a bolt and nut for connecting the other arm to the block, the bolt passing through the slot in said arm, a weighted arm pivoted to the block, means for electrically connecting said arm with an ignition circuit, a contact connected with the said circuit and carried by the block and against which the arm will rest as long as the block is in a vertical position and a stop on the block for limiting the movement of the arm when the block is moved to a tilted position.

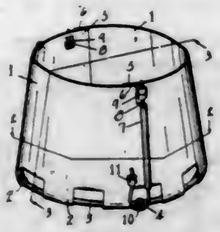
1,631,002. FURNITURE. FRED BOWMAN and EDWARD ELLIS, Cushing, Okla. Filed Apr. 21, 1926. Serial No. 103,534. 1 Claim. (Cl. 45—16.)



An article of furniture comprising a casing, a partition dividing the casing into an upper section and a lower section, vertical partitions dividing each section into separate compartments including an inner central compartment and outer compartments surrounding the inner compartment, an ice chamber in the inner compartment of the upper section, a pan within one of the compartments of the lower section, a drain pipe extending from the ice chamber into the pan, a door for each compartment, a vertical swinging door having its lower edge hingedly secured at the bottom of the ice chamber and opening outwardly into one of the compartments and ice guides carried upon the inner face of the door.

1,631,003. SPOTLIGHT FOR MAIL CARS. DENNIS FLETCHER BRADSHAW, Indianapolis, Ind. Filed Oct. 2, 1926. Serial No. 139,129. 1 Claim. (Cl. 240—7.1.)

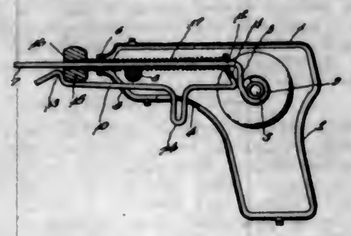
In combination with a mail car, a casing mounted on the roof thereof, a shaft journaled in the casing and projecting from the top thereof, a tubular member of substantially T shape and having its depending part connected with the shaft, a lamp connected with one end of the tubular member, conductors for the lamp passing into the other end of the tubular member and connected with the lamp, said conductors passing into the interior of the car, a shaft having one end journaled in the casing and the said shaft depending into the car, a handle on the lower end of the shaft and gears connecting the two shafts together.



1,631,004. PACKING DEVICE. WILLIAM A. BRECKON, Lee Township, Allegan County, Mich. Filed Apr. 16, 1926. Serial No. 102,476. 11 Claims. (Cl. 226—17.)

10. A basket packing device comprising side wall members, a concave bottom removably associated with said side wall members and provided with a flexible diaphragm, means for supporting said diaphragm in an upwardly crowned position permitting it to be collapsed within the concave bottom, and a retaining plate for holding packed articles in position as the diaphragm is collapsed.

11. In a packing device, the combination of a base, a plurality of side members pivotally mounted on said base, means for holding said side members in erected position to receive a basket permitting limited independent movement of said side members on their pivots, and a bottom removably associated with said side members and constituting a follower for retaining the packed articles when the device is withdrawn from a basket arranged thereon.

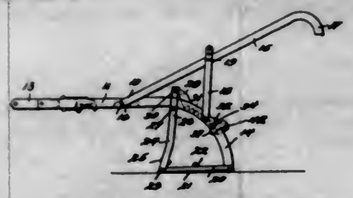


1,631,005. FRUIT PACKING BASKET. WILLIAM A. BRECKON, Lee Township, Allegan County, Mich. Filed Aug. 11, 1926. Serial No. 128,556. 10 Claims. (Cl. 226—17.)

1. In a basket packing device, the combination of pivotally connected segmental hinge members, segmental complementary walls of sheet metal having their lower edges headed about said hinge members whereby said wall members are reinforced and pivotally connected, said wall members having overlapping edges when closed, the vertical edge of one of said wall members being beaded to provide a latch rod support and the other having a loop-like keeper struck therefrom to aline with said latch support when the wall members are closed, said wall members having portions struck inwardly therefrom and disposed in spaced relation from their lower ends providing ledge members, segmental ledge bars secured to said ledge members, a latch rod slidable in said latch rod support to engage said keeper when the walls are closed, and a bottom removably supported on said ledge.

1,631,006. TOY PISTOL. STEWART BROWN, Chicago, Ill., assignor of one-half to Harland K. Delahanty, Chicago, Ill. Filed Nov. 8, 1924. Serial No. 748,737. 9 Claims. (Cl. 124—10.)

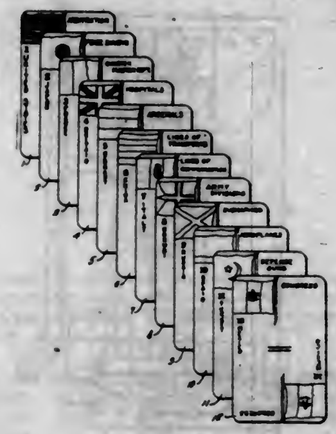
8. A toy pistol including a missile supporting member, a missile adapted to be carried by the supporting member and to be projected therefrom, means for holding the missile against projection from the supporting member, and means for projecting the missile when free from engagement with the holding means, said projecting



means having engagement with the holding means for holding the holding means in holding relation with the missile.

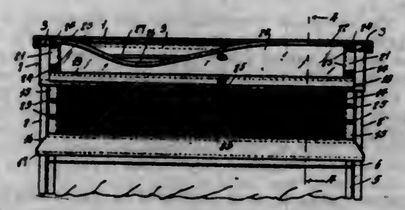
1,631,007. BLOWPIPE TIP. JAMES H. BUCKNAM, Jersey City, N. Y., assignor, by direct and mesne assignments, of one-half to The Linde Air Products Company, a Corporation of Ohio, and one-half to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 1, 1922. Serial No. 585,785. 10 Claims. (Cl. 158—27.4.)

1. A blowpipe tip having an oxidizing gas passage and a heating gas passage, both passages extending to the end of said tip, the outlet orifices of said passages being disposed near one another and one of said orifices being counterbored.



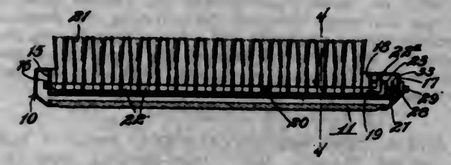
1,631,008. PLOW STOCK. ELBERT M. CHAPPELL, Hartsville, S. C., assignor to Hartsville Manufacturing Company, Hartsville, S. C., a Corporation of South Carolina. Filed Jan. 24, 1925. Serial No. 4,463. 8 Claims. (Cl. 97—110.)

1. In a plow, in combination, a beam, a quadrant shaped rear end thereon, a bar extending forward of the end from said quadrant, an upright pivoted at its lower end to said bar and adapted to carry a plow blade, and means conforming to the curvature of said quadrant pivoted to the opposite end of said upright and adapted to be adjustably engaged with a portion of said quadrant when the quadrant and the means are substantially concentric.



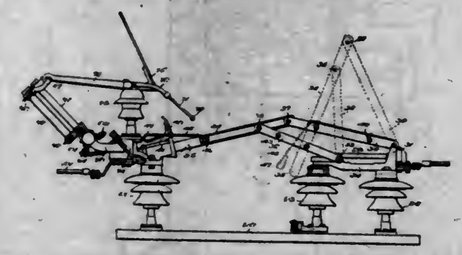
1,631,009. GAME. CHESTER H. CLARK, Gallup, N. Mex. Filed Sept. 29, 1926. Serial No. 138,486. 1 Claim. (Cl. 273—152.)

In a card game, a plurality of sets of cards, each set representing a different country and each set including cards carrying data representing military and civil sources, counters for use by each player, a major card entitling the holder thereof to special privilege, a card in each set for use in a central group, to which counters are contributed and from which loans may be made, and a peace card to be played into the central group and entitling



the holder who makes the play to payments of counters from all of the other players, the two cards last named carrying characteristic designations.

1,631,010. COMBINED GLARE, WIND, RAIN, AND INSECT SHIELD FOR AUTOMOBILES. WELLINGTON I. CLEMENTS, Norfolk, Va. Filed Mar. 2, 1926. Serial No. 91,742. 14 Claims. (Cl. 296—95.)

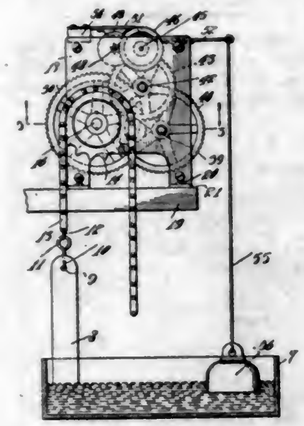


6. A shield for an automobile comprising a panel, means adapted to secure the panel to the automobile in rear of the windshield, a second and reticulated panel secured to the first panel, a third panel having transparent and opaque portions, means adapted to secure the third panel in folded position to the first panel, and means adapted to secure the third panel in extended position to the second panel.

1,631,011. FOLDING BRUSH. JAMES FREDERIC CONNON, Cleveland, Ohio. Filed Dec. 1, 1925. Serial No. 72,559. 11 Claims. (Cl. 15—203.)

1. An article of the character described comprising a case having a back and side walls, a plurality of oscillatable bristle holders extending parallel to each other and one of the side walls and carrying projecting tufts of bristles, each bristle holder being U-shaped in cross section and being disposed with its open face toward the back and being perforated at intervals, the tufts of bristles extending through said perforations in a direction away from said back, and means for oscillating the bristle holders.

1,631,012. SWITCH. NICHOLAS J. CONRAD, Chicago, Ill., assignor to Schweitzer & Conrad, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1925. Serial No. 74,930. 21 Claims. (Cl. 200—114.)



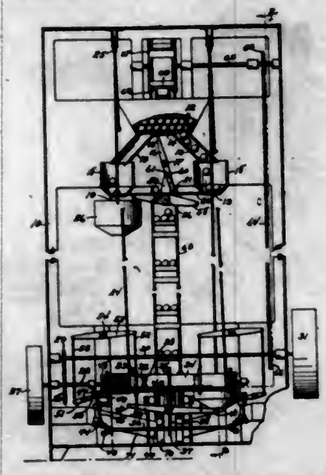
4. In combination, a pair of relatively movable switch contacts, a fuse having a fuse contact at one terminal and having the other terminal connected permanently to one of said switch contacts, means for separating said switch contacts by a relatively continuous movement, the separation of said switch contacts first throwing the fuse in circuit and then by continuous movement disconnecting the fuse contact.

1,631,013. TOOTHBRUSH. ERIC LEOPOLD HUGO COSBY, Teddington, England. Filed Sept. 17, 1925, Serial No. 56,078, and in Great Britain Sept. 17, 1924. 3 Claims. (Cl. 15—176.)

1. A tooth brush comprising a handle having at one end a recessed back portion and having a depression in one of its faces adjacent its other end, said handle also having a longitudinal bore communicating with one end of said recess and with one end of said depression, a rod insertable in said longitudinal bore and having one end projecting into the hollow back portion, a flat spring carried by the opposite end of said rod and adapted to be inserted flatwise in the depression of the handle and having its free end engageable with an end of said depression with its intermediate portion bowed, and a bristle carrying stock adapted to be inserted in the recess of the back portion with one end in engagement with one end of said recess and its other end engaged by said rod.

1,631,014. POT FEEDER FOR TYPE-CASTING MACHINES. GEORGE M. COX, Mobile, Ala., assignor of one-half to JONAS MARX, Mobile, Ala. Filed Aug. 30, 1926. Serial No. 132,574. 3 Claims. (Cl. 22—80.)

1. A pot feeder for type casting machines comprising a movable ingot holder, a gear train coupled to be driven by said holder, a rapidly moving brake drum driven by said gear train and having a peripheral groove therein with wedge shaped cross-sectional area, a brake lever fulcrumed adjoining said drum, a wedge shaped brake shoe carried by said lever and adapted to enter the groove of said drum, means for urging said shoe against the drum, and a boat for balancing said last-named means and for moving the brake shoe away from the drum.

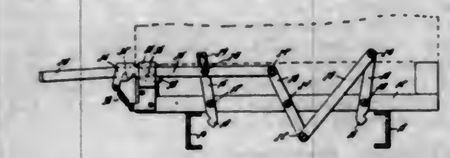


1,631,015. BRUSH. WILLIAM J. COX, Lebanon, Pa. Filed Sept. 8, 1926. Serial No. 134,241. 1 Claim. (Cl. 15—160.)

As a new article of manufacture, a brush for cleaning the spokes of a wheel comprising an elongated body, a spindle extending axially through the body and having a portion extended to provide a handle, the outer portion of the body being reduced in diameter to provide a cylindrical head at the outer end of the body, the portion of the body inwardly of and immediately adjacent to the head constituting a neck, the inner end of the neck and the inner end portion of the body being connected by a gradually tapered portion, and a buffer of yieldable material overlying the outer end of the spindle.

1,631,016. TOY MOTOR. JOHN L. CRAVEN, Indianapolis, Ind. Filed Jan. 23, 1925. Serial No. 4,349. 3 Claims. (Cl. 46—37.)

1. In a device of the character described, a hopper having a pair of discharge chutes in its bottom, receivers located beneath said chutes, slidable plates controlling communication to the chutes and from the receivers, trip operated means connected with said plates for sliding the same in opposite direction, a shaft, a pair of drums thereon, flexible members secured to and wrapped about said drums and trained over guide pulleys at the top of the device, buckets carried by said flexible members and adapted to receive from said receivers, balls within the hopper adapted to pass into the buckets alternately

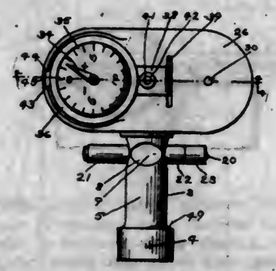


for weighting the same, an elevator carrier discharging into the hopper, and an operative connection between the drums and said elevator carrier.

1,631,017. PROCESS FOR PRESERVING OR CANNING FRUIT. STUART L. CRAWFORD, Rochester, N. Y. Filed Sept. 10, 1926. Serial No. 134,753. 3 Claims. (Cl. 99—8.)

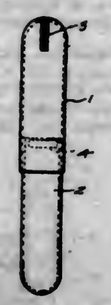
3. The process of preparing fruit for preserving which comprises immersing the fruit from 1 to 5 minutes in a sugar solution having a boiling point of from 215 degrees to 240 degrees F., said treatment being adapted to remove the air from the fruit and fill up the cells with sugar solution, whereby the air is replaced by the cane syrup which is thus absorbed in the tissue.

1,631,018. MEANS FOR RETAINING THE DUMPING ELEMENTS OF VEHICLES. JOHN S. CURTIS, Oakland, Ill. Filed Jan. 6, 1926. Serial No. 79,644. 2 Claims. (Cl. 298—38.)



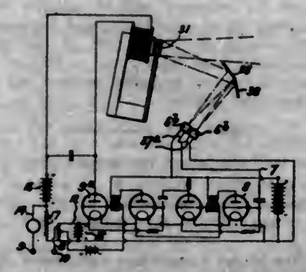
1. In a device of the class described, a plurality of pivotally mounted hooks having engaging portions on reverse sides thereof, means for mounting the hooks on the forward portion of a dumping element, means controlling the hooks simultaneously and causing them to engage stationary elements, for retaining the dumping element against movement, and a device for retaining and releasing the controlling means, the operation of said device being incident to the manual shifting of said controlling means.

1,631,019. MICROMETER CALIPERS. PHILIP J. DARLINGTON, Brookline, Mass. Filed Sept. 24, 1926. Serial No. 137,500. 3 Claims. (Cl. 33—178.)



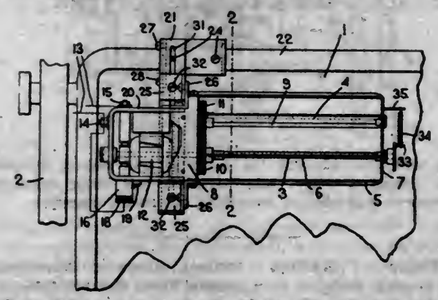
1. A micrometer caliper having a casing, a plug with an expansible section attached to said casing, a plunger longitudinally movable in said plug and having a tapered

end arranged to engage and expand the plug, an oscillating arm in the casing and held in engagement with and responsive to the movements of said plunger, means for amplifying the movements of said arm, an index



arm rotated by said amplifying means, and a graduated scale adjustably mounted in said casing on which the index reads to indicate the amount of expansion of the said plug.

1,631,020. CIGAR AND CIGARETTE LIGHTING CONTAINER. RUSSELL H. DOAK, Pine Bluff, Ark. Filed Sept. 17, 1925. Serial No. 56,977. 1 Claim. (Cl. 44—48.)

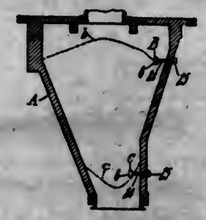


An individual container for cigars and cigarettes, comprising a paper container sufficiently rigid to reinforce its contents, said container consisting of two hollow members closed at one of their ends and telescopically engaging one another at their open ends, a strip of chemical composition on the end of the inner member and covered by the outer member when the container is closed, and another strip of chemical on the closed end of the outer member that will ignite said member when rubbed on the first mentioned strip.

1,631,021. THERMIONIC INDICATING MEANS RESPONSIVE TO LIGHT VARIATIONS. JOHN JOSEPH DOWLING, Rathgar, Dublin, Ireland. Filed Mar. 2, 1926. Serial No. 91,780, and in Great Britain Apr. 15, 1925. 7 Claims. (Cl. 250—2.)

1. Light responsive means of the kind herein referred to comprising a thermionic valve receiver system, indicating means associated therewith, and means for continuously subjecting the said system to electric current oscillations persistence of which is necessary to prevent any indication being given that predetermined light conditions are departed from, such means being operated by impulses derived from the receiver system.

1,631,022. GLARE ELIMINATOR. RALPH E. EAVES and WILLIAM C. KEEN, Allston, Mass. Filed Mar. 1, 1926. Serial No. 91,437. 6 Claims. (Cl. 296—97.)



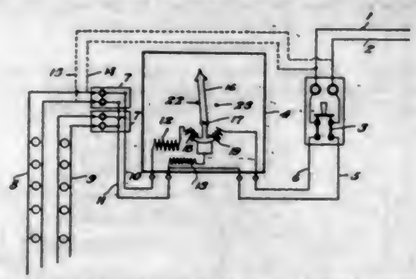
1. A glare screen for automobiles comprising a blade rotatable about an axis extending at substantially right angles to the line of vision of the driver of the automobile, and means to rotate said blade continuously and rapidly, whereby the amount of light which passes through the rotating blade to the driver's eye increases progressively from the axial line of rotation outwardly.

1,631,023. FOOD PRODUCT AND METHOD OF MAKING THE SAME. CARL FELDHUSEN, Boise, Idaho. Filed Mar. 25, 1924. Serial No. 701,840. 7 Claims. (Cl. 99—5.)

2. A food product comprising a dried mixture of a gelatinized, dry food material and milk.

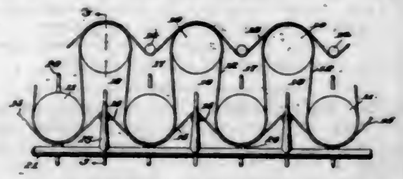
5. The method of making a food product, which comprises gelatinizing and drying a vegetable product, mixing the same with milk and thereafter drying the mixture.

1,631,024. ELECTRIC-CIRCUIT-CONTROLLING APPARATUS. SAMUEL G. FISHER, Boston, Mass. Filed Dec. 27, 1924. Serial No. 758,356. 4 Claims. (Cl. 200—52.)



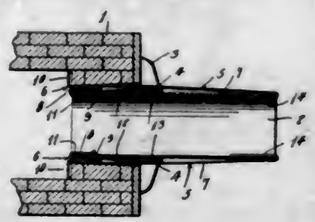
1. An apparatus of the class described comprising, in combination, a casing provided with an opening in one of the walls thereof and also having a dust tight compartment located therein having an enclosed passageway communicating therewith, an actuating member pivotally mounted within said casing at the rear of said opening, and means connected to said actuating member and extending through said compartment and passageway and adapted to operate a signal.

1,631,025. CURRENT-THEFT INDICATOR. ORILL FLENER, Fort Smith, Ark. Filed Dec. 23, 1925. Serial No. 77,333. 3 Claims. (Cl. 171—34.)



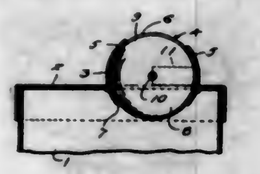
1. The combination with a watt hour meter having a current coil, and a potential coil therein bridging the line and load connection, the combination of a signal

device including coils connected in series with each other and with said current coil, a movable indicator pivotally mounted and having armature arms acted upon



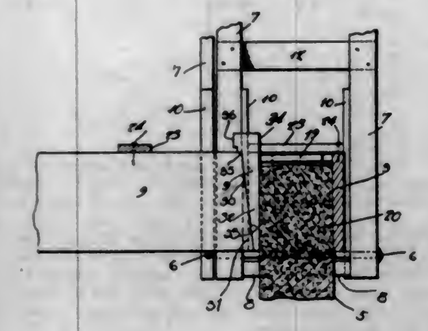
by said coils whereby the indicator will remain normally in neutral position, said potential coil being connected between said coils to constitute a return connection.

1,631,026. DRYING. FREDRIK GREWIN, Norrkoping, Sweden, assignor to American Voith Contact Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 18, 1927, Serial No. 161,903, and in Sweden Oct. 24, 1923. 17 Claims. (Cl. 34—48.)



1. In combination, a plurality of cylinders over which a web of material to be dried is carried, the cylinders and web forming laterally extending spaces of uniform cross-section with open ends, and means to direct a single thin current of air at high speed through each of said spaces in direction substantially along the center lines of said spaces.

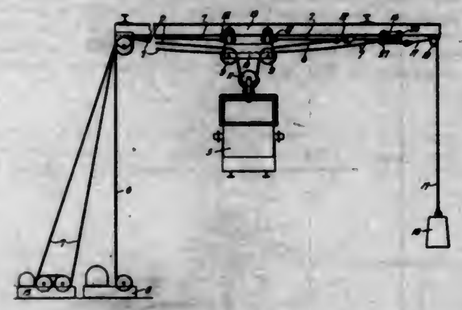
1,631,027. STOVEPIPE LOCK. FRANK X. GRIES, Sunbury, Pa., assignor to Charles J. Reitz, Sunbury, Pa. Filed Aug. 6, 1925. Serial No. 48,583. 1 Claim. (Cl. 126—318.)



A stovepipe lock comprising, in combination with a collar bearing against the chimney and provided adjacent its inner edge with a slot and a stovepipe section passing through the collar into the chimney, an anchor provided at one end with a slot and at the other with hooks engaging the chimney and the inner end of the stovepipe section, and a strap passing through said slot of the collar and having an inner looped portion passing through said slot of the anchor, said looped portion being provided at its free end with a hook engaging that portion of the collar located between the inner edge thereof and its slot, and said strap being provided at its outer end with a hook engaging the outer end of the stovepipe section.

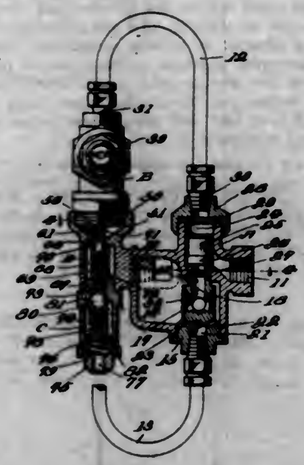
1,631,028. MEASURING CANISTER. BENJAMIN J. GUNDERSON, Spring Grove, Minn. Filed May 3, 1924. Serial No. 710,818. 1 Claim. (Cl. 221—106.)

A container provided with a rectangular opening through a wall thereof, disks disposed at opposite ends of the opening, arcuate plates arranged at opposite sides of said opening, said disks and plates being disposed partly interiorly and partly exteriorly of the container and coacting to provide discharge ways one interiorly of the container and the other exteriorly thereof, a rotary measuring vessel snugly fitting between the said disks and plates and having an opening therein, said vessel having a shaft journaled in said disks, said shaft being exteriorly of the wall of the container, and a substantially rectangular stop element on one end of the shaft engageable at opposite sides with said wall to limit its rotation in each direction to thereby insure registration of the opening of the measuring vessel with said ways.



1,631,029. BUILDING FORM FOR CONCRETE STRUCTURES. GEORGE L. HAGY, San Antonio, Tex. Filed Oct. 27, 1926. Serial No. 144,518. 4 Claims. (Cl. 25—131.)

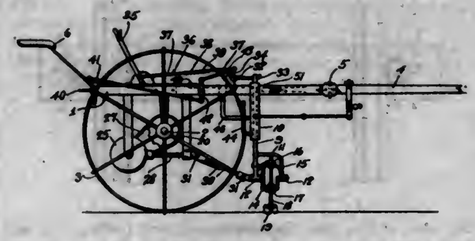
1. In a form for concrete walls, uprights arranged at opposite sides of the walls of an angular foundation or base, inner and outer form boards supported between said uprights with the form boards arranged in end to end angular relation, an end of one inner form board being squared, and the adjacent end of another inner form board being mitered at an outward and downward incline to partially overlap the lower part of the squared end of said one inner form board, and a release wedge engaging said mitered end and said squared end of the respective inner form boards.



1,631,030. TROLLEY-BUCKET-ROPE TAKE-UP. HOWARD V. HARDING, Hudson, N. Y., assignor to Gifford-Wood Company, a Corporation of New York. Filed Nov. 26, 1926. Serial No. 150,802. 4 Claims. (Cl. 104—91.)

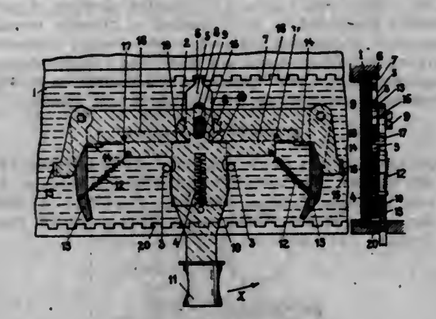
2. A trolley bucket installation comprising, in combination, an elevated track; a trolley movable along the track; a bucket supported by the trolley; a trolley rope secured to the opposite ends of the trolley; means for driving the trolley rope to cause the bucket to travel; a carriage movable along the track; a sheave on said carriage; the trolley rope passing from the trolley around said sheave and thence to the driving means; and a

gravity actuated slack take-up device connected with the sheave carriage so as to maintain the trolley rope at all times under substantially constant tension, and so as to yield responsive to heavy strains on the rope.



1,631,031. UNLOADER ASSEMBLY. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Sept. 22, 1925. Serial No. 57,840. 3 Claims. (Cl. 137—153.)

1. An unloader assembly adapted for use in an air line between a compressor and its storage tank comprising a check valve, an unloader, and a relief valve, the parts arranged whereby the unloader operates at a predetermined pressure in the storage tank the air being compressed by the compressor and insures the compressor starting against zero pressure when the unloader operates to again permit the delivery of air to the storage tank.

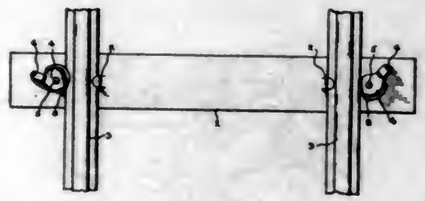


1,631,032. COTTON CHOPPER. OSCAR S. HELLUMS, Dawson, Tex. Filed June 29, 1925. Serial No. 40,395. 4 Claims. (Cl. 97—13.)

1. A cotton chopper comprising a wheeled frame, a vertically movable frame carried thereby and including horizontal bars, a laterally movable frame having portions slidably engaging the horizontal bars, a crank shaft carried by the laterally movable frame, a tool actuated by the crank shaft, a tool engaging part mounted for

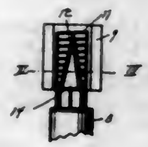
oscillatory movement on the laterally movable frame, means for rotating the crank shaft, means for adjusting the vertically movable frame and means for adjusting the laterally movable frame.

1,631,033. CALCULATING MACHINE. HERMANN HOFFMEISTER, Gliesmarode, near Brunswick, Germany, assignor to Grimme, Natalis & Co. Aktiengesellschaft, Brunswick, Germany, a Corporation of Germany. Filed Oct. 20, 1924, Serial No. 744,789, and in Germany Oct. 27, 1923. 5 Claims. (Cl. 235—63.)



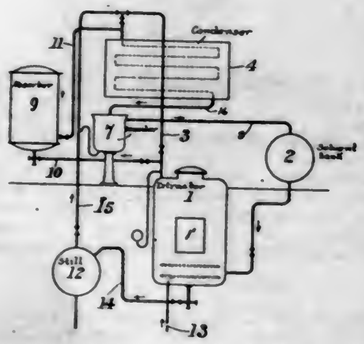
1. In a calculating machine or the like embodying a casing and a carriage slidable in said casing, a latch for securing the carriage in adjusted positions in said casing, an operating member mounted on said carriage for sliding movement and also for rocking movement, means operable by either a sliding or rocking movement of said operating member to retract said latch, and means associated with said operating member and engageable with said casing in the rocking movement of the operating member to limit the advancing movement of said carriage.

1,631,034. MINE-TRACK TIE. ELLIS G. HOLST, Lavoye, Wyo. Filed Dec. 13, 1924. Serial No. 755,697. 1 Claim. (Cl. 238—341.)



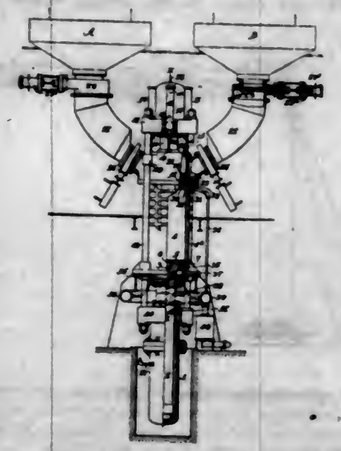
A rail tie having rail fastening means carried thereby consisting of a rail flange engaging ear upstruck from the tie, and a locking member opposed to said ear and movable into and out of engaging position with the rail flange, said locking member being of disk form and having an eccentric pivotal mounting on the tie and provided, for a portion of its periphery, with a flange which in

certain positions of the member overhangs the rail flange, said locking member being provided with a radial extension constituting a handle for effecting its movement and



the edge of the disk constituting a cam forcing the rail flange laterally into engagement with said upstruck ear as said locking member is turned in rail locking position.

1,631,035. RADIOTUBE. HENRY K. HUPPERT, San Francisco, Calif. Filed Dec. 21, 1925. Serial No. 76,820. 1 Claim. (Cl. 250—27.5.)

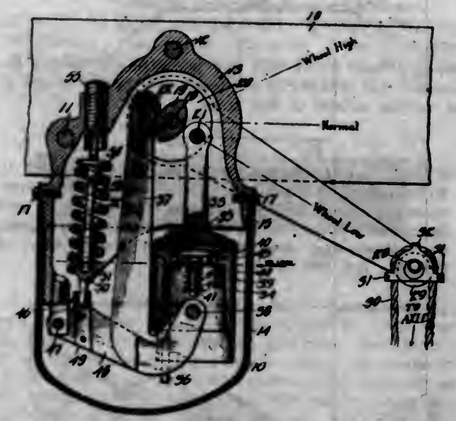


In a radio tube having an evacuated chamber, a plate element positioned in said chamber, a filament element positioned within said chamber, a grid element interposed between said filament and said plate, and a fourth-element positioned within said tube in such a manner as to have its margins substantially surrounded by said filament.

1,631,036. APPARATUS FOR THE EXTRACTION AND RECOVERY OF VOLATILE LIQUIDS. EDWARD ALLAN IRONSIDE, London, England. Filed Nov. 6, 1925, Serial No. 67,390, and in Great Britain Nov. 8, 1924. 1 Claim. (Cl. 252—4.)

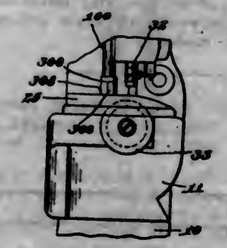
A plant or installation for the recovery of solvents from gases or other materials employing an extractor connected by tubes to an adsorber forming part of the plant whereby a solvent introduced into the extractor can be exhaustively recovered from such extractor by passing steam or air under pressure through the extractor to the adsorber.

1,631,037. HYDRAULIC PRESS. WILLIAM B. KOCHENDERFER, Camden, N. J. Filed Oct. 28, 1921. Serial No. 511,213. 10 Claims. (Cl. 100—50.)



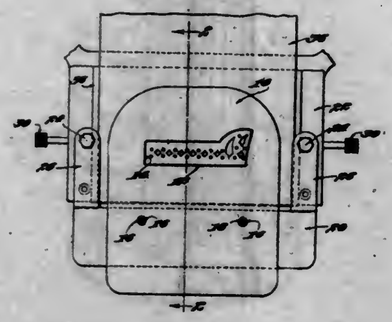
1. In a hydraulic press, the combination of a vertically disposed cylinder, a pair of unobstructed heads vertically movable with respect to said cylinder; the upper head fitting within and serving normally as a closure for one end of the cylinder and the lower head sliding within the cylinder and serving as a compressing element, a plurality of means for delivering fixed charges of material to the compressing chamber, a movable casing closing the upper end of the cylinder and through which such material is charged into the cylinder; said upper head being adapted to operate within said casing out of contact therewith, pressure means actuated from a common source for moving said heads toward each other, auxiliary means for lifting the upper head while the lower head is at rest, and independent means for imparting vertical movement to said casing.

1,631,038. GLASS-PLATE FASTENER. WILLIAM LA HODNY and FRANK X. KIBITZ, Buffalo, N. Y., assignors to Standard Mirror Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed May 23, 1924. Serial No. 715,495. 1 Claim. (Cl. 16—1.)



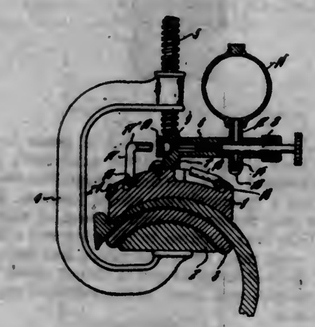
A fastener for attaching to a surface a glass plate having longitudinal edges, transverse edges and bearing faces converging from the opposite longitudinal edges toward said transverse edges, comprising a base adapted to be secured to said surface and a flange rising from said base and having a transverse central part adapted to engage with a transverse edge of the plate and two end parts diverging inwardly from opposite ends of said transverse part and adapted to engage with said bearing faces, said transverse edges of the plate being beveled and the flange portions of the fastener engaging therewith being correspondingly beveled, and the upper sides of said flange portions terminating below the front side of said plate.

1,631,039. SHOCK ABSORBER. FRANK F. LANDIS, Waynesboro, Pa. Filed Oct. 7, 1924. Serial No. 742,248. 43 Claims. (Cl. 267—8.)



1. In a hydraulic shock diffuser, a container for liquid, an inverted cylinder open at the bottom end only sealed by the liquid, a piston in the cylinder, and means for moving the cylinder and piston relatively to each other while keeping the interior of the cylinder free of air, substantially as set forth.

1,631,040. PRESSING DEVICE FOR FOLDING MACHINES. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to Lorenz Muther, Newton, Mass. Filed Dec. 1, 1922. Serial No. 604,346. 15 Claims. (Cl. 12—55.)



1. A pressing device for folding machines having a main pressing member and a member retractable within said main pressing member but normally advanced for engaging the upturned fold approximately flatwise; said device being rotatable to press convexly curved edges radially.

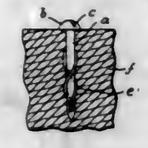
1,631,041. GAUGE FOR PERFORATING MACHINES. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to The Peerless Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1924. Serial No. 686,816. 13 Claims. (Cl. 164—93.)

1. A gauge for perforating machines comprising a plate having a cut-out portion or opening for holding a shoe part by frictional engagement between the edge of said shoe part and the edge of said cut-out portion, said cut-out portion being of the same contour and size as said shoe part, and means for positioning said gauge in the machine.

1,631,042. VULCANIZER. GEORGE W. LEWIS, Oilton, Okla. Filed Nov. 4, 1925, Serial No. 66,803. Renewed Apr. 13, 1927. 4 Claims. (Cl. 18—18.)

1. A vulcanizer comprising a base having a groove and a recess therein, a burner tube in the groove with its ends bent and resting in the recess, said recess acting as an initial heating means, a nozzle carrying member supported on the base above the recess, an extension on the burner tube for receiving the vapor from the nozzle and means for supplying fuel to the nozzle carrying member.

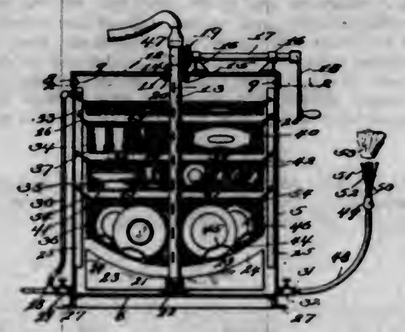
1,631,043. BOBBIN. NOAH E. LUCAS, Norwich, Conn. Filed Sept. 14, 1925. Serial No. 56,195. 5 Claims. (Cl. 242—118.)



1. A bobbin having a groove extending in a spiral direction lengthwise along the side thereof and of a

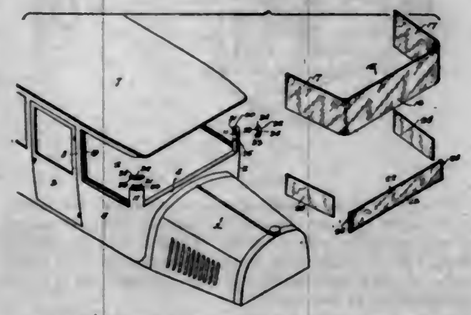
pitch to aid in the removal of material therefrom in a mass on application of a relative turning movement to

the mass and bobbin, said groove having a single shoulder located at one side thereof, and means for supporting the bobbin.



1,631,044. NAIL, SCREW NAIL, AND THE LIKE. EDWARD LYTTON, London, England. Original application filed Dec. 22, 1924, Serial No. 757,481, and in Great Britain Feb. 28, 1924. Divided and this application filed June 8, 1925. Serial No. 35,647. 1 Claim. (Cl. 85—23.)

A nail or spike device comprising a shank having a pointed end, said shank also having a plurality of projecting longitudinal ribs formed integrally therewith, each rib having a comparatively strong junction with the shank at its end nearer the pointed end of the shank, and having from that junction to its other end a junction which is so weak that, when the device has been driven home into a piece of material and is turned about its axis said latter junction will shear and permit the rib to coil about the shank.



1,631,045. DISHWASHER. CYRENE M. MACON, Dallas, Tex. Filed July 11, 1923. Serial No. 650,948. 1 Claim. (Cl. 141—9.)

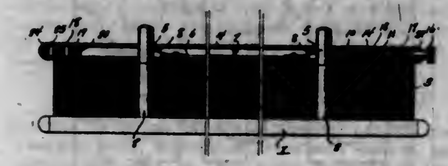
In a dish washer, the combination of a body having a rotary tubular shaft extending upwardly through the center thereof and provided with an inlet and a plurality of discharge openings throughout the length of the same, a plurality of foraminous trays disposed one above the other for holding dishes and other articles and arranged in concentric relation relatively to the shaft, the lower tray being materially larger in dimensions than the trays above and having a depending convex bottom to increase the capacity thereof, and radial blades on the lower extremity of the shaft below the convex bottom of the lowermost larger tray for agitating and circulating the water within the body and through the trays, the upper edges of the said radial blades being concave and closely and rotatably movable with relation to the convex

bottom of said lower tray and permitting a greater dependence and capacity of the lower tray by the extent of the convex bottom of the latter.

1,631,046. AUTOMOBILE WINDSHIELD. JOSEPH P. MCCULLOUGH, Philadelphia, Pa., assignor of thirty-three per cent to Joseph M. Evans, Camden, N. J., and thirty-two per cent to Walter H. Conard, Philadelphia, Pa. Filed Jan. 29, 1926. Serial No. 84,671. 5 Claims. (Cl. 296—84.)

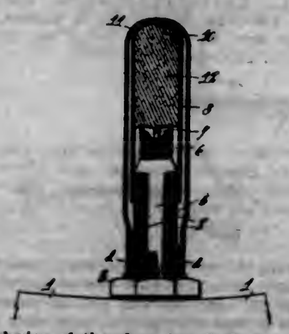
1. An automobile body comprising lower side portions; a front portion; corner members at the juncture of said front and side portions; upright supporting members extending above said lower side portions and spaced to the rear of said corner members; a one piece wind shield comprising a front plate and side wings, spaced above said lower side portions and said front portion; a movable wind shield section below said front plate between said corner members, and movable wind shield sections below said side wings, between said corner members and said upright supporting members.

1,631,047. BOAT. HERMANN MEYER, Berlin, Germany. Filed Apr. 14, 1926, Serial No. 102,011, and in Germany Feb. 14, 1925. 3 Claims. (Cl. 9—2.)



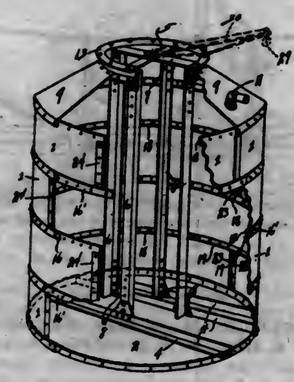
1. A boat hull comprising an inflatable and expansible annular tube and bow and stern members, each open at the inner end and tapering toward the outer end, the ends of the said inflatable tubes being arranged in the open inner ends of said bow and stern members and secured thereto.

1,631,048. PACKAGE. CHARLES E. MILLER, McSherrytown, Pa. Filed Aug. 31, 1926. Serial No. 132,767. 5 Claims. (Cl. 181—11.)



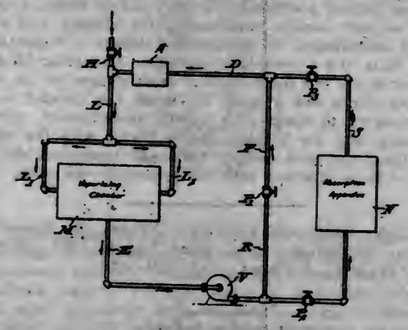
1. A package container for curved articles comprising a box having the inner side of the bottom thereof shaped to conform to the contour of the curved article which forms the lower layer of the contents of said box.

1,631,049. TEMPORARY BINDER. HENRY C. MILLER, Milwaukee, Wis.; First Wisconsin Trust Company, Milwaukee, Wis., executor of said Henry C. Miller, deceased. Filed Sept. 6, 1923. Serial No. 661,177. 2 Claims. (Cl. 129—12.)



1. A loose leaf binder comprising a bottom member having a pair of upwardly extending posts, a tubular top member having a pair of apertures therethrough for loosely receiving said posts, a locking bar normally free to move relatively to said posts located interiorly of said tubular member and having terminal upwardly and outwardly extending locking tongues and externally manually operable means extending into said tubular member for forcing said posts towards each other and into engagement with said locking tongues.

1,631,050. VALVE CAP. EDWARD JAMES MURPHY, Framingham, Mass. Filed Dec. 14, 1925. Serial No. 75,368. 4 Claims. (Cl. 152—12.)

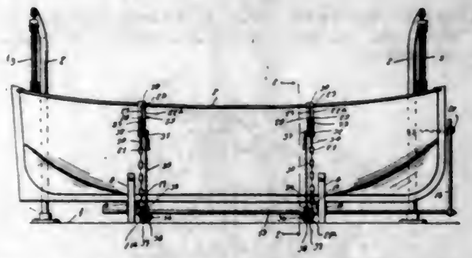


4. In a device of the class described, the combination with a tire valve stem having flat sides, lock nut, valve and dust cap, of a valve cap adapted to be applied over the end of the valve stem and of a length for extending vertically into position for being engaged by the said dust cap as it is screwed home and having a gasket to engage said stem end whereby when the dust cap is screwed home upon the lock nut the gasket will be compressed against the said stem end, said valve cap having flattened portions for engaging the flat sides of the valve stem to prevent rotation of said cap, said gasket being so shaped and positioned that when compressed against the stem end a portion thereof will engage the plunger of the valve to hold the same normally away from its seat to prevent wear by constant pressure.

1,631,051. OIL TANK. WATT M. NICHOLS, Ranger, Tex. Filed Aug. 14, 1925. Serial No. 50,318. 5 Claims. (Cl. 220—5.)

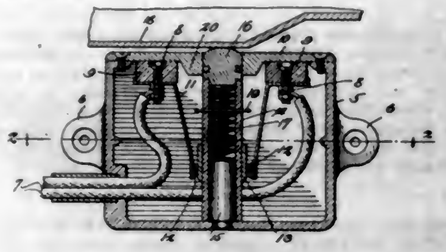
1. An oil tank comprising a bottom and angle bars attached thereto, a cylindrical wall attached to said bottom and consisting of a plurality of tiers superposed on each other and each tier consisting of a plurality of units connected together by seal tight joints, a top connected to the upper tier of units, a central ring frame attached to said top, and braces attached to the circumferential portions of said frame and to said bottom angle bars.

1,631,052. PROCESS FOR THE RECOVERY OF VOLATILE SOLVENTS. RUDOLF OERTEL, Hanover, Germany, assignor to Metallbank und Metallurgische Gesellschaft Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed June 8, 1926, Serial No. 114,582, and in Germany Apr. 7, 1924. 6 Claims. (Cl. 34—24.)



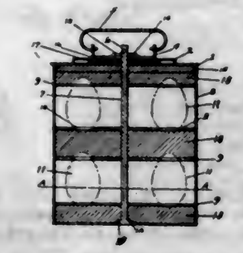
1. Process for recovering volatile solvents which comprises repeatedly contacting a body of gas with a source of solvent vapors and subsequently subjecting the resulting gas-solvent vapor mixture to a solvent vapor absorption operation.

1,631,053. LIFEBOAT SECURING AND RELEASING MECHANISM. GEORGE W. P. OVERMAN, Norfolk, Va. Filed Nov. 11, 1926. Serial No. 147,773. 12 Claims. (Cl. 9—22.)



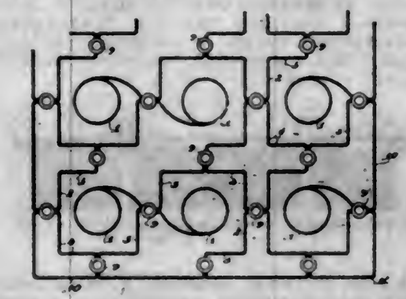
12. A life boat securing and releasing mechanism including chocks from which the boat may be swung in an outboard direction, pivoted jaws adapted to contact

with the keel of the boat to hold the boat against outward displacement from the chocks, hooks engaged with the boat, members secured to the deck of the vessel, catches releasably connecting the members to the hooks and adapted to be restrained to maintain the connection,



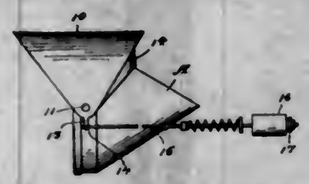
and means adapted to support the jaws in boat retaining position and to restrain the catches, said means being adapted to be operated to simultaneously move the jaws into boat releasing position and to release the catches.

1,631,054. SWITCH. BLAKE PALM, Washington, D. C. Filed Feb. 4, 1926. Serial No. 85,975. 1 Claim. (Cl. 200—159.)



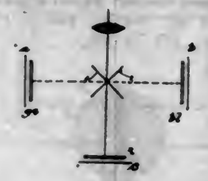
A switch of the class described embodying a housing, a guiding finger extending from one wall of the housing, a tubular plunger formed of insulating material and having one end thereof positioned over the guiding finger, a circular contact member surrounding the plunger and arranged intermediate the ends of the plunger, a removable cover plate and a removable end plate, insulating blocks secured to the end plate, contact arms secured to the insulating blocks and adapted to engage the circular contact member to complete a circuit therethrough, wires extending into the housing and in circuit with the contact arms, and said contact arms and insulating blocks adapted to be removed with the removable end plate.

1,631,055. EGG CONTAINER. NELSON B. PARRISH, Great Barrington, Mass. Filed July 9, 1926. Serial No. 121,482. 2 Claims. (Cl. 220—55.)



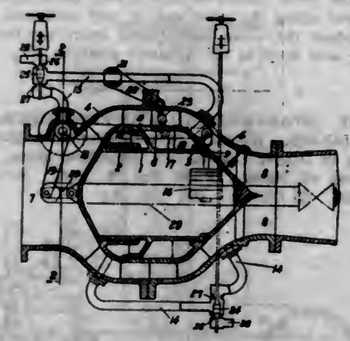
1. In a device of the class described comprising a casing, a cover for the said casing, said cover provided with a shoulder extending around the entire perimeter and said shoulder designed to seat within the casing, a clamping cover superimposed on the said cover, said clamping cover provided with an opening on the top and a card receptacle attached on the inner side of said clamping cover, said clamping cover and card receptacle cooperating to hold a shipping card, said card receptacle in alignment with the bottom of the said clamping cover, a clamp for said clamping cover, said clamp provided with a projection in the center to provide means for the insertion of a gasket, a handle attached to said clamp, a plurality of disks within the casing, said disks provided with a plurality of holes, a tie rod passing thru the casing, the disks, the clamping cover and the clamp, means to secure the tie rod in position and seal the casing water tight.

1,631,056. BED SPRING. JOHN PEPERNICK, Binghamton, N. Y. Filed June 4, 1926. Serial No. 113,795. 1 Claim. (Cl. 5—271.)



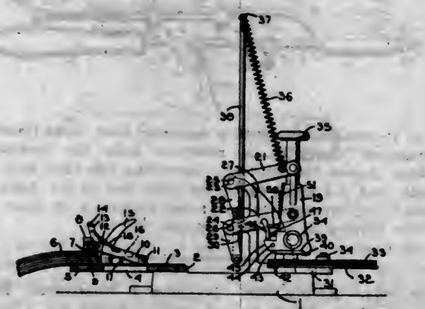
A bed spring comprising a plurality of juxtaposed helical springs, the opposite portions of each of said springs being bent in substantially right angular fashion to constitute approximately square framing units, portions of the various sides of said framing units having loops formed therein, the loops upon the adjacent portions of such framing units being adapted to be arranged in overlapping and aligning relation, securing means passing through the overlapping and aligned loops, and side rods having equi-spaced loops formed therein adapted to overlie and align with certain of the loops upon said framing units and to be fixedly connected thereto.

1,631,057. HEADLIGHT-DIMMING MECHANISM. GEORGE F. PHILLIPS and THOMAS H. TORIAN, Paducah, Ky. Filed Apr. 28, 1926. Serial No. 105,211. 2 Claims. (Cl. 240—45.6.)



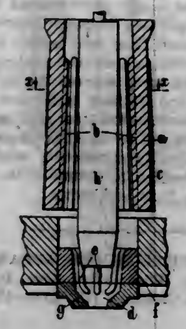
1. A dimming device for an automobile headlamp, comprising a visor curved in cross section and straddlingly engaged over the headlamp and pivoted thereto at substantially its intermediate portion, said visor being provided below its pivot with a downwardly extending crank arm, rearwardly extending means connected with said crank arm for swinging the visor downwardly, spring means normally maintaining the visor in horizontal position in non-obstructing relation to the rays of light issuing from the lamp, and a depending vertical flange at the rear end of the visor acting as a stop for maintaining the visor normally in horizontal position and being adapted to engage the top of the lamp at the lens retaining rim for limiting the downward swinging movement of the visor.

1,631,058. APPARATUS FOR MULTIPLEX PHOTOGRAPHY. HANS PILOTY, Munich, Germany, assignor to the Firm of Jos-Pe Farbenphoto Gesellschaft mit beschränkter Haftung, Hamburg, Germany. Filed Oct. 10, 1924, Serial No. 742,932, and in Switzerland Feb. 13, 1924. 1 Claim. (Cl. 88—1.)



Tricolor photographic apparatus, comprising a lens system; an exit pupil for the lens system and determining the boundary of the rays within the angle of the image; and a light-splitting mirror device positioned immediately behind the lens system, said mirror device comprising, three strip-like mirrors two of which are arranged in a common plane, and the third of which crosses the said two and leaves a free space between the adjacent edges of the two.

1,631,059. AUTOMATIC SELF-CLOSING VALVE. OWEN ALFRED PRICE, Kilmarnock, Scotland. Original application filed June 26, 1926, Serial No. 118,852, and in Great Britain June 27, 1925. Divided and this application filed Dec. 10, 1926. Serial No. 153,906. 3 Claims. (Cl. 137—139.)

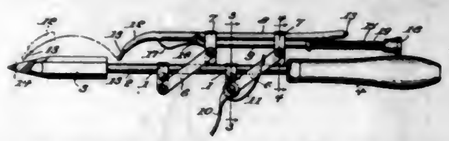


1. An automatic self-closing valve, comprising, in combination with a main conducting channel for fluid having a zone of less cross-sectional area than that of the remainder of the channel, a valve-forming plunger movable in said channel in the vicinity of said zone, said plunger having its closing movement in the direction towards said zone, said plunger exposed at its opposite ends to the pressures in said main channel and in said zone, an annular body surrounding said plunger and forming with said plunger a structure of stream-line form spaced from the internal wall of said channel, a balancing piston movable with said plunger, between said plunger and said annular body, the side of said piston nearest to said zone being subject to the pressure in said main channel and the other side of said piston being subject to the pressure in said zone, and means serving normally to hold said plunger stable in open position but adapted to be overcome on predetermined variation of the differential pressure between the main channel and said zone occasioned by change of the conditions of flow, to permit unaided automatic closing movement of said plunger.

1,631,060. MARKING MACHINE. FRED A. PUTNAM, Keene, N. H., assignor to Markem Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed May 22, 1926. Serial No. 111,068. 15 Claims. (Cl. 101—301.)

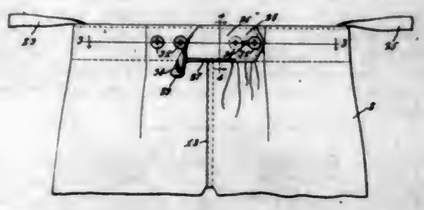
1. A marking machine comprising a platen and a work support providing an aperture in proximity to said platen in sufficient area to permit the portion of a flexible article which has been printed upon said plate to be depressed therethrough, whereby a series of superimposed flexible articles may be successively printed from the lowermost upwardly.

1,631,061. APPARATUS FOR CONTROLLING THE FLOW OF MOLTEN GLASS THROUGH A DISCHARGE APERTURE. CARL HENRY RANKIN, Wellsburg, W. Va. Filed Nov. 29, 1926, Serial No. 151,453, and in Great Britain Dec. 1, 1925. 9 Claims. (Cl. 49—55.)



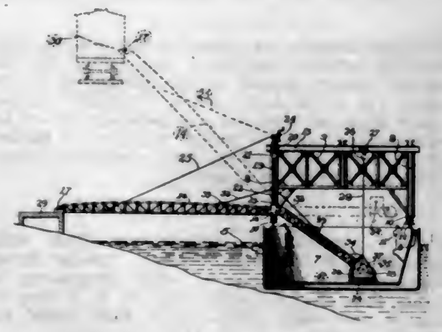
3. In apparatus for controlling the flow of molten glass through a discharge aperture, a liner having the said discharge aperture formed therein, corrugations on the interior wall of the said aperture, a plunger arranged in axial alignment with the said aperture, a sleeve arranged coaxially with the plunger to enclose an annular space around the said plunger and corrugations on the interior wall of the said sleeve.

1,631,062. WEIGHTED ARTIFICIAL SILK AND METHOD OF ITS PRODUCTION. GEORGE BIVAT, Paterson, N. J., assignor, by mesne assignments, to Lyons Piece Dye Works, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 15, 1925. Serial No. 62,588. 13 Claims. (Cl. 8—13.)



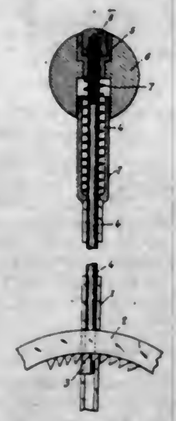
1. The process which comprises treating cellulose acetate silk with a gelling agent and with a weighting agent.

1,631,063. SOLDERING IRON. PETER H. ROONLEY, Washington, D. C. Filed June 4, 1926. Serial No. 113,765. 6 Claims. (Cl. 113—109.)



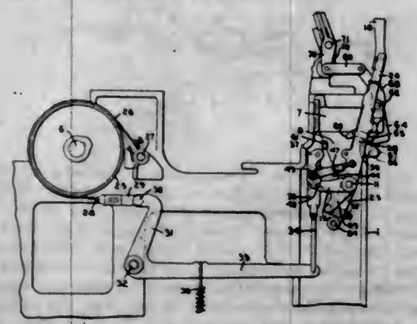
1. In combination with a soldering iron, links pivotally connected therewith, a reservoir tube for containing solder, means for pivotally connecting the tube with the links, and a trigger connected with one of the links for permitting the tube to be swung forwardly to place the solder carried by the tube against the iron

1,631,064. KNICKERS. MAURICE J. ROSENBERG, Baltimore, Md. Filed Aug. 3, 1926. Serial No. 126,841. 1 Claim. (Cl. 2—237.)



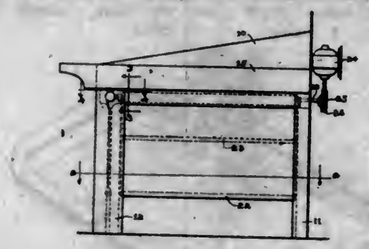
A garment of the type referred to comprising front and back portions connected together, said back portion having its inner side at the upper part thereof formed with a pocket, a pair of oppositely disposed shirring strings anchored in and extended from said pocket for gathering a part of the back portion, a combined gathered portion concealing and retaining strip secured to the outer face of said back portion and formed with free end terminal portions normally disconnected from said back portion, and said back portion and end terminal portions having co-acting means for detachably connecting said terminal portions to said back portion to maintain the gathered part of the back portion from extending.

1,631,065. BARGE-UNLOADING APPARATUS. ISAAC A. RYAN, Ironton, Ohio. Filed Sept. 10, 1926. Serial No. 134,699. 15 Claims. (Cl. 214—15.)



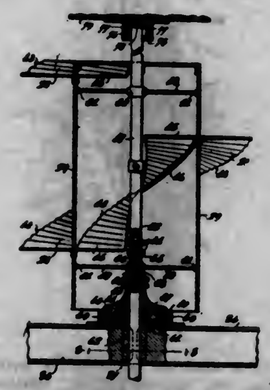
1. An apparatus of the class described including a traveling crane, having a chain hoist, a flexible power-driven conveyor freely suspended between its ends by the crane hoist for horizontal swinging movement and embodying connected head and tail sections relatively adjustable vertically, and means to independently vertically adjust said conveyor sections.

1,631,066. MEANS FOR LOCKING HAND-OPERATED BRAKES. ANDRE SAGET, Paris, France. Filed Apr. 15, 1927, Serial No. 184,107, and in France Apr. 14, 1926. 5 Claims. (Cl. 74—39.)



1. In combination with a brake handlever, a locking quadrant, a latch adapted to cooperate with said quadrant, a spring controlled latch rod longitudinally movable along said brake handlever and a stop piece adapted to be screwed along the outer end of said latch rod and to abut against the outer end of said brake handlever for securing said latch in its operative position.

1,631,067. STARTING AND STOPPING MECHANISM FOR LOOMS. WILLIAM SEVILLE, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 7, 1927. Serial No. 166,281. 15 Claims. (Cl. 192—4.)



3. Starting and stopping mechanism for a loom comprising a shipper for throwing the power on and off, a brake, a spring-operated actuator therefor, a controller for the actuator, the said shipper and controller being mounted to move together from "on" to "off" position and from releasing to applying position, respectively, latching mechanism acting to lock the actuator and brake in releasing position, and means acting, when the controller is swung from releasing to applying position, to unlock the latching mechanism and allow the actuator to apply the brake.

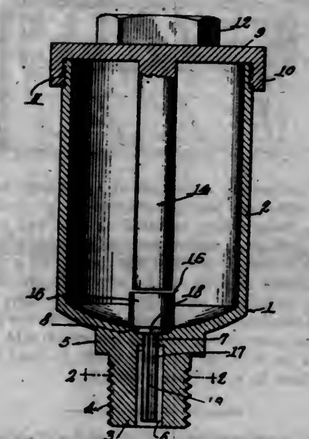
1,631,068. GARAGE. ROBERT WALTER SEYMOUR, Chicago, Ill. Filed June 5, 1926. Serial No. 113,888. 1 Claim. (Cl. 20—1.)

In a building structure, such as a porte-cochère adapted to be used in conjunction with a principal structure such as a building, a roof disposed abutting the side of said adjoining building, a plurality of corner posts for supporting the said roof, a plurality of sides comprising flexible curtains connected to said posts for cooperating with the adjoining building to enclose the space under said roof, means associated with the curtains and the said posts for enabling the curtains to be rolled up and down, and means for guiding the curtains in their up and down movement, said curtains being adapted when rolled down to provide a weather tight enclosure and when rolled up to clear the top of an automobile or the like.

1,631,069. POWER GENERATOR. WILLIAM M. SMITH, Turtle Creek, Pa. Original application filed Sept. 4, 1925, Serial No. 54,492. Divided and this application filed June 2, 1926. Serial No. 113,301. 5 Claims. (Cl. 253—38.)

1. In a power generator of the kind wherein is provided a stack and means for delivering air to the bottom of said stack; an air motor in the stack, said air motor comprising a plurality of sections in vertical alignment, each section consisting of a shaft, an open ended cylindrical member secured to and spaced from the shaft and also spaced from the inner wall of the stack, a spiral vane secured to the outer wall of the cylindrical member, and a spiral vane secured to the inner wall of said cylindrical member.

1,631,070. COAL-MINING EXPLOSIVE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1924. Serial No. 746,873. 7 Claims. (Cl. 52—11.)

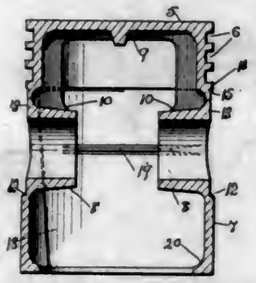


1. A detonating explosive comprising a detonating agent and hydrocellulose.

1,631,071. PROCESS OF MAKING HOLLOW RAYON FIBERS. WALTER O. SNELLING, Allentown, Pa. Filed May 11, 1925. Serial No. 29,309. 4 Claims. (Cl. 18—54.)

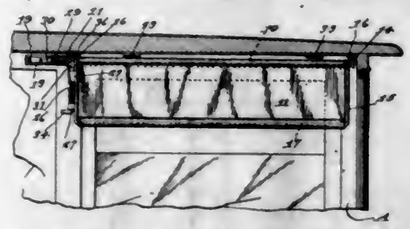
1. In the preparation of hollow fibers, the process which comprises forming a preliminary fiber, coating this preliminary fiber with a solid cellulose covering, and dissolving the preliminary fiber in a solvent in which the coating is insoluble.

1,631,072. OIL CUP. JABEZ S. SNOW, Sr., Schuyler, Va. Filed Mar. 25, 1925. Serial No. 18,209. 2 Claims. (Cl. 184—82.)



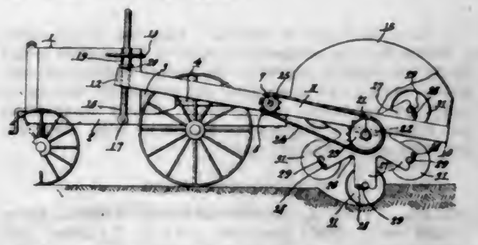
1. In a lubricator of the class described, a receptacle, a closure for the receptacle, a stem of determined length fixedly and rigidly secured to the closure and housed completely within the receptacle, the receptacle having an outlet for lubricant, and a valve slidably mounted in the receptacle in substantial alinement with the stem, the valve controlling the outlet.

1,631,073. PISTON. CHRIS SORENSON, Tacoma, Wash. Filed Jan. 7, 1927. Serial No. 159,719. 5 Claims. (Cl. 74—108.)



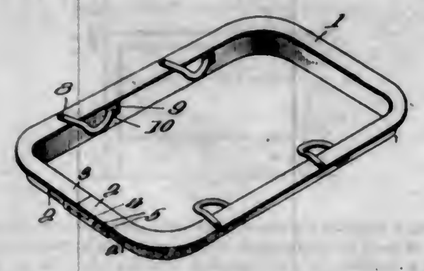
1. A piston having a head, a skirt, and wrist pin bearing bosses, the head on both sides of one of the bearing bosses and one side of the other bearing boss being integral with the skirt, the skirt being separated from the head at the other side of said other bearing boss by a circumferentially extending slot and being divided by a longitudinal slot communicating with said circumferentially extending slot, thereby rendering the

slotted side of the skirt partly resilient, and means to distribute the tension on the resilient skirt part uniformly from end to end of the latter, said last named means



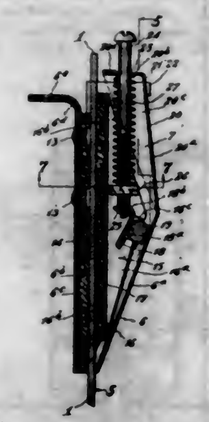
embodying a circumferenially extending rib formed internally of the skirt and extending partly across said resilient part of the skirt.

1,631,074. VEHICLE SUNSHADE. CHARLES M. STAINBROOK, Bowling Green, Ky. Filed Aug. 25, 1926. Serial No. 131,516. 2 Claims. (Cl. 296—95.)



1. In combination, a horizontally disposed rod having an offset attaching portion adapted to be secured to a support, a shade frame mounted on said rod for pivotal movement, resilient means associated with the rod and frame and normally holding the latter in a horizontal plane, a bracket secured to the attaching portion of said rod and including an offset disk like extremity having a notch, and a spring pressed bolt carried by the frame and arranged to move about the periphery of said disk, and adapted to be received by said notch to hold the shade and its frame in a vertical position.

1,631,075. ROTARY PLOW. ADOLF G. STAPEL, Montgomery, Ala. Filed Nov. 20, 1925. Serial No. 70,269. 2 Claims. (Cl. 97—215.)



1. In a rotary soil-engaging element, a shaft, webs carried by the shaft, soil-engaging elements extended between the webs, the soil-engaging elements being disposed in rows, the soil-engaging elements of all of the rows being disposed at an acute angle to the draft line and at an acute angle to the vertical, and the soil-engaging elements of adjoining rows slanting in opposite directions both with respect to the draft line and with respect to the vertical.

1,631,076. BED SPRING AND THE LIKE. CHARLES P. TRIMBLE, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 30, 1924. Serial No. 723,170. 4 Claims. (Cl. 5—209.)

1. In a spring construction, an angle frame, means pivoted upon one face of said frame and extending through the other face thereof, whereby said means can be swung exteriorly of said frame for adapting it to different sizes of beds and can be swung interiorly of the periphery of said frame when not in use.

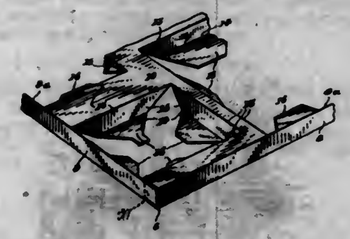
1,631,077. SHOCK ABSORBER. SAMUEL K. WELLMAN, Cleveland, Ohio. Filed Aug. 8, 1922. Serial No. 580,483. 18 Claims. (Cl. 188—129.)

1. In a shock absorber for vehicles with spring-suspended bodies, the combination of relatively movable mutually engaging friction parts adapted to be connected respectively to the vehicle body and axle, one of said parts having a facing adapted to maintain its coefficient of friction substantially constant under varying moisture conditions.

1,631,078. SHOCK ABSORBER. SAMUEL K. WELLMAN, Cleveland, Ohio. Filed May 18, 1923. Serial No. 639,728. 15 Claims. (Cl. 188—129.)

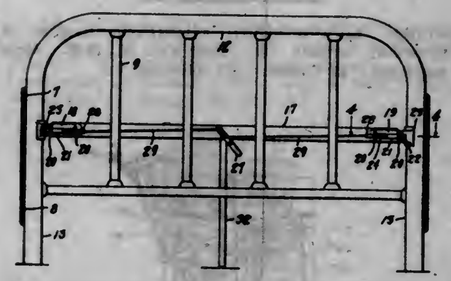
1. In a shock absorber adapted to be interposed between an axle and the spring-suspended body of a vehicle, the combination of a pair of relatively movable coacting resistance parts and means for connecting said resistance parts to the vehicle axle and body, respectively, each of said connecting means comprising a perforated concavo-convex socket formed in the resistance part, a perforated member formed with a countersink fitting the convex side of said socket, a bolt extending through said perforated member and loosely through the perforation

of the socket and having a spherical head fitting the concave side of said socket, and means operatively engaging the said perforated member and bolt for holding the



countersink, socket and bolt head in operative contact, one of the parts other than the resistance member being adapted to be secured to one of the vehicle parts.

1,631,079. SHOCK ABSORBER FOR AUTOMOBILES. SAMUEL K. WELLMAN, Cleveland, Ohio. Filed Nov. 13, 1924. Serial No. 749,603. 19 Claims. (Cl. 188—129.)

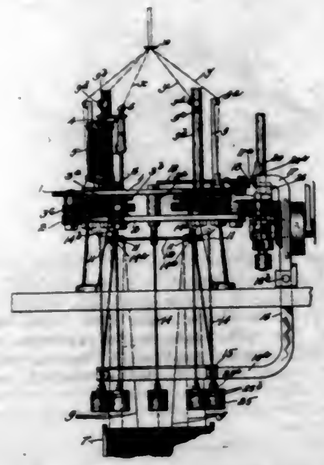


1. In a shock absorber adapted to be interposed between an axle and the spring suspended body of a vehicle, the combination of an elongated friction plate connected at one end to one of said vehicle parts; a casing comprising a channel member forming three of the longitudinal sides of the casing and connected to the other vehicle part and a plate detachably secured to said channel member and forming the fourth longitudinal side of said casing; a friction facing secured on the inner side of the web of the channel member to be engaged by one side of said friction plate; and a spring pressed member in the casing engaging the opposite side of the friction plate and yieldingly pressing it against said friction facing.

1,631,080. DISPLAY BOX. HARRY L. BAKER, Elmira, N. Y., assignor to Owen Card Publishing Co. Inc., a Corporation of New York. Filed Jan. 22, 1925. Serial No. 4,081. 2 Claims. (Cl. 206—44.)

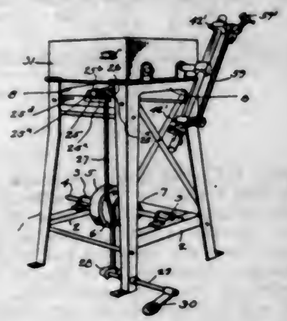
2. A compartment forming device for boxes comprising a sheet of material fashioned to form a plurality of rectangular apertures in which cards and similar articles are adapted to be placed, said sheet being fashioned around the four side walls of the apertures to form depending wall members, and each of the four wall members of the separate apertures having inwardly projecting flanges upon which the cards are adapted to rest to retain said cards in fixed position when the device is placed in a box or container.

1,631,081. FOOT-FRAME LOCK FOR FOLDABLE BEDS. GEORGE E. BENNETT, San Francisco, Calif., assignor to American Automatic Lock and Lift Company, San Francisco, Calif., a Corporation of California. Filed Aug. 24, 1921. Serial No. 494,798. 1 Claim. (Cl. 5—178.)



In a foldable bed, a bed frame having side rails, a foot frame comprising a foot rail and legs, brackets fixed to the foot ends of said side rails, a cross rail connecting said brackets together, a pair of links at each side of said bed connecting said foot and bed frames together whereby said foot frame may lie in position either rearwardly of the bed frame in perpendicular relation or spaced above said bed frame in parallel relation, one link of each pair being connected to said brackets, a lug fixed to each of said legs and having a recess therein, spring-pressed bolts slidably mounted in said brackets extending transversely of said side rails and arranged to engage in said recesses when said foot frame is perpendicularly disposed, and hand operated means carried by said cross rail for withdrawing both of said bolts from said recesses simultaneously.

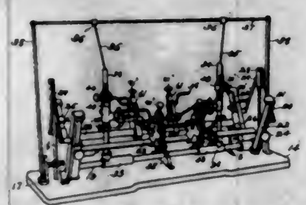
1,631,082. MACHINE FOR BRAIDING ELASTIC FABRICS. JACQUIN M. C. BRANCO, Somerset, Mass., assignor of one-half to James K. Lanning, Fall River, Mass. Filed July 27, 1926. Serial No. 125,301. 8 Claims. (Cl. 96—8.)



1. In a machine for braiding elastic fabric, the combination with yarn-delivering and braiding mechanism of a carrier for elastic cords, guiding means for each cord

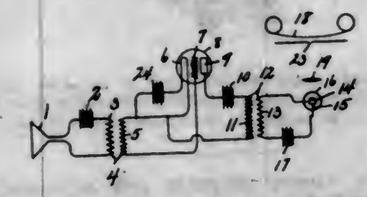
to cause the cord to travel for a distance in an approximately horizontal plane as it moves toward the braiding point, and a weight suspended on the horizontal portion

of each cord, and stop mechanism arranged to be rendered active by the fall of the suspended weight when its cord is broken.



1,631,083. LOOP-WINDING MACHINE. SAMUEL H. BROWNING, Atlanta, Ga. Filed Feb. 10, 1925. Serial No. 8,282. 11 Claims. (Cl. 140—922.)

1. A winding machine, the combination with a rotary head bar, of relatively adjustable loop engaging means thereon for effecting loops of varied lengths, means for securing the loop engaging means at any desired position on said head bar, and cam means for effecting the longitudinal adjustment on said head bar of one of the loop engaging means with respect to its securing means.

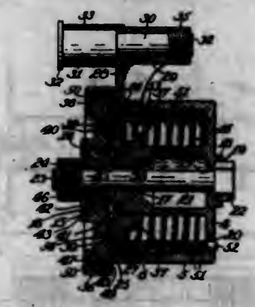


1,631,084. COIL-SPREADING MACHINE. SAMUEL H. BROWNING, Atlanta, Ga. Filed Feb. 10, 1925. Serial No. 8,283. 13 Claims. (Cl. 153—17.)

1. A coil shaping machine comprising means for gripping the ends of a wire coil loop, a plurality of means for gripping and holding each side of the loop, operating means for simultaneously moving the holding means on the respective sides away from or towards each other;

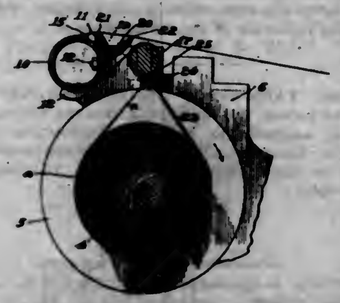
of means cooperating with the operating means to raise and lower the holders on one side of the loop with respect to the holders on the other side.

1,631,085. ELECTRICAL APPARATUS. THEODORE WILLARD CASE, Auburn, N. Y. Filed Apr. 16, 1923. Serial No. 632,496. 3 Claims. (Cl. 176—122.)



1. In an apparatus for producing a photographic record of light variations corresponding to electrical variations, a bulb containing a pair of electrodes spaced apart a distance not greater than one inch, and the negative one of said electrodes comprising a rare earth oxide, and a gas within the bulb at such a pressure that an intense concentrated glow is produced about the negative electrode.

1,631,086. ROPE. CLYDE F. CUNNINGHAM, Clarksburg, W. Va. Filed Oct. 7, 1926. Serial No. 140,148. 4 Claims. (Cl. 117—52.)



1. A decorative rope comprising a core of fabric, folded upon itself and a textile covering having its marginal edge portions brought together and confined between the folded edge portions of the core.

1,631,087. AUTOMATIC VEHICLE SPRING CONTROLLER. EMERSON DAVIS, Indianapolis, Ind., assignor of one-half to George P. Ruth, Indianapolis, Ind. Filed Mar. 27, 1926. Serial No. 98,028. 14 Claims. (Cl. 267—10.)

1. A vehicle spring controller having a lever arm and frictional resistance means and a single anchored and longitudinally expansible coil spring combined to retard movement of the lever arm and resist rebound action of the vehicle spring, and supporting means for the lever arm and also the frictional resistance means and the coil spring.

1,631,088. DRAG ROLL AND CLEARING PLATE FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 10, 1926. Serial No. 128,490. 9 Claims. (Cl. 139—97.)

1. In a loom, the combination of a hollow drag roll having a longitudinally extending opening to receive lint, dirt, and the like dropped from the warp, and a lint trough extending transversely of the loom in front of said opening in the drag roll and having a scraping edge over which the warp threads pass from the drag roll to the shed forming mechanism.

1,631,089. AUTOMATICALLY-THREADING SHUTTLE FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 14, 1926. Serial No. 141,520. 3 Claims. (Cl. 139—223.)

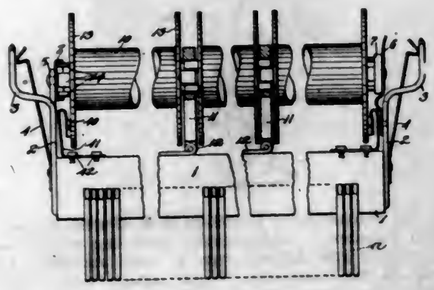
2. In an automatically threading shuttle for looms, the combination of the shuttle body provided with a side delivery eye and having its front wall adjacent the fell of the cloth during weaving cut away in a frontwardly, downwardly and forwardly uniformly curved surface to a point frontward of the side delivery eye and the top of which curved surface gradually decreases in height relative to the back wall of the shuttle, and a cast iron threading block which supports the front wall of the shuttle against the binder pressure and having an apron with a similarly curved surface that the warp threads in the upper plane of the shed may be gradually lifted by the coinciding curved surface without obstruction as the shuttle passes through the shed.

1,631,090. AUTOMATICALLY-THREADING SHUTTLE FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 26, 1926. Serial No. 144,213. 8 Claims. (Cl. 139—223.)

1. An automatically threading loom shuttle having a bobbin chamber, a longitudinally extending thread passage and a side delivery eye, a scroll extending forwardly in the longitudinal thread passage from a point adjacent the bobbin chamber, and a guide rib extending into the scroll from the side wall of the thread passage and between the ends thereof to guide the thread from the scroll to the side delivery eye.

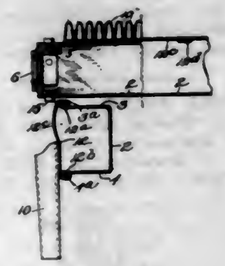
1,631,091. GUIDE FOR BOTTLE REFRIGERATORS. CHESTER A. FRICK, Muncie, Ind., assignor to Glascock Brothers Manufacturing Company, Muncie, Ind., a Corporation of Indiana. Filed Aug. 8, 1925. Serial No. 48,961. 4 Claims. (Cl. 211—8.)

2. A bottle refrigerator having substantially U-shaped bottle receiving tubular channels, means for closing one end of each of said channels normally openable from the interior only and means at the opposite end of said channel for preventing the insertion of a bottle bottom first while permitting the insertion thereof neck first.



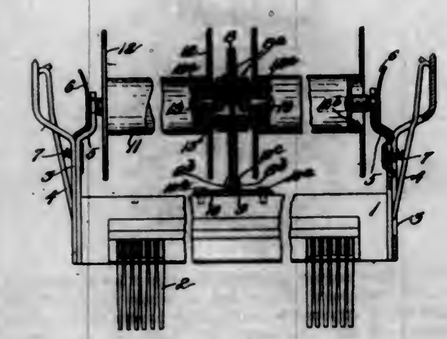
1,631,092. TUBE FRAME. EDGAR F. HATHAWAY, Wellesley, and CHARLES LEA, Milton, Mass., assignors to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1925. Serial No. 72,997. 10 Claims. (Cl. 139—10.)

10. An end bracket for a tube-frame, embracing a suspension arm, a three-sided attaching member secured to its lower end by tenons inserted and secured in apertures



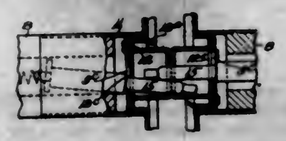
formed in said arm by heading down the outer ends of said tenons, the attaching member forming in conjunction with the adjacent portion of the arm, a hollow four-sided attaching member fitting into the hollow end portion of a carrier-bar adapted to receive fastening screwa passed through opposite walls of the carrier-bar.

1,631,093. YARN SPOOL FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, and WALTER BIXBY, Boston, Mass., assignors to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 7, 1923. Serial No. 623,523. 7 Claims. (Cl. 139—10.)



1. In a tube frame for weaving, the combination of a longitudinal carrier bar, suspension hangers and a yarn-spool rotatably supported thereby, a brake member comprising a resilient angle arm having a horizontal limb secured to the carrier bar to permit adjustment longitudinally thereof and an upright limb arranged to press against the outer face of an end head of the spool, substantially as described.

1,631,094. TUBE FRAME FOR TUFT WEAVING. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed July 20, 1923. Serial No. 652,727. 8 Claims. (Cl. 139—10.)

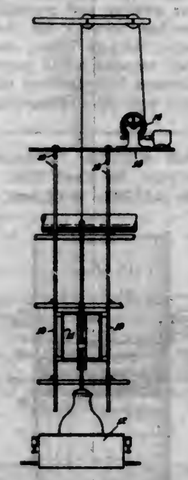


4. A tube frame for tuft weaving embracing in its structure a longitudinal carrier-bar provided with longitudinal tube-attaching lips, a series of parallel tuft tubes, a tube-carrying attaching strip constructed to be interlockingly engaged with said lips to detachably retain the tuft tubes in operation position for service, substantially as described.

1,631,095. SPOOL-SUPPORTING MEANS FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed May 6, 1926. Serial No. 107,068. 11 Claims. (Cl. 139—10.)

1. In a tube frame for tuft weaving, the combination with a longitudinal carrier-bar having spool-bearing brackets at its ends, of a medial bearing bracket formed with a closed annular bearing, a rotatable coupling member mounted in said bearing and having releasable coupling connection at both ends with the adjacent ends of adjacent yarn-spools to insure equal rotation of both spools while allowing either spool to be removed without depriving the other of its bearing support.

1,631,096. YARN SPOOL FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, and WALTER BIXBY, Boston, Mass., assignors to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 4, 1926. Serial No. 133,593. 13 Claims. (Cl. 139—10.)



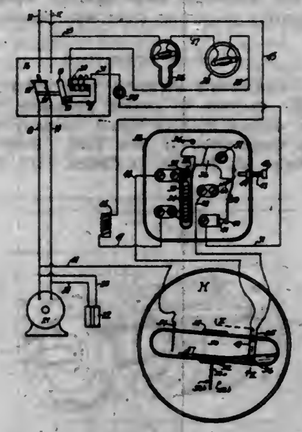
1. A yarn spool for delivering yarn embracing spool sections adapted to be rotatably supported end to end, journal gudgeons secured to the ends of the spool sections, for rotatably supporting the spool sections in intermediate bearings, and adjustable pintles mounted in said gudgeons to serve according to their adjustment either as a supporting journal for the spool section or as a means for rotatively interlocking adjacent spool section together to cause equal rotation of adjacent spool sections thus interlocked.

1,631,097. GLASS-DRAWING APPARATUS. RAYMOND D. HURLEY and BROOKS H. PATTON, Clarksburg, W. Va., assignors to Rolland Glass Company, Clarksburg, W. Va., a Corporation of West Virginia. Filed June 24, 1925. Serial No. 39,282. 2 Claims. (Cl. 49—17.)

1. A glass drawing apparatus comprising means for establishing a pool of molten glass, guides arranged vertically over said pool means and subject to the heat thereof, a bait supporting carriage vertically movable

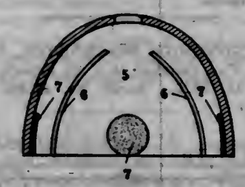
between said guides, and means for lubricating each of said guides comprising a lubricant pocket associated with the upper end thereof in such manner as to receive heat

therefrom by conduction, said lubricant pocket having a conduit leading to the carriage-engaged surface of the guide.



1,631,098. CLOSURE. JEAN JACQUES, Philadelphia, Pa., assignor of one-half to Adolph W. Oswald, Philadelphia, Pa. Filed Feb. 5, 1926. Serial No. 86,133. 7 Claims. (Cl. 220—24.)

1. A receptacle closure comprising a cylindric rotor casing having opposed ports and a semi-cylindric rotor for controlling communication through the casing, said rotor having its major body portion free relative to the ends to afford inherent capacity for circumferential flexure to engage the wall of the casing with fluid tightness.



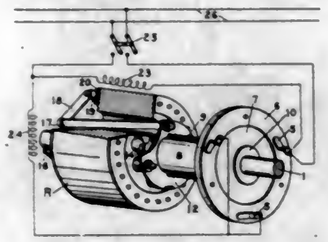
1,631,099. CONTROL MECHANISM FOR ELECTRICALLY-OPERATED BURNERS. JESSE C. JOHNSON, Oakland, Calif., assignor to S. T. Johnson Co., Oakland, Calif. Filed Nov. 26, 1926. Serial No. 150,864. 7 Claims. (Cl. 236—78.)

1. In an electrical control mechanism for burners having, in combination, electric current conductors, an operating motor, a circuit connection between the motor and the said conductors, a main circuit switch for the motor, a magnetic fuel oil stop valve connected in parallel with the motor circuit, an electro-magnetic control circuit in multiple with the said motor circuit and comprising an electro-magnet and an armature, said armature operatively associated with said main circuit switch for controlling its operation, in series with said electro-magnet, a temperature relay, an electro-magnetic gas valve, a manually operated circuit closing and breaking snap switch and a heat actuated three wire stack safety switch, said stack safety switch adapted, when in a cold temperature position to close the circuit to the temperature relay and to the electro-magnetic gas valve on the closing of said circuit by said snap switch, the closing of said series circuit energizing said electro-magnet for engaging said armature to close said main circuit switch for the motor

current, said heat actuated three wire stack safety switch adapted, when in a hot temperature position, to simultaneously shunt out the temperature relay and the electro-magnetic gas valve.

1,631,100. VIBRATION DAMPING MEANS FOR VACUUM TUBES. CHARLES C. LAURITSEN, St. Louis, Mo., assignor, by mesne assignments, to The Dyal Company, St. Louis, Mo., a Copartnership consisting of Walter H. Dyer and A. R. Allison. Filed Feb. 25, 1926. Serial No. 90,506. 1 Claim. (Cl. 250—27.5.)

In apparatus of the class described, a weight member designed to be placed on a thermionic tube and comprising a relatively heavy cap adapted to embrace the free end of the tube, the lower portion of said cap being divided by slots whereby resilient tube gripping members are formed.



1,631,101. TUBE FRAME. CHARLES LEA, Milton, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed June 5, 1925, Serial No. 35,081. Renewed Apr. 18, 1927. 6 Claims. (Cl. 139—10.)

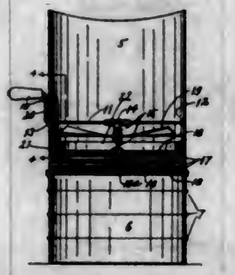
1. In a tube frame the combination of a carrier-bar comprising an elongated strip of sheet metal bent longitudinally to form bottom, back and top walls, and a front wall projecting downwardly from the top wall to form a backing to which the yarn-guiding tuft tubes are secured,

the bottom wall being extended forwardly beyond the plane of the front wall and being provided with a series of parallel apertures in its forwardly projecting portion and a series of yarn-guiding tuft tubes inserted in said apertures and secured at their upper or intake ends to said downwardly projecting front wall, substantially as described.

1,631,102. STARTING SWITCH FOR SINGLE-PHASE MOTORS. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,233. 5 Claims. (Cl. 172—279.)

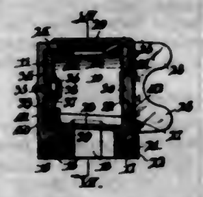
5. In an electric motor of the type which includes a shaft and a rotor thereon having holes extending therethrough parallel with the shaft, a centrifugal starting switch comprising, a circuit controlling element movable axially on the rotor shaft, a spring pressing said sleeve in one direction, a plurality of relatively long bars extending lengthwise of the rotor shaft through the holes in the rotor and connected at one end to said element, and inclined links each pivotally connected at one end to the rotor and at the other end to the outer free end of the corresponding bar, each bar and its link normally forming an acute angle which decrease as the bars move outward by centrifugal force.

1,631,103. AUTOMOBILE SUSPENSION. EARL L. MARTIN, Miami, Fla., assignor to C. L. Brown, Miami, Fla. Filed July 31, 1925. Serial No. 47,264. 6 Claims. (Cl. 267—2.)



3. In an automobile suspension the combination of a frame having two side bars with downwardly turned end portions, cables connecting the ends of each of said side bars, a front axle and a rear axle housing connected fixedly to each of said cables at points removed from the ends thereof, each of said cables comprising looped stranded sections, and turn buckles connecting the looped ends of said sections.

1,631,104. BELT BUCKLE. FREDERICK RAY MATTESON, Taunton, Mass., assignor to Frank Packard Daughaday, Chartley, Mass. Filed Jan. 20, 1926. Serial No. 82,487. 7 Claims. (Cl. 24—191.)



1. In a belt buckle, the combination with a body member embracing a front plate and side flanges having inwardly turned lips, a belt-gripping lever interposed between the front plate and said lips and having rolling fulcral support on said lips to support the rearward thrust of the lever as it is forced into gripping position to pinch the free end of the belt against the back of the front plate, a lever guiding and positioning means forming a loose connection between the lever and the side flanges of the buckle body to retain the lever in proper relation to the body member while permitting the transmission of the rearward belt-pinching thrust through the rolling contact with said lips, substantially as described.

1,631,105. FLOUR SIFTER. TORNEY O. NALL and ERNEST J. BEAUVAIS, St. Paul, Minn. Filed June 10, 1926. Serial No. 115,023. 4 Claims. (Cl. 201—358.)

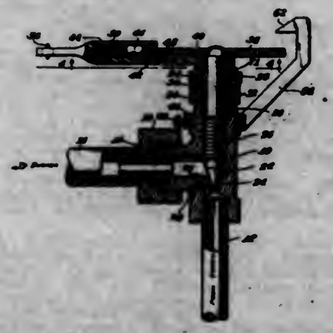
1. In a flour sifter, an upright cylindrical shell, a number of horizontally arranged vertically spaced screens fixed in the lower portion of said shell, a vertical central shaft mounted in the lower portion of the shell and extending through said screens and vertically above them, radially armed spiders fixed on said vertical shaft and arranged one above each screen, a drive shaft arranged diametrically across the shell and a crank on said shaft externally of the shell, means for rotating the said spiders on the vertical shaft when said crank is rotated, said latter means comprising a drive gear mounted on said drive shaft, a ring gear within the shell and meshing with said drive gear said ring gear fixed to the uppermost screen spider, and a circular guard fixed in said shell above said ring gear.

1,631,106. CLOSURE FOR FILLER OPENINGS. ADOLPH W. OSWALD, Philadelphia, Pa., assignor of one-half to Jean Jacques, Philadelphia, Pa. Filed Jan. 29, 1926. Serial No. 84,578. 4 Claims. (Cl. 220—86.)

1. A closure for filler openings comprising a body portion affording a through passage, said body portion having an annularly recessed base providing an inner concentric neck, a plug valve interposed cross-wise of the passage, an apron attached to the valve and adapted to normally cover the inlet to said through passage, and means to yieldingly hold the plug valve in open position or lock the same in closed position.

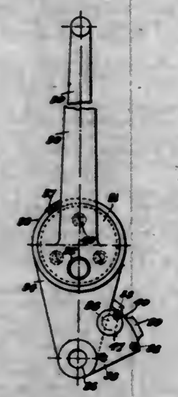
1,631,107. FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn. Filed Jan. 28, 1926. Serial No. 84,495. 32 Claims. (Cl. 49—77.)

12. The method of shaping the lower ends of a succession of mold charges of molten glass delivered downwardly through an outlet from a container, which comprises periodically causing glass below and adjacent to said outlet to move upwardly, thrusting oppositely directed shear blades through the upwardly moving glass and immediately withdrawing the blades, whereby the



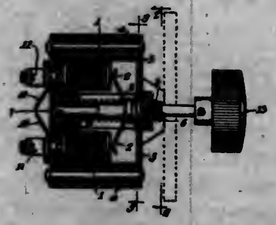
shape imparted to the glass remaining above said shear blades, after the severing operation, is retained as the shape of the lower end of the next succeeding mold charge.

1,631,108. BOUND-EDGE PLASTER WALL BOARD. CLARENCE W. UTZMAN, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 14, 1923, Serial No. 624,931, Patent No. 1,540,045, dated June 2, 1925. Divided and this application filed Nov. 17, 1924. Serial No. 750,224. 9 Claims. (Cl. 154—45.9.)



1. A plaster wallboard having a composition body with fibrous cover sheets thereon, one of said cover sheets passing about the longitudinal edges of the wallboard to engage the opposite side thereof with the other cover sheet extending about said edges over said first sheet to engage the opposite side and secured at its margins thereto, said margins chamfered to bring the exterior surfaces thereof into the plane of the main body of said first sheet, and the inner cover sheet edge being formed with spaced tongues which extend transversely within the wallboard to support the opposite cover sheets at their edges.

1,631,109. VALVE FOR OIL BURNERS. HERMAN W. HITZEMANN, Roselle, Ill. Filed Feb. 4, 1926. Serial No. 85,969. 7 Claims. (Cl. 277—54.)



6. An oil burner valve comprising a casing, a valve member threaded in said casing and having a shank projecting rearwardly therefrom, a disc fixed on the end of said shank for rotating said valve member to open and close said valve, a by-pass around said valve, a set screw for restricting or closing said by-pass, an oil delivery tube, and a coupling between said tube and said casing, said coupling overlying said set screw to prevent access thereto.

1,631,110. IMPLEMENT FOR EFFECTING THE RELATIVE MOVEMENT OF TWO ELEMENTS. WALTER VILLA GILBERT, Westminster, London, England, assignor to Gilbert's Patents Limited, London, England, a Company. Original application filed June 7, 1926. Serial No. 114,342, and in Great Britain Feb. 25, 1926. Divided and this application filed Jan. 22, 1927. Serial No. 162,901. 10 Claims. (Cl. 29—84.)

1. A hand implement for effecting the relative movement of two elements, comprising an eccentric sheave and a connecting link, the sheave member being provided with means for rotating it about its axis and also with means for detachably connecting it to one of the relatively movable elements at a position eccentric to the sheave, and the connecting link forming a strap member of the eccentric and provided with means for detachably connecting it to the other relatively movable element.

1,631,111. PRESSURE RHEOSTAT. GUSTAV O. WILMS, Milwaukee, Wis., assignor, by mesne assignments, to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 13, 1922. Serial No. 574,803. 8 Claims. (Cl. 201—51.)

1. A rheostat comprising a carbon disk resistor, a low tension spring controlling a low pressure upon said resistor and proportioned to cause a gradually and substantially uniform variation in resistance through a wide working range, and an adjustable actuator to operate said spring.

May 3, 1927

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Abbott, William T., doing business as William T. Abbott & Co., Boston, Mass. Tea in bulk. 227,289; May 3; Serial No. 239,452; published Feb. 22, 1927.

Acme Battery Manufacturing Company, St. Louis, Mo. Electric storage batteries and parts thereof. 227,211; May 3; Serial No. 240,898; published Feb. 15, 1927.

Adam de Cluhn Laboratories. (See Percival, Frank M.)

Aktiebolaget Salenius, Werkstäder, Stockholm, Sweden. Centrifugal liquid separators and parts belonging thereto. 59,591; renewed Jan. 15, 1927.

Albersheim, Dr. M., Frankfort-on-the-Main, Germany. Soaps and soap creams and powders for shaving. 227,394; May 3; Serial No. 241,851; published Feb. 22, 1927.

Albright, Chester E., doing business as Albright Purse Co., Germantown and Philadelphia, Pa. Combined coin and paper purse or a coin purse. 227,325; May 3; Serial No. 236,581; published Feb. 15, 1927.

All Star Candy Co., San Francisco, Calif. Chocolate-covered candy bar. 227,228; May 3; Serial No. 239,909; published Feb. 22, 1927.

Alma Manufacturing Company of Baltimore City, Baltimore, Md. Snap fasteners. 61,281; renewed Mar. 12, 1927.

Alma Manufacturing Company of Baltimore City, Baltimore, Md. Buckles. 62,276; renewed Apr. 30, 1927.

American Agricultural Chemical Company, The. (See Virginia-Carolina Chemical Company.)

American Chicle Company. (See Crawford, Caleb, Company.)

American Optical Company, Southbridge, Mass. Ophthalmic lenses, projection lenses, etc. 227,193; May 3; Serial No. 241,461; published Feb. 22, 1927.

American Pop Corn Company, Sioux City, Iowa. Shelled pop corn. 227,245; May 3; Serial No. 239,733; published Jan. 4, 1927.

American Retail Stores Co., The, Columbus, Ohio, and Indianapolis, Ind. Topcoats, overcoats, three and four piece suits. 227,319; May 3; Serial No. 235,448; published Feb. 15, 1927.

Angelo Bros. Limited, Calcutta, British India. Gum and orange shellac, button and garnet lac. 227,289–91; May 3; Serial Nos. 191,611–13; published Sept. 23, 1924.

Angelo Bros. Limited, Calcutta, British India. Gum and orange shellac, button and garnet lac. 227,434; May 3; Serial No. 195,617; published Sept. 23, 1924.

Angelo Bros. Limited, Calcutta, British India. Gum and orange shellac, button and garnet lac. 227,435; May 3; Serial No. 195,619; published Sept. 23, 1924.

Angus, George, & Co., Limited, Newcastle-on-Tyne and Bentham, near Lancaster, England. Brake linings. 227,321; May 3; Serial No. 236,458; published Feb. 22, 1927.

Anheuser-Busch Brewing Association, assignor to Anheuser-Busch, Incorporated, St. Louis, Mo. Beer. 64,125; renewed July 23, 1927.

Archer, A. W., Co., Inc., New York, N. Y. Twine, rope, and cord. 227,218; May 3; Serial No. 241,597; published Feb. 22, 1927.

Argus Motoren Gesellschaft Jeannin & Co. Comm. Ges., to Argus Motoren Gesellschaft mit beschränkter Haftung, Berlin, Germany. Automobiles and parts thereof except rubber tires. 61,145; renewed Mar. 5, 1927.

Arnold, F. R., & Company, New York, N. Y. Toilet requisites—namely, face, toilet, and shampoo powders, rouges, face cream, etc. 227,212; May 3; Serial No. 240,946; published Feb. 22, 1927.

Asbestos Manufacturing Co., Huntington, Ind. Asbestos brake linings, brake blocks, clutch facings, and disks. 227,361; May 3; Serial No. 222,592; published Feb. 22, 1927.

Atkins, E. C., & Company, Indianapolis, Ind.; New York, N. Y.; Memphis, Tenn.; Atlanta, Ga.; Minneapolis, Minn.; Portland, Oreg.; Seattle, Wash.; San Francisco, Calif.; Chicago, Ill.; and Toronto, Canada, to E. C. Atkins & Company, Indianapolis, Ind. Tools for fitting saws. 64,324; renewed Aug. 6, 1927.

Atlantic Refining Company, Franklin and Philadelphia, Pa., to Atlantic Refining Company, Philadelphia, Pa. Lubricating oils. 61,283–4; renewed Mar. 12, 1927.

Auto Vacuum Products Co. (See La Pierre, Alexander J.)

Autotone Company, The, to Hardman, Peck & Co., New York, N. Y., successor. Piano players. 57,349; renewed Nov. 18, 1926.

Avolin Laboratories, Newark, N. J. Antiseptic and prophylactic dental preparation. 227,324; May 3; Serial No. 236,719; published Feb. 22, 1927.

Basck, Howard E., Chicago, Ill. Games such as indoor golf. 227,379; May 3; Serial No. 238,765; published Feb. 22, 1927.

Babbitt, B. T., Inc., New York, N. Y. Caustic soda. 227,310; May 3; Serial No. 240,164; published Feb. 22, 1927.

Bachman's, Inc., Reading, Pa. Pretzels. 227,207; May 3; Serial No. 240,841; published Feb. 15, 1927.

Barnett Bros., New York, N. Y. Men's and boys' dress, negligee, and work shirts. 227,352; May 3; Serial No. 241,257; published Feb. 15, 1927.

Barrell, William L., Co. of New York, Inc., New York, N. Y. Cotton piece goods, cotton duck, awning stripes in the piece, etc. 227,308; May 3; Serial No. 240,049; published Feb. 22, 1927;

Barthel, Fred P., doing business as Barthel Laboratories, New York, N. Y. Automobile and furniture polish. 227,431; May 3; Serial No. 241,767; published Feb. 15, 1927.

Barton Salt Company, The, Hutchinson, Kan. Feeding salt for stock. 227,253; May 3; Serial No. 227,561; published Feb. 22, 1927.

Bartons Bias Narrow Fabric Co., Bridgeport, Conn., and New York, N. Y. Bias bindings, bias fagoting braid, narrow elastic, narrow fabric trimmings, etc. 227,323; May 3; Serial No. 236,522; published Feb. 15, 1927.

Bay State Milling Company, Winona, Minn. Wheat flour. 65,135; renewed Sept. 10, 1927.

Beacon Manufacturing Co., Providence, R. I., to Beacon Manufacturing Company, New Bedford, Mass., and Providence, R. I. Blankets, comfortables, elderdown piece goods. 62,895; renewed May 28, 1927.

Beacon Oil Company, Boston, Mass. Lubricating oil. 227,353; May 3; Serial No. 241,258; published Feb. 15, 1927.

Bell, Warren E., Brasher Falls, N. Y. Butter. 227,331; May 3; Serial No. 240,337; published Feb. 22, 1927.

Bernstein, Charles, & Co., New York, N. Y. Watches, clocks, and their movements. 227,467; May 3.

Berwind White Coal Mining Company, to The Berwind-White Coal Mining Co., Philadelphia, Pa., successor. Coal. 60,916; renewed Feb. 26, 1927.

Binder, Benjamin, doing business as Binder Electric Supply Company, Trenton, N. J. Electric insulated wire, sockets, switches, etc. 227,450; May 3.

Binder, Benjamin, doing business as Binder Electric Supply Company, Trenton, N. J. Electric lighting fixtures. 227,451; May 3.

Black, William C., Lexington, Ky. Soap. 227,414; May 3; Serial No. 241,599; published Feb. 22, 1927.

Blair Manufacturing Company. (See Case, Adelbert B., assignor.)

Blass, Ferdinand M. E., doing business as Eastern American Association for Oxygen-Therapy, New York, N. Y. Rejuvenator and general tonic. 227,397; May 3; Serial No. 241,979; published Feb. 22, 1927.

Bleyer & Weinberg, New York, N. Y. Silk piece goods. 227,301; May 3; Serial No. 242,567; published Feb. 22, 1927.

Blood, J. B., Company, Lynn, Mass. Bread. 227,415; May 3; Serial No. 241,600; published Feb. 15, 1927.

Blue Valley Creamery Co., Chicago, Ill. Butter. 227,392; May 3.

Blue Valley Creamery Co., Chicago, Ill. Butter. 227,456; May 3.

Blumenthal, Sidney, & Co. Inc., New York, N. Y. Pile fabrics in the piece. 227,184; May 3; Serial No. 241,387; published Feb. 22, 1927.

Brill Brothers, New York, N. Y. Knit underwear. 64,190; renewed July 30, 1927.

Brody-Lewis Mfg. Company, Omaha, Nebr. Men's and boys' regular and knee length trousers, overalls, one-piece suits, children's play suits, and rompers. 227,194; May 3; Serial No. 241,470; published Feb. 15, 1927.

Brookes & Crookes, to Brookes & Crookes, Ld., Sheffield, England, successor. Cutlery. 63,404; renewed June 18, 1927.

Brown, G. Lance, Co., Inc., Huntingdon Valley, Pa. Pile cones and ointments for affections of the skin. 227,364; May 3; Serial No. 224,899; published Feb. 22, 1927

Bruckmann Co., The, Cincinnati, Ohio. Malt beverage. 227,449; May 3.

Brumer Bros., Clinton, Iowa, to T & T Company (Not Inc.), Chicago, Ill., successor. Solution for soldering and cleaning metals. 61,641; renewed Apr. 2, 1927.

Buegeleisen & Jacobson, New York, N. Y. Musical wind instrument. 227,371; May 3; Serial No. 238,009; published Feb. 15, 1927.

Bulte Mills. (See Kansas Flour Mills Corporation.)

Burdsal, A., Company, The, Indianapolis, Ind. Paste and ready-mixed paints. 227,454; May 3.

Burk, William C., Philadelphia, Pa. Medicines for the treatment and regulation of the stomach and bowels, etc. 61,698; renewed Apr. 2, 1927.

Burnett, Joseph, Company, Boston, Mass. Preparation for beautifying the complexion, for removing tan sunburn, freckles, etc. 227,174; May 3; Serial No. 242,392; published Feb. 22, 1927.

Burnett, Joseph, Company, Boston, Mass. Tooth wash. 227,175; May 3; Serial No. 242,393; published Feb. 22, 1927.

Burnett, Joseph, Company, Boston, Mass. Preparation for beautifying the complexion, etc. 227,176; Apr. 3; Serial No. 242,895; published Feb. 22, 1927.
Butcher, Charles F., to W. & S. Butcher Limited, Sheffield, England. Razors. 62,019; renewed Apr. 16, 1927.
Cadet Knitting Company, Philadelphia, Pa. Hosiery. 227,215; May 3; Serial No. 241,561; published Feb. 15, 1927.
Calico Printers' Association, Limited, The, Manchester, England. Cotton piece goods. 227,179; May 3; Serial No. 243,033; published Feb. 22, 1927.
California Bottling Works, doing business as California Bottling Co., Los Angeles, Calif. Beverages sold as soft drinks. 227,473; May 3.
California Oil Burner Company. (See Lyons, Inora M.)
Cammell Laird and Company, Limited, Sheffield, England. Steel and iron in bars, sheets, rods, rails, plates, and wire. 62,020–21; renewed Apr. 16, 1927.
Case, Adelbert B., assignor to Blair Manufacturing Company, Springfield, Mass. Lawn mowers. 65,256; renewed Sept. 17, 1927.
Casper, A. B., doing business as A. B. Casper & Company, Minneapolis, Minn. Potatoes. 227,366; May 3; Serial No. 237,404; published Jan. 25, 1927.
Cavalli, Tito L., Benicia, Calif. Buttermilk drink. 227,367; May 3; Serial No. 237,439; published Feb. 15, 1927.
Cellas', Inc., doing business as Labrocel Packing Co., Inc., New York, N. Y. Canned anchovies in salt. 227,317; May 3; Serial No. 234,895; published Feb. 22, 1927.
Central Radio Laboratories, Milwaukee, Wis. Variable resistance devices for regulating the volume output of sound of radio receiving sets. 227,327; May 3; Serial No. 236,867; published Feb. 15, 1927.
Chamberlain, Frank H., to Frank H. Chamberlain Co. Inc., Boston, Mass., successor. Headwear. 64,381; renewed Aug. 6, 1927.
Chandler & Price Company, The, Cleveland, Ohio. Paper cutters and paper-cutting machines and parts thereof, etc. 227,421; May 3; Serial No. 241,695; published Feb. 22, 1927.
Chapin & Gould Paper Company, Springfield, Mass. Writing and printing paper. 227,445; May 3.
Chapin-Sacks Corp., Washington, D. C., and Savannah, Ga. Carbonated water. 227,383; May 3; Serial No. 239,164; published Feb. 22, 1927.
Chesebrough Manufacturing Company, Consolidated, New York, N. Y. Petroleum-jelly preparations. 227,376; May 3; Serial No. 238,304; published Feb. 22, 1927.
Chicago Engineering Works Inc., Chicago, Ill. Educational texts in pamphlet form. 227,380; May 3; Serial No. 238,774; published Feb. 22, 1927.
Chicago Pneumatic Tool Company, New York, N. Y. Portable electric tools. 227,389; May 3.
Chicago Pneumatic Tool Company, New York, N. Y. Pneumatic tools and machinery. 227,390; May 3.
Chicago Pneumatic Tool Company, New York, N. Y. Pneumatic hammers, riveters, grinders, reamers, etc. 227,391; May 3.
Christy & Compy Limited, London, England. Headwear. 63,577; renewed June 25, 1927.
Cifuentes, Fernandez y Ca., assignor to Cifuentes, Pego y Compania, Habana, Cuba. Cigars. 60,514; renewed Feb. 12, 1927.
Cities Service Oil Company, Cleveland, Ohio. Gasoline, lubricating oils, and greases. 227,262; May 3; Serial No. 231,141; published Feb. 15, 1927.
Cohn & Rosenberger, Inc., New York, N. Y. Pins for adornment, necklaces, bracelets, bar pins, etc. 227,266; May 3; Serial No. 234,025; published Feb. 15, 1927.
Cole, H. C., Milling Company, Chester, Ill. Mill feeds. 227,195; May 3; Serial No. 241,473; published Feb. 15, 1927.
Colgate & Company, assignor to Colgate & Company, Jersey City, N. J. Soaps, perfumes, powders, and liquids. 30,566; renewed Sept. 21, 1927.
Collins, Julius G., Kansas City, Kans. Antifreeze composition. 227,236; May 3; Serial No. 239,397; published Feb. 22, 1927.
Colvin, Americus B., Bussey, Ark. Medical preparation for use in the treatment of chronic ulcers and sores. 227,471; May 3.
Conkey, G. E., Company, The, Cleveland, Ohio. Vitamine compound for poultry and livestock. 227,216; May 3; Serial No. 241,562; published Feb. 15, 1927.
Conover, C. E., Co., The, New York, N. Y. Dress shields, dress-shield brassières, made-up dress or waist linings. 227,375; May 3; Serial No. 238,249; published Feb. 1, 1927.
Corbett Brothers Co., New York, N. Y. Ribbons in the bolt or piece. 227,419; May 3; Serial No. 241,654; published Feb. 22, 1927.

Preparation for the treatment of rheumatism. Michigan Testing Laboratories. 227,382; May 3; Serial No. 238,987; published Feb. 22, 1927.
Preparation for the treatment of the hair and scalp. D. Mason. 227,377; May 3; Serial No. 238,328; published Feb. 22, 1927.
Preparation for use in the treatment of venereal diseases. F. Selvidge. 227,248; May 3; Serial No. 242,397; published Feb. 22, 1927.
Prophylactic against lues and gonorrhea. Sächsisches Serumwerk A. G. 227,173; Apr. 3; Serial No. 234,488; published Feb. 15, 1927.
Root-canal treatment, Permanent. Drs. Duncan & Langdon. 227,242; May 3; Serial No. 239,701; published Feb. 15, 1927.
Salt. Barton Salt Company. 227,253; May 3; Serial No. 227,561; published Feb. 22, 1927.
Salt, Table. Leslie-California Salt Co. 227,401; May 3; Serial No. 242,014; published Feb. 22, 1927.
Salve. Keystone Catarrh Remedy Co. 63,958; renewed July 16, 1927.
Soda, Caustic. B. T. Babbitt, Inc. 227,310; May 3; Serial No. 240,164; published Feb. 22, 1927.
Solution for soldering and cleansing metals. Brumer Bros. 61,641; renewed Apr. 2, 1927.
Specific for trench mouth, pyorrhea. Drs. Duncan & Langdon. 227,243; May 3; Serial No. 239,702; published Feb. 22, 1927.
Toilet requisites. F. R. Arnold & Company. 227,212; May 3; Serial No. 240,946; published Feb. 22, 1927.
Tonic. Munyon Remedy Co. 227,296; May 3; Serial No. 242,486; published Feb. 22, 1927.
Tonic, Rejuvenator and general. F. M. E. Blass. 227,397; May 3; Serial No. 241,979; published Feb. 22, 1927.
Tooth wash. Joseph Burnett Company. 227,175; May 3; Serial No. 242,893; published Feb 22, 1927.
Toothache drops. Poloris Company. 227,207; May 3; Serial No. 242,497; published Feb. 22, 1927.

CLASS 7.

Twine, rope, and cord. A. W. Archer Co. 227,218; May 3; Serial No. 241,597; published Feb. 22, 1927.

CLASS 8.

Pipes, Tobacco. J. L. Duncan. 227,468; May 3.

CLASS 10.

Fertilizers. Virginia-Carolina Chemical Company 61,315; renewed Mar. 12, 1927.

CLASS 11.

Pigment black, white, and colored stamping leaf to be used on a hot-stamping press. R. W. Grauert. 227,469; May 3.

CLASS 12.

Brick. Diatom Insulation Co. 227,461; May 3.

CLASS 14.

Steel and iron in bars, sheets, rods, rails, plates, and wire. Cammell Laird and Company. 62,020–21; renewed Apr. 16, 1927.

CLASS 15.

Candles. Smith & Nichols, Incorporated. 227,199; May 3; Serial No. 240,740; published Feb. 15, 1927.
Candles. Smith & Nichols, Incorporated. 227,200; May 3; Serial No. 240,745; published Feb. 15, 1927.
Gasoline, lubricating oils and greases. Cities Service Oil Company. 227,262; May 3; Serial No. 231,141; published Feb. 15, 1927.
Oil, Illuminating. Tide Water Oil Co. 65,205; renewed Sept. 10, 1927.
Oil, Lubricating. Beacon Oil Company. 227,353; May 3. Serial No. 241,258; published Feb. 15, 1927.
Oils, greases, plumbago, and graphite. Pure Oil Company. 60,667; renewed Feb. 19, 1927.
Oils, Lubricating. Atlantic Refining Company. 61,283–4; renewed Mar. 12, 1927.
Oils, Lubricating. Standard Oil Company. 227,238; May 3; Serial No. 239,431; published Feb. 15, 1927.
Petroleum and burning oils, Refined. Pure Oil Company. 59,829; renewed Jan. 22, 1927.
Petroleum products. De Laittre-Dixon Company. 227,294; May 3; Serial No. 242,475; published Feb. 15, 1927.
Petroleum, Refined. Gaither Oil Company. 227,378; May 3; Serial No. 238,370; published Feb. 15, 1927.

CLASS 16.

Liquid gloss, floor oil, and floor dressing. Standard Oil Company (New Jersey). 227,458; May 3.
Paints. Robt. Shoemaker & Co. 62,272; renewed Apr. 30, 1927.
Paints, Anticorrosive. Pyro Corrosanti Co. Inc. 227,372; May 3; Serial No. 238,073; published Feb. 15, 1927.
Paints, Dry, paste, and ready-mixed. J. Saks. 227,369; May 3; Serial No. 237,516; published Feb. 15, 1927.
Paints, Paste and ready-mixed. A. Burdsal Company. 227,454; May 3.
Pigments, Lead. Picher Lead Company. 63,340; renewed June 18, 1927.
Polish, Automobile and furniture. F. P. Barthel. 227,431; May 3; Serial No. 241,767; published Feb. 15, 1924.
White lead. Robt. Shoemaker & Co. 62,271; renewed Apr. 30, 1927.

CLASS 17.

Cigars. Cifuentes, Fernandez y Ca. 60,514; renewed Feb. 12, 1927.

CLASS 19.

Automobiles and parts thereof, except rubber tires. Argus Motoren Gesellschaft Jeannin & Co. Comm.-Ges. 61,145; renewed Mar. 5, 1927.
Bicycles. John Wanamaker. 30,346; renewed July 6, 1927.

CLASS 21.

Accumulators. A. Müller. 61,650; renewed Apr. 2, 1927.
B-battery eliminator. A. J. La Pierre. 227,370; May 3; Serial No. 237,868; published Feb. 15, 1927.
Electric floor-polishing machines. S. C. Johnson & Son. 227,213; May 3; Serial No. 240,977; published Feb. 15, 1927.
Electric insulated wire, sockets, switches, etc. B. Binder. 227,450; May 3.
Electric-lighting fixtures. B. Binder. 227,451; May 3.
Electric percolators, household stoves, grills, waffle irons, etc. Hartman Furniture & Carpet Co. 227,460; May 3.
Electric storage batteries and parts thereof. Acme Battery Manufacturing Company. 227,211; May 3; Serial No. 240,898; published Feb. 15, 1927.
Electric tools, Portable. Chicago Pneumatic Tool Company. 227,389; May 3.
Electrical receptacles, cable connecters, switches, etc. Russell & Stoll Company. 227,210; May 3; Serial No. 240,880; published Feb. 15, 1927.
Electrically-illuminated panel for displaying house numbers, etc. G. Meyer, jr. 227,384; May 3; Serial No. 239,186; published Feb. 15, 1927.
Motor brushes and brushes for dynamos. Morgan Crucible Co. Limited. 62,799; renewed May 28, 1927.
Radiofrequency coils. Daven Radio Corporation. 227,354; May 3; Serial No. 241,264; published Feb. 15, 1927.
Radio receiving sets and parts thereof. Paul Goldstein & Co. Inc. 227,436; May 3; Serial No. 203,034; published Feb. 15, 1927.
Radio receiving sets, Variable resistance devices for regulating the volume output of sound of. Central Radio Laboratories. 227,327; May 3; Serial No. 236,867; published Feb. 15, 1927.

CLASS 22.

Baits, Artificial. James Heddon's Sons. 227,405; May 3; Serial No. 242,127; published Feb. 22, 1927.
Cards, Playing. Whitman Publishing Co. 227,429; May 3; Serial No. 241,758; published Feb. 22, 1927.
Coasters and sleds, Roller. F. Wissig. 227,412; May 3; Serial No. 242,328; published Feb. 22, 1927.
Fishing line. Enterprise Manufacturing Company. 227,409; May 3; Serial No. 242,286; published Feb. 22, 1927.
Games such as indoor golf. H. F. Baack. 227,379; May 3; Serial No. 238,765; published Feb. 22, 1927.
Rattles, dolls, doll toilet sets, etc., Baby. Zadek Feldstein Co. 227,192; May 3; Serial No. 241,457; published Feb. 22, 1927.

CLASS 23.

Bits and augers. Irwin Auger Bit Company. 65,244; renewed Sept. 17, 1927.
Cutlery. Brookes & Crookes. 63,404; renewed June 18, 1927.
Cutters and paper-cutting machines and parts thereof, etc., Paper. Chandler & Price Company. 227,421; May 3; Serial No. 241,695; published Feb. 22, 1927.
Grinders, Feed. Spartan Manufacturing Co. 60,987; renewed Feb. 26, 1927.
Hammers, riveters, grinders, reamers, etc., Pneumatic. Chicago Pneumatic Tool Company. 227,391; May 3.
Injectors for stationary and locomotive steam boilers. Ohio Injector Co. 61,712; renewed Apr. 2, 1927.
Knife and cork puller, Combination. Greist Manufacturing Company. 227,337; May 3; Serial No. 240,602; published Feb. 22, 1927.
Machines for manufacturing cattle cake. Richard Sizer, Limited. 227,244; May 3; Serial No. 239,724; published Feb. 22, 1927.
Motors, Fuel-mixing gas savers for internal-combustion. H. Freund. 227,423; May 3; Serial No. 241,713; published Feb. 22, 1927.
Mowers, Lawn. A. B. Case. 65,256; renewed Sept. 17, 1927.
Mowers, Lawn-mower parts, and grass catchers, Lawn. Simmons-Hardware Company. 65,365; renewed Sept. 24, 1927.
Razors. C. F. Butcher. 62,019; renewed Apr. 16, 1927.
Saws. George Worthington Company. 63,020; renewed June 4, 1927.

Separators and parts belonging thereto, Centrifugal liquid. Aktiebolaget Selenius' Werkstäder. 59,591; renewed Jan. 15, 1927.
Tools and machinery, Pneumatic. Chicago Pneumatic Tool Company. 227,390; May 3.
Tools for fitting saws. E. C. Atkins & Company. 64,334; renewed Aug. 6, 1927.
Tools, Hand and mechanics'. Winsted Edge Tool Works. 227,246; May 3; Serial No. 239,838; published Jan. 18, 1927.
Waxing, polishing, and scrubbing machines, etc., Floor. The Floorola Corporation. 227,196; May 3; Serial No. 241,477; published Feb. 22, 1927.

CLASS 25.

Padlocks, door locks, furniture locks, latches, and bolts. F. W. Lilling. 227,356; May 3; Serial No. 216,275; published June 22, 1926.

CLASS 26.

Eyeglass and spectacle frames. Shur-On Standard Optical Co. 227,219; May 3; Serial No. 242,755; published Feb. 22, 1927.
Indicating and recording the temperature and consistency of plastics, Devices for. J. H. Day Company. 227,336; May 3; Serial No. 240,597; published Feb. 22, 1927.
Lenses, blanks for lenses, projection lenses, etc., Opthalmic. American Optical Company. 227,193; May 3; Serial No. 241,461; published Feb. 22, 1927.
Measuring work pieces, screws, sheet metals, wires, etc., Instruments for. C. Zeiss. 227,288; May 3; Serial No. 194,846; published Feb. 22, 1927.
Objectives. C. Zeiss. 227,285–7; May 3; Serial Nos. 194,843–5; published Feb. 22, 1927.
Refractory materials, Articles made of. Morgan Crucible Company. 64,341; renewed Aug. 6, 1927.
Telescopes. C. Zeiss. 227,280–1; May 3; Serial Nos. 194,838–9; published Feb. 22, 1927.
Telescopes. C. Zeiss. 227,284; May 3; Serial No. 194,842; published Feb. 22, 1927.
Telescopes and field glasses. C. Zeiss. 227,275–9; May 3; Serial Nos. 194,833–7; published Feb. 22, 1927.
Telescopes, field glasses. C. Zeiss. 227,282–3; May 3; Serial Nos. 194,840–1; published Feb. 22, 1927.

CLASS 27.

Watches. Dueber-Hampden Watch Company. 227,182; May 3; Serial No. 241,330; published Feb. 15, 1927.
Watches. Franklin Simon & Co. Inc. 227,313; May 3; Serial No. 240,245; published Feb. 15, 1927.
Watches, clocks, and their movements. Charles Bernstein & Co. 227,467; May 3.

CLASS 28.

Gold and silver plated metal novelties. Weidlich Bros. Mfg. Co. 227,462; May 3.
Jewelry. Geo. O. Street & Sons. 64,447; renewed Aug. 6, 1927.
Necklaces, pendants, bracelets, etc. Franklin Simon & Co. Inc. 227,314; May 3; Serial No. 240,248; published Feb. 15, 1927.

Chromium plate. Vacuum Can Company. 243,681; May 3.
Cork material. Armstrong Cork Company. 243,409; May 3.
Stepladders and stepladder stools. J. R. Clark Company. 241,927; May 3.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 3D DAY OF MAY, 1927.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abernethy, James L., Park Ridge, and L. E. Mumbower, Chicago, Ill. Wrench. 1,627,003; May 3.
Ackeret, Herbert, assignor to The Massillon-Cleveland-Akron Sign Company, Massillon, Ohio. Display Stand. 1,626,711; May 3.
Ackerman, William, Towners, N. Y., assignor to Mergenthaler Linotype Company. Typographical machine. 1,626,773; May 3.
Acme Can Company. (See Wright, William E., assignor.)
Adams, William H., assignor to Eastern Finishing Works, Inc., Kenyon, R. I. Printed fabric. Des. 72,539; May 3.
Agee, George S., Longview, Wash. Vine lifter. 1,626,712; May 3.
Ahlm, Charles E. F., East Cleveland, assignor to Automotive Patent Holding Company, Cleveland, Ohio. Transmission gearing. 1,627,368; May 3.
Ailes, George H., Philadelphia, Pa. Display easel. 1,627,133; May 3.
Akron Standard Mold Company. (See Galvin, Wade S., assignor.)
Aktiebolaget Vaporackumulator. (See Bäckström, Sigurd M., assignor.)
Alber, Walyer L., Chicago, Ill. Hollow tile partition tie piece. 1,626,589; May 3.
Albesaard, Joseph, Paris, France. Aeroplane. 1,627,004; May 3.
Alcorn, William B., Detroit, Mich. Packing strip for shipping materials. 1,627,223; May 3.
Alexander, Carl Z. and E. S., Newark, N. J., assignors, by mesne assignments, to E. C. Seward, Jersey City, N. J. Sectional steam boiler. 1,627,530; May 3.
Alexander, Earl S. (See Alexander, Carl and E. S.)
Alexander, Herbert, and A. Ambery, Leeds, England. Apparatus for the electric heat treatment of wire, strip, and the like. 1,626,713; May 3.
Allalouf, Vital, New York, N. Y. Ash tray or article of similar nature. Des. 72,540; May 3.
Allan, William G., Toronto, Ontario, Canada, assignor, by mesne assignments, to F. G. Clark. Welding and product thereof. 1,626,774; May 3.
Allen, Frederick C., Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Milling machine. 1,626,590; May 3.
Allen, Fred W., Kingston, Tenn. Steam-pressure cooker. 1,627,005; May 3.
Allen, Groavenor N., Oneida, N. Y. Pot or similar article. Des. 72,541; May 3.
Allmanna Svenska Elektriska Aktiebolaget. (See Booth, Adolf, assignor.)
Almquist, Milton L. (See Demarest, C. S. and Almquist.)
American Car and Foundry Company. (See Willoughby, Victor, assignor.)
American Cyanamid Company. (See Bierman, H. C., and Speirs, assignors.)
American Electric Fusion Corporation. (See von Henke, Edmund J., assignor.)
American Lakes Paper Company. (See Seaborne, Charles R., assignor.)
American Manganese Steel Company. (See Estes, Clarence H., assignor.)
American Meter Company. (See Kerstein, Ernest A., assignor.)
American Mills Co., The. (See Smith, Julius B., assignor.)
American Multigraph Company, The. (See Hult, John A., assignor.)
American Multigraph Company, The. (See Kline, Victor H., assignor.)
American Safety Razor Corporation. (See Kaufman, Joseph, assignor.)
American Sales Book Company. (See Pringle, William A., assignor.)
American Steel Foundries. (See Lamont, John A., assignor.)
American Telephone and Telegraph Company. (See Demarest, C. S. and Almquist, assignors.)
American Telephone and Telegraph Company. (See Herman, Joseph, assignor.)
American Telephone and Telegraph Company. (See Martin, William H., assignor.)
American Telephone and Telegraph Company. (See Nyquist, Harry, assignor.)
Ames, Adelbert, jr., Tewksbury, Mass. Photograph and making the same. 1,626,591; May 3.
Andersen, Niels C., assignor to The Goss Printing Press Company, Chicago, Ill. Cylinder for printing presses. 1,626,592; May 3.

Anderson, Carl E., Stratford, assignor to The Bryant Electric Company, Bridgeport, Conn. Electric switch. 1,627,304; May 3.
Anderson, Charles O., Omaha, Nebr. Load-adjusted brake mechanism. 1,627,305; May 3.
Anderson, Homer G., East Orange, N. J., assignor to Westinghouse Lamp Company. Manufacture of incandescent lamps. 1,626,658; May 3.
Andrade, Cipriano, jr., New York, N. Y. Differential. 1,626,907; May 3.
Anglemyer, Carl M., Dayton, and W. P. Coffman, Dunkirk, assignors to The Edgemont Machine Company, Dayton, Ohio. Clutch. 1,627,006; May 3.
Antoncich, Frederick A., Brooklyn, N. Y. Boat-launching device. 1,626,714; May 3.
Antonelli, Orazio, Brooklyn, N. Y., assignor, by mesne assignments, to Recreator Phonograph Corporation, Boston, Mass. Projecting machine. 1,627,134; May 3.
Appelian, Henri G., and J. J. Van Horen, London, assignors of one-half to E. J. Walker, Leicester, England. Frame for bicycles. 1,626,775; May 3.
Archer, Earl W., Cambridge, Ohio. Light-control system. 1,627,474; May 3.
Archer, Robert G., jr. (See Archer, Robert G., sr., and R. G., jr.)
Archer, Robert G., sr., and R. G. Archer, jr., Fort Washington, Pa. Flag holder for automobile radiators. Des. 72,542; May 3.
Ario, Rudolf, Brooklyn, N. Y. Moving van. 1,627,135; May 3.
Armstrong, Frederick A., Sawtelle, Calif. Muffler cut-out. 1,626,908; May 3.
Arnold, Carl, Nuremberg, Germany. Motor mechanism for toy boats. 1,627,078; May 3.
Arnold, Enos F., Long Beach, Calif. Inclinometer. 1,627,136; May 3.
Artistic Brass & Bronze Works, Inc. (See Poritz, Frederick M., assignor.)
Asherman, Max, New York, N. Y. Attachment for ladies' bags. 1,627,224; May 3.
Au, Carl H., assignor of one-half to J. C. Hoyt, Washington, D. C. Current meter. 1,626,715; May 3.
Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Electrical conductor with reenforcing core. 1,626,776; May 3.
Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. High-potential conductor. 1,626,777; May 3.
Austin, Bascum O., Wilkinsburg, and W. G. Horn, Bryn Mawr Farms, Pa., assignors to Westinghouse Electric & Manufacturing Company. Control apparatus. 1,626,659; May 3.
Automatic Electric Inc. (See Gardner, John E., assignor.)
Automatic Electric Inc. (See Hudd, A. E., and Bound, assignors.)
Automotive Patent Holding Company. (See Ahlm, Charles E. F., assignor.)
Averill Mfg. Co. (See Hopf, Rudolph A., assignor.)
Ayer, Louis H., Chicago, Ill. Bonding pin. 1,626,909; May 3.
Babel, Elmer H., Oakland, and R. L. Owen, Venice, Calif.; said Babel assignor to said Owen. Four-wheel equalized traction unit. 1,627,225; May 3.
Bäckström, Sigurd M., assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden. Internal-combustion locomotive. 1,627,226; May 3.
Baily, Milner B., Dunlap, Ill. Scrubbing machine. 1,627,263; May 3.
Baird, Frank T., Blue Island, Ill., assignor to French Battery & Carbon Company, Madison, Wis. Electric lantern battery. 1,627,264; May 3.
Baker, Erle K., assignor to Baker Wheel & Rim Company, Chicago, Ill. Vehicle wheel. 1,627,369; May 3.
Baker, Mark, Boston, England. Apparatus for cutting lard, butter, or margarine. 1,627,007; May 3.
Baker Wheel & Rim Company. (See Baker, Erle K., assignor.)
Balke, Paul, and G. Leymieffer, Troisdorf, Germany. Phonographic record. 1,627,227; May 3.
Balmer, John H., Maplewood, N. J. Combination bathroom fixture. Des. 72,543; May 3.
Balmer, John H., Maplewood, N. J. Combination bathroom fixture. Des. 72,544; May 3.
Balph, Wilmer G., East Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company. Switchboard. 1,626,660; May 3.

Bamford, Frank L., assignor to C. M. Hall Lamp Company, Detroit, Mich. Lamp catch. 1,626,593; May 3.
Bancel, Paul A., Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J. Surface condenser. 1,627,265; May 3.
Barber Asphalt Company, The. (See Browne, Frank A., assignor.)
Barbour, Garland I., Akron, Ohio. Lavatory. 1,627,475; May 3.
Barker, Leonard C., Edgewater, N. J. Mechanical toy baseball. 1,626,778; May 3.
Barnell, David O. (See Bertschy, Adolph J. P., assignor.)
Barnes, E. H. (See Effley, Michael P., assignor.)
Barr, Marshall E., Franklin Park, Ill. Variable-pressure track brake. 1,627,137; May 3.
Barrett, John H., New York, N. Y. Stationary-washtub cover-holding device. 1,627,476; May 3.
Bartenfeld, Wilford G., Lorain, Ohio. Channel and plate construction for vessels. 1,626,716; May 3.
Bartter, Stephen H., Kingston-on-Thames, England. Means or device for the retention of bedclothes. 1,627,008; May 3.
Barwood, V. H., Manufacturing Co. (See De Witt, Charles E., assignor.)
Bassett, Walter B. (See Lottman, Edward J., assignor.)
Bastien, Paul, and C. S. Crawford, assignors to F. E. Moskovics, Indianapolis, Ind. Automobile radiator. Des. 72,545; May 3.
Bauer-Stuart Company, The. (See Stuart, Harve R., assignor.)
Baumgärtner, Dr. Katz & Co., G. m. b. H. (See Lechthaler, Robert, assignor.)
Bausman, Alonzo L., assignor to National Equipment Company, Springfield, Mass. Starch-molding apparatus. 1,627,138; May 3.
Bayer, Herman K., and H. J. Epstein, St. Louis, Mo. Brake construction for sole-cutting machines. 1,627,370; May 3.
Beale, Frank A., assignor of one-half to Muhleman & Kayhoe, Incorporated, Richmond, Va. Roof tile and making the same. 1,627,266; May 3.
Beam, Aron M., Denver, Colo., deceased; L. J. Beam, administrator. Continuously-operating ore or ore-shale converting retort furnace. 1,627,538; May 3.
Beam, Leroy J., administrator. (See Beam, Aron M.)
Bearings Company of America, The. (See Chambers, David F., assignor.)
Becker, Fred, Buffalo, assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,626,779; May 3.
Beckett, Ivan, New York, N. Y. Filing and indexing apparatus. 1,626,661; May 3.
Beckett, Laycock & Watkinson Limited. (See Hirst, Charles E., assignor.)
Beesch, Hazel O., et al., administrators. (See Owens, Michael J.)
Belding, George A. (See Bickell William G., assignor.)
Bell, John E. (See Isom, E. W., and Bell.)
Bellinger, Earl W., et al. (See Rouse, George M., assignors.)
Berg, John, assignor to Metal Specialties Manufacturing Company, Chicago, Ill. Electric connecter. 1,627,306; May 3.
Bernard, William A., assignor to The William Schollhorn Company, New Haven, Conn. Hand tool. 1,627,307; May 3.
Bernier, Anselme, Biddeford, Me. Threading device for shuttles. 1,627,308; May 3.
Bernitz Furnace Appliance Company. (See Snow, Benjamin H., assignor.)
Berry, Leslie G., Charlotte, N. C. Constructing fireproofing buildings. 1,627,009; May 3.
Bertschy, Adolph J. P., Plattsmouth, assignor to D. O. Barnell, Omaha, Nebr. Auxiliary charge-forming means for internal-combustion engines. 1,627,139; May 3.
Bethel, Claude, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Truck-motor-frame suspension. 1,626,662; May 3.
Bickell, William G., assignor of one-half to G. A. Belding, Pittsburgh, Pa. Roofing clip. 1,626,780; May 3.
Bierce, Fred N., Cincinnati, Ohio. Guard for guys and the like. 1,627,423; May 3.
Bierman, Harry C., New Rochelle, and G. W. Speirs, Glendale, N. Y., assignors to American Cyanamid Company, New York, N. Y. Ammonia cylinder cap. 1,627,371; May 3.
Bindemann, George H., Wauseon, Ohio. Poultry fountain. 1,627,140; May 3.
Binder, Christian, Pittsburgh, Pa. Brick-ice-cream container. 1,627,424; May 3.
Birnie Paper Company. (See Collins, George E. P., assignor.)
Black, Edward F., Tulsa, Okla., assignor to Black, Sivalls & Bryson Mfg. Co., Kansas City, Mo. Leak-tight sectional tank. 1,627,309; May 3.
Black, Sivalls & Bryson Mfg. Co. (See Black, Edward F., assignor.)
Blackston, Edward A., assignor to Lovic R. Gilbert, Raleigh, N. C. Weft-replenishing mechanism for looms of more than one shuttle. 1,627,310; May 3.
Blackwell, William T. (See Robinson, G. P., and Blackwell.)
Blair, James C., et al., administrators. (See Owens, Michael J.)
Blair, Robert S., Sound Beach, and B. D. Wells, Danbury, Conn.; said Wells assignor to said Blair. Apparatus for truing car wheels. 1,627,074; May 3.
Bliss Containers, Inc. (See Bliss, Herbert R., assignor.)
Bliss, Herbert R., assignor to Bliss Containers, Inc., Niagara Falls, N. Y. Assembling fiber shipping cases. 1,627,311; May 3.
Block, David J., assignor to W. Stein, Chicago, Ill. Flour improver and process of manufacture. 1,626,910; May 3.
Blume, Henry, and G. B. Streitz, Jordan, Minn. Valve and cage puller. 1,627,477; May 3.
Blust, Christian, St. Albans, W. Va. Automatic safety cut-off for gas valves. 1,627,312; May 3.
Boddeker, Albert, Chicago, Ill. Oil burner. 1,627,267; May 3.
Boehringer, C. H., Sohn Chemische Fabrik. (See Häussler, Alfred, assignor.)
Boelter, Hugo. (See Koegle, John G., assignor.)
Bogan, Hans, Springfield, Ill. Egg preserver. 1,627,141; May 3.
Bogart, Frank S. V. (See Spengler, George H., assignor.)
Bohn Aluminum and Brass Corporation. (See Eggenweiler, C. W., and Fiegel, assignors.)
Bolton, Earl, and F. D. Bolton, Tulsa, Okla. Stone-cutting machine. 1,627,142; May 3.
Bolton, Floyd D. (See Bolton, Earl and F. D.)
Bonchina, Frank, Cairnbrook, Pa. Planting machine. 1,627,143; May 3.
Bonsall, Charles D., assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 1,627,372; May 3.
Bonsall, Charles D., Pittsburgh, assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 1,627,373; May 3.
Boone, Edgar H., and J. W. Cook, Santa Rita, N. Mex. Sash latch. 1,627,478; May 3.
Booraem, John F. (See Sutphen, Robert M., assignor.)
Bosserdet, Alfred E., assignor of one-half to E. Hunter, Detroit, Mich. Plumb bob. 1,626,717; May 3.
Bosshardt, Edwin, Berlin-Tempelhof, Germany. Open-hearth furnace. 1,627,425; May 3.
Bosworth, George P., assignor to Hemphill Company, Central Falls, R. I. Yarn or thread feeding mechanism for spring-needle machines. 1,626,781; May 3.
Boulton, George, Rochester, N. Y. Attachment for sewing machines. 1,627,228; May 3.
Bouma, Benjamin T., Lynnville, Iowa. Poultry roost. 1,627,268; May 3.
Bound, Arthur F. (See Hudd, A. E., and Bound.)
Bowe, Thomas A., Milwaukee, Wis. Safety clutch-releasing device. 1,627,313; May 3.
Boynton, Oliver R., Kansas City, Mo. Egg beater. 1,627,314; May 3.
Boynton Oliver R., Kansas City, Mo. Beater or mixer. 1,627,315; May 3.
Brace, Porter H., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company. Temperature-controlling system. 1,626,663; May 3.
Brach, Frances, administratrix. (See Brach, Henry E., assignor.)
Brach, Henry E., deceased, Valparaiso, Ind.; F. Brach, administratrix. Soldering iron. 1,626,911; May 3.
Brady, Edward J., assignor to The W. G. I. Contracting Company, Philadelphia, Pa. Purifying illuminating gas. 1,626,664; May 3.
Brand, Albert, Munich, Germany. Machine for printing ampulle. 1,626,912; May 3.
Bredig, Georg, and E. Elöd, Karlsruhe, assignors to the Firm of Rudolph Koepp & Co., Oestrich-on-the-Rhine, Germany. Production of hydrocyanic acid. 1,627,144; May 3.
Breed, Ralph S., Lynn, Mass. Golf-tee holder. 1,627,145; May 3.
Briggs, Arthur M., Andrade, Calif. Toy horse or novelty. 1,627,426; May 3.
Briggs Manufacturing Company. (See Maise, Herman C., assignor.)
Bronson, Adelbert E., assignor to The Dill Manufacturing Company, Cleveland, Ohio. Dust-cap construction. 1,627,374; May 3.
Brookes, Arthur J. C., Bridgnorth, England. Adjustable limit gauge. 1,627,146; May 3.
Brooks, Robert, Ashton-on-Mersey, England, assignor to Westinghouse Electric & Manufacturing Company. Relay. 1,626,665; May 3.
Brooks, Stephen H., assignor to The Oil Conservation Engineering Company, Cleveland, Ohio. Swing-pipe mechanism. 1,626,782; May 3.
Brown, Colin, assignor to The E. C. Brown Company, Rochester, N. Y. Pump handle for fire extinguishers or similar articles. Des. 72,546; May 3.
Brown, E. C., Company, The. (See Brown, Colin, assignor.)
Brown, Fred A., Los Angeles, Calif. Signal. 1,626,913; May 3.
Brown, William A., Philadelphia, Pa. Combination blower and heater 1,627,229; May 3.
Brown, William H., Cleveland, Ohio, assignor to Dryden Rubber Company. Machine for placing washers on upstanding pins. 1,626,914; May 3.
Browne, Frank A., Wayne, assignor to The Barber Asphalt Company, Philadelphia, Pa. Building construction and the like. 1,627,581; May 3.
Browne, Vere B., Brackenridge, Pa. Making magnetic alloys. 1,627,269; May 3.

Bros, Jake M., New Effington, S. Dak. Corn planter with one wheel support. 1,626,594; May 3.
Bruninga, John H., trustee. (See Deemar, Henry V., assignor.)
Bryan Screw Machine Products Company, The. (See Fisher, Frank C., assignor.)
Bryant Electric Company, The. (See Anderson, Carl E., assignor.)
Bucknam, Frank C., New Orleans, La. Shrimp-shelling machine. 1,627,479; May 3.
Budd Wheel Company. (See Nelson, Emil A., assignor.)
Budd Wheel Company. (See Ragsdale, Earl J. W., assignor.)
Buettner, T., & Co. (See Drummond, Katherine L., assignor.)
Bumington, Edwin C., assignor to U. S. Bobbin & Shuttle Company, Manchester, N. H. Apparatus for making rings. 1,626,915; May 3.
Burke, Charles E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilization of plastics. 1,626,916; May 3.
Burnham, John A., Marblehead, Mass. Representing cascades in landscapes. 1,627,270; May 3.
Burns, George J., Youngstown, Ohio. Thermal gasifying motor construction. 1,626,783; May 3.
Burrows, Fred A., York, Pa. Steam trap. 1,627,271; May 3.
Busch-Sulzer Bros.-Diesel Engine Co. (See Schneider, Rudolph, assignor.)
Butler, Jay H., Newark, Ohio. Transmission control. 1,626,718; May 3.
Cable Company, The. (See Collignon, William C., assignor.)
Cable, Frank T., New London, assignor to Electric Boat Company, Groton, Conn. Reversible internal-combustion engine. 1,627,816; May 3.
Cadwell, Sidney M., Leonia, N. J., assignor to The Naugatuck Chemical Company. Rubber deterioration retarder and process of making. 1,626,784; May 3.
Cadwell, Sidney M., Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn. Preparing a reaction product of acetaldehyde and aniline. 1,627,230; May 3.
Caffray, William E., assignor to Nashua Manufacturing Company, Nashua, N. H. Blanket printing process and machine. 1,626,595; May 3.
Callison, Claud, Loyal, Okla. Speed wrench. 1,626,719; May 3.
Camel Company. (See Wasberg, A., and Darrow, assignors.)
Campbell, Sterling H., assignor to Railway Devices Company, St. Louis, Mo. Nut lock. 1,626,596; May 3.
Campbell, William B., Montreal, Quebec, Canada. Freeness tester for pulp. 1,627,010; May 3.
Cantor, Ruban, assignor to Royal Glass Works, Brooklyn, N. Y. Unloading device. 1,626,597; May 3.
Caracristi, Virginius E., Bronxville, N. Y. Steam-engine operation. 1,627,075; May 3.
Caracristi, Virginius E., Bronxville, N. Y. Valve cut-off and speed indicator. 1,627,076; May 3.
Carlson, Eric V. (See Pecina, R. F., and Carlson.)
Carlson, Frederick O., Hopewell, Va., assignor to Mayhew Steel Products Company, Incorporated, Shelburne Falls, Mass. Cutter, mill, or the like. 1,626,598; May 3.
Carolin, Samuel. (See Quigan, F. J., and Carolin.)
Carrier Engineering Corporation. (See Lewis, Lee L., assignor.)
Carter, Mitchell, Salt Lake City, Utah, assignor to Thermic Generating Company. Oil burner. 1,626,785; May 3.
Carthew, John W., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Test gauge. 1,626,599; May 3.
Carvalho, Leslie R. N., assignor to The Closure Service Company, Toledo, Ohio. Receptacle closure. 1,626,917; May 3.
Carvalho, Leslie R. N., assignor to The Closure Service Company, Toledo, Ohio. Receptacle closure. 1,626,918; May 3.
Case, Arthur F., assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio. Car dumper. 1,627,375; May 3.
Case, J. I., Threshing Machine Company. (See MacGregor, Wallace F., assignor.)
Casparis, William A., et al. (See Harding, Joseph G., assignor.)
Chaffee, Emory L., Belmont, assignor to J. H. Hammond, jr., Gloucester, Mass. Detector and controlling the same. 1,627,231; May 3.
Chandler & Price Company, The. (See Root, Charles F., assignor.)
Chambers, David F., assignor to The Bearings Company of America, Lancaster, Pa. Ball retainer for ball bearings. 1,627,232; May 3.
Chambers, Ralph W. (See Greenway, M. E., and Chambers.)
Chayes Dental Instrument Corporation. (See Chayes, Herman E. S., assignor.)
Chayes, Herman E. S., assignor to Chayes Dental Instrument Corporation, New York, N. Y. Making dental attachments. 1,626,720; May 3.
Christian, Arthur T., Glenview, Ill. Combination dust cap and lock nut. 1,627,480; May 3.
Citron, William J., assignor to The Trailograf Company, Inc., San Francisco, Calif. Film attachment for motion-picture projectors. 1,626,786; May 3.
Clancy, John F. (See Dunlop, J., and Clancy.)
Clapp, Lewis J., Claremont, N. H., assignor to Sullivan Machinery Company. Lifting mechanism for railway cars. 1,627,481; May 3.
Clark, Dolph M., Portland, Oreg. Coffee-urn attachment to automatically measure more than one substance simultaneously to deliver a combined uniform volume. 1,627,147; May 3.
Clark, Farley G. (See Allen, William G., assignor.)
Clark, James L., Corn Creek, Ky. Button. Des. 72,547; May 3.
Clark, Le Roy B., Waterbury, Conn. Smoke shield. 1,627,482; May 3.
Clarke-Moore Corporation. (See Moore, Arlington, assignor.)
Clauberg, Herman P., Hasbrouck Heights, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y. Folding delivery. 1,626,600; May 3.
Clausing, George, assignor to The Vulcan Last Company, Portsmouth, Ohio. Last. 1,627,272; May 3.
Clay Equipment Corporation. (See Obele, George, assignor.)
Claybourn, Leslie W., Milwaukee, Wis. Inking mechanism for printing machinery. 1,627,483; May 3.
Clement, Edward E. (See Hoge, J. B., and Clement.)
Clement, George A., mount Vernon, N. Y. Marking fused bifocal lenses for identification. 1,627,148; May 3.
Clement, Hans, New York, N. Y., assignor to General Optical Co., Inc. Optical diagnostic instrument. 1,626,601; May 3.
Clermont Machine Co. (See Surico, Carmine, assignor.)
Cline, Delbert E. (See Coffin, C. G., and Wolf, assignors.)
Closure Service Company, The. (See Carvalho, Leslie R. N., assignor.)
Coffin, Charlie G., and J. A. Wolf, assignors of one-third to D. E. Cline, Elgin, Okla. Plug for lubricant inlets. 1,627,378; May 3.
Coffman, William P. (See Anglemyer, C. M., and Coffman.)
Cohn, Jacob, New York, N. Y., assignor, by mesne assignments, to Nonexplosive Corporation of America (New Corporation). Safety attachment for tanks. 1,626,721; May 3.
Colader Company, The. (See Newdick, Norton A., assignor.)
Cole, Leon J., Greenville, Pa. Accelerator pedal. 1,626,722; May 3.
Coleman, John P., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-braking apparatus. 1,626,918; May 3.
Coleman, John P., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-car retarder. 1,626,920; May 3.
Colladay, Edward F. (See Hoge, J. B., and Clement, assignors.)
Collignon, William C., assignor to The Cable Company, Chicago, Ill. Pneumatically-operated musical instrument. 1,627,011; May 3.
Collins, George E. P., assignor to Birnie Paper Company, Springfield, Mass. Apparatus for lining envelopes. 1,627,149; May 3.
Comay, Salmen. (See Morrell, J. C. and Comay.)
Conley, John E. (See Marden, J. W., Thomas, and Conley.)
Conner, Frank S., et al. (See Frengle, F., and Roban, assignors.)
Conrader, Rudolph, Erie, Pa. Pump-control mechanism. 1,627,376; May 3.
Consolidated Car Heating Company. (See Hynes, Lee P., assignor.)
Constant, C. L., Company. (See Stewart, Alexander, assignor.)
Cook, Charles L., Louisville, Ky. Gas or vapor engine, particularly steam engine. 1,627,427; May 3.
Cook, John W. (See Boone, E. H., and Cook.)
Cook, Thomas R., Scranton, Pa. Car underframe. 1,627,484; May 3.
Cooper, William D., Palmyra, Mo. Loading machine. 1,627,485; May 3.
Copeland, Robert J., Toronto, Ontario, Canada. Golf tee. 1,627,012; May 3.
Corey, Arthur R. (See Mentzer, Claude E., assignor.)
Corlett, Edwin H., East Cleveland, Ohio. Method and apparatus for effecting opitcal projections. 1,626,787; May 3.
Costello, Rose M., et al., executors. (See Costello, Thomas H.)
Costello, Rose M., trustee. (See Costello, Thomas H., assignor.)
Costello, Thomas H., deceased, Chicago, Ill.; R. M. Costello and W. E. Costello, executors, assignors to R. M. Costello, trustee. Hinge. 1,627,274; May 3.
Costello, Thomas H., deceased, Chicago, Ill.; R. M. Costello and W. E. Costello, executors, assignors to R. M. Costello, trustee. Friction hinge. 1,627,275; May 3.
Costello, Thomas H., deceased, Chicago, Ill.; R. M. Costello and W. E. Costello, executors, assignors to R. M. Costello, trustee. Map rack. 1,627,276; May 3.
Costello, William E., et al., executors. (See Costello, Thomas H.)

Cowie, John, Sutherland, Saskatchewan, Canada. Stovepipe damper. 1,627,013; May 3.
Cox, Burton K., Jacksonville, Fla. Combined bumper and jack. 1,627,317; May 3.
Cox, Robert N. (See Griffey, Dinney F., assignor.)
Craig, Andrew, Motutapu Island, New Zealand. Plow colter. 1,627,277; May 3.
Craig, Robert F. (See Hornbuckle, W. P., and Craig.)
Cramer, Stuart W., Cramerton, and W. B. Hodge, assignors to Wm. B. Hodge Company, Charlotte, N. C. Humidifier. 1,626,666; May 3.
Cramer, Stuart W., Cramerton, and W. B. Hodge, assignors to Wm. B. Hodge Company, Charlotte, N. C. Humidifier. 1,626,667; May 3.
Cramer, Stuart W., Cramerton, and W. B. Hodge, assignors to Wm. B. Hodge Company, Charlotte, N. C. Humidifier. 1,626,668; May 3.
Crampton, George S., Philadelphia, Pa. Trial lens mounting for oculists and opticians. 1,626,669; May 3.
Cravens, Frank S., Olive Hill, Ky. Valve. 1,627,486; May 3.
Crawford, Charles S. (See Bastien, P. and Crawford.)
Crawford, Gus J., Baker, Mont. Tractor device. 1,626,788; May 3.
Creed, Oliver, Cincinnati, Ohio. Filling attachment for gasoline tanks of automobiles. 1,626,789; May 3.
Crompton & Knowles Loom Works. (See Crutchlow, William, assignor.)
Crompton & Knowles Loom Works. (See Jennings, Victor H., assignor.)
Crosley, Powel, jr., Cincinnati, Ohio. Adapter. 1,627,077; May 3.
Cross Bros. Company. (See Philip, George R., assignor.)
Crowe, Paul L., Baltimore, Md. Ball mill. 1,627,487; May 3.
Crowe, Paul L., Baltimore, Md. Ball mill. 1,627,488; May 3.
Crowell, Erd V., Los Angeles, Calif., assignor of one-half to The Guiberson Corporation, Dallas, Tex. Oil or gas well. Re16,607; May 3.
Crutchlow, William, Paterson, N. J., assignor, by mesne assignments, to Crompton & Knowles Loom Works, Worcester, Mass. Box-operating mechanism for looms. 1,626,723; May 3.
Curran, Edward T., Detroit, Mich. Automobile radiator therometer. 1,626,790; May 3.
Cutler-Hammer Mfg. Co., The. (See Lightfood, Edwin N., assignor.)
Cutler-Hammer Mfg. Co., The. (See Stone, David, assignor.)
Cyclo Corporation. (See Honig, Frank, assignor.)
Dale, Christopher C., et al. (See Smith, Lawrence F., assignor.)
Daman, Arthur C., Denver, Colo. Oil feeder for flotation machines. 1,627,014; May 3.
Danna, Charles, New Orleans, La. Breather pump. 1,627,377; May 3.
Danner, Edward, Toledo, Ohio. Method and apparatus for forming glassware. 1,627,428; May 3.
D'Arleux, Roger M. G. M., Paris, France. Receptacle. 1,627,233; May 3.
Darrow, William W. (See Wasberg, A., and Darrow.)
Davenport Machine & Foundry Company. (See Seeman, Frederick A., assignor.)
Davidson, Charles L., New York, N. Y. Stoker. 1,626,791; May 3.
Davidson Manufacturing Company. (See Davidson, William W., assignor.)
Davidson, William D. (See Goeser, E. W., and Davidson.)
Davidson, William W., Evanston, Ill., assignor to Davidson Manufacturing Company, Madison, Wis. Machine for separating and feeding blanks. 1,627,015; May 3.
Davis, Hanley M., Cambridge, Mass. Window-cleaning device. 1,627,318; May 3.
Davis, Isadore, Des Moines, Iowa, assignor to Interlocking Shingle Co., Des Moines, Iowa. Interlocking multiple shingle. 1,627,429; May 3.
Day, Harry I. (See Kirby, G. T., and Day.)
Dayton, James M., assignor to The Dayton Manufacturing Company, Torrington, Conn. Flow meter. 1,627,234; May 3.
Dayton Manufacturing Company, The. (See Dayton, James M., assignor.)
Dayton Scale Company. (See Hopkinson, Joseph, assignor.)
Dayton Scale Company. (See Wood, George R., assignor.)
Dean Card Typewriter Company. (See Dean, Seward A., assignor.)
Dean, Seward A., Hastings, assignor to Dean Card Typewriter Company, Hennepin County, Minn. Typewriter. 1,627,016; May 3.
De Boer, Rudolph, Grand Rapids, Mich. Wall pocket or similar article. Des. 72,548; May 3.
Decatur Brick Mfg. Co. (See McCune, Herbert R., assignor.)
Deemar, Henry V., assignor to J. H. Bruninga, trustee, St. Louis, Mo. Heater. 1,627,235; May 3.
De Filippis, Raymond, Brooklyn, N. Y. Toy vehicle. 1,627,150; May 3.
Delany, Edward L., assignor to Delany Realty Corporation, Brooklyn, N. Y. Float valve for flush tanks. 1,627,489; May 3.
Delany Realty Corporation. (See Delany, Edward L., assignor.)
Dellinger, John, Buffalo, N. Y. Toy. 1,627,319; May 3.
Demarest, Charles S., Ridgewood, N. J., and M. L. Almquist, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company. Frequency-controlling system. 1,626,724; May 3.
Dempewolf, Carl A., Henderson, Ky. Planter. 1,627,017; May 3.
Denemark, Jacob, Trenton, N. J. Pressing machine. 1,626,792; May 3.
Derk, Joseph, assignor to The Derk Manufacturing Company, Philadelphia, Pa. Table scarf. Des. 72,549; May 3.
Derk Manufacturing Company, The. (See Derk, Joseph, assignor.)
De Rosa, Ronald M., San Francisco, Calif. Hand lift for harrows. 1,626,793; May 3.
De Wald, Daniel, Rawlins, Wyo. Retractable vehicle runner. 1,627,151; May 3.
Dewey and Almy Chemical Company. (See Dewey, Bradley, assignor.)
Dewey, Bradley, assignor to Dewey and Almy Chemical Company, Cambridge, Mass. Colloidal adhesive composition. 1,627,278; May 3.
De Witt, Charles E., Dallas, Tex., assignor to V. H. Barwood Manufacturing Co., Lynn, Mass. Burnishing and refitting tool for bearings. 1,627,152; May 3.
Deye, Erwin G., Newport, Ky., and H. F. Haverbusch, Cincinnati, Ohio. Device for use with routing mills. 1,627,153; May 3.
D'Humy, Fernand E., Englewood, N. J., assignor to Ramp Buildings Corporation, New York, N. Y. Storage building. 1,626,602; May 3.
Dieaner, John A., Chicago, and A. C. Mabee, Villa Park, Ill. Controller for fish lures. 1,627,078; May 3.
Dieter, William, Newark, N. J. Automobile torpedo and contact mine. 1,626,794; May 3.
Dieter, William, Newark, N. J. Automobile torpedo. 1,627,154 May 3.
Dieter, William, Newark, N. J. Automobile torpedo. 1,627,155; May 3.
Dill Manufacturing Company, The. (See Bronson, Adelbert E., assignor.)
Di-Noc Manufacturing Company, The. (See Reese, Thomas S., assignor.)
Dippel, William T., New York, assignor to H. S. Martin, Brooklyn, N. Y. Visual annunciator. 1,626,795; May 3.
Disbrow, Clarkson A., New Rochelle, N. Y., and W. E. Gadd, Philadelphia, Pa., assignors to The Rail Joint Company, New York, N. Y. Track-lining device. 1,627,156; May 3.
Disibio, Joseph, Detroit, Mich. Tilting stand for crocks. 1,627,490; May 3.
Dixie Dental Manufacturing Co. (See Pecker, Joseph S., assignor.)
Dod, Gerald, Southport, England. Rope or belt drive for drying cylinders and the like. 1,627,018; May 3.
Dodds, James B., Denver, Colo. Concentrator. 1,627,157; May 3.
Doeliner, William, Jersey City, N. J. Safety feed means. 1,627,491; May 3.
Doherty Research Company. (See Truesdell, Arthur E., assignor.)
Dominiczak, John, Braddock, Pa. Electrical switch. 1,627,158; May 3.
Dornier, Claudius, assignor of one-half to the Firm Dornier Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Flying machine. 1,627,019; May 3.
Dornier Metallbauten Gesellschaft mit beschränkter Haftung. (See Dornier, Claudius, assignor.)
Dosch, Henry C. (See Magnus, E. G., and Dosch.)
Dougherty, Glenn O., Los Angeles, Calif. Pedal-actuated faucet. 1,627,020; May 3.
Douglas, Theodore, Scarboro, assignor to Duplex Engine Governor Company, Inc., Brooklyn, N. Y. Safety attachment for aircraft. 1,626,921; May 3.
Dow Chemical Company, The. (See Smith, A. K., and Prutton, assignors.)
Down, Sidney G., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Motor-vehicle brake device. 1,626,670; May 3.
Downs, Charles F., Cleveland, Ohio. Culinary apparatus. 1,626,922; May 3.
Drabenstott, Glenn H., Wooster, Ohio. Parachute escape for airships. 1,626,796; May 3.
Drennon, William M., Anaheim, Calif. Universal bench motorstand. 1,626,923; May 3.
Droge, William H., Detroit, Mich. Dice shaking or throwing device. 1,627,492; May 3.
Drummond, Katherine L., assignor to T. Buettner & Co., Inc., Chicago, Ill. Footwear case. Des. 72,550; May 3.
Drummond, Katherine L., assignor to T. Buettner & Co., Inc., Chicago, Ill. Utensil mitt. Des. 72,551; May 3.
Dryden Rubber Company. (See Brown, William H., assignor.)
Dubbs, Carbon P., Wilmette, assignor to Universal Oil Products Company, Chicago, Ill. Treating petroleum and other hydrocarbons. 1,627,159; May 3.
Dubilier Condenser Corporation. (See Dubilier, William, assignor.)

Dubilier, William, New Rochelle, assignor to Dubilier Condenser Corporation, New York, N. Y. Electrical condenser. 1,627,493; May 3.
Du Bois, Virgil L. (See Moody, J. F., and Du Bois.)
Dueker, Charles, Fort Dodge, Iowa. Clearing device for corn-snapping mechanisms. 1,627,021; May 3.
Dufield, William S., Hamilton, Ontario, Canada. Instep-arch supporter. 1,626,725; May 3.
Duffy, William J. (See Gilday, F., and Duffy.)
Dunlop, James, Chicago, Ill., and J. F. Clancy, East Troy, Wis., assignors to Kaestner & Hecht Company, Chicago, Ill. Floor selector for elevators. 1,627,320; May 3.
Duplex Engine Governor Company. (See Douglas, Theodore, assignor.)
Du Pont, E. I., de Nemours & Company. (See Burke, Charles E., assignor.)
Du Pont, E. I., de Nemours & Co. (See Lawrie, James W., assignor.)
Du Pont, E. I., de Nemours & Company. (See Varnes, Samuel K., assignor.)
Dupuy, Arthur O., Cleveland, Ohio, assignor to Lancaster Iron Works, Inc., Lancaster, Pa. Brickmaking machinery. 1,627,079; May 3.
Dvorkovitz, Paul, London, England. Destructive distillation of solid carbonaceous materials. 1,627,321; May 3.
Dwyer, Willard B., Bennington, Vt. Bracket hanger. 1,627,494; May 3.
Dyck, Lionel, Chicago, Ill. Internal-combustion engine. 1,627,160; May 3.
E. and T. Fairbanks and Company. (See Starr, Morton H., assignor.)
Eastern Finishing Works, Inc. (See Adams, William H., assignor.)
Edgemont Machine Company, The. (See Anglemyer, C. M., and Coffman, assignors.)
Edison, Thomas A., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Storage battery. Re16,614; May 3.
Edison, Thomas A., Incorporated. (See Edison, Thomas A., assignor.)
Edson, William W., Newtonville, Mass., assignor to Westinghouse Electric & Manufacturing Company. Regulator system. 1,626,608; May 3.
Edwards, William A., Chicago, Ill. Homogenizing Fluid-Fuel Mixtures. 1,627,161; May 3.
Effey, Michael P., assignor of one-half to E. H. Barnes, Lowville, N. Y. Bush or plant support. 1,627,495; May 3.
Egloff, Gustav. (See Morrell, J. C., and Egloff.)
Egloff, Gustav, assignor to Universal Oil Products Company, Chicago, Ill. Treating oil shale. 1,627,162; May 3.
Egloff, Gustav, assignor to Universal Oil Products Company, Chicago, Ill. Treating oil shale. 1,627,163; May 3.
Egloff Gustav, Chicago, Ill., and W. R. Howard, Washington, D. C., assignors to Universal Oil Products Company, Chicago, Ill. Apparatus for treating oils. 1,627,164; May 3.
Eggenweiler, Charles W., and W. J. Fiegel, Detroit, Mich., assignors, by mesne assignments to Bohn Aluminum and Brass Corporation. Machine for trimming the edges of bearing or like sections. 1,626,924; May 3.
Electric Boat Company. (See Cable, Frank T., assignor.)
Elias, Edward, Brooklyn, N. Y. Hand bag. 1,627,496; May 3.
Elias, Justin A., Philadelphia, Pa., assignor to F. J. Kline, Long Island City, N. Y. Paper fastener. Re16,610; May 3.
Elöd, Egon. (See Bredig, G., and Elöd.)
Emsco Derrick & Equipment Company. (See Goeser, E. W., and Davidson, assignor.)
Enberg, Stone R., assignor to Walden-Worcester, Incorporated, Worcester, Mass. Tool handle. 1,626,671; May 3.
Endsley, Louis E., Pittsburg, Pa., assignor to Waugh Equipment Company, Chicago, Ill. Draft gear. 1,627,378; May 3.
Enns, Peter C., Herbert, Saskatchewan, Canada. Automatic signals. 1,626,797; May 3.
Eppstein, Lewis B., et al. (See Stewart, Frank H., assignor.)
Epstein, Henry J. (See Bayer, H. K., and Epstein.)
Equipment Specialties Co. (See Hull, George A., assignor.)
Erni, Walter. Milwaukee, Wis. Steering mechanism for coaster wagons. 1,627,022; May 3.
Estes, Clarence H., Chicago Heights, assignor to American Manganese Steel Company, Chicago, Ill. Bar for foundry flasks. 1,627,165; May 3.
"Eternit," Pietra Artificiale, Societa Anonima. (See Mattei, D., and Massa, assignors.)
Evans, George S. (See Vial, F. K., and Evans.)
Everlast Sporting Goods Mfg. Co. (See Golomb, Morris, assignor.)
Fairchild Aerial Camera Corporation. (See Henry, Ferdinand G., assignor.)
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Reservoir device. 1,626,604; May 3.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electro-pneumatic brake. 1,626,605; May 3.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Car-door-controlling device. 1,626,672; May 3.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Flexible diaphragm device. 1,626,673; May 3.
Farrar, Roy B., Spokane, Wash. Ash pan. 1,627,023; May 3.
Faulkner, Austen, et al. (See Smith, Lawrence F., assignor.)
Fay, John L., St. Louis, Mo. Fuel-mixing device for internal-combustion engines. 1,626,798; May 3.
Federal Cement Tile Company. (See Freund, Cheri S., assignor.)
Feiss, Richard A., assignor to The Joseph & Feiss Co., Cleveland, Ohio. Vent for full-lined garments and method of making it. 1,626,799; May 3.
Feldstein, Ben J., New York, N. Y. Baby rattle. 1,627,166; May 3.
Fellenbaum, Daniel T., Coatesville, Pa. Milk-can rack. 1,627,080; May 3.
Fener, Vahan, Chicago, Ill. Alloy. 1,626,925; May 3.
Ferguson, John E. (See Whitmore, J. B., and Ferguson.)
Fessler, Marcus J., Syracuse, N. Y. Reclaiming rubber. 1,626,800; May 3.
Fichtenbaum, Oscar, Brooklyn, N. Y. Folding bed or couch. 1,626,801; May 3.
Fiegel, William J. (See Eggenwiler, C. W., and Fiegel.)
Field, Burnham E., Douglaston, and R. Franks, Elmhurst, N. Y., assignors to Haynes Stellite Company. Wear-resisting alloy. 1,626,726; May 3.
Finch, Paul R., assignor to A. C. White, Des Moines, Iowa. Rotary pump. 1,627,024; May 3.
Fischer, Albert C., Chicago, Ill. Roofing attachment. 1,626,802; May 3.
Fish, William L., Pompton Plains, N. J. Card camera. 1,626,606; May 3.
Fishback, John S., Indianapolis, Ind. Self-contained radio receiving unit. 1,626,803; May 3.
Fisher, Clarence F., Lancaster, Kans. Antiskid chain. 1,627,025; May 3.
Fisher, Frank C., Toledo, assignor to The Bryan Screw Machine Products Company, Bryan, Ohio. Automobile lock. 1,627,081; May 3.
Fisher, Frank C., Toledo, assignor to The Bryan Screw Machine Products Company, Bryan, Ohio. Automobile lock. 1,627,082; May 3.
Fisher, Garfield W. (See Jones, L. S., Fisher, and Henrikson.)
Fitzgerald Manufacturing Company, The. (See Fitzgerald, Patrick J., assignor.)
Fitzgerald, Patrick J., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn. Gasket. 1,627,167; May 3.
Flanders, Warren B., Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company. Automatic stop valve. 1,626,804; May 3.
Ford, David O., Lynchburg, Va. Paper salt shaker. Des. 72,552; May 3.
Ford, Hannibal C., Jamaica, assignor to Ford Instrument Company, Inc., New York, N. Y. Electrical transmitter. 1,627,168; May 3.
Ford Instrument Company. (See Ford, Hannibal C., assignor.)
Ford, James G. (See Little, G. M., and Ford.)
Forker, Harry M., Washington, D. C. Column spacer. 1,627,026; May 3.
Forrest, Thomas W. W., assignor to Sun-Maid Raisin Growers of California, Fresno, Calif. Apparatus for processing berries, especially Thompson seedless raisins. 1,626,805; May 3.
Forrow, Elwin W., Anaheim, Calif. Flexible swab. 1,626,926; May 3.
Forry, Archie D., Clarksville, Iowa. Implement for cutting and opening pasteboard boxes. 1,626,806; May 3.
Fosseen, Arthur B., Spokane, Wash. Roof. 1,627,027; May 3.
Fountain, Clark O., Moorestown, N. J. Automobile rebound checking device. 1,627,379; May 3.
Fowler, Lester A., Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake-valve device. 1,626,607; May 3.
Francis, Jacob R., Flint, Mich. Heat control for internal-combustion engines. 1,626,727; May 3.
Franks, Russell. (See Field, B. E., and Franks.)
Franks, Thomas, Walsall, England. Coupling for vehicles. 1,627,430; May 3.
Frans Manufacturing Co. (See Thorne, Lawrence C., assignor.)
Fraser, Kenneth G., Wellton, Ariz. Filter funnel. 1,627,083; May 3.
Freeland, Claude L., Bristow, Okla. Process of and apparatus for condensing, treating, and washing hydrocarbon vapors. 1,627,431; May 3.
French Battery & Carbon Company. (See Baird, Frank T., assignor.)
Frengle, Frederick, Cotati, and F. D. Rohan, assignors to F. D. Rohan and F. S. Conner, a Copartnership doing business under the firm name of Pride of Petaluma Brooder Stove Company, Petaluma, Calif. Chicken brooder. 1,627,279; May 3.
Freund, Cheri S., assignor to Federal Cement Tile Company, Chicago, Ill. Building tile or slab. 1,627,280; May 3.

Fr. Hesser Maschinenfabrik Aktiengesellschaft. (See Gangler, Paul, assignor.)
Friedman, William, New York, N. Y. Toilet article. 1,626,927; May 3.
Friedman, William, Princeville, Ill. Combined window stop and weather strip. 1,626,674; May 3.
Fritz, George, Cincinnati, Ohio. Sectional bin. 1,627,084; May 3.
Froelich, Clarence H. (See Van Essen, P. D., and Froelich.)
Gadd, William E. (See Disbrow, C. A., and Gadd.)
Gallaway, William O. (See Nye, Louis R., assignor.)
Galloway, Robert M., assignor to The National Automatic Tool Company, Richmond, Ind. Mechanism reversible without backlash error. 1,627,236; May 3.
Galvin, Wade S., assignor to The Akron Standard Mold Company, Akron, Ohio. Tire. Des. 72,553; May 3.
Gamino, Bartolo, Pigeon, Mich. Knee-protecting device. 1,627,497; May 3.
Gangler, Paul, Esslingen, assignor to the Firm Fr. Hesser Maschinenfabrik-Aktiengesellschaft. Stuttgart-Cannstatt, Germany. Machine for manufacturing, filling, and closing packages. 1,627,169; May 3.
Gardner, John E., assignor, by mesne assignments, to Automatic Electric, Inc., Chicago, Ill. Automatic telephone system. 1,626,807; May 3.
Garrety, Frank J., Cincinnati, Ohio. Display-sample device. 1,627,281; May 3.
Geiger, Paul H., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,626,928; May 3.
General Chemical Company. (See Lipfert, William J., assignor.)
General Electric Company. (See Hewlett, E. M., and Willard, assignors.)
General Fuel Briquette Corporation. (See Zwoyer, Ellsworth B. A., assignor.)
General Optical Co. (See Clement, Hans, assignor.)
General Railway Signal Company. (See Howe, Winthrop K., assignor.)
General Railway Signal Company. (See Larry, Edwin C., assignor.)
General Railway Signal Company. (See Peabody, James A., assignor.)
Gerlach Oscar, La Salle, Ill. Manufacture of Hydraulic cement and the like. 1,627,170; May 3.
Gesellschaft für Drahtlose Telegraphie m. b. H. (See Meissner, Alexander, assignor.)
Gesellschaft für Drahtlose Telegraphie m. b. H. et al. (See Semm, A., and Schaffer, assignors.)
Gibson, Adelbert R., Los Angeles, Calif., and H. E. Schorr, New York, N. Y. Headlight lens. 1,627,498; May 3.
Gibson, William R., Forest Hills, N. Y. Chimney. 1,626,808; May 3.
Giggal, William C., Denver, Colo. 1,627,085; May 3.
Gilbert, Lovic R. (See Blackston, Edward A., assignor.)
Gilbert, Maxwell F., Philadelphia, Pa., assignor to Richardson & Boynton Company, New York, N. Y. Heater. 1,627,086; May 3.
Gilbert, Walter V., Westminster, London, assignor to Gilbert's Patents Limited, London, England. Detachable-wheel mechanism. 1,627,499; May 3.
Gilbert's Patents Limited. (See Gilbert, Walter V., assignor.)
Gilday, Frank, and W. J. Duffy, Mayfield, Pa. Automatic signal system. 1,627,380; May 3.
Gillett, Benjamin B., Kansas City, Mo. Open-end wrench. 1,626,809; May 3.
Gillson, Charles B. (See Stolp, Samuel S., assignor.)
Gillson, Louis K., Wilmette, Ill. Fuel-throwing vane or shovel. 1,627,381; May 3.
Gilson, Robert M., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical relay. 1,627,322; May 3.
Gingras, Louis J., and A. St. Onge, Websterville, Vt. Door holder. 1,626,810; May 3.
Glaesener, Fred, Castleford, Idaho. Agricultural implement. 1,626,811; May 3.
Gleason Works. (See Head, Ernest C., assignor.)
Glove Corporation. (See Sturm, Frank X., assignor.)
Godfrey, William F., Kearney, Nebr. Endless-chain pump. 1,626,812; May 3.
Goeller, Vernon R., Boonton, N. J. Tire spreader. 1,627,500; May 3.
Goeser, Edwin W., and W. D. Davidson, assignors, by mesne assignments, to Emsco Derrick & Equipment Company, Los Angeles, Calif. Rotary table. 1,627,323; May 3.
Gold, Samuel B., Independence, assignor to Weber Engine Company, Kansas City, Mo. Internal-combustion engine. 1,627,532; May 3.
Goldberg, Maximilian M., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio. Card-assorting machine. 1,627,028; May 3.
Goldinger, Carl M., Tarentum, Pa., assignor to W. P. Murphy, Chicago, Ill. Uncoupling lever. 1,626,929; May 3.
Goldthorpe, Jack J., Albany, N. Y. Game. 1,627,501; May 3.
Golomb, Morris, assignor to Everlast Sporting Goods Mfg. Co., New York, N. Y. Protective device for boxers. 1,627,382; May 3.
Good Inventions Co. (See Good, John, assignor.)
Good, John, Garden City, assignor to Good Inventions Co., New York, N. Y. Liquid-fuel-combustion apparatus. 1,626,813; May 3.
Goodall, Fred E., assignor, by mesne assignments, to Van Ess Laboratories, Inc., Chicago, Ill. Skin cream. 1,626,814; May 3.
Goodman, Patrick, Brooklyn, N. Y. Gas-main stopper. 1,627,502; May 3.
Goodwin, Ernest G., New York, N. Y., assignor, by mesne assignments, to Goodwin Side Bearing Co., Inc., Wilmington, Del. Side bearing. 1,627,432; May 3.
Goodwin, Ernest G., Pelham, assignor to Standard Coupler Company, New York, N. Y. Draft gear and installing same. 1,627,433; May 3.
Goodwin Side Bearing Co. (See Goodwin, Ernest G., assignor.)
Gordatowski, J. B., et al. (See Stewart, Frank H., assignor.)
Goss Printing Press Company, The. (See Andersen, Niels C., assignor.)
Gothberg, Herman E., Wyoming, N. Y. Mop wringer. 1,627,383; May 3.
Gottschalk, Prosper L., Wauwatosa, Wis. Form for building construction. 1,627,171; May 3.
Gouirand, René, and A. Pache, deceased, New York, N. Y.; J. Pache, administratrix. Clamp. 1,627,172; May 3.
Graham Brothers. (See Kuhn, Clinton J., assignor.)
Graham Glass Company. (See Lents, J. M., and Miller, assignors.)
Graham, Louis A., Evanston, and C. L. Low, Chicago, Ill. Sign-composing device. 1,626,815; May 3.
Gran, Albert, Chicago, Ill. Receptacle. 1,627,282; May 3.
Grant, Charles W., Lynn, Mass. Game. 1,627,087; May 3.
Green, Archibald H., London County, England, assignor to The International Silencer Company (1926) Limited, county of London, England. Silencer for gaseous currents. 1,627,324; May 3.
Green Fuel Economiser Company, The. (See Messler, Clinton S., assignor.)
Green, Jerry S., Le Claire, Iowa. Self-locking clothesline receiver. 1,626,728; May 3.
Greenway, Milton E., and R. W. Chambers, Whitewright, Tex. Automatic circuit breaker. 1,627,029; May 3.
Gregg, Robert D. (See Shidler, F. L., and Gregg.)
Grether, Carl, Todtnau, Germany. Brush. 1,626,816; May 3.
Griffey, Dinney F., assignor of one-half to R. N. Cox, Red Jacket, W. Va. Railway-switch locking and operating means. 1,627,503; May 3.
Griffin Wheel Company. (See Vial, F. K., and Evans, assignors.)
Grip Nut Company. (See Sharp, William E., assignor.)
Grogg, Charles C., Mansfield, Ohio. Container. 1,626,930; May 3.
Grondahl, Lars O., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical relay. 1,626,931; May 3.
Groat, Ransom A., San Bruno, Calif. Telegraph-receiving instrument. 1,627,030; May 3.
Grubman, Leo J., Belle Harbor, N. Y., assignor to Voices, Incorporated, Newark, N. J. Sound-producing device. 1,627,384; May 3.
Grubman, Leo J., Belle Harbor, N. Y., assignor to Voices, Incorporated, Newark, N. J. Sound-producing device. 1,627,385; May 3.
Grunberg, George, New York, N. Y. Perfume bottle. Des. 72,554; May 3.
Grünewälder, Karl. (See Kämpf, A., and Grünewälder.)
Grupe, William F., Lynhurst, N. J. Transfer medium for metallizing purposes. 1,627,088; May 3.
Guiberson Corporation, The. (See Crowell, Erd V., assignor.)
Gulick, David E., Chicago, Ill. Lavatory. 1,627,504; May 3.
Gurnee, Isaac Q., Butler, and A. A Smith, Riverdale, N. J., assignors to Superior Hard Rubber Company, Butler, N. J. Thermometer case. Des. 72,555; May 3.
Guymon, Chauncey, Los Angeles, Calif. Advertising device. 1,627,505; May 3.
Haase, Frank. (See Morehouse, F. B., and Haase.)
Haas, Carrie, administratrix. (See Haas, Ignatius.)
Haas, Ignatius, deceased; C. Haas, administratrix, Philadelphia, Pa. Toy game board. 1,627,173; May 3.
Hall, C. M., Lamp Company. (See Bamford, Frank L., assignor.)
Hall, C. M., Lamp Co. (See Seitz, Ernest O., assignor.)
Hall & Connolly, Inc. (See Hall, Theodore, assignor.)
Hall, Theodore, Brooklyn, assignor to Hall & Connolly, Inc., New York, N. Y. Feeding means for arc lamps. 1,626,952; May 3.
Hall, William G., Honolulu, Hawaii. Juice-straining system for sugar-cane mills. 1,627,283; May 3.
Hall, William G., Honolulu, Hawaii. Juice-straining system for sugar-cane mills. 1,627,284; May 3.
Halleck, Frank A., Michigan City, Ind., assignor to Sullivan Machinery Company. Drilling apparatus. 1,627,538; May 3.
Halpin, Abraham, New York, N. Y. Instrument attachment. 1,627,089; May 3.
Halvorsen, Arthur L., Perth Amboy, N. J. Making a stable hydrogen peroxide. 1,627,325; May 3.
Hamey, Amos C., North Sydney, New South Wales, Australia. Crushing and grinding machine. 1,627,506; May 3.

Hammer-Bray Company. (See Hammer, George, assignor.)
Hammer, George, assignor to Hammer-Bray Company, Oakland, Calif. Gas-kindling burner. 1,627,286; May 3.
Hammett, Elbert A., Kansas City, Mo. Electrically-operated valve mechanism. 1,626,817; May 3.
Hammond, John H., jr. (See Chaffee, Emory L., assignor.)
Hammond, John H., jr., Gloucester, Mass. Salvo firing. 1,627,174; May 3.
Handlan, Alexander H., jr., St. Louis, Mo. Hose coupling. 1,626,729; May 3.
Hanley, William L., jr., Bradford, Pa. Clay tempering and expressing apparatus. 1,626,675; May 3.
Hansen, John C., jr., Newark, N. J. Leveling device. 1,627,175; May 3.
Hansmann, Paul, and H. Strack, Long Prairie, Minn., assignors, by mesne assignments, to the said Hansmann. Antiside draft-plow hitch. 1,626,676; May 3.
Hanson, Bengt M. W., deceased, Hartford, Conn.; E. A. Hanson and C. E. Whitney, executors. Metal-working machine. 1,627,090; May 3.
Hanson, Einar A., et al., executors. (See Hanson, Bengt M. W.)
Harding, Joseph G., Jackson, assignor of one-half to W. R. Casparis, Columbus, and one-half to S. E. Stephenson, Jackson, Ohio. Manufacturing slag cement. 1,627,287; May 3.
Harris, Jason E., Howard, Kans. Bearing for engines, air compressors, and the like. 1,627,031; May 3.
Harris, Jason E., Howard, Kans. Intake valve. 1,627,032; May 3.
Hart, Russell, Los Angeles, Calif. Photographically recording sound. 1,627,387; May 3.
Hartley, Arthur J., Peoria, Ill. Grain-feeding device. 1,626,608; May 3.
Harvey, Fred. (See Huckel, John F., assignor.)
Hatmaker, James R., Paris, France. Condensed milk and making same. 1,626,818; May 3.
Häussler, Alfred, assignor to C. H. Boehringer Sohn Chemische Fabrik, Niederingelheim-on-the-Rhine, Germany. Making keto and aldo aliphatic carboxylic acids. 1,627,091; May 3.
Haverbusch, Herman F. (See Deye, E. G., and Haverbusch.)
Haward, Ernest W., Old Trafford, England. Antisplash device for the wheels of motor road vehicles. 1,627,033; May 3.
Hawkins, Edgar M., assignor to M. D. Knowlton Company, Rochester, N. Y. Receiving bank. 1,626,933; May 3.
Hayes, Stanley W., assignor to Hayes Track Appliance Company, Richmond, Ind. Portable derail. 1,627,092; May 3.
Hayes, Thomas R., Monrovia, Calif. Chair. 1,627,388; May 3.
Hayes Track Appliance Company. (See Hayes, Stanley W., assignor.)
Haynes, Hobart F., Syracuse, N. Y. Socket wrench. 1,626,730; May 3.
Haynes, Jasper H., Bangor, Me. Runner for automobile wheels. 1,627,507; May 3.
Haynes Stellite Company. (See Field, B. B., and Franks, assignors.)
Haslett, Merritt W., Franklin, N. Y. Retracting caster. 1,626,819; May 3.
Head, Ernest C., assignor to Gleason Works, Rochester, N. Y. Pair of gears. 1,626,820; May 3.
Head, Ernest C., assignor to Gleason Works, Rochester, N. Y. Method and machine for cutting gears. 1,626,821; May 3.
Hearn, George G., St. Petersburg, Fla. Protective device for automobile fuel tanks. 1,626,822; May 3.
Hedberg, William F., Kansas City, Mo. Joist form. 1,626,823; May 3.
Hedenburg, Oscar F., and D. S. Pratt, Pittsburgh, Pa., assignors to The Toledo Rex Spray Company, Toledo, Ohio. Insecticide composition. 1,627,389; May 3.
Hellmund, Rudolf E., Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Frequency-changing aggregate. 1,627,326; May 3.
Hemphill Company. (See Bosworth, George P., assignor.)
Hemphill Company. (See Lawson, Robert H., assignor.)
Henderson, George C., Detroit, assignor to Whitehead & Kales Company, River Rouge, Mich. Fifth-wheel assembly. 1,627,176; May 3.
Henderson, Robert H., East Orange, N. J. Bender for light-gauge conduits or pipes. 1,627,034; May 3.
Henningsen, Knud, Chicago, Ill. Clamp for scaffolding or the like. 1,627,177; May 3.
Henrici, Fritz W. A., Boston, Mass. Reversing mechanism. 1,627,434; May 3.
Henriksson, Carl G. (See Jones, L. S., Fisher, and Henriksson.)
Henry, Ferdinand G., New York, N. Y., assignor to Fairchild Aerial Camera Corporation. Control of gyroscope-erecting systems. 1,627,178; May 3.
Henry, Guy P., Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind. Tire carrier. 1,626,934; May 3.
Herman, Joseph, New York, N. Y., assignor to American Telephone and Telegraph Company. Method of and apparatus for synchronization in picture transmission. 1,626,731; May 3.
Heron, Sam D. (See Wade, V. M., Zimmerman, and Heron.)
Hershey Manufacturing Company. (See Hershey, Orville S., assignor.)
Hershey, Orville S., assignor to Hershey Manufacturing Company, Chicago, Ill. Automobile lock. Re16,612; May 3.
Herskovitz, Max, deceased, Chicago, Ill.; W. Herskovitz (now, by judicial change of name, W. Herst) and C. Weinfeld, executors. Electric-socket structure. 1,627,238; May 3.
Herskovitz, William, et al., executors. (See Herskovitz, Max.)
Hewitt, Roy, Sterling, Ill. Bale-tie machine. 1,627,533; May 3.
Hewlett, Edward M., and W. W. Willard, Schenectady, N. Y., assignors to General Electric Company. System of and apparatus for gun-fire control. 1,626,824; May 3.
Hickman, Manuel, San Juan, assignor of one-third to P. M. Perkins, McAllen, Tex. Duplex baling press. 1,627,327; May 3.
Higgins, John J. (See Madden, H. D., and Higgins.)
Higgins, John J. (See Robins, H. M., and Higgins.)
Higgins, John J., East Orange, N. J., assignor to Westinghouse Lamp Company. Stem for incandescent lamps and method of making. 1,626,677; May 3.
Higgins, John J., East Orange, N. J., assignor to Westinghouse Lamp Company. Combination inserting and welding machine. 1,626,678; May 3.
Hild, Frederic W., Los Angeles, Calif. Central shank reaming disk bit. 1,627,179; May 3.
Hilger, George, Chicago, Ill. Refrigeration system. 1,627,328; May 3.
Hill, Clement V., Trenton, N. J. Hinge for doors. 1,627,329; May 3.
Hill, Louis, Akron, Ohio. Compensating gas cut-off. 1,626,609; May 3.
Hindahl, David, assignor to Rodger Ballast Car Company, Chicago, Ill. Railway dump car. 1,626,825; May 3.
Hineline, Harris D., Akron, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Variable-speed squirrel-cage motor. 1,627,330; May 3.
Hiniker, Benjamin F., Taft, Calif. Pipe and rod spider. 1,626,826; May 3.
Hirst, Charles E., assignor to Beckett, Laycock & Watkinson Limited, London, England. Screw and nut actuating mechanism. 1,627,331; May 3.
Hochuli, Henry R., Jamaica, N. Y., assignor to Mergenthaler Linotype Company. Machine for clearing matrix cavities. 1,627,093; May 3.
Hodge, William B. (See Cramer, S. W., and Hodge.)
Hodge, Wm. B., Company. (See Cramer, S. W., and Hodge, assignors.)
Hoe, R., & Co. (See Clauberg, Herman P., assignor.)
Hoffman, Glenn R., Springfield, Ill. Braking mechanism, more particularly for motor vehicles. 1,627,508; May 3.
Hoffman, Glenn R., Springfield, Ill. Braking mechanism, more particularly for motor vehicles. 1,627,509; May 3.
Hoffman, Glenn R., Springfield, Ill. Braking mechanism, more particularly for motor vehicles. 1,627,510; May 3.
Hoge, James B., Cleveland, Ohio, and E. E. Clement, Washington, D. C., assignors to E. F. Colladay, Washington, D. C. Radiophone meter. 1,627,332; May 3.
Holsington, Harry, Davenport, Iowa. Shutter latch for shields. 1,626,827; May 3.
Hokanson, Otto A., assignor to Woodstock Typewriter Company, Woodstock, Ill. Removable carriage for typewriters. 1,627,390; May 3.
Holden, William H. T., New York, N. Y., assignor to Westinghouse Lamp Company. Vaporizing a getter in an evacuated vessel. 1,626,732; May 3.
Holderle, Carl L. (See Holderle, Frederick W. and C. L.)
Holderle, Frederick W. and C. L., Rochester, N. Y. Beverage cooling and dispensing apparatus. 1,626,985; May 3.
Hollister, Harvey F., Spencer, Iowa. Condenser and cooler. 1,626,733; May 3.
Holtom, Albert O., Rochester, assignor to H. E. Zimmerman, New York, N. Y. Radiator cap. Des. 72,556; May 3.
Honig, Frank, Oak Park, assignor to Cyclo Corporation, Chicago, Ill. Spooling mechanism and method. 1,627,239; May 3.
Hooben, James A., Taunton, Mass. Tool. 1,627,435; May 3.
Hoover, Benjamin J., Okolona, Miss. Railway tie remover. 1,627,094; May 3.
Hopf, Rudolph A., assignor to Averill Mfg. Co., New York, N. Y. Doll head. 1,627,511; May 3.
Hopkinson, Joseph, assignor to Dayton Scale Company, Dayton, Ohio. Scale. 1,626,828; May 3.
Hopwood, John M. (See Peebles, Thomas A., assignor.)
Horn, William G. (See Austin, B. O., and Horn.)
Hornbuckle, William P., and R. F. Craig, Stanley, N. C. Warper attachment. 1,626,829; May 3.
Hornquist, Frank, Mount Jewett, Pa. Safety shoe for railway trucks. 1,626,610; May 3.
Horst, Milton F., Los Angeles, Calif. Continuous automatic concrete mixer. 1,626,830; May 3.
House, Henry A., Bridgeport, Conn., assignor to The Shredded Wheat Company, Niagara Falls, N. Y. Article-handling mechanism. 1,627,391; May 3.

Hovland, Henry, Flushing, assignor to Western Electric Company, Incorporated, New York, N. Y. Automatic telephone system. Re16,615; May 3.

Hovland, Henry, Flushing, assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y. Automatic coin-service telephone system. Re16,616; May 3.

Howard, William R. (See Egloff, G., and Howard.)

Howard, William R., Washington, D. C., assignor to Universal Oil Products Company, Chicago, Ill. Process and apparatus for treating hydrocarbons. 1,627,436; May 3.

Howe, Winthrop K., assignor, by mesne assignments, to General Railway Signal Company, Rochester, N. Y. Power-operated wringer for washing machines. 1,626,831; May 3.

Hoyt, John C. (See Au, Carl H., assignor.)

Hubbard, Lemott D., Utica, N. Y. Culinary utensil. 1,627,285; May 3.

Huckel, John F., assignor to F. Harvey, Kansas City, Mo. Lunch-counter stool. 1,626,832; May 3.

Hudd, Alfred E., Liverpool, and A. F. Bound, Timperley, England, assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Train-control system. 1,626,833; May 3.

Hueber, Joseph A. (See Kelley, J. M., and Hueber.)

Hughes, Charles H., and B. E. Kothe, Cincinnati, Ohio. Artificial bait. 1,627,512; May 3.

Hull, George A., assignor to Equipment Specialties Co., Chicago, Ill. Car-door-latching device. 1,626,834; May 3.

Hult, John A., assignor to The American Multigraph Company, Cleveland, Ohio. Addressing machine. 1,627,240; May 3.

Humphrey, Alfred H., assignor to G. G. Humphrey, Salem, N. Y. Sign. 1,627,437; May 3.

Humphrey, Grace G. (See Humphrey, Alfred H., assignor.)

Hunt, Leonard E., Duquesne, Pa. Rolling-mill table. 1,626,734; May 3.

Hunter, Edward. (See Bosserdet, Alfred E., assignor.)

Hutchinson, Job, Saugerties, N. Y. Washing and wringing machine. 1,627,438; May 3.

Huth, Dr. Erich F., G. m. b. H. (See Messtorff, Gerhard, assignor.)

Hynes, Lee P., assignor to Consolidated Car Heating Company, Albany, N. Y. Motor system for car doors. 1,627,180; May 3.

Ile, William, assignor to Reynolds Spring Company, Jackson, Mich. Cord connecter. 1,627,286; May 3.

Imbery, Arthur. (See Alexander, H., and Imbery.)

Individualizing Company of Illinois. (See Magnus, E. G., and Doech, assignors.)

Ingersoll, Howard L., White Plains, N. Y. Corrugated wall plate. 1,627,392; May 3.

Ingersoll-Rand Company. (See Bancel, Paul A., assignor.)

Ingham, Walter E., Newington, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Ball-turning device. 1,626,936; May 3.

Interlocking Shingle Co. (See Davis, Isadore, assignor.)

International Business Machines Corporation. (See Peirce, John R., assignor.)

International Harvester Company. (See Raney, Clemma R., assignor.)

International Scale Company. (See Osgood, Louis A., assignor.)

International Scale Company. (See Osgood, L. A., and Wolf, assignors.)

International Silencer Company (1926) Limited, The. (See Green, Archibald H., assignor.)

Isom, Edward W., Winnetka, Ill., and J. E. Bell, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill. Apparatus for condensing vapors. 1,627,544; May 3.

Jackson, John T., Coldwater, Mich. Poster board. 1,626,735; May 3.

Jahn, Herman C., Springfield, Ill. Wrench. 1,627,035; May 3.

Jäger, Karl, Werden-Ruhr, Germany. Textile fabric. Des. 72,557; May 3.

James, Albert S., Eureka, Calif. Attachment for tank vents. 1,627,095; May 3.

James, Edwin F., Cleveland, Ohio. Refrigerating apparatus. 1,626,835; May 3.

James, Keith D., Hobart, Tasmania, Australit. Variable-transmission gearing. 1,626,611; May 3.

Jamison, Frank E., Kansas City, Kans. Attachment for paper-folding machines. 1,627,333; May 3.

Jauvert, Pierre M., Toulon, France. Refrigerating apparatus. 1,626,836; May 3.

Jennings, Victor H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Device to prevent rotation of bobbins. 1,626,837; May 3.

Johnson, Thor, Rolette, N. Dak. Camp stove. 1,627,513; May 3.

Johnson, William H., Cambridge, Md. Window bracket. 1,627,241; May 3.

Johnston, George W., Sand Springs, Okla. Boat-propelling mechanism. 1,626,736; May 3.

Johnston, Howard H. (See Riley, L. G., Meyer, Johnston, and van Nieukerken.)

Jones, Louis S., G. W. Fisher, and C. G. Henrikson, assignors to The National Tile Company, Anderson, Ind. Tile-coating machine and process. 1,627,096; May 3.

Jordan, Jesse M., Lovefield, Tex. Milk-bottle cap. 1,627,036; May 3.

Jorgensen, Olav E., Forest Hills, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Piston for internal-combustion engines. 1,626,838; May 3.

Joseph & Feiss Co., The. (See Feiss, Richard A., assignor.)

Kaestner & Hecht Company. (See Dunlop, J., and Clancy, assignors.)

Kaisling, William, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Wall telephone. 1,627,393; May 3.

Kallmeyer, Ernst, Burgbernheim, Germany, assignor to H. W. Reese, New York, N. Y. Catheter. 1,626,839; May 3.

Kämpf, Adolf, and K. Grünewälder, Premnitz, Westhavelland, Germany. Loosening parallel fiber bunches by the wet process. 1,627,037; May 3.

Kanner, Samuel, New York, N. Y. Pen desk stand or similar article. Des. 72,558; May 3.

Katzinger, Arthur, Chicago, Ill. Reenforced baking pan. 1,627,542; May 3.

Katzinger, Arthur, assignor to Edward Katzinger Company, Chicago, Ill. Making containers. 1,627,540; May 3.

Katzinger, Arthur, assignor to Edward Katzinger Company, Chicago, Ill. Covered pan. 1,627,541; May 3.

Katzinger, Edward, Company. (See Katzinger, Arthur, assignor.)

Kauch, Robert, Dayton, Ohio. Searchlight range finder. 1,627,097; May 3.

Kaufman, Joseph, assignor to American Safety Razor Corporation, New York, N. Y. Container. 1,626,840; May 3.

Kaufmann, Arno, Pforzheim, Germany. Necktie holder. 1,626,937; May 3.

Kearns, John J., Spokane, Wash. Weeding implement. 1,627,038; May 3.

Kégresse, Adolphe, Paris, France. Endless supporting and driving flexible belt for motor and other vehicles. 1,627,287; May 3.

Keith, Nathaniel S., deceased, Philadelphia, Pa.; C. L. Roth, administrator. Amalgamator. 1,627,181; May 3.

Kelley, James M., and J. A. Hueber, Philadelphia, Pa. Color-changing attachment for motion-picture projectors. 1,626,841; May 3.

Kellogg, Carl A., Brooklyn, N. Y. Printing machine. 1,627,182; May 3.

Kellogg, Carlton C., Moline, Ill. Grain shocker. 1,626,612; May 3.

Kellogg Switchboard and Supply Company. (See Kaisling, William, assignor.)

Kelly, Bert F., assignor to Parts Corporation Indianapolis, Ind. Rear-view-mirror support. 1,626,938; May 3.

Kelly, Harry D., Bloomfield, N. J., assignor to Westinghouse Lamp Company, Lamp-making machine. 1,626,679; May 3.

Kendall, William G., Newark, N. J. Compact holder. 1,626,613; May 3.

Kendall, William G., Newark, N. J., assignor to Parfumerie Rigaud, Inc., New York, N. Y. Compact holder. 1,626,842; May 3.

Kerstein, Ernest A., Brooklyn, assignor to American Meter Company, Incorporated, New York, N. Y. Resetting device for gas meters. 1,627,183; May 3.

Kibele, Eugene, San Antonio, Tex. Well swab. 1,626,614; May 3.

Kilby, Herbert N., Cleveland, Ohio. Carbonating apparatus and method. 1,627,439; May 3.

King, Grover N., Kerrville, Tex. Fishing tool. 1,626,843; May 3.

Kirby Gustavus T., New York, and H. I. Day, Forest Hills, N. Y., assignors, by mesne assignments, to Kirby, Incorporated. Illuminating means. 1,626,615; May 3.

Kirby, Incorporated. (See Kirby, G. T., and Day, assignors.)

Kline, Fred J. (See Ellis, Justin A., assignor.)

Kline, Victor H., Lakewood, assignor to The American Multigraph Company, Cleveland, Ohio. Printing device having changeable form.) 1,627,242; May 3.

Knowlton, M. D., Company. (See Hawkins, Edgar M., assignor.)

Knowlton, M. D., Company. (See Seymour, Charles R., assignor.)

Koegle, John G., assignor of one-half to H. Boelter, Toledo, Ohio. Casting machine. 1,627,098; May 3.

Koehring Company. (See Lichtenberg, Erick H., assignor.)

Koepp, Rudolph, & Co. (See Bredig, G., and Elöd, assignors.)

Kooperstein, Louis, assignor to West Disinfecting Company, New York, N. Y. Soap valve. 1,626,989; May 3.

Kothe, Bernard E. (See Hughes, C. H., and Kothe.)

Kowol, Carl O., Alton, Ill. Pencil sharpener. 1,627,243; May 3.

Kraemer, Louis, Yonkers, N. Y. Line-drying attachment for fishing rods. 1,627,514; May 3.

Krammer, Henry E., New York, N. Y. Sectional flying boat. 1,627,184; May 3.

Krammer, Henry E., New York, N. Y. Aircraft. 1,627,185; May 3.

Krauss, Friedrich E., Schwarzenberg, Saxony, Germany. Portable fire extinguisher. 1,627,039; May 3.

Kreager, William A. J., Denver, Colo. Burners for oil-well cleaners. 1,626,940; May 3.

Kuhn, Clinton J., Vanderburgh, assignor to Graham Brothers, Evansville, Ind. Finger guard for foldable bus doors. 1,626,844; May 3.

Kurkowski, Joseph, Pittsburgh, Pa. Apparatus for joining or connecting pipes. 1,627,288; May 3.

La France, Richard, assignor to The Owens Bottle Company, Toledo, Ohio. Forming charges of molten glass. 1,626,737; May 3.

La France, Richard, assignor to The Owens Bottle Company, Toledo, Ohio. Conveying apparatus. 1,626,738; May 3.

Laird, Carl L., Galveston, Tex. Reefing iron. 1,627,515; May 3.

Lalor Fuel Oil System Company, The. (See Lalor, James D., assignor.)

Lalor, James D., assignor to The Lalor Fuel Oil System Company, Inc., Baltimore, Md. Fluid-straining apparatus. 1,627,186; May 3.

Lamb, Charles R. (See Wood, George E., assignor.)

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Articulated car construction. 1,626,845; May 3.

Lampros, Peter, Iron Mountain, Mich. Glove. 1,626,846; May 3.

Lanak, William H., Minneapolis, Minn. Sadiron. 1,626,616; May 3.

Lancaster Iron Works, Inc. (See Dupuy, Arthur O., assignor.)

Landgren, Charles A., and J. A. Landgren, Silverton, Oreg. Attachment for frying pans. 1,627,099; May 3.

Landgren, Julia A. (See Landgren, Charles A. and Julia.)

Larkie, Loyd P., et al. (See Smith, Lawrence F., assignor.)

Larry, Edwin C., assignor to General Railway Signal Company, Rochester, N. Y. Railway-signaling system. 1,627,440; May 3.

Larsen, Hjalmar R., Newark, N. J. Cooking utensil. 1,627,187; May 3.

Larsen, Johannes C., Sturtevant, Wis. Onion harvester. 1,627,289; May 3.

Larson, Erick, Paullina, Iowa. Automatic currier and oiler. 1,627,516; May 3.

Lasker, William W., Brooklyn, N. Y., and J. Mueller, North Bergen, N. J., assignor to Powers Accounting Machine Corporation, New York, N. Y. Variable-feed mechanism for tabulating machines. 1,627,394; May 3.

Last, Erwin, Vienna, Austria. Electrode to be applied to the human body and making the same. 1,626,617; May 3.

Lawrie, James W., assignor to E. I. du Pont de Nemours & Co., Wilmington, Del. Recovering glycerine from fermented molasses mash and apparatus therefor. 1,627,040; May 3.

Lawson, Robert H., Pawtucket, assignor to Hemphill Company, Central Falls, R. I. Reverse plating mechanism and process. 1,627,290; May 3.

Lawyer, William S., Woodland, Wash. Wrench. 1,627,441; May 3.

Leach Company. (See Rauter, Fred W., assignor.)

Leach Company. (See Runge, Richard W., assignor.)

Leary, John J., Brooklyn, N. Y. Printing machine. 1,627,041; May 3.

Lechthaler, Robert, Berlin-Charlottenburg, assignor to Baumgärtner, Dr. Kats & Co., G. m. b. H., Spandau-Elswerder, Germany. Apparatus for the manufacture of hollow bodies from fibrous pulp. 1,626,847; May 3.

Lecrenier, Célestin, Tampa, Fla. Motor. 1,627,100; May 3.

Lee, Charles M., Shreveport, La. Mirror mounting. 1,627,395; May 3.

Legat, Robert C. (See Prentice, G. E., and Legat.)

Lehmann, Otto P. E., Newark, N. J., assignor to V. C. Thorne, New York, N. Y. Projecting machine. 1,627,396; May 3.

Leighton, Joseph B., Los Angeles, Calif. Self-lubricating spring. 1,626,740; May 3.

Lentz, John M., and F. E. Miller, assignors to Graham Glass Company, Evansville, Ind. Method and apparatus for fire-finishing glass articles. 1,626,789; May 3.

Lewis, Leo L., Plainfield, assignor to Carrier Engineering Corporation, Newark, N. J. Method of and apparatus for cooling and ventilating. Re16,611; May 3.

Lewis, Lloyd V., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway braking apparatus. 1,626,941; May 3.

Lewis, Wilbur S., Cleveland, Ohio. Take-up device. 1,627,244; May 3.

Leyssieffer, Gustav. (See Balke, P., and Leyssieffer.)

Lichtenberg, Erich H., assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis. Drive mechanism for tractors. 1,626,680; May 3.

Liebknecht, Otto, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y. Manufacture of hydrocyanic acid. 1,626,848; May 3.

Lightfoot, Edwin N., New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Machine for winding resistance coils. 1,627,188; May 3.

Lilpfert, William J., Timonium, Md., assignor to General Chemical Company, New York, N. Y. Calcium-arsenate products and making the same. 1,626,942; May 3.

Liptak Fire-Brick Arch Company. (See Strachota, Clarence A., assignor.)

Little, George M., Pittsburgh, and J. G. Ford, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company. Dry cell. 1,627,334; May 3.

Littleford, John S., jr., Fort Thomas, Ky. Indoor game. 1,627,517; May 3.

Livingston, Fremont P., Denver, Colo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Retaining-valve device. 1,626,618; May 3.

Lloyd, Myron B., Detroit, Mich. Mixing device. 1,626,741; May 3.

Lock, Jack, Lowell, Mass. Balancing bobbins and the like. 1,627,518; May 3.

Lockwood, Edna E., Kansas City, Mo. Floor-polishing machine. 1,626,742; May 3.

Loeb, Rudolf, Ventnor, N. J. Ornamental fabric structure. 1,627,543; May 3.

Logan, Benjamin J. (See Ovren, John E., assignor.)

Loose Seat Valve Company. (See Wilson, Wylie G., assignor.)

Lottman, Edward J., assignor of one-half to W. B. Bassett, Cincinnati, Ohio. Thread-feeding attachment for knitting machines. 1,627,534; May 3.

Love, William H. (See Matthews, H. E., Love, and Ryder.)

Low, Charles L. (See Graham, L. A., and Low.)

Lowell-Wintsch Automatic Train Control. (See Rose, James A., assignor.)

Lubé, Henry. (See Perrault, J. A., and Lubé.)

Lucke, Charles E., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Condensing apparatus. 1,626,849; May 3.

Lucke, Charles E., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Condensing apparatus. 1,626,850; May 3.

Luthy, Joseph O., San Antonio, Tex. Battery connecter. 1,627,442; May 3.

Lynds, Fred H., North Attleboro, Mass., assignor to Whiting & Davis Company. Mesh machine. 1,627,397; May 3.

Lyons, Gordon T., Los Angeles, Calif. Dispensing device. 1,626,943; May 3.

Maag Gear Wheel & Machine Company. (See Maag, Max, assignor.)

Maag, Max, Schwamendingen, assignor to Maag Gear Wheel and Machine Company, Ltd., Zurich, Switzerland. Gear grinder. 1,626,944; May 3.

Maag, Max, Schwamendingen, assignor to Maag Gear Wheel and Machine Company, Ltd., Zurich, Switzerland. Gear grinder. 1,626,945; May 3.

Mabee, Alexander C. (See Dienner, J. A., and Mabee.)

MacDow, John W., Newark, N. J. Loud speaker. Des. 72,559; May 3.

Macey, Frank, Milwaukee, Wis. Antifriction tip for furniture. 1,626,946; May 3.

MacGahan, Paul, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Magnet. 1,626,681; May 3.

MacGregor, Wallace F., assignor to J. I. Case Threshing Machine Company, Racine, Wis. Combination Harvester thrasher. 1,627,535; May 3.

MacLaurin, Robert D., Lakewood, and C. C. Smith, Cleveland, Ohio. Garbage reduction. 1,626,853; May 3.

McRae, Duncan, East Orange, N. J., assignor to Westinghouse Lamp Company. Getter and applying the same. 1,626,682; May 3.

Macy, Alfred J., assignor, by mesne assignments, to The Pro-Tex Corporation, Chicago, Ill. Automatic releasing mechanism for locks. 1,627,189; May 3.

Madden, Harry D., Newark, N. J., assignor to Westinghouse Lamp Company. Machine for deforming glass articles. 1,626,683; May 3.

Madden, Harry D., Newark, and J. J. Higgins, East Orange, N. J., assignors to Westinghouse Lamp Company. Glass-rod-cutting machine. 1,626,851; May 3.

Madsen, Norman, Michigan City, Ind., assignor to Sullivan Machinery Company. Drilling apparatus. 1,627,291; May 3.

Magnavox Company, The. (See Metcalf, Herbert E., assignor.)

Magnus, Elmer G. and H. C. Doech, assignors to Individualizing Company of Illinois, Chicago, Ill. Slug holder. 1,627,398; May 3.

Maier, George E., Los Angeles, Calif., assignor to Westinghouse Air Brake Company, Wilmerding, Pa. Charging valve. 1,627,443; May 3.

Maise, Herman C., assignor to Briggs Manufacturing Company, Detroit, Mich. Door bumper. 1,627,190; May 3.

Malcom, Roscoe C., Wichita, Kans. Thermal switch. 1,627,519; May 3.

Mangold, Aberham F., Akron, Ohio. Dust collector. 1,626,852; May 3.

Manierre George, Milwaukee, Wis. Car loader. 1,626,947; May 3.

Manierre, George, Milwaukee, Wis. Unloader for railway cars. 1,626,948; May 3.

Marbury, Ralph E., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Condenser. 1,626,684; May 3.

Marden, John W., East Orange, and T. P. Thomas and J. E. Conley, Bloomfield, N. J., assignors to Westinghouse Lamp Company. Activation by means of hydrogen-free, carbon-bearing gas. 1,626,686; May 3.

Markatos, Spiros C., New York, N. Y. Iron-supporting plate for hot-water boilers. Re16,608; May 3.

Martelli, Joseph, Vineland, N. J. Composition for toy torpedo casings. 1,627,101; May 3.

Martin, Antonio S., Schenectady, N. Y. Knee-operated throttle-valve-controlling means. 1,627,102; May 3.

Martin, Harrison S. (See Dippel, William T., assignor.)

Martin, James V., Garden City, N. Y. Aeroplane-wing structure. 1,627,191; May 3.

Martin, William F. (See Tibbens, Samuel K., assignor.)

Martin, William H., Chappaqua, N. Y., assignor to American Telephone and Telegraph Company. Cone loud-speaker diaphragm. 1,626,743; May 3.

Mason, Charles W., Olaa, Hawaii. Bagasse board and making the same. 1,627,103; May 3.

Mason, Thomas S., and E. L. Yungk, Hartford, Conn. Container. 1,627,042; May 3.

Massillon-Cleveland-Akron Sign Company, The. (See Ackeret, Herbert, assignor.)

Mathieson Alkali Works, The. (See Parker, Harrison O., assignor.)

Mattei, Diego, and A. Mazza, assignors to "Eternit," Pietra Artificiale, Societa Anonima, Genoa, Italy. Apparatus for the manufacture of tubes of cement asbestos or similar substances. 1,627,104; May 3.

Matthews, Harry E., W. H. Love, and H. T. Ryder, Greensboro, N. C. Electric stop motion for textile machines. 1,627,292; May 3.

Maudsley, Richard T., Quinton, Birmingham, assignor to Packards & James Fison (Thetford) Ltd., Ipswich, England. Sulphuric acid chamber. 1,627,043; May 3.

Mayhew Steel Products Company. (See Carlson, Frederick O., assignor.)

Maynes Corporation. (See Maynes, Hyla F., assignor.)

Maynes, Hyla F., North Tonawanda, N. Y., assignor to Maynes Corporation, Dover, Del. Drive for amusement rides. 1,627,192; May 3.

Mazza, Adolfo. (See Mattei, D., and Mazza.)

McBee Binder Co., The. (See Welk, Nelson S., assignor.)

McCann, Ronald A., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,626,949; May 3.

McCormick, Fowler, Chicago, Ill. Telegraphy. 1,627,444; May 3.

McCormick, Fowler, Chicago, Ill. Printing telegraphy. 1,627,445; May 3.

McCune, Herbert R., assignor to Decatur Brick Mfg. Co., Decatur, Ill. Brick machine. 1,626,619; May 3.

McDonald, Alfred, et al. (See Stitt, Charles M., assignor.)

McDonnell, Stephen P., and P. A. Villars, Dallas, Tex. Timer for internal-combustion engines. 1,627,520; May 3.

McGeehin, Daniel J., West Hazleton, Pa. Temporary pipe coupling. 1,627,044; May 3.

McGeehin, Daniel J., West Hazleton, Pa. Pipe scraper. 1,627,045; May 3.

McIntosh, Arthur M., Sydney, Australia. Making and molding hard porcelain. 1,627,245; May 3.

McIntyre, Allan H., Winchester, Va. Fruit-grading machine. 1,627,246; May 3.

McMinn, John E., assignor to Peerless Manufacturing Company, Louisville, Ky. Heater. Des. 72,560; May 3.

McNerney, John H., et al., administrators. (See Owens, Michael J.)

McRae, William A., Brechin, Ontario, Canada. Liquid-level indicator. 1,626,686; May 3.

Mead, Richard R., Brooklyn, N. Y., assignor to Mergenthaler Linotype Company. Mold for slug-casting machines. 1,626,854; May 3.

Meier, William J., Lansing, Mich. Chimney. 1,627,105; May 3.

Meissner, Alexander, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Circuit arrangement for multiplex communication. 1,626,856; May 3.

Menschel, Reinhold, Berlin, Germany. Swimming and running shoe. 1,627,521; May 3.

Mentzer, Claude E., assignor of one-half to A. R. Corey, Des Moines, Iowa. Automatic race-track timing device. 1,626,620; May 3.

Mepstead, George S., London, England. Rotary Pump. 1,626,855; May 3.

Mercer, Alvis, et al. (See Smith, Lawrence F., assignor.)

Mercer, Henry H., Claremont, N. H., assignor to Sullivan Machinery Company. Steam-generating apparatus. 1,626,950; May 3.

Meredith, Sherman C., Burlingame, and N. N. T. Nyborg, Modesto, Calif. Manufacturing lactose. 1,626,857; May 3.

Mergenthaler Linotype Company. (See Ackerman, William, assignor.)

Mergenthaler Linotype Company. (See Hochuli, Henry R., assignor.)

Mergenthaler Linotype Company. (See Mead, Richard R., assignor.)

Messler, Clinton S., assignor to The Green Fuel Economizer Company, Beacon, N. Y. Automatic safety system for vessels containing liquid under pressure. 1,627,399; May 3.

Messtorff, Gerhard, Spandau, near Berlin, assignor to the Firm Dr. Erich F. Huth G. m. b. H., Berlin, Germany. Vacuum-tube radiotransmitter. 1,626,744; May 3.

Metal Specialties Manufacturing Company. (See Berg, John, assignor.)

Metcalf, Herbert E., San Leandro, assignor to The Magnavox Company, Oakland, Calif. Vacuum tube. 1,626,858; May 3.

Metropolitan Lamp Co. Inc. (See Sheiner, Philip, assignor.)

Metz, Alexander E., Teaneck, N. J. Scaffold bracket. 1,626,745; May 3.

Meyer, Harry R. (See Riley, L. G., Meyer, Johnston, and van Nieukerken.)

Meyer, Henry H., Detroit, Mich. Piston. 1,627,100; May 3.

Meyrowitz, Benjamin, New York, N. Y. Automobile traffic-signaling apparatus. 1,627,545; May 3.

Middendorf, George, Newark, N. J. Compressor for refrigerators or the like. 1,626,621; May 3.

Midulla, Benjamin, New York, N. Y. Electric water heater. 1,627,335; May 3.

Miller, Dora S., Los Angeles, Calif. Automobile body. Des. 72,561; May 3.

Miller, Frank R. (See Lents, J. M., and Miller.)

Miller, William A., Pittsburgh, Pa. Intermittent grip mechanism for rotary conveyers. 1,627,046; May 3.

Mills, Thomas R., Washington, D. C. Average-speed-recording means for railway trains. 1,627,522; May 3.

Miner, W. H., Inc. (See Withall, Albert P., assignor.)

Mitchell, Judie P., Denver, Colo. Radiator cap. Des. 72,562; May 3.

Moeller, Heinrich, Cologne Bayenthal, Germany, assignor to Westinghouse Electric & Manufacturing Company. Induction motor. 1,626,622; May 3.

Moeller, Max, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, and elsewhere. Measuring instrument. 1,627,106; May 3.

Monckmeier, Gustav C., Tipton, Iowa. Wear-compensating bolt. 1,627,401; May 3.

Montgomery Ward & Company. (See Robertson, Charles A., assignor.)

Moore, Arlington, New York, N. Y. Infolding paper container bodies and the like. 1,627,049; May 3.

Moore, Arlington, Boston, Mass. Paper dish. 1,627,050; May 3.

Moore, Arlington, Boston, Mass. Paper dish. 1,627,051; May 3.

Moore, Arlington, Worcester, Mass., assignor to Clarke-Moore Corporation, Wilmington, Del. Paper container. 1,627,047; May 3.

Moore, Arlington, Worcester, Mass., assignor to Clarke-Moore Corporation, Wilmington, Del. Paper container. 1,627,048; May 3.

Moore, George, Toronto, Ontario, Canada. Railway-crossing-gate-operating device. 1,627,052; May 3.

Moody, Joseph F., and V. L. Du Bois, assignors to A. H. Neilson, Tulsa, Okla. Safety hook. Re16,613; May 3.

Moratta, Mathew M., Princeton, Ind. Piston ring. 1,627,107; May 3.

Morehouse, Frank B., and F. Haase, San Francisco, Calif., assignors to Trayway Mfg. Co. Washing machine. 1,627,053; May 3.

Morehouse, Harold E., Dayton, Ohio. Aircraft engine. 1,627,108; May 3.

Morgan, George S., Toledo, Ohio. Removing deterrent salts from pickling liquids. 1,626,623; May 3.

Morgan, William C., Everett, Wash. Plastic composition. 1,626,859; May 3.

Morrell, Jacque C., and G. Egloff, assignors to Universal Oil Products Company, Chicago, Ill. Obtaining resin-like bodies from cracked hydrocarbon products. 1,627,054; May 3.

Morrell, Jacque C., and S. Comay, assignors to Universal Oil Products Company, Chicago, Ill. Purifying hydrocarbon oils. 1,627,055; May 3.

Morris, Adrian K., Atlanta, Ga. Face mask. 1,627,523; May 3.

Morris, Edward M., Rochester, N. Y. Lifting tongs. 1,627,524; May 3.

Morris, Russell L., Tulsa, Okla. Self-locking liquid-level gauge. 1,627,056; May 3.

Morris, Thomas W., Liverpool, England. Preservation of bacon or ham. 1,627,057; May 3.

Morrison, Montford, New York, N. Y. X-ray-tube radiator. 1,626,687; May 3.

Morrison, Robert A., and F. L. Oswald, Portland, Oreg. Ironing board. 1,626,624; May 3.

Moseley, James F., Manchester, England. Detersive compound. 1,627,446; May 3.

Moses, Ashleigh S., New York, N. Y. Apparatus for thickening and washing materials. 1,626,951; May 3.

Moskovics, Frederic E. (See Bastien, P., and Crawford, assignors.)

Motogram Corporation. (See Wilde, Francis E. J., assignor.)

Mucher, John J., Brooklyn, N. Y. Combination terminal. 1,627,447; May 3.

Mudd, Garrett W., Chicago, Ill. Machine for making compacts, tablets, wafers, and the like. 1,626,860; May 3.

Mueller, Adolph, trustee. (See Mueller, P., and Schuermann, assignors.)

Mueller, Charles W., Jersey City, N. J. Bird perch. 1,627,448; May 3.

Mueller, John. (See Lasker, W. W., and Mueller.)

Mueller, Philip, and A. C. Schuermann, assignors to A. Mueller, trustee, Decatur, Ill. Slip-joint coupling. 1,626,952; May 3.

Muhlfeld, John E., Scarsdale, N. Y., and A. G. Sandman, Baltimore, Md. Steam locomotive. 1,627,402; May 3.

Muhleman & Kayhoe, Incorporated. (See Beale, Frank A., assignor.)

Müller, Friederich, Elisabeth, N. J., assignor to Pratt & Whitney Company, New York, N. Y. Tool post. 1,626,953; May 3.

Mumbower, Leonard E. (See Abernethy, J. L., and Mumbower.)

Munro, Hugh, Glasgow, Scotland. Device for cleaning interdental spaces. 1,627,525; May 3.

Murphy, P. H., Company. (See Bonsall, Charles D., assignor.)

Murphy, Walter P. (See Goldinger, Carl M., assignor.)

Murphy, Walter P. (See Nicholas, Charles W., assignor.)

Murray, Harry, Ross, Calif. Adjustable pulley-block hanger. 1,626,861; May 3.

Myer, Ulrich, Linden, Mo. Fencepost. 1,626,862; May 3.

Myers, Lewis C., Freeport, assignor to Royal Typewriter Company, Inc., New York, N. Y. Typewriting machine. 1,627,058; May 3.

Nacey, Harry M., Chicago, Ill. Automatic sprinkler head for sprinkling systems. 1,626,863; May 3.

Nadolleck, Malva, New York, N. Y. Wreath. Des. 72,563; May 3.

Nashua Manufacturing Company. (See Caffray, William E., assignor.)

National Automatic Tool Company, The. (See Galloway, Robert M., assignor.)

National Cash Register Company, The. (See Goldberg, Maximilian M., assignor.)

National Cash Register Company, The. (See Robertson, William H., assignor.)

National Cash Register Company, The. (See Shipley, Bernis M., assignor.)

National Equipment Company. (See Bausman, Alonzo L., assignor.)

National Tile Company, The. (See Jones, L. S., Fisher, and Henrikson, assignors.)

Naugatuck Chemical Company, The. (See Cadwell, Sidney M., assignor.)

Naugatuck Chemical Company, The. (See Ostromislensky, Iwan, assignor.)

Naumburg, Robert E., Winchester, Mass. Piece-up mechanism for textile machines. 1,626,954; May 3.

Neidich, Samuel A., Edgewater Park, N. J. Filament-dyeing apparatus. 1,627,059; May 3.

Neilson, Albert H. (See Moody, J. F., and Du Bois, assignors.)

Neilson, James P., sr., Tulsa, Okla. Combination releg and jack clamp. 1,626,864; May 3.

Neilson, Robert E., Tulsa, Okla. Safety hook. 1,626,865; May 3.

Neilson, Robert E., Tulsa, Okla. Safety hook. 1,626,866; May 3.

Nellensteijn, Frederik J. (See Pataky, W. C. H., and Nellensteijn.)

Nelson, Charles A., assignor to Savage Arms Corporation, Utica, N. Y. Firearm. 1,626,867; May 3.

Nelson, Charles S., Cocolalla, Idaho. Vacuum tank. 1,627,293; May 3.

Nelson, Emil A., Detroit, Mich. Self-cleaning dump body. 1,627,336; May 3.

Nelson, Emil A., Abington, assignor to Budd Wheel Company, Philadelphia, Pa. Automobile wheel structure. 1,627,198; May 3.

Newdick, Norton A., assignor to The Colader Company, Columbus, Ohio. Loading machine. 1,627,247; May 3.

Newmeyer, William L., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Automatic station. 1,626,688; May 3.

Newton, Albert S., Providence, R. I. Desk bumper device. 1,626,955; May 3.

Nicholas, Charles W., Tarentum, Pa., assignor to W. P. Murphy, Chicago, Ill. Uncoupling lever. 1,626,956; May 3.

Nilson, Leonard D., Wayzata, Minn. Lifting jack. 1,627,526; May 3.

Noble, Ernest E., Yale City, Okla. Oil packing for inclosed axles or shafts. 1,626,957; May 3.

Noble, William, assignor, by mesne assignments, to Pro-phy-lac-tic Brush Company, Northampton, Mass. Boxing machine. 1,627,449; May 3.

Non-Explosive Corporation of America (New Corporation.) (See Cohn, Jacob, assignor.)

Norberg, Clifford M., Mamaroneck, N. Y. Draft control. 1,627,194; May 3.

Norden, Mortimer, New York, N. Y. Illuminated sign. 1,626,958; May 3.

Norman, Joseph T., Frederick, Md. Wagon. 1,627,109; May 3.

Norris, Charles M., Denver, Colo. Indicator. 1,627,110; May 3.

Northrup, Elmer C., San Francisco, Calif., assignor, by mesne assignments, to Sprague-Sells Corporation, Hoopeston, Ill. Nailing machine. 1,626,868; May 3.

Nyblom, Axel T., Varberg, Sweden. Dirigible headlight for automobiles. 1,627,060; May 3.

Nyborg, Niels N. T. (See Meredith, S. C., and Nyborg.)

Nydqvist, Antenor, Trollhattan, Sweden. Hydraulic power-transmission mechanism. 1,627,294; May 3.

Nye, Louis R., assignor of forty-nine per cent to W. O. Gallaway, Portland, Oreg. Table signaling device. 1,626,959; May 3.

Nyquist, Harry, Millburn, N. J., assignor to American Telephone and Telegraph Company. Picture-transmitting system. 1,627,111; May 3.

Oakman, Erwin H., Atlanta, Ga. Attachment for autos. 1,626,746; May 3.

Obele, George, assignor to Clay Equipment Corporation, Cedar Falls, Iowa. Stanchion. 1,627,527; May 3.

O'Donnell, Edward M., San Francisco, and D. D. Peebles, Eureka, Calif. Expansion joint for heat exchangers. 1,626,869; May 3.

Ogden, Benjamin V., Philadelphia, Pa. Switch for automobile stop lights. 1,627,061; May 3.

Ohio Brass Company, The. (See Austin, Arthur O., assignor.)

Oil Conservation Engineering Company, The. (See Brooks, Stephen H., assignor.)

Oliver, Ernon V., Portland, Oreg. Water still. 1,626,960; May 3.

Oppenheim, Charles J., jr., New York, N. Y. Bottle. Des. 72,564; May 3.

Osgood, Louis A., assignor, by mesne assignments, to International Scale Company, Dayton, Ohio. Portable scale. 1,626,961; May 3.

Osgood, Louis A., Dayton, and E. R. Wolf, Springfield, assignors to International Scale Company, Dayton, Ohio. Weighing scale. 1,626,963; May 3.

Ostromislensky, Iwan, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn. Obtaining colored polymerized styrol and its homologues and products obtained thereby. 1,627,195; May 3.

Oswald, Franklin L. (See Morrison, R. A., and Oswald.)

Otis, John F., Oswego, N. Y. Steam generator. 1,627,450; May 3.

Outcelt, Henry J., Warsaw, Ind. Internal-combustion engine. 1,627,403; May 3.

Outhier, Marcel, Paris, assignor to Societe Anonyme des Etablissements Kiblok, Levallois-Perret, France. Nut lock. 1,627,404; May 3.

Oven, Frank J., assignor to Victor Manufacturing & Gasket Co., Chicago, Ill. Gasket. 1,626,962; May 3.

Ovren, John E., assignor of one-half to B. J. Logan, Stoughton, Wis. Transmission mechanism. 1,627,196; May 3.

Owen-Dyneto Corporation. (See Sayre, Gordon B., assignor.)

Owen, Richard L. (See Babel, E. H., and Owen.)

Owens Bottle Company, The. (See La France, Richard, assignor.)

Owens Bottle Company, The. (See Owens, Michael J., assignor.)

Owens Bottle Company, The. (See Soubier, Leonard D., assignor.)

Owens, John L., Minneapolis, Minn. Huller and scarifier. 1,627,248; May 3.

Owens, Michael J., deceased; J. H. McNerney, J. C. Blair, and H. O. Beesch, administrators, assignors to The Owens Bottle Company, Toledo, Ohio. Apparatus for guiding and conveying hot glassware. 1,626,747; May 3.

Owens, Michael J., deceased; J. H. McNerney, J. C. Blair, and H. O. Beesch, administrators, assignors to The Owens Bottle Company, Toledo, Ohio. Bottle-transfer mechanism. 1,626,748; May 3.

Oxhandler, Leopold, Chicago, Ill. Cushioning and filler-locking flat. 1,626,870; May 3.

Pache, Auguste. (See Goulrand, R., and Pache.)

Pache, Julia, administratrix. (See Goulrand, R., and Pache.)

Packards & James Fison (Thetford) Ltd. (See Maudsley, Richard T., assignor.)

Page, Albert E., Brooklyn, assignor to Scott and Williams, Inc., New York, N. Y. Circular-knitting machine. 1,627,257; May 3.

Page, John W., Chicago, Ill. Revolving derrick. 1,627,249; May 3.

Palmer, John H., Rossland, British Columbia, Canada. Siphon. 1,627,451; May 3.

Panyard, John F., Detroit, Mich. Piston packing. 1,626,749; May 3.

Panyard, John F., Detroit, Mich. Piston packing. 1,626,750; May 3.

Parfumerie Rigaud, Inc. (See Kendall, William G., assignor.)

Parker, Harrison O., Tulsa, Okla., assignor to The Mathieson Alkali Works, New York, N. Y. Refining oils. 1,627,333; May 3.

Parker, William B., Placerville, Calif. Adjustable lip-spray nozzle. 1,627,250; May 3.

Parodi, Achille, Genoa, Italy. Apparatus for cleaning potteries and the like. 1,627,112; May 3.

Parr, Louis, Vancouver, British Columbia, Canada. Machine for straightening saws. 1,626,751; May 3.

Parts Corporation. (See Kelly, Bert F., assignor.)

Pataky, Walther C. H., The Hague, and Frederik J. Nellenstelin, Delft, Netherlands. Making fatty acids from hydrocarbons. 1,627,452; May 3.

Pathe Cinema, Anciens Etablissements Pathe Freres. (See Pénin, Emile C., assignor.)

Patrick, Benjamin H., Mount Gay, W. Va. Railroad switch. 1,626,752; May 3.

Patrick, Isaac, Jamaica, N. Y. Scissors or shears with composite blade. 1,627,197; May 3.

Paul, Joseph D., Philadelphia, Pa. Grade-crossing gate. 1,626,964; May 3.

Paul, Sydney. (See Twyman, B W. and Paul.)

Paulson, Peter L., Clinton, Minn. Fire-kindling material. 1,626,965; May 3.

Paulus, Charles L. (See Russell, H. O. and Paulus.)

Peabody, James A., Evanston, Ill., assignor to General Railway Signal Company. Control means for light signals. 1,627,453; May 3.

Pearson, George C., Youngstown, Ohio. Snubber for vehicles. 1,627,113; May 3.

Pecina, Rudolph F., and E. V. Carlson, Los Angeles, Calif. Musical string-instrument tuner. 1,626,753; May 3.

Pecker, Joseph S., assignor, by mesne assignments, to Dixie Dental Manufacturing Co., Philadelphia, Pa. Dentist's anvil. 1,626,754; May 3.

Peebles, David D. (See O'Donnell, E. M., and Peebles.)

Peebles, Thomas A., Pittsburgh, assignor to J. M. Hopwood, Dormont, Pa. Steam-separating apparatus for steam generators. 1,626,625; May 3.

Peerless Manufacturing Company. (See McMinn, John E., assignor.)

Peirce, John R., New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y. Accounting machine. 1,626,871; May 3.

Pénin, Emile C., Joinville-le-Pont, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Film winding and unwinding device for motion-picture apparatus. 1,627,198; May 3.

Penny, Roy W., Raleigh, N. C. Hydrant. 1,627,251; May 3.

Perkins, Percy M. (See Hickman, Manuel, assignor.)

Perrault, Jules A., Lowell, Mass., and H. Lubé, Astoria, N. Y., assignors to Recreator Phonograph Corporation, Boston, Mass. Projecting apparatus. 1,627,114; May 3.

Pestourie, Pierre, Paris, France. Shock absorber. 1,626,755; May 3.

Petera, Cornelius A., Minneapolis, Minn. Lawn mower. 1,627,252; May 3.

Peterson, Oscar W., Cadillac, Mich. Artificial fishing bait. 1,627,455; May 3.

Pfeifer, Ferdinand, Springfield, assignor to The Taylor Tilting Light Company, Marysville, Ohio. Tilting headlight for automobiles and the like. 1,627,199; May 3.

Phalon, Lilian A., Rochester, N. Y. Combined tray and table. 1,627,454; May 3.

Philadelphia Dry Machinery Company. (See Wigglesworth, Harry H., assignor.)

Philip, George R., assignor to Cross Bros. Company, Northfield, Vt. Sand-blast relief carving. 1,627,456; May 3.

Pickar, Leo H., North Freedom, Wis. Folding brush. 1,627,200; May 3.

Pieper, Alphonse F., Rochester, N. Y. Dental apparatus. 1,626,689; May 3.

Pietzsch, Frank H., assignor to Railway Devices Company, St. Louis, Mo. Angle-cock holder. 1,626,690; May 3.

Pietzsch, Louis H., Coburg, Melbourne, Victoria, Australia. Liquid-dispensing apparatus. 1,627,115; May 3.

Pliblad, Eric J., Brooklyn, N. Y., assignor to R. S. Smart, Ottawa, Canada. Spring suspension device or shock absorber. 1,626,966; May 3.

Pilling, Norman B., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company. Resistor alloy. 1,626,691; May 3.

Piver, William C., Hillside, N. J. Making an insecticide. 1,626,872; May 3.

Poetz, John C., Leonia, Idaho. Mold for concrete buildings. 1,627,116; May 3.

Pompeian Flooring Company. (See Slosser, Alger J., assignor.)

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Lamp base or similar article. Des. 72,565; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Lamp base or similar article. Des. 72,566; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Lamp base or similar article. Des. 72,567; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Lamp base or similar article. Des. 72,568; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Lamp base or similar article. Des. 72,569; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Bridge arm for electric-light fixtures or similar articles. Des. 72,570; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Bridge arm for electric-light fixtures or similar articles. Des. 72,571; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Bridge arm for electric-light fixtures or similar articles. Des. 72,572; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Column for electric-light fixtures or similar articles. Des. 72,573; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Column for electric-light fixtures or similar articles. Des. 72,574; May 3.

Poritz, Frederick M., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y. Column for electric-light fixtures or similar articles. Des. 72,575; May 3.

Power Specialty Company. (See Primrose, John, assignor.)

Powers Accounting Machine Corporation. (See Lasker, W. W., and Mueller, assignors.)

Pratt & Whitney Company. (See Allen, Frederick C., assignor.)

Pratt & Whitney Company. (See Ingham, Walter E., assignor.)

Pratt & Whitney Company. (See Müller, Friederich, assignor.)

Pratt & Whitney Company. (See Tanner, Hubert D., assignor.)

Pratt, David S. (See Hedenburg, O. F., and Pratt.)

Preble, James J., Newton, and W. B. Thompson, Winchester, assignors to Spraco Painting Equipment Company, Boston, Mass. Apparatus or tool for applying coating material. 1,627,117; May 3.

Prentice, G. E., Manufacturing Company. (See Prentice, G. E., and Legat, assignors.)

Prentice, George E., Berlin, and R. C. Legat, New Britain, assignors to G. E. Prentice Manufacturing Company, New Britain, Conn. Separable fastener. 1,626,873; May 3.

Prenveille, Antoine E. M. and D. E., Oakland, Calif. Sliding grate for ovens. 1,627,405; May 3.

Prenveille, Donald E. (See Prenveille, A. E. M. and D. E.)

Preston, Marshall V., Boston, Mass. Pattern-grading machine. 1,627,062; May 3.

Pride of Petaluma Brooder Stove Company. (See Frengle, F., and Rohan.)

Primrose, John, assignor to Power Specialty Company, New York, N. Y. Oil heater and operating same. 1,626,874; May 3.

Pringle, William A., Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada. Feeding device for computing machines. 1,627,201; May 3.

Pritchett, William H., San Diego, Calif. Automobile curtain. 1,627,457; May 3.

Pritchett, William H., San Diego, Calif. Gasoline regulator. 1,627,458; May 3.

Products Protection Corporation. (See Smith, Franklin S., assignor.)

Pro-phy-lac-tic Brush Company. (See Noble, William, assignor.)

Pro-tex Corporation, The. (See Macy, Alfred J., assignor.)

Prutton, Carl F. (See Smith, A. K., and Prutton.)

Quigan, Frank J., Brooklyn, and S. Carolin, New York, N. Y. Hand-bag accessory. 1,627,063; May 3.

Radio Corporation of America, et al. (See Semm, A., and Schaffer, assignors.)

Ragsdale, Earl J. W., Norristown, assignor to Budd Wheel Company, Philadelphia, Pa. Wheel. 1,627,202; May 3.

Rail Joint Company, The. (See Disbrow, C. A., and Gadd, assignors.)

Railway Devices Company. (See Campbell, Sterling H., assignor.)

Railway Devices Company. (See Pietzsch, Frank H., assignor.)

Railway Metal Products Company. (See Small, Arthur E., assignor.)

Ramp Buildings Corporation. (See d'Humy, Fernand E., assignor.)

Ramsey, Clifford H., Glen Rock, N. J. Breaking roller. 1,627,339; May 3.

Raney, Clemma R., Chicago, Ill., assignor to International Harvester Company. Grain shocker. 1,627,203; May 3.

Ranney, William C., Elbridge, N. Y. Holder and carrier for golf clubs. 1,627,459; May 3.

Rauter, Fred W., assignor to Leach Company, Oshkosh, Wis. Vehicle wheel. 1,627,406; May 3.

Rawak, George, New York, N. Y. Headlight. 1,626,626; May 3.

Rawling, Arthur, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Switch contact. 1,626,692; May 3.

Reach, William F., Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y. Golf-club shaft. 1,626,967; May 3.

Recatti, Rocco, St. Louis, Mo. Toy trundle. 1,626,756; May 3.

Reckler, Laurence L., Westwood, Calif. Liquid-control means for hydraulic brakes. 1,626,968; May 3.

Recreator Phonograph Corporation. (See Antonelli, Orazio, assignor.)

Recreator Phonograph Corporation. (See Perrault, J. A., and Lubé, assignors.)

Reese, Henry W. (See Kallmeyer, Ernst, assignor.)

Reese, Issachar P. (See Troast, William F., assignor.)

Reese, Thomas S., assignor to The Di-Noc Manufacturing Company, Cleveland, Ohio. Transfer print and making the same. 1,627,407; May 3.

Reeves, George G., Shreveport, La. Outlet valve. 1,626,969; May 3.

Reiser, Alfred W., Toledo, Ohio. Electric connecter for branch circuits. 1,626,875; May 3.

Reiter, William J., et al. (See Stitt, Charles M., assignor.)

Rentschler, Harvey C., East Orange, N. J., assignor to Westinghouse Lamp Company. High-voltage electron device. 1,626,693; May 3.

Reynolds Spring Company. (See Ile, William, assignor.)

Richardson & Boynton Company. (See Gilbert, Maxwell F., assignor.)

Richey, Thompa R., Atlanta, Tex. Highway safety device. 1,626,627; May 3.

Richmond, Herbert. (See Wike, William L., assignor.)

Riddle, John, assignor to Telegraph Construction and Maintenance Company, Limited, London, England. Galvanometer and like recording instrument. 1,626,694; May 3.

Riley, Lynn G., and H. R. Meyer, Wilkinsburg, and H. H. Johnston, Edgewood Park, and J. M. van Nieukerken, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company. Control apparatus. 1,627,340; May 3.

Ritter, Frederick D., assignor to Weatherproof Body Corporation, Corunna, Mich. Door and curtain. 1,626,757; May 3.

Roberts, Fred, Portland, Oreg. Comb for hair cutting. 1,627,408; May 3.

Roberts, William E., Kenosha, Wis. Cuff link. 1,627,460; May 3.

Robertshaw, George A., Greensburg, Pa. Fuel-control system. 1,627,341; May 3.

Robertson, Charles A., Jackson, Mich., assignor to Montgomery Ward & Company, Chicago, Ill. Governor for explosive engines. 1,627,118; May 3.

Robertson, William H., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio. Cash register. 1,627,119; May 3.

Robins, Harry M., Glen Ridge, and J. J. Higgins, East Orange, N. J., assignors to Westinghouse Lamp Company. Automatic flashing machine. 1,626,695; May 3.

Robinson, Edward A., assignor of one-half to himself and one-half to E. E. Workman, Montreal, Quebec, Canada. Connecter-head support. 1,626,696; May 3.

Robinson, Grosvenor P., Summit, and W. T. Blackwell, Westfield, N. J.; said Robinson assignor, by mesne assignments, to said Blackwell. Lighting fixture. 1,627,461; May 3.

Rodanet, Charles H. H., assignor to Société Anonyme: Etablissements Ed. Jaeger, Paris, France. Construction of speed indicators. 1,626,697; May 3.

Rodger Ballast Car Company. (See Hindahl, David, assignor.)

Roessler & Hasslacher Chemical Company, The. (See Liebknecht, Otto, assignor.)

Roessler & Hasslacher Chemical Company, The. (See Williams, Carl S., assignor.)

Rohan, Francis D. (See Frengle, F., and Rohan.)

Rohan, Francis D., et al. (See Frengle, F., and Rohan, assignors.)

Rohmer, Frank D., Lackawanna, N. Y. Combination lock. 1,627,462; May 3.

Root, Charles F., assignor to The Chandler & Price Company, Cleveland, Ohio. Feed table for sheet-feeding mechanism. 1,627,064; May 3.

Rooth, Adolf, Ludvika, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Voltage regulator for transformers. 1,626,970; May 3.

Rose, James A., assignor to Lowell-Wintsch Automatic Train Control, Inc., Lancaster, Pa. Method and apparatus for transmitting electric current. 1,627,409; May 3.

Rosewater, Benjamin J., Eureka Springs, Ark. Traffic sign. 1,626,876; May 3.

Ross, David E., La Fayette, Ind. Internal-combustion engine. 1,626,877; May 3.

Roth, Claude L., administrator. (See Keith, Nathaniel S.)

Rotherham, Walter S., Little Falls, N. J., assignor to Westinghouse Lamp Company. Sealing-in head for incandescent electric lamps. 1,626,628; May 3.

Rouse, George M., assignor, by mesne assignments, of one-third to E. W. Bellinger, Westmoreland, and one-third to G. M. Thomas, Utica, N. Y. Fire escape. 1,626,698; May 3.

Rowley, Raymond W., St. Louis, Mo. Plasterer's float. 1,627,410; May 3.

Royal Glass Works. (See Cantor, Ruban, assignor.)

Royal Typewriter Company. (See Myers, Lewis C., assignor.)

Ruben, Samuel, New York, N. Y. Apparatus for indicating the presence and the concentration of gases and vapors in atmosphere. 1,627,204; May 3.

Ruben, Samuel, New York, N. Y. Electron relay. 1,627,411; May 3.

Ruckert, Harry E., assignor, by mesne assignments, to Sanitary Products Corporation of America, Philadelphia, Pa. Method and apparatus for forming articles from sheet material. 1,627,412; May 3.

Rumbough, Stanley M., New York, N. Y. Cap. 1,627,065; May 3.

Runge, Richard W., assignor to Leach Company, Oshkosh, Wis. Track roller. 1,627,413; May 3.

Rupp, John L., Wilkinsburg, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa. Casing for combined battery and battery charger for radio apparatus. Des. 72,576; May 3.

Russak, Michael J., New York, N. Y. Cigarette holder. 1,627,463; May 3.

Russell, Herbert O., Detroit, Mich., and C. L. Paulus, Dayton, Ohio. Electrically-operated wing-tip flare bracket. 1,627,066; May 3.

Russell, James M., Dayton, Ohio. Parachute pack. 1,627,067; May 3.

Russell, Willis W., Cincinnati, Ohio. Carton. 1,626,971; May 3.

Ryder, Hugh T. (See Matthews, H. E., Love, and Ryder.)

Rynearson, Winfield S., Edmonds, Wash. Collapsible tent support. 1,627,546; May 3.

Sabalitschka, Theodor, Berlin-Steglitz, Germany. Preserving food for men or animals. 1,627,342; May 3.

St. Onge, Asarias. (See Gingras, L. J., and St. Onge.)

Salamon, Matyas, Brooklyn, N. Y. Safe. 1,627,464; May 3.

Sanders, Albert H., Glendora, Calif. Mortar-applying device. 1,626,972; May 3.

Sandman, August G. (See Muhlfeld, J. E., and Sandman.)

Sanitary Products Corporation of America. (See Ruckert, Harry E., assignor.)

Sattler, Gustav. (See Syptroth, Emil, assignor.)

Savage Arms Corporation. (See Nelson, Charles A., assignor.)

Sauer, Johan N. A., Amsterdam, Netherlands. Process of and apparatus for treating liquids with purifying and decolorizing agents. 1,627,343; May 3.

Saunders, Edward W., St. Louis, Mo. Windshield. 1,626,758; May 3.

Sayegh, Toufik A., Central Falls, R. I. Game apparatus. 1,627,120; May 3.

Sayre, Gordon E., assignor to Owen-Dyneto Corporation, Syracuse, N. Y. Windshield wiper. 1,626,629; May 3.

Scammell China Co. (See Schnepf, Emil L., assignor.)

Schaeffer, Dorman, Helena, Mont. Toy vehicle. Des 72,577; May 3.

Schaffer, Lewis D., assignor to The State Banking & Trust Company, trustee for himself, and The Singer Manufacturing Company, Cleveland, Ohio. Bowling-pin-setting apparatus and its method of operating. 1,627,414; May 3.

Schaffer, Walter. (See Semm, A., and Schaffer.)

Schaurte, Paul, Zurich-Altstetten, Switzerland. Rotary machine. 1,626,973; May 3.

Schers, Emil. (See Schers, Louis and E.)

Schers, Louis and E., Wilkes-Barre, Pa. Eye protector. 1,627,121; May 3.

Schleferstein, Heinrich, Charlottenburg, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company. Radio transmission system. 1,626,699; May 3.

Schlesinger, Alex, New York, N. Y. Telephone-instrument attachment. 1,627,415; May 3.

Schmid, Edward R., Verona, N. J., assignor to Westinghouse Lamp Company. Basing cement. 1,626,700; May 3.

Schmidt, Benjamin F., South Pasadena, Calif. Gear-shift mechanism. 1,626,974; May 3.

Schmidt, Benjamin F., Los Angeles, Calif. Gear shift. 1,626,975; May 3.

Schneider, Rudolph, assignor to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo. Engine bedplate. 1,626,760; May 3.

Schnepf, Emil L., assignor to Scammell China Co., Trenton, N. J. Plate. Des. 72,578; May 3.

Schnitzler, Abraham, Chelsea, Mass. Shifting jack for motor vehicles. 1,626,630; May 3.

Scholes, Richard T., Hinsdale, Ill. Tie plate. 1,626,631; May 3.

Schollhorn, William, Company, The. (See Bernard, William A., assignor.)

Schoof, Ralph T., Dodge City, Kans. Pocket postal scale. 1,626,976; May 3.

Schorr, Herman E. (See Gibson, A. R., and Schorr.)

Schuermann, Anton C. (See Mueller, P., and Schuermann.)

Schüftan, Eugen, Berlin-Wilmersdorf, Germany. Apparatus for making composite motion pictures. 1,627,295; May 3.

Schuman, Paul R., Chicago, Ill. Smoking pipe. 1,627,416; May 3.

Scott, Allen C., Omaha, Nebr. Container for shipping goods. 1,627,344; May 3.

Scott and Williams, Inc. (See Page, Albert E., assignor.)

Scott, Baxter C., Pickens, Miss. Denture. 1,626,761; May 3.

Scott, Philip L., Chicago, Ill., assignor to Super-Diesel Tractor Corporation, La Porte, Ind. Relief mechanism for fuel-injection systems. 1,626,762; May 3.

Scott, Ralph B., Los Angeles, Calif. Conduit cleaner. 1,627,122; May 3.
Seaborne, Charles R., Appleton, Wis., assignor to American Lakes Paper Company, Chicago, Ill. Engraving method and apparatus. 1,627,205; May 3.
Seeman, Frederick A., assignor to Davenport Machine & Foundry Company, Davenport, Iowa. Jolt-roll-over mechanism. 1,627,348; May 3.
Seitz, Ernest O., assignor to C. M. Hall Lamp Co., Detroit, Mich. Combined tail light and stop signal. 1,626,632; May 3.
Semm, Alfred, and W. Schaffer, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, and Radio Corporation of America. Arrangement for controlling tube senders. 1,626,759; May 3.
Setzepfand, Werner, Berlin, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Telephone system. 1,627,206; May 3.
Seward, Edwin C. (See Alexander, Carl Z. and E. S., assignors.)
Seymour, Charles R., assignor to M. D. Knowlton Company, Rochester, N. Y. Tube-cutting machine. 1,626,878; May 3.
Shannon, Walter N., jr., San Bernardino, Calif. Truck. 1,627,253; May 3.
Sharp, William E., assignor to Grip Nut Company, Chicago, Ill. Lock nut and making the same. 1,627,207; May 3.
Sheer, H. M. Company. (See Shuler, Andrew F., assignor.)
Sheiner, Philip, Brooklyn, assignor to Metropolitan Lamp Co. Inc., New York, N. Y. Base for a lamp. Des. 72,579; May 3.
Sherman, Vernon W., Detroit, Mich. Transfer switch. 1,627,345; May 3.
Shidler, Frank L., and R. D. Gregg, Kankakee, Ill. Appliance for finishing concrete pavements. 1,626,879; May 3.
Shinn, Frank H., Davenport, Iowa. Interleaving device. 1,627,417; May 3.
Shipley, Bernis M., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio. Cash register. 1,626,880; May 3.
Shredded Wheat Company, The. (See House, Henry A., assignor.)
Shredded Wheat Company, The. (See Webster, Earl P., assignor.)
Shuler, Andrew F., Arcanum, Ohio, deceased; M. M. Shuler and W. B. Shuler, executors, assignors to H. M. Sheer Company, Quincy, Ill. Brooder. 1,627,346; May 3.
Shuler, Mary M., et al., executors. (See Shuler, Andrew F.)
Shuler, W. B., et al., executors. (See Shuler, Andrew F.)
Sibley, Tarrant, Bennington, Vt. Machine for forming fasteners. 1,626,977; May 3.
Siemens & Halske Aktiengesellschaft. (See Moeller, Max, assignor.)
Siemens & Halske Aktiengesellschaft. (See Setzepfand, Werner, assignor.)
Simko, Andrew S., Passaic, N. J. Removable half sole for shoes. 1,627,465; May 3.
Sinclair Refining Company. (See Isom, E. W., and Bell, assignors.)
Singer Manufacturing Company, The. (See Schaffer, Lewis D., assignor.)
Skinner, Frank W., West Norwood, N. J. Liquid indicator. 1,626,881; May 3.
Skitt, James H., assignor to Smith, Drum & Company, Phidadelphia, Pa. Dyeing machine. 1,627,347; May 3.
Slayton, W. L., Toledo, Ohio. Reminder for card players. 1,627,208; May 3.
Sleeper, Frank H., assignor to Sleeper & Hartley, Inc., Worcester, Mass. Expansion pulley. 1,626,701; May 3.
Sleeper & Hartley, Inc. (See Sleeper, Frank H., assignor.)
Sleeper, Harvey P., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Temperature-indicating device. 1,626,633; May 3.
Slepian, Joseph, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company. Electrostatic radiotuner. 1,626,634; May 3.
Slepian, Joseph, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Transmitter. 1,626,635; May 3.
Slepian, Joseph, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Glow-discharge transmitter. 1,626,636; May 3.
Slosser, Alger J., assignor to Pompeian Flooring Company, Williamsport, Pa. Plastic composition product and producing articles of manufacture. 1,627,296; May 3.
Small, Arthur E., Oak Park, Ill., assignor, by mesne assignments, to Railway Metal Products Company. Side door for railway freight cars. 1,626,882; May 3.
Smart, Russel S. (See Pilblad, Eric J., assignor.)
Smith, Albert A. (See Gurnee, I. Q., and Smith.)
Smith, Albert K., Midland, Mich., and C. F. Prutton, East Cleveland, Ohio, assignors to The Dow Chemical Company, Midland, Mich. Treating brine. 1,627,068; May 3.
Smith, Bryan H., Berkeley, Calif. Luggage carrier. 1,626,978; May 3.
Smith, Burgess W., assignor to The Todd Company, Incorporated, Rochester, N. Y. Safety paper. 1,627,254; May 3.
Smith, Charles C. (See MacLaurin, R. D., and Smith.)
Smith, Drum & Company. (See Skitt, James H., assignor.)
Smith, Franklin S., Brooklyn, assignor to The Products Protection Corporation, New York, N. Y. Treating moldings of partially-cured phenolic condensation products. 1,627,209; May 3.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,627,123; May 3.
Smith, Julius B., assignor to The American Mills Co., Waterbury, Conn. Covered elastic thread or cord. 1,627,255; May 3.
Smith, Lawrence F., assignor of one-eighth to L. P. Larkie and one-eighth to A. Faulkner, C. C. Dale, and A. Mercer, Hasard, Ky. Coal car. 1,627,256; May 3.
Smith, Rittenhouse M., Mobile, Ala. Filing device. 1,626,883; May 3.
Smith, Rittenhouse M., Mobile, Ala. Filing device. 1,626,884; May 3.
Smith, Rittenhouse M., Mobile, Ala. Index-locking device and card attachment. 1,626,885; May 3.
Smith, Rittenhouse M., Mobile, Ala. Filing device. 1,626,886; May 3.
Smith, Rittenhouse M., Mobile, Ala. Filing device. 1,626,979; May 3.
Smith, William A., Clarkson, N. Y. Preparing food substances. 1,627,466; May 3.
Smyth, Francis G., jr., Red Bank, N. J. Playing card. Des. 72,580; May 3.
Snow, Benjamin H., Winchester, assignor to Bernitz Furnace Appliance Company, Boston, Mass. Furnace wall. 1,627,349; May 3.
Societe Anonyme des Etablissements Kiblok. (See Outhier, Marcel, assignor.)
Société Anonyme: Etablissements Ed. Jaeger. (See Rodanet, Charles H. H., assignor.)
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Apparatus for forming glass. 1,626,702; May 3.
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Glass-forming machine. 1,626,703; May 3.
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Glass-forming apparatus. 1,626,704; May 3.
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Glass feeder. 1,626,705; May 3.
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Glass feeder. 1,626,706; May 3.
Soubier, Leonard D., assignor to The Owens Bottle Company, Toledo, Ohio. Apparatus for transferring glass articles. 1,626,707; May 3.
Spalding, A. G., & Bros. (See Reach, William F., assignor.)
Sparlin, Guy V., Tampa, Fla. Pneumatic horn. 1,627,467; May 3.
Speirs, George W. (See Bierman, H. C., and Speirs.)
Spengler, George H., assignor to F. S. V. Bogart, Rockford, Ill. Boring tool. 1,626,887; May 3.
Sperry Development Company. (See Sperry, Elmer A., assignor.)
Sperry, Elmer A., Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del. Valve mechanism for combustion engines. 1,627,210; May 3.
Spraco Painting Equipment Company. (See Preble, J. J., and Thompson, assignors.)
Sprague-Sells Corporation. (See Northrup, Elmer C., assignor.)
Sproesser, William C., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Getter for controlling crystal growth. 1,626,637; May 3.
Sproesser, William C., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Introduction of clean-up agents into evacuated vessels. 1,626,638; May 3.
Sproesser, William C., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Application of getters to electric incandescent lamps and the like. 1,626,639; May 3.
Sproesser, William C., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Evacuation of bulbs and the like. 1,626,640; May 3.
Sprout, Willis F., Lebanon, Kans. Proportional dividers. 1,626,980; May 3.
Stampley, Henry E., Sibley, La. Glarechield. 1,626,981; May 3.
Standard Coupler Company. (See Goodwin, Ernest G., assignor.)
Starr, Morton H., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt. Weighing machine. 1,627,124; May 3.
Starr, Robert J., Briercrest, Saskatchewan, Canada. Resilient wheel. 1,627,418; May 3.
State Banking & Trust Company, trustee, The. (See Schaffer, Lewis D., assignor.)
Stein, Harry B., Chicago, Ill. Window construction. 1,627,419; May 3.
Stein, William D. (See Block, David J., assignor.)
Steinman, Saul, Shelton, Conn. Sign holder. 1,627,350; May 3.

Stephenson, Samuel E., et al. (See Harding, Joseph G., assignor.)
Stevens, Blamey, Temascaltepec, Mexico. Hydraulically-operated diaphragm pump. 1,627,257; May 3.
Stewart, Alexander, Roselle, assignor to C. L. Constant Company, Hoboken, N. J. Treating discarded lead battery plates. 1,627,351; May 3.
Stewart, Alonso L., Rushville, Ind. Self-guiding and riding cultivator. 1,626,888; May 3.
Stewart, Anne H., Cleveland, Ohio. Base frame for primary educational work and play. 1,627,211; May 3.
Stewart, Cecelia H., Pittsburgh, Pa. Cover casing for match packages. Des. 72,581; May 3.
Stewart, Frank H., Philadelphia, Pa., assignor to L. B. Eppstein, J. Wilsin, and J. B. Gordatowski, New York, N. Y., syndicate managers of The Cum-Art Syndicate, New York, N. Y. Apparatus for building tire casings. 1,627,212; May 3.
Stickney, Burnham C., Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,626,641; May 3.
Stitt, Charles M., assignor of one-third to A. McDonald, Los Angeles, and one-third to W. J. Reiter, Santa Monica, Calif. Picture. 1,627,468; May 3.
Stockstad, Harold E., Duluth, Minn. Safety hook. 1,626,642; May 3.
Stolp, Samuel S., assignor to C. B. Gillson, Chicago, Ill. Direct-current track circuit for railway signals. 1,626,643; May 3.
Stone, David, New Rochelle, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Winding machine. 1,627,213; May 3.
Stover, George H., New York, N. Y. Apparatus for handling bricks. 1,626,644; May 3.
Strachota, Clarence A., St. Paul, Minn., assignor to Liptak Fire-Brick Arch Company, Chicago, Ill. Fire-arch structure. 1,626,982; May 3.
Strack, Herman. (See Hanamann, P., and Strack.)
Streitz, George B. (See Blume, H., and Streitz.)
Struble, James F., Hutchinson, Kans. Antifreezing device. 1,626,763; May 3.
Stuart, Harve R., assignor to The Bauer-Stuart Company, Springfield, Ohio. Demonstrating device for shock absorbers and the like. 1,627,125; May 3.
Studebaker Corporation, The. (See Henry, Guy P., assignor.)
Sturm, Frank X., assignor to The Glove Corporation, Alexandria, Ind. Glove. Re16,609; May 3.
Sullivan, John J., Bridgeport, Conn. Hedge trimmer. 1,627,258; May 3.
Sullivan, Joseph H., Portage, Wis. Incandescent-electric-lamp connection. 1,626,983; May 3.
Sullivan Machinery Company. (See Clapp, Lewis J., assignor.)
Sullivan Machinery Company. (See Halleck, Frank A., assignor.)
Sullivan Machinery Company. (See Madsen, Norman, assignor.)
Sullivan Machinery Company. (See Mercer, Henry H., assignor.)
Sulzer Frères Société Anonyme. (See Wirth, Elias, assignor.)
Sundberg, Elizabeth L., administratrix. (See Sundberg, William.)
Sundberg, Elizabeth L., trustee. (See Sundberg, William, assignor.)
Sundberg, William, deceased, by E. L. Sundberg, administratrix, assignor to E. L. Sundberg, trustee, Chicago, Ill. Box-car-unloading apparatus. 1,626,984; May 3.
Sundstrand Corporation. (See Sundstrand, Oscar J., assignor.)
Sundstrand, Oscar J., Rockford, Ill., assignor, by mesne assignments, to Sundstrand Corporation, Wilmington, Del. Adding and listing machine. 1,626,889; May 3.
Sun-Maid Raisin Growers of California. (See Forrest, Thomas W. W., assignor.)
Super-Diesel Tractor Corporation. (See Scott, Philip L., assignor.)
Superior Hard Rubber Company. (See Gurnee, I. Q., and Smith, assignors.)
Surico, Carmine, assignor to Clermont Machine Co., Inc., New York, N. Y. Machine for making macaroni. 1,627,297; May 3.
Sutphen, Robert M., Newark, N. J., assignor to J. F. Booraem, Greenwich, Conn. Mural decoration. 1,627,214; May 3.
Syptroth, Emil, Schwab-Gmund, Germany, assignor to G. Sattler, New York, N. Y. Fixing artificial hair dress on natural hair. 1,627,469; May 3.
Tamini, Mario, Milan, Italy. Driving arrangement for machines installed on automobiles. 1,627,126; May 3.
Tanner, Hubert D., Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Gear-tooth grinder. 1,626,890; May 3.
Taylor Tilting Light Company, The. (See Pfeifer, Ferdinand, assignor.)
Telegraph Construction and Maintenance Company. (See Riddle, John, assignor.)
Templeton, Walter B., Chicago, Ill. Jack. 1,626,891; May 3.
Terrell, Charles A., et al. (See Wood, Joseph E., assignor.)
Terrell, John. (See Vaughan, J. B., and Terrell.)
Thackray, George E., Westmont Borough, Pa. Bonding rails. 1,627,352; May 3.
Thermic Generating Company. (See Carter, Mitchell, assignor.)
Thomas, Albert J., Clinton, Ind. Reversible door latch and lock. 1,627,420; May 3.
Thomas, George M., Philadelphia, Pa. Constant-surface-speed talking machine. 1,627,353; May 3.
Thomas, Guy M., et al. (See Rouse, George M., assignor.)
Thomas, Phillips, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Glow-discharge transmitter. 1,626,645; May 3.
Thomas, Phillips, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Glow-discharge apparatus and operating the same. 1,626,647; May 3.
Thomas, Phillips, Edwewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Glow-discharge microphone. 1,626,648; May 3.
Thomas, Phillips, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company. Glow-discharge transmitter. 1,626,646; May 3.
Thomas, Thomas P. (See Marden, J. W., Thomas, and Conley.)
Thompson, George W., Pittsburgh, Pa. Pipe wrench. 1,626,985, May 3.
Thompson, James H., Hollidays Cove, W. Va. Electron-discharge device. 1,627,127; May 3.
Thompson, Wayne B. (See Preble, J. J., and Thompson.)
Thorne, Lawrence C., assignor to Frantz Manufacturing Co., Sterling, Ill. Folding door. 1,626,764; May 3.
Thorne, Victor C. (See Lehmann, Otto P. R., assignor.)
Thorsten, Thorielf, Pittsburgh, Pa. Conveyer. 1,627,354; May 3.
Tibbens, Samuel K., assignor of one-half to W. F. Martin, Harrisburg, Pa. Safety hook. 1,627,470; May 3.
Tidwell, William A., Indianapolis, Ind. Toy gun. 1,626,892; May 3.
Tiefel, Charles G., assignor to The Todd Company, Inc., Rochester, N. Y. Work-ejecting mechanism for printing apparatus. 1,626,649; May 3.
Timken Roller Bearing Company, The. (See Wallin, Philip, assignor.)
Todd Company, The. (See Smith, Burgess W.)
Todd Company, The. (See Tiefel, Charles G., assignor.)
Toledo Rem Spray Company, The. (See Hedenburg, O. F., and Pratt, assignors.)
Tompkins, John D., Valatie, N. Y. Method and apparatus for treating fibrous materials. 1,626,766; May 3.
Toombs, James M., jr., Webster Grove, Mo. Roller bearing car wheel. 1,626,765; May 3.
Towner, Heber F., Santa Ana, Calif. Disk harrow. 1,627,355; May 3.
Towner, Heber F., Santa Ana, Calif. Disk cultivator. 1,627,356; May 3.
Townley, Julian W., assignor of two-thirds to L. E. Weber, Kansas City, Mo. Electric circuit-controlling apparatus. 1,627,357; May 3.
Trallograf Company, The. (See Citron, William J., assignor.)
Traudt, William F., Buffalo, N. Y. Apparatus for cementing soles to shoe uppers. 1,627,358; May 3.
Travis, Reginald S., Union Mills, Wash. Oar lock. 1,627,128; May 3.
Trayway Mfg. Co. (See Morehouse, F. B., and Haase, assignors.)
Troast, William F., assignor to I. P. Reese, Lancaster, Pa. Sliding shackle lock. 1,627,259; May 3.
Truesdell, Arthur E., Pittsfield, Mass., assignor of one-half to Doherty Research Company, New York, N. Y. Limekiln and burning lime. 1,627,215; May 3.
Truttwin, Hans, Vienna, Austria. Metal-iodide-alkali-iodide compounds suitable for use in therapeutics and manufacturing them. 1,627,359; May 3.
Twyman, B. Wickliffe, Marysville, Mich., and S. Paul, Lima, Ohio. Automobile body-ventilating system. 1,626,893; May 3.
U. G. I. Emil H. W., New York, N. Y., assignor to West- assignor.)
Ullrich, Emil H. W., New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company. Switch mechanism. 1,626,650; May 3.
U. S. Bobbin & Shuttle Company. (See Buffington, Edwin C., assignor.)
Underwood Typewriter Company. (See Becker, Fred, assignor.)
Underwood Typewriter Company. (See Smith, Jesse A. B., assignor.)
Underwood Typewriter Company. (See Stickney, Burnham C., assignor.)
Underwood Typewriter Company. (See Waldheim, John, assignor.)
Union Switch & Signal Company, The. (See Coleman, John P., assignor.)
Union Switch & Signal Company, The. (See Geiger, Paul H., assignor.)
Union Switch & Signal Company. (See Gilson, Robert M., assignor.)
Union Switch & Signal Company, The. (See Grondahl, Lars O., assignor.)
Union Switch & Signal Company, The. (See Lewis, Lloyd V., assignor.)
Union Switch & Signal Company, The. (See McCann, Ronald A., assignor.)

Union Switch & Signal Company, The. (See Wallace, Herbert A., assignor.)
Union Switch & Signal Company, The. (See Young, Henry S., assignor.)
Unrath, Gotthilf, Pforzheim, Germany. Apparatus for washing refuse containing precious metal. 1,627,129; May 3.
Universal Oil Products Company. (See Dubbs, Carbon P., assignor.)
Universal Oil Products Company. (See Egloff, Gustav, assignor.)
Universal Oil Products Company. (See Egloff, G., and Howard, assignors.)
Universal Oil Products Company. (See Howard, William R., assignor.)
Universal Oil Products Company. (See Morrell, J. C., and Comay, assignors.)
Universal Oil Products Company. (See Morrell, J. C., and Egloff, assignors.)
Van Ess Laboratories, Inc. (See Goodall, Fred E., assignor.)
Van Essen, Pieter D., The Hague, Netherlands, and C. H. Froelich, Bethlehem, Pa. Breech mechanism. 1,626,651; May 3.
Vanhoren, Jules J. (See Appelian, H. G., and Vanhoren.)
Van Nieukerken, Jan M. (See Riley, L. G., Meyer, Johnston, and van Nieukerken.)
Varnes, Samuel K., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Recovering glycerin from fermented molasses mash. 1,626,986; May 3.
Vaughan, James B., Lacy Springs, and J. Terrell, Taylorsville, Ala. Attachment for cultivators. 1,627,298; May 3.
Venegas, Jose P., Laredo, Tex. Key lock. 1,626,987; May 3.
Vial, Frederick K., La Grange, and G. S. Evans, Oak Park, assignors to Griffin Wheel Company, Chicago, Ill. Process of and apparatus for operating cupolas. 1,627,536; May 3.
Victor Manufacturing & Gasket Co. (See Oven, Frank J., assignor.)
Villain, Paul, London, England. Making perfumed or medicated transparent soaps. 1,626,708; May 3.
Villanueva, Gervasio B., Tondo, Manila, P. I. Combined cigarette holder and lighter. 1,626,767; May 3.
Villars, Paul A. (See McDonnell, S. P., and Villars.)
Vincent, Ernest P., New York, N. Y. Side-reading illuminated sign. 1,627,528; May 3.
Vinas, Manuel A., New York, N. Y. Handless clock. 1,626,988; May 3.
Vogler, James B., Charlotte, N. C. Rotatable display stand. 1,627,130; May 3.
Voices, Incorporated. (See Grubman, Leo J., assignor.)
Vollbrecht, Frederick A., Detroit, Mich. Electric toaster. 1,626,894; May 3.
Vollmann, Carl W., Montreal, Quebec, Canada. Rotary compressor. 1,626,768; May 3.
Von Henke, Edmund J., assignor to American Electric Fusion Corporation, Chicago, Ill. Electrical welding apparatus. 1,626,769; May 3.
Vulcan Last Company, The. (See Clausing, George, assignor.)
Wade, Vernon M., A. C. Zimmerman, and S. D. Heron, Dayton, Ohio. Liquid coating composition. 1,627,069; May 3.
Wadsworth, Arthur W., Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky. Dustproof guard. 1,627,471; May 3.
Wadsworth Watch Case Company, The. (See Wadsworth, Arthur W., assignor.)
Wagner, Alice M., et al. (See Wood, Joseph E., assignor.)
Walden-Worcester, Incorporated. (See Enberg, Stone R., assignor.)
Waldheim, John, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,626,989; May 3.
Waldheim, John, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,626,990; May 3.
Wallace, Herbert A., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,626,895; May 3.
Wallin, Philip, assignor to The Timken Roller Bearing Company, Canton, Ohio. Taper-gauging machine. 1,627,360; May 3.
Walker, Homer F., Beaumont, Tex. Butt-cutting machine. 1,626,770; May 3.
Walker, Robert J. (See Appelian, H. G., and Vanhoren, assignors.)
Walthall, Clarence H., assignor of two-fifths to R. A. Withrow, Montgomery, W. Va. Transportation of rolling stock. 1,626,709; May 3.
Wanerman, Hyman. New York, N. Y. Liquid-refreshment holder. Des. 72,582; May 3.
Wasberg, Axel, and W. W. Darrow, assignors to Camel Company, Chicago, Ill. Steel door. 1,627,216; May 3.
Washington, Burnett T., Williamson, W. Va. Car-truck side frame. 1,627,131; May 3.
Watkins, Joseph, Marysville, Pa. Confection mold. 1,627,421; May 3.
Watling, John B., Chicago, Ill. Vending machine. 1,626,896; May 3.
Watson, Edward P., Floral Park, N. Y. Pneumatic bumper. 1,627,472; May 3.
Watt, William E., Evanston, Ill. Air cooling and dehydrating device. 1,627,361; May 3.
Waugh Equipment Company. (See Endsley, Louis E., assignor.)
Weatherproof Body Corporation. (See Ritter, Frederick D., assignor.)
Weber, Abraham, New York, N. Y. Floor oiler. 1,626,991; May 3.
Weber Engine Company. (See Gold, Samuel B., assignor.)
Weber, Lillie B. (See Townley, Julian W., assignor.)
Webster, Earl P., assignor to The Shredded Wheat Company, Niagara Falls, N. Y. Biscuit-removal means. 1,627,362; May 3.
Webster, Earl P., assignor to The Shredded Wheat Company, Niagara Falls, N. Y. Sealing machine for cartons. 1,627,363; May 3.
Webster, Earl P., assignor to The Shredded Wheat Company, Niagara Falls, N. Y. Biscuit-removal means. 1,627,364; May 3.
Wedberg, Axel G. W., Floral Park, N. Y. Concrete construction. 1,626,897; May 3.
Weinfeld, Charles, et al., executors. (See Herskovitz, Max.)
Weintraub, Ezechiel, Neuilly-sur-Seine, France. Metallic vapor device. 1,627,070; May 3.
Welk, Nelson S., assignor to The McBee Binder Co., Athens, Ohio. Filling tray. 1,626,898; May 3.
Wellman-Seaver-Morgan Company, The. (See Case, Arthur F., assignor.)
Wells, Burling D. (See Blair, R. S., and Wells.)
Wells, Ralph J., Dayton, Ohio. Railway-track construction. 1,627,217; May 3.
Wendel, William F., Girard, Pa. Ice-cream disher. 1,627,132; May 3.
Werlitz, Arthur, Berlin, Germany. Sounding figure. 1,627,365; May 3.
Wernig, John S., Brooklyn, N. Y. Automobile bumper. 1,627,218; May 3.
West Disinfecting Company. (See Kooperstein, Louis, assignor.)
Western Electric Company. (See Hovland, Henry, assignor.)
Westinghouse Air Brake Company, The. (See Carthew, John W., assignor.)
Westinghouse Air Brake Company, The. (See Down, Sidney G., assignor.)
Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)
Westinghouse Air Brake Company, The. (See Fowler, Lester A., assignor.)
Westinghouse Air Brake Company, The. (See Livingston, Fremont P., assignor.)
Westinghouse Air Brake Company. (See Maier, George E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Austin, B. O., and Horn, assignors.)
Westinghouse Electric & Manufacturing Company. (See Balph, Wilmer G., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bethel, Claude, assignor.)
Westinghouse Electric & Manufacturing Company. (See Brace, Porter H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Brooks, Robert, assignor.)
Westinghouse Electric & Manufacturing Company. (See Edson, William W., assignor.)
Westinghouse Electric and Manufacturing Company. (See Flanders, Warren B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hellmund, Rudolf E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hineline, Harris D., assignor.)
Westinghouse Electric & Manufacturing Company. (See Little, G. M., and Ford, assignors.)
Westinghouse Electric & Manufacturing Company. (See MacGahan, Paul, assignor.)
Westinghouse Electric & Manufacturing Company. (See Marbury, Ralph E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Moeller, Heinrich, assignor.)
Westinghouse Electric & Manufacturing Company. (See Newmeyer, William L., assignor.)
Westinghouse Electric and Manufacturing Company. (See Pilling, Norman B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Rawling, Arthur, assignor.)
Westinghouse Electric & Manufacturing Company. (See Riley, L. G., Meyer, Johnston, and van Nieukerken, assignors.)
Westinghouse Electric & Manufacturing Company. (See Schieferstein, Heinrich, assignor.)
Westinghouse Electric & Manufacturing Company. (See Sleeper, Harvey P., assignor.)
Westinghouse Electric and Manufacturing Company. (See Slepian, Joseph, assignor.)
Westinghouse Electric & Manufacturing Company. (See Thomas, Phillips, assignor.)
Westinghouse Electric & Manufacturing Company. (See Ullrich, Emil H. W., assignor.)

Westinghouse Electric & Manufacturing Company. (See Woodson, James C., assignor.)
Westinghouse Lamp Company. (See Anderson, Homer G., assignor.)
Westinghouse Lamp Company. (See Higgins, John J., assignor.)
Westinghouse Lamp Company. (See Holden, William H. T., assignor.)
Westinghouse Lamp Company. (See Kelly, Harry D., assignor.)
Westinghouse Lamp Company. (See MacRae, Duncan, assignor.)
Westinghouse Lamp Company. (See Madden, Harry D., assignor.)
Westinghouse Lamp Company. (See Madden, H. D., and Higgins, assignors.)
Westinghouse Lamp Company. (See Marden, J. W., Thomas, and Conley, assignors.)
Westinghouse Lamp Company. (See Rentschler, Harvey C., assignor.)
Westinghouse Lamp Company. (See Robins, H. M., and Higgins, assignors.)
Westinghouse Lamp Company. (See Rotherham, Walter S., assignor.)
Westinghouse Lamp Company. (See Schmid, Edward R., assignor.)
Westinghouse Lamp Company. (See Sproesser, William C., assignor.)
Westinghouse Lamp Company. (See Whitmore, J. B., and Ferguson, assignors.)
Westinghouse Union Battery Company. (See Rupp, John L., assignor.)
White, Alvah C. (See Finch, Paul R., assignor.)
White, Raymond R., assignor to White Showers, Inc., Detroit, Mich. Pipe connection. 1,627,219; May 3.
White Showers, Inc. (See White, Raymond R., assignor.)
Whitehead & Kales Company. (See Henderson, George C., assignor.)
Whiting & Davis Company. (See Lynds, Fred H., assignor.)
Whitmore, James B., and J. E. Ferguson, Bloomfield, N. J., assignors to Westinghouse Lamp Company. Hook-forming machine. 1,626,652; May 3.
Whitney, Clarence E., et al., executors. (See Hanson, Bengt M. W.)
Wigglesworth, Harry H., assignor to The Philadelphia Drying Machinery Company, Philadelphia, Pa. Drying machine. 1,627,529; May 3.
Wike, William L., assignor of 51 per cent to H. Richmond, Riverside, Calif. Rotary rake. 1,627,422; May 3.
Wilcox, Charles E., Anaheim, Calif., assignor to E. C. Wilson. Pipe tongs. 1,627,260; May 3.
Wilde, Francis E. J., Meadowmere Park, assignor to Motogram Corporation, New York, N. Y. Electric sign. 1,626,899; May 3.
Wilde, Francis E. J., Meadowmere Park, assignor to Motogram Corporation, New York, N. Y. Electric-sign control. 1,626,900; May 3.
Willard, Waldo W. (See Hewlett, E. M., and Willard.)
Williams, Carl S., Woodbridge, N. J., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y. Testing machine. 1,627,366; May 3.
Williams, Hubert P., Hamlin, Tex. Trailer coupling. 1,626,993; May 3.
Williams, William E., Wilmette, Ill. Metal sheet used for freight-car structures. 1,626,994; May 3.
Willk, Alexandre, Paris, France. Folding powder puff. 1,626,992; May 3.
Willms, Karl D., Baltimore, Md. Snow guard. 1,626,995; May 3.
Willoughby, Victor, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y. Mine car. 1,626,653; May 3.
Willoughby, Victor, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y. Mine car. 1,626,654; May 3.
Wilson, Elihu C. (See Wilcox, Charles E., assignor.)
Wilson, James P., Norfolk, Va. Motor-meter protector. 1,627,261; May 3.
Wilson, Wylie G., Elizabeth, N. J., assignor to Loose Seat Valve Company, Dover, Del. Lifting valve. 1,627,299; May 3.
Wilsin, Jerome, et al. (See Stewart, Frank H., assignor.)
Wirth, Elias, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland. Absorption refrigerating machine. 1,627,071; May 3.
Wish, William E., Edgware, England. Road-vehicle lamp. 1,626,901; May 3.
Withall, Albert P., assignor to W. H. Miner, Inc., Chicago, Ill. Shock-absorbing mechanism. 1,627,367; May 3.
Withrow, Floyd G., Grand Rapids, Mich. Carburetor-choke-valve spring. 1,627,220; May 3.
Withrow, Robert A. (See Walthall, Clarence H., assignor.)
Wolf, Elmer E. (See Osgood, L. A., and Wolf.)
Wolf, Frank, New York, N. Y. Holder for shaving-cream tubes, tooth-paste tubes, and the like. 1,626,771; May 3.
Wolf, Joseph A. (See Coffin, C. G., and Wolf.)
Wood, George E., assignor of one-half to C. R. Lamb, Wellington, New Zealand. Stop for sliding window sashes. 1,627,300; May 3.
Wood, George R., assignor to Dayton Scale Company, Dayton, Ohio. Meat slicer. 1,626,902; May 3.
Wood, Gleason, Waltham, Mass. Screw driver. 1,627,301; May 3.
Wood, Joseph E., assignor of one-fourth to C. A. Terrel and one-eighth to A. M. Wagner, Chicago, Ill. Signal light. 1,626,710; May 3.
Wood, Walter W., Canton, Ohio. Vehicle spring. 1,626,906; May 3.
Woodahl, John S., Great Falls, Montana. Elevated ash carrier. 1,627,262; May 3.
Woodson, James C., East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Heat-insulating wall. 1,626,655; May 3.
Woodson, James C., East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electric-furnace heating unit. 1,626,656; May 3.
Woodstock Typewriter Company. (See Hokanson, Otto A., assignor.)
Worden, Euclid P., Glen Ridge, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Surface condenser. 1,626,772; May 3.
Workman, Ellison E. (See Robinson, Edward A., assignor.)
Worthington Pump and Machinery Corporation. See Jorgensen, Olav E., assignor.)
Worthington Pump and Machinery Corporation. (See Lucke, Charles E., assignor.)
Worthington Pump and Machinery Corporation. (See Worden, Euclid P., assignor.)
Wragg, Lulu M., Spokane, Wash. Windshield. 1,626,997; May 3.
Wright, John F., El Dorado, Ark. Treating impure crude oil. 1,627,072; May 3.
Wright, John W., Puyallup, Wash. Device for sorting beans. 1,627,221; May 3.
Wright, Robert S., Monot, N. Dak. Noncorroding antifreeze composition. 1,626,998; May 3.
Wright, William E., assignor to Acme Can Company, Philadelphia, Pa. Ice-cream freezer. 1,627,302; May 3.
Wyman, Charles A., Auburn, Wash. Mole trap. 1,626,903; May 3.
Wynn, John G., Madison, Wis., assignor to The Zeno Button Company, Indianapolis, Ind. Casing for coin-controlled apparatus. 1,626,999; May 3.
Yackley, George M., Avoca, Minn. Corn planter. 1,627,537; May 3.
Yeager, Roy V., Des Moines, Iowa. Structural-building floor. 1,627,000; May 3.
Yokoyama, Masaji, Setagaya-Cho, Japan. System of unifying a group of clocks. 1,627,001; May 3.
Young, Henry S., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling apparatus. 1,626,657; May 3.
Yungk, Edwin L. (See Mason, T. S., and Yungk.)
Zabel, Charles, Coraopolis, Pa. Gyratory pan toy. 1,626,904; May 3.
Zeno Button Company, The. (See Wynn, John G., assignor.)
Zifferer, Lothar R., Columbia, Pa. Nutcracker. 1,626,905; May 3.
Zilbermber, Abraham, New York, N. Y. Passenger and moving-picture advertising bus. 1,627,473; May 3.
Zilliox, John, Orchard Park, N. Y. Wrench. 1,626,906; May 3.
Zimmerman, Arthur C. (See Wade, V. M., Zimmerman, and Heron.)
Zimmerman, Herman E. (See Holtom, Albert O., assignor.)
Zoelly, Heinrich, Zurich, Switzerland. Power-driven vehicle. 1,627,303; May 3.
Zuehlke, Fred H., Davenport, Wash. Harrow. 1,627,002; May 3.
Zwoyer, Ellsworth B. A., Perth Amboy, N. J., assignor to The General Fuel Briquette Corporation, New York, N. Y. Briquetting method. 1,627,222; May 3.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF MAY, 1927.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Accelerator pedal. L. J. Cole. 1,626,722; May 3.
Accounting machine. J. R. Peirce. 1,626,871; May 3.
Acetaldehyde and aniline, Preparing a reaction product of. S. M. Cadwell. 1,627,230; May 3.
Acid chamber, Sulphuric-. R. T. Maudsley. 1,627,043; May 3.
Acid, Manufacture of hydrocyanic. O. Liebknecht. 1,626,848; May 3.
Acid, Production of hydrocyanic. G. Bredig and E. Elöd. 1,627,144; May 3.
Acids from hydrocarbons, Making fatty. W. C. H. Pataky and F. J. Nellensteijn. 1,627,452; May 3.
Acids, Making keto and aldo aliphatic carboxylic. A. Häussler. 1,627,091; May 3.
Adapter. P. Crosley, jr. 1,627,077; May 3.
Adding and listing machine. O. J. Sundstrand. 1,626,889; May 3.
Addressing machine. J. A. Hult. 1,627,240; May 3.
Advertising device. C. Guymon. 1,627,505; May 3.
Aeroplane. J. Albessard. 1,627,004; May 3.
Aeroplane wing structure. J. V. Martin. 1,627,191; May 3.
Agricultural implement. F. Glaesener. 1,626,811; May 3.
Air cooling and dehydrating device. W. E. Watt. 1,627,361; May 3.
Aircraft. H. E. Krammer. 1,627,185; May 3.
Aircraft engine. H. E. Moorehouse. 1,627,108; May 3.
Aircraft, Safety attachment for. T. Douglas. 1,626,921; May 3.
Airships, Parachute escape for. G. H. Drabenstott. 1,626,796; May 3.
Alloy. V. Fener. 1,626,925; May 3.
Alloy, Resistor. N. B. Pilling. 1,626,691; May 3.
Alloy, Wear-resisting. B. E. Field and R. Franks. 1,626,726; May 3.
Alloys, making magnetic. V. B. Browne. 1,627,269; May 3.
Amalgamator. N. S. Keith. 1,627,181; May 3.
Amusement rides, Drive for. H. F. Maynes. 1,627,192; May 3.
Antifreeze composition, Noncorroding. R. S. Wright. 1,626,998; May 3.
Antifreezing device. J. F. Struble. 1,626,763; May 3.
Arch supporter, Instep-. W. S. Duffield. 1,626,725; May 3.
Article-handling mechanism. H. A. House. 1,627,391; May 3.
Articles from sheet metal, Method and apparatus for forming. H. E. Ruckert. 1,627,412; May 3.
Ash carrier, Elevated. J. S. Woodahll. 1,627,262; May 3.
Ash pan. R. B. Farrar. 1,627,023; May 3.
Ash tray or article of similar nature. V. Allalouf. Des. 72,540; May 3.
Automatic signal. P. C. Enns. 1,626,797; May 3.
Automobile body. D. S. Miller. Des. 72,561; May 3.
Automobile body-ventilating system. B. W. Twyman and S. Paul. 1,626,893; May 3.
Automobile bumper. J. S. Wernig. 1,627,218; May 3.
Automobile fuel tanks, Protective device for. G. G. Hearn. 1,626,822; May 3.
Automobile lock. F. C. Fisher. 1,627,081–2; May 3.
Automobile lock. O. S. Hershey. Re16,612; Apr. 26.
Automobile radiator. P. Bastien and C. S. Crawford. Des. 72,545; May 3.
Automobile rebound-checking device. C. O. Fountain. 1,627,379; May 3.
Automobile stop lights, Switch for. B. V. Ogden. 1,627,061; May 3.
Automobile torpedo. W. Dieter. 1,627,154–5; May 3.
Automobile torpedo and contact mine. W. Dieter. 1,626,794; May 3.
Automobile traffic-signaling apparatus. B. Meyrowitz. 1,627,545; May 3.
Automobile wheel structure. E. A. Nelson. 1,627,193; May 3.
Automobiles, Filling attachment for gasoline tanks of. O. Creed. 1,626,789; May 3.
Autos, Attachment for. E. H. Oakman. 1,626,746; May 3.
Bacon or ham, Preservation of. T. W. Morris. 1,627,057; May 3.
Bag: *See*—
Hand bag.
Bags, Attachment for ladies'. M. Asherman. 1,627,224; May 3.
Bagasse board and making the same. C. W. Mason. 1,627,103; May 3.
Bait, Artificial. C. H. Hughes and B. E. Kothe. 1,627,512; May 3.
Baking pan, Reenforced. A. Katzinger. 1,627,542; May 3.
Bale-tie machine. R. Hewitt. 1,627,533; May 3.
Baling press, Duplex. M. Hickman. 1,627,327; May 3.
Ball bearings, Ball retainer for. D. F. Chambers. 1,627,232; May 3.
Ball mill. P. L. Crowe. 1,627,487–8; May 3.
Ball-turning device. W. E. Ingham. 1,626,936; May 3.
Bank, Receiving. E. M. Hawkins. 1,626,933; May 3.
Bar for foundry flasks. C. H. Estes. 1,627,165; May 3.
Bathroom fixture, Combination. J. H. Balmer. Des. 72,543–44; May 3.
Battery: *See*—
Electric lantern battery.
Battery and battery charger for radio apparatus, Casing for combined. J. L. Rupp. Des. 72,576; May 3.
Battery connecter. J. O. Luthy. 1,627,442; May 3.
Battery plates, Treating discarded lead. A. Stewart. 1,627,351; May 3.
Beans, Device for sorting. J. W. Wright. 1,627,221; May 3.
Bearing or like sections, Machine for trimming the edges of. C. W. Eggenweiler and W. J. Fiegel. 1,626,924; May 3.
Bearing, Side. E. G. Goodwin. 1,627,432; May 3.
Bearings, Burnishing and refitting tool for. C. E. De Witt. 1,627,152; May 3.
Beater or mixer. O. R. Boynton. 1,627,315; May 3.
Bed or couch, Folding. O. Fichtenbaum. 1,626,801; May 3.
Bedclothes, Means or device for the retention of. S. H. Bartter. 1,627,008; May 3.
Bench motor stand, Universal. W. M. Drennon. 1,626,923; May 3.
Berries, especially Thompson seedless raisins, Apparatus for processing. T. W. W. Forrest. 1,626,806; May 3.
Bicycles, Frame for. H. G. Appelian and J. J. Vanhoren. 1,626,775; May 3.
Bin: *See*—
Sectional bin.
Biscuit-removal means. E. P. Webster. 1,627,364; May 3.
Biscuit-removal means. E. P. Webster. 1,627,364; May 3.
Bit: *See*—
Disk bit.
Blower and heater, Combination. W. A. Brown. 1,627,220; May 3.
Board: *See*—
Ironing board. Switch board.
Poster board. Toy-game board.
Boat-launching device. F. A. Antoncich. 1,626,714; May 3.
Boat-propelling mechanism. G. W. Johnston. 1,626,736; May 3.
Boat, Sectional flying. H. E. Krammer. 1,627,184; May 3.
Bobbins and the like, Balancing. J. Lock. 1,627,518; May 3.
Bobbins, Device to prevent rotation of. V. H. Jennings. 1,626,837; May 3.
Boiler: *See*—
Steam boiler.
Boilers, Iron-supporting plate for hot-water. S. C. Markatos. Re16,608; May 3.
Bolt: *See*—
Wear compensating bolt.
Bonding pin. L. H. Ayer. 1,626,909; May 3.
Boring tool. G. H. Spengler. 1,626,837; May 3.
Bottle. C. J. Oppenheim, jr. Des. 72,564; May 3.
Bottle cap, Milk-. J. M. Jordan. 1,627,036; May 3.
Bottle, Perfume. G. Grunberg. Des. 72,554; May 3.
Bottle-transfer mechanism. M. J. Owens. 1,626,748; May 3.
Bowling-pin-setting apparatus and its operating. L. D. Schaffer. 1,627,414; May 3.
Boxing machine. W. Noble. 1,627,449; May 3.
Bracket: *See*—
Flare bracket. Window bracket.
Scaffold bracket.
Bracket hanger. W. B. Dwyer. 1,627,494; May 3.
Brake: *See*—
Electric pneumatic brake. Track brake.
Brake device, Motor-vehicle. S. G. Down. 1,626,670; May 3.

Brake mechanism, Load-adjusted. C. O. Anderson. 1,627,305; May 3.
Brake-valve device. L. A. Fowler. 1,626,607; May 3.
Braking mechanism, more particularly for motor vehicles. G. R. Hoffman. 1,627,508–10; May 3.
Brakes, Liquid-control means for hydraulic. L. L. Reckler. 1,626,968; May 3.
Breaking roller. C. H. Ramsey. 1,627,389; May 3.
Breech mechanism. P. D. Van Essen. 1,626,651; May 3.
Brick machine. H. R. McCune. 1,626,619; May 3.
Brick-making machinery. A. O. Dupuy. 1,627,079; May 3.
Bricks, Apparatus for handling. G. H. Stover. 1,626,644; May 3.
Brine, Treating. A. K. Smith and C. F. Prutton. 1,627,068; May 3.
Briquetting method. E. B. A. Zwoyer. 1,627,222; May 3.
Brooder. A. F. Shuler. 1,627,346; May 3.
Brooder, Chicken. F. Frengle and F. D. Rohan. 1,627,279; May 3.
Brush. C. Grether. 1,626,816; May 3.
Brush, Folding. L. H. Pickar. 1,627,200; May 3.
Building construction and the like. F. A. Browne. 1,627,531; May 3.
Building construction, Form for. P. L. Gottschalk. 1,627,171; May 3.
Building, Storage. F. E. d'Humy. 1,626,602; May 3.
Buildings, Constructing fireproofing. L. G. Berry. 1,627,009; May 3.
Bulbs and the like, Evacuation of. W. C. Sproesser. 1,626,640; May 3.
Bumper and jack, Combined. B. K. Cox. 1,627,317; May 3.
Bumper, Pneumatic. E. P. Watson. 1,627,472; May 3.
Burner: *See*—
Gas-kindling burner. Oil burner.
Bush or plant support. M. P. Effey. 1,627,495; May 3.
Butt-cutting machine. H. F. Walker. 1,626,770; May 3.
Button. J. L. Clark. Des. 72,547; May 3.
Calcium arsenate products and making the same. W. J. Lilpfert. 1,626,942; May 3.
Camera, Card. W. L. Fish. 1,626,606; May 3.
Cap. S. M. Rumbough. 1,627,065; May 3.
Cap, Radiator. A. O. Holtom. Des. 72,556; May 3.
Car, Coal. L. F. Smith. 1,627,256; May 3.
Car construction, Articulated. J. A. Lamont. 1,626,845; May 3.
Car-door-controlling device. C. C. Farmer. 1,626,672; May 3.
Car doors, Motor system for. L. P. Hynes. 1,627,180; May 3.
Car dumper. A. F. Case. 1,627,375; May 3.
Car loader. G. Manierre. 1,626,947; May 3.
Car, Mine. V. Willoughby. 1,626,653–4; May 3.
Car, Railway dump. D. Hindahl. 1,626,825; May 3.
Car retarder, Railway-. J. P. Coleman. 1,626,920; May 3.
Car roof. C. D. Bonsall. 1,627,372–3; May 3.
Car structures, Metal sheet used for freight-. W. E. Williams. 1,626,994; May 3.
Car-truck side frame. B. T. Washington. 1,627,131; May 3.
Car underframe. T. R. Cook. 1,627,484; May 3.
Car-unloading apparatus, Box-. W. Sundberg. 1,626,984; May 3.
Car wheel, Roller-bearing. J. M. Toombs, jr. 1,626,765; May 3.
Car wheels, Apparatus for truing. R. S. Blair and B. D. Wells. 1,627,074; May 3.
Cars, Lifting mechanism for railway. L. J. Clapp. 1,627,481; May 3.
Cars, Side door for railway freight. A. E. Small. 1,626,882; May 3.
Cars, Unloader for railway. G. Manierre. 1,626,948; May 3.
Carbonaceous articles, Destructive distillation of solid. P. Dvorkovits. 1,627,321; May 3.
Carbonating apparatus and method. H. N. Kilby. 1,627,439; May 3.
Carburetor-choke-valve spring. F. G. Withrow. 1,627,220; May 3.
Card-assorting machine. M. M. Goldberg. 1,627,028; May 3.
Card players, Reminder for. W. L. Slayton. 1,627,208; May 3.
Card, Playing. F. G. Smyth, jr. Des 72,580; May 3.
Carrier: *See*—
Ash carrier. Tire carrier.
Luggage carrier.
Carton. W. W. Russell. 1,626,971; May 3.
Cartons, Sealing machine for. E. P. Webster. 1,627,363; May 3.
Case: *See*—
Shipping case.
Catheter. E. Kallmeyer. 1,626,839; May 3.
Cash register. W. H. Robertson. 1,627,119; May 3.
Cash register. B. M. Shipley. 1,626,880; May 3.
Casing for coin-controlled apparatus. J. G. Wynn. 1,626,999; May 3.
Caster, Retracting. M. W. Haslett. 1,626,819; May 3.
Casting machine. J. G. Koegle. 1,627,098; May 3.
Cement and the like, Manufacture of hydraulic. O. Gerlach. 1,627,170; May 3.
Cement, Basing. E. R. Schmid. 1,626,700; May 3.
Chain, Antiskid. C. F. Fisher. 1,627,025; May 3.
Chair. T. R. Hayes. 1,627,388; May 3.
Chimney. W. R. Gibson. 1,626,808; May 3.
Chimney. W. J. Meier. 1,627,105; May 3.
Circuit arrangement for multiplex communication. A. Meissner. 1,626,856; May 3.
Circuit breaker, Automatic. M. E. Greenway and R. W. Chambers. 1,627,029; May 3.
Cigarette holder. M. J. Russak. 1,627,463; May 3.
Cigarette holder and lighter, Combined. G. B. Villanueva. 1,626,767; May 3.
Clamp: *See*—
Form clamp.
Clamp. R. Goulrand and A. Pache. 1,627,172; May 3.
Clay tempering and expressing apparatus. W. L. Hanley, jr. 1,626,675; May 3.
Cleaner: *See*—
Conduit cleaner.
Clean-up agents into evacuated vessels, Introduction of. W. C. Sproesser. 1,626,638; May 3.
Clip: *See*—
Roofing clip.
Clock, Handless. M. A. Vinas. 1,626,988; May 3.
Clocks, System of unifying a group of. M. Yokoyama. 1,627,001; May 3.
Clothesline receiver, Self-locking. J. S. Green. 1,626,728; May 3.
Clutch. C. M. Anglemyer and W. P. Coffman. 1,627,006; May 3.
Clutch-releasing device, Safety. T. A. Bowe. 1,627,313; May 3.
Coaster wagons, Steering mechanism for. W. Ernl. 1,627,022; May 3.
Coating material, Apparatus or tool for applying. J. J. Preble, and W. B. Thompson. 1,627,117; May 3.
Cock holder, Angle-. F. H. Pietzsch. 1,626,690; May 3.
Column spacer. H. M. Forker. 1,627,026; May 3.
Coffee-urn attachment to automatically measure more than one substance simultaneously to deliver a combined uniform volume. D. M. Clark. 1,627,147; May 3.
Coils, Machine for winding resistance. E. N. Lightfoot. 1,627,188; May 3.
Colloidal adhesive composition. B. Dewey. 1,627,278; May 3.
Colter, Plow. A. Craig. 1,627,277; May 3.
Comb for hair cutting. F. Roberts. 1,627,408; May 3.
Combination lock. F. D. Rohmer. 1,627,462; May 3.
Compact holder. W. G. Kendall. 1,626,613; May 3.
Compact holder W. G. Kendall. 1,626,842; May 3.
Compacts, tablets, wafers, and the like, Machine for making. G. W. Mudd. 1,626,800; May 3.
Compressor, Rotary. C. W. Vollmann. 1,626,768; May 3.
Computing machines, Feeding device for. W. A. Pringle. 1,627,201; May 3.
Concrete buildings, Mold for. J. C. Poetz. 1,627,116; May 3.
Concrete construction. A. G. W. Wedberg. 1,626,897; May 3.
Concrete mixer, Continuous automatic. M. F. Horst. 1,626,830; May 3.
Concentrator. J. B. Dodds. 1,627,157; May 3.
Condenser. R. E. Marbury. 1,626,684; May 3.
Condenser and cooler. H. F. Hollister. 1,626,733; May 3.
Condenser, Surface. P. A. Bangel. 1,627,265; May 3.
Condenser, Surface. E. P. Worden. 1,626,772; May 3.
Condensing apparatus. C. E. Lucke. 1,626,849–50; May 3.
Conduit cleaner. R. B. Scott. 1,627,122; May 3.
Conduits or pipes, Bender for light-gauge. E. H. Henderson. 1,627,034; May 3.
Confection mold. J. Watkins. 1,627,421; May 3.
Connecter-head support. E. A. Robinson. 1,626,696; May 3.
Container. C. C. Grogg. 1,626,930; May 3.
Container. J. Kaufman. 1,626,840; May 3.
Container. T. S. Mason and E. L. Yungk. 1,627,042; May 3.
Containers, Making. A. Katzinger. 1,627,540; May 3.
Control apparatus. B. O. Austin and W. G. Horn. 1,626,659; May 3.
Control apparatus. L. G. Riley, H. R. Meyer, H. H. Johnston, and J. M. van Nieukerken. 1,627,340; May 3.
Conveyer. T. Thorsten. 1,627,354; May 3.
Conveying apparatus. R. La France. 1,626,738; May 3.
Cooker, Steam-pressure. F. W. Allen. 1,627,005; May 3.
Cooking utensil. H. E. Larsen. 1,627,187; May 3.
Cooling and dispensing apparatus, Beverage. F. W. Holderle and C. L. Holderle. 1,626,935; May 3.
Cooling and ventilating, Method of and apparatus for. L. L. Lewis. Re16,611; May 3.
Cord connecter. W. Ile. 1,627,286; May 3.
Corn-snapping mechanisms, Clearing device for. C. Dueker. 1,627,021; May 3.
Coupling: *See*—
Hose coupling. Slip-joint coupling.
Pipe coupling. Trailer coupling.
Covered pan. A. Katzinger. 1,627,541; May 3.
Cream, Skin. F. E. Goodall. 1,626,814; May 3.
Crossing gate, Grade-. J. D. Paul. 1,626,964; May 3.

Crushing and grinding machine. A. C. Hamey. 1,627,506; May 3.
Crystal growth, Getter for controlling. W. C. Sproesser. 1,626,637; May 3.
Cuff link. W. E. Roberts. 1,627,460; May 3.
Culinary apparatus. C. F. Downs. 1,626,922; May 3.
Culinary utensil. L. D. Hubbard. 1,627,285; May 3.
Cultivator, Disk. H. F. Towner. 1,627,356; May 3.
Cultivator, Self guiding and riding. A. L. Stewart. 1,626,888; May 3.
Cultivators, Attachment for. J. B. Vaughan and J. Terrell. 1,627,298; May 3.
Cupolas, Process of and apparatus for operating. F. K. Vial and G. S. Evans. 1,627,536; May 3.
Current meter. C. H. Au. 1,626,715; May 3.
Currier and oiler, Automatic. E. Larson. 1,627,516; May 3.
Curtain, Automobile. W. H. Pritchett. 1,627,457; May 3.
Cushioning and filler-locking flat. L. Oxbandler. 1,626,870; May 3.
Cutter, mill, or the like. F. O. Carlson. 1,626,598; May 3.
Cylinder cap, Ammonia. H. C. Bierman and G. W. Speirs. 1,627,371; May 3.
Cylinders and the like, Rope or belt drive for drying. G. Dod. 1,627,018; May 3.
Damper, Stovepipe. J. Cowie. 1,627,013; May 3.
Decoration, Mural. R. M. Sutphen. 1,627,214; May 3.
Dental apparatus. A. F. Pieper. 1,626,689; May 3.
Dental attachments, Making. H. E. S. Chayes. 1,626,720; May 3.
Dentist's anvil. J. S. Pecker. 1,626,754; May 3.
Denture. B. C. Scott. 1,626,761; May 3.
Derail, Portable. S. W. Hayes. 1,627,092; May 3.
Derrick, Revolving. J. W. Page. 1,627,249; May 3.
Desk bumper device. A. S. Newton. 1,626,955; May 3.
Detector and controlling the same. E. L. Chaffee. 1,627,231; May 3.
Detersive compound. J. F. Moseley. 1,627,446; May 3.
Diaphragm device, Flexible. C. C. Farmer. 1,626,673; May 3.
Dice shaking or throwing device. W. H. Droge. 1,627,492; May 3.
Differential. C. Andrade, jr. 1,626,907; May 3.
Dish, Paper. A. Moore. 1,627,050–1; May 3.
Disk bit, Central-shank-reaming. F. W. Hild. 1,627,179; May 3.
Dispensing device. G. T. Lyons. 1,626,943; May 3.
Display sample device. F. J. Garrety. 1,627,281; May 3.
Display stand. H. Ackeret. 1,626,711; May 3.
Display stand, Rotatable. J. B. Vogler. 1,627,130; May 3.
Doll head. R. A. Hopf. 1,627,511; May 3.
Door and curtain. F. D. Ritter. 1,626,757; May 3.
Door bumper. H. C. Maise. 1,627,190; May 3.
Door, Folding. L. C. Thorne. 1,626,764; May 3.
Door holder. L. J. Gingras and A. St. Onge. 1,626,810; May 3.
Door-latching device, Car-. G. A. Hull. 1,626,834; May 3.
Door, Steel. A. Washberg and W. W. Darrow. 1,627,216; May 3.
Doors, Finger guard for foldable bus. C. J. Kuhn. 1,626,844; May 3.
Doors, Hinge for. C. V. Hill. 1,627,329; May 3.
Draft control. C. M. Norberg. 1,627,194; May 3.
Drilling apparatus. F. A. Halleck. 1,627,539; May 3.
Drilling apparatus. N. Madsen. 1,627,291; May 3.
Dry cell. G. M. Little and J. G. Ford. 1,627,334; May 3.
Drying machine. H. H. Wigglesworth. 1,627,529; May 3.
Dump body, Self-cleaning. E. A. Nelson. 1,627,336; May 3.
Dust cap and lock nut, Combination. A. T. Christian. 1,627,480; May 3.
Dust-cap construction. A. E. Bronson. 1,627,374; May 3.
Dust collector. A. F. Mangold. 1,626,852; May 3.
Dustproof guard. A. W. Wadsworth. 1,627,471; May 3.
Dyeing machine. J. H. Skitt. 1,627,347; May 3.
Easel, Display. G. H. Alles. 1,627,133; May 3.
Educational work and play, Base frame for primary. A. H. Stewart. 1,627,211; May 3.
Egg beater. O. R. Boynton. 1,627,314; May 3.
Egg preserver. H. Bogan. 1,627,141; May 3.
Electric-circuit-controlling apparatus. J. W. Townley. 1,627,357; May 3.
Electric condenser. W. Dubilier. 1,627,493; May 3.
Electric connecter. J. Berg. 1,627,306; May 3.
Electric connecter for branch circuits. A. W. Reiser. 1,626,875; May 3.
Electric current, Method and apparatus for transmitting. J. A. Rose. 1,627,409; May 3.
Electric-light fixtures or similar articles, Bridge arm for. F. M. Poritz. Des. 72,570–2; May 3.
Electric-light fixtures or similar articles, Column for. F. M. Poritz. Des. 72,573–5; May 3.
Electric socket structure. M. Herskovitz. 1,627,238; May 3.
Electric switch. C. E. Anderson. 1,627,304; May 3.
Electric toaster. F. A. Vollbrecht. 1,626,894; May 3.
Electrical conductor with reenforcing core. A. O. Austin. 1,626,776; May 3.
Electrical relay. R. M. Gilson. 1,627,322; May 3.
Electrical relay. L. O. Grondahl. 1,626,931; May 3.
Electrical switch. J. Dominiczak. 1,627,158; May 3.
Electrical transmitter. H. C. Ford. 1,627,168; May 3.
Electrode to be applied to the human body and making same. E. Last. 1,626,617; May 3.
Electron device, High-voltage. H. C. Rentschler. 1,626,693; May 3.
Electron-discharge device. J. H. Thompson. 1,627,127; May 3.
Electropneumatic brake. C. C. Farmer. 1,626,605; May 3.
Elevators, Floor selector for. J. Dunlop and J. F. Clancy. 1,627,320; May 3.
Engine: *See*—
Aircraft engine. Internal-combustion engine.
Engine bedplate. R. Schneider. 1,626,760; May 3.
Engine operation, Steam-. V. Z. Caracristi. 1,627,075; May 3.
Engine, particularly steam engine, Gas or vapor. C. L. Cook. 1,627,427; May 3.
Engines, air compressors, or the like, Bearing for. J. E. Harris. 1,627,031; May 3.
Engines, Auxiliary-charge-forming means for internal-combustion. A. J. P. Bertschy. 1,627,139; May 3.
Engines, Fuel-mixing device for internal-combustion. J. L. Fay. 1,626,798; May 3.
Engines, Governor for explosive. C. A. Robertson. 1,627,118; May 3.
Engines, Heat control for internal-combustion. J. R. Francis. 1,626,727; May 3.
Engines, Piston for internal-combustion. O. E. Jorgensen. 1,626,838; May 3.
Engines, Timer for internal-combustion. S. P. McDonnell and P. A. Villars. 1,627,520; May 3.
Engines, Valve mechanism for combustion. E. A. Sperry. 1,627,210; May 3.
Engraving method and apparatus. C. R. Seaborne. 1,627,205; May 3.
Envelopes, Apparatus for lining. G. E. P. Collins. 1,627,149; May 3.
Eye protector. L. and E. Schers. 1,627,121; May 3.
Fabric, Printed. W. H. Adams. Des. 72,539; May 3
Fastener, Separable. G. E. Prentice and R. C. Legat. 1,626,873; May 3.
Fasteners, Machine for forming. T. Sibley. 1,626,977; May 3.
Faucet, Pedal-actuated. G. O. Dougherty. 1,627,020; May 3.
Feed means, Safety. W. Doellner. 1,627,491; May 3.
Fencepost. U. Myer. 1,626,862; May 3.
Fiber bunches by the web process, Loosening parallel. A. Kämpf and K. Grünewälder. 1,627,037; May 3.
Fibrous materials, Method and apparatus for treating. J. D. Tompkins. 1,626,706; May 3.
Fibrous pulp, Apparatus for the manufacture of hollow bodies from. R. Lechthaler. 1,626,847; May 3.
Filament-dyeing apparatus. S. A. Neidich. 1,627,059; May 3.
Filing and indexing apparatus. I. Beckett. 1,626,661; May 3.
Filing device. R. M. Smith. 1,626,883–4; May 3.
Filing device. R. M. Smith. 1,626,886; May 3.
Filing device. R. M. Smith. 1,626,979; May 3.
Fire-arch structure. C. A. Strachota. 1,626,982; May 3.
Firearm. C. A. Nelson. 1,626,867; May 3.
Fire escape. G. M. Rouse. 1,626,698; May 3.
Fire extinguisher, Portable. F. E. Krauss. 1,627,039; May 3.
Fire extinguishers or similar articles, Pump handle for. C. Brown. Des. 72,546; May 3.
Fire-kindling material. P. L. Paulson. 1,626,965; May 3.
Fish lures, Controller for. J. A. Dienner and A. C. Mabee. 1,627,078; May 3.
Fishing bait, Artificial. O. W. Peterson. 1,627,455; May 3.
Fishing rods, Line-drying attachment for. L. Kraemer. 1,627,514; May 3.
Fishing tool. G. N. King. 1,626,843; May 3.
Flag holder for automobile radiators. R. G. Archer, sr., and R. G., jr. Des. 72,542; May 3.
Flare bracket, Electrically-operated wing-tip. H. O. Russell and C. L. Paulus. 1,627,066; May 3.
Flashing machine, Automatic. H. M. Robins and J. J. Higgins. 1,626,695; May 3.
Floor oiler. A. Weber. 1,626,991; May 3.
Floor-polishing machine. E. E. Lockwood. 1,626,742; May 3.
Floor, Structural building. R. V. Yeager. 1,627,000; May 3.
Flotation machines, Oil feeder for. A. C. Daman. 1,627,014; May 3.
Flour improver and manufacture. D. J. Block. 1,626,910; May 3.
Flow meter. J. M. Dayton. 1,627,234; May 3.
Fluid-straining apparatus. J. D. Lalor. 1,627,186; May 3.
Flying machine. C. Dornier. 1,627,019; May 3.
Folding delivery. H. P. Clauberg. 1,626,600; May 3.
Food for men or animals, Preserving. T. Sabalitschka. 1,627,342; May 3.
Food substances, Preparing. W. A. Smith. 1,627,466; May 3.
Footwear case. K. L. Drummond. Des. 72,550; May 3.
Form clamp. W. C. Giggal. 1,627,085; May 3.

Fountain: *See*—
Poultry fountain.
Frame: *See*—

Sole-cutting machines, Brake construction for. H. K. Bayer and H. J. Epstein. 1,627,370; May 3.
Soles to shoe uppers, Apparatus for cementing. W. F. Traudt. 1,627,358; May 3.
Sound-producing device. L. J. Grubman. 1,627,384–5; May 3.
Sounding figure. A. Werlitz. 1,627,365; May 3.
Speed indicators, Construction of. C. H. H. Rodanet. 1,626,697; May 3.
Speed wrench. C. Callison. 1,626,719; May 3.
Spooling mechanism and method. F. Honig. 1,627,239; May 3.
Spring: *See*—
Carburetor-choke-valve spring.
Lubricating spring. Vehicle spring.
Spring suspension device or shock absorber. E. J. Pilblad. 1,626,966; May 3.
Sprinkling systems, Automatic sprinkler head for. H. M. Nacey. 1,626,863; May 3.
Squirrel-cage motor, Variable-speed. H. D. Hineline. 1,627,330; May 3.
Stanchion. G. Obele. 1,627,527; May 3.
Stand: *See*—
Display stand.
Stand for crocks, Tilting. J. Disibio. 1,627,490; May 3.
Starch-molding apparatus. A. L. Bausman. 1,627,138; May 3.
Station, Automatic. W. L. Newmeyer. 1,626,688; May 3.
Steam boiler, Sectional. C. Z. and E. S. Alexander. 1,627,530; May 3.
Steam-generating apparatus. H. H. Mercer. 1,626,950; May 3.
Steam generator. J. F. Otis. 1,627,450; May 3.
Steam generators, Steam-separating apparatus for. T. A. Peebles. 1,626,625; May 3.
Steam trap. F. A. Burrows. 1,627,271; May 3.
Still, Water. E. V. Oliver. 1,626,960; May 3.
Stoker. C. L. Davidson. 1,626,791; May 3.
Stone-cutting machine. E. and F. D. Bolton. 1,627,142; May 3.
Stool, Lunch-counter. J. F. Huckel. 1,626,832; May 3.
Stopper: *See*—
Gas-main stopper.
Storage battery. T. A. Edison. Re16,614; May 3.
Stove, Camp. T. Johnson. 1,627,513; May 3.
Sugar-cane mills, Juice-straining system for. W. G. Hall. 1,627,283–4; May 3.
Swab, Flexible. E. W. Forrow. 1,626,926; May 3.
Swab, Well. E. Kibele. 1,626,614; May 3.
Switch: *See*—
Electric switch. Thermal switch.
Electrical switch. Transfer switch.
Railway switch.
Switchboard. W. G. Ralph. 1,626,660; May 3.
Switch contact. A. Rawling. 1,626,692; May 3.
Switch mechanism. E. H. W. Ullrich. 1,626,650; May 3.
Table: *See*—
Rolling-mill table. Rotary table.
Table signaling device. L. R. Nye. 1,626,959; May 3.
Tabulating machines, Variable-feed mechanism for. W. W. Lasker and J. Mueller. 1,627,394; May 3.
Tail light and stop signal, Combined. E. O. Seitz. 1,626,632; May 3.
Take-up device. W. S. Lewis. 1,627,244; May 3.
Talking machine, Constant-surface-speed. G. M. Thomas. 1,627,353; May 3.
Tank: *See*—
Vacuum tank.
Tank, Leak-tight sectional. E. F. Black. 1,627,309; May 3.
Tank vents, Attachment for. A. S. James. 1,627,095; May 3.
Tanks, Float valve for flush. E. L. Delany. 1,627,489; May 3.
Tanks, Safety attachment for. J. Cohn. 1,626,721; May 3.
Taper-gauging machine. P. Wallin. 1,627,360; May 3.
Telegraph receiving instrument. R. A. Grout. 1,627,030; May 3.
Telegraphy. F. McCormick. 1,627,444; May 3.
Telegraphy, Printing. F. McCormick. 1,627,445; May 3.
Telephone-instrument attachment. A. Schlesiager. 1,627,415; May 3.
Telephone system. W. Setzepfand. 1,627,206; May 3.
Telephone system, Automatic. J. E. Gardner. 1,626,807; May 3.
Telephone system, Automatic. H. Hovland. Re16,615; May 3.
Telephone system, Automatic coin-service. H. Hovland. Re16,616; May 3.
Telephone, Wall. W. Kaisling. 1,627,393; May 3.
Temperature-controlling system. P. H. Brace. 1,626,663; May 3.
Temperature-indicating device. H. P. Sleeper. 1,626,633; May 3.
Tent support, Collapsible. W. S. Rynearson. 1,627,546; May 3.

Terminal, Combination. J. J. Mucher. 1,627,447; May 3.
Test gauge. J. W. Carthew. 1,626,599; May 3.
Testing machine. C. S. Williams. 1,627,306; May 3.
Textile fabric. K. Jäger. Des. 72,557; May 3.
Textile machines, Electric stop motion for. H. E. Matthews, W. H. Love, and H. T. Ryder. 1,627,292; May 3.
Textile machines, Piece-up mechanism for. R. E. Naumburg. 1,626,964; May 3.
Thermometer, Automobile radiator. E. T. Curran. 1,626,790; May 3.
Thermometer case. I. Q. Gurnee and A. A. Smith. Des. 72,555; May 3.
Thickening and washing materials, Apparatus for. A. S. Moses. 1,626,951; May 3.
Thread or cord, Covered elastic. J. B. Smith. 1,627,255; May 3.
Thermal switch. R. C. Malcom. 1,627,519; May 3.
Thrasher, Combination harvester. W. F. MacGregor. 1,627,535; May 3.
Tie plate. R. T. Scholes. 1,626,631; May 3.
Tile and making the same, Roof. F. A. Beale. 1,627,266; May 3.
Tile-coating machine and process. L. S. Jones, G. W. Fisher, and C. G. Henrikson. 1,627,096; May 3.
Tile or slab, Building. C. S. Freund. 1,627,280; May 3.
Tile-partition tie piece, Hollow-. W. L. Alber. 1,626,589; May 3.
Timing device, Automatic race-track. C. E. Mentzer. 1,626,620; May 3.
Tire. W. S. Galvin. Des. 72,553; May 3.
Tire carrier. G. P. Henry. 1,626,934; May 3.
Tire casings, Apparatus for building. F. H. Stewart. 1,627,212; May 3.
Tire spreader. V. R. Goeller. 1,627,500; May 3.
Toilet article. W. Friedman. 1,626,927; May 3.
Tongs, Lifting. E. M. Morris. 1,627,524; May 3.
Tongs, Pipe. C. E. Wilcox. 1,627,260; May 3.
Tool. J. A. Hooben. 1,627,435; May 3.
Tool, Hand. W. A. Bernard. 1,627,307; May 3.
Tool handle. S. R. Enberg. 1,626,671; May 3.
Tool post. F. Müller. 1,626,953; May 3.
Toy. J. Dellinger. 1,627,319; May 3.
Toy baseball, Mechanical. L. C. Barker. 1,626,778; May 3.
Toy boats, Motor mechanism for. C. Arnold. 1,627,073; May 3.
Toy game board. I. Haaz. 1,627,173; May 3.
Toy gun. W. A. Tidwell. 1,626,892; May 3.
Toy, Gyratory pan. C. Zabel. 1,626,904; May 3.
Toy horse and novelty. A. M. Briggs. 1,627,426; May 3.
Toy torpedo casings, Composition for. J. Martelli. 1,627,101; May 3.
Toy trundle. R. Recatti. 1,626,756; May 3.
Toy vehicle. R. de Filippis. 1,627,150; May 3.
Toy vehicle. D. Schaeffer. Des. 72,577; May 3.
Track brake, Variable-pressure. M. E. Barr. 1,627,137; May 3.
Track-lining device. C. A. Disbrow and W. E. Gadd. 1,627,156; May 3.
Track roller. R. W. Runge. 1,627,418; May 3.
Tractive device. G. J. Crawford. 1,626,788; May 3.
Tractors, Drive mechanism for. E. H. Lichtenberg. 1,626,680; May 3.
Traffic signal. B. Rosewater. 1,626,876; May 3.
Trailer coupling. H. P. Williams. 1,626,993; May 3.
Train-control system. A. E. Hudd and A. F. Bound. 1,626,833; May 3.
Trains, Average-speed-recording means for railway. T. R. Mills. 1,627,522; May 3.
Transfer medium for metallizing purposes. W. F. Grupe. 1,627,088; May 3.
Transfer print and making the same. T. S. Reese. 1,627,407; May 3.
Transfer switch. V. W. Sherman. 1,627,345; May 3.
Transformers, Voltage regulator for. A. Rooth. 1,626,970; May 3.
Transmission control. J. H. Butler. 1,626,718; May 3.
Transmission gearing. C. E. F. Ahlm. 1,627,368; May 3.
Transmission mechanism. J. E. Ovren. 1,627,196; May 3.
Transmitter. J. Slepian. 1,626,635; May 3.
Transmitter, Glow-discharge. J. Slepian. 1,626,636; May 3.
Transmitter, Glow-discharge. P. Thomas. 1,626,645; May 3.
Transmitter, Glow-discharge. P. Thomas. 1,626,646; May 3.
Trap: *See*—
Mole trap. Steam trap.
Tray and table, Combined. L. A. Phalon. 1,627,454; May 3.
Tray, Filing. N. S. Welk. 1,626,898; May 3.
Trimmer: *See*—
Hedge trimmer.
Truck. W. N. Shannon, jr. 1,627,253; May 3.
Truck-motor-frame suspension. C. Bethel. 1,626,662; May 3.
Tube: *See*—
Vacuum tube.
Tube-cutting machine. C. R. Seymour. 1,626,878; May 3.
Tube sender, Arrangement for controlling. A. Semm and W. Schaffer. 1,626,759; May 3.
Tubes of cement asbestos or similar substances, Apparatus for the manufacture of. D. Mattei and A. Mazza. 1,627,104; May 3.
Typewriter. S. A. Dean. 1,627,016; May 3.
Typewriter machine. J. Waldheim. 1,626,990; May 3.
Typewriters, Removable carriage for. O. A. Hokanson. 1,627,390; May 3.
Typewriting machine. F. Becker. 1,626,779; May 3.
Typewriting machine. L. C. Myers. 1,627,058; May 3.
Typewriting machine. J. A. B. Smith. 1,627,123; May 3.
Typewriting machine. B. C. Stickney. 1,626,641; May 3.
Typewriting machine. J. Waldheim. 1,626,989; May 3.
Typographical machine. W. Ackerman. 1,626,773; May 3.
Unlonding device. R. Cantor. 1,626,597; May 3.
Vacuum tank. C. S. Nelson. 1,627,293; May 3.
Vacuum tube. H. E. Metcalf. 1,626,858; May 3.
Valve. F. S. Cravens. 1,627,486; May 3.
Valve and cage puller. H. Blume and G. B. Streitz. 1,627,477; May 3.
Valve, Automatic stop. W. B. Flanders. 1,626,804; May 3.
Valve, Charging. G. E. Maier. 1,627,443; May 3.
Valve-controlling means, Knee-operated throttle-. A. S. Martin. 1,627,102; May 3.
Valve cut-off and speed indicator. V. Z. Caracristi 1,627,076; May 3.
Valve device, Retaining-. F. P. Livingston. 1,626,618; May 3.
Valve, Intake. J. E. Harris. 1,627,032; May 3.
Valve, Lifting. W. G. Wilson. 1,627,299; May 3.
Valve, Outlet. G. G. Reeves. 1,626,969; May 3.
Valve mechanism, Electrically-operated. E. A. Hummett. 1,626,817; May 3.
Valve, Soap. L. Kooperstein. 1,626,939; May 3.
Valves, Automatic safety cut-off for gas. C. Blust. 1,627,312; May 3.
Van, Moving. R. Arlo. 1,627,135; May 3.
Vane or shovel, Fuel-throwing. L. K. Gillson. 1,627,381; May 3.
Vapor device, Metallic. E. Weintraub. 1,627,070; May 3.
Vapors, Apparatus for condensing. E. W. Isom and J. E. Bell. 1,627,544; May 3.
Vaporizing a getter in an evacuated vessel. W. H. T. Holden. 1,626,732; May 3.
Vehicle, Power-driven. H. Zoelly. 1,627,303; May 3.
Vehicle runner, Retractable. D. De Wald. 1,627,151; May 3.
Vehicle spring. W. W. Wood. 1,626,996; May 3.
Vehicle wheel. E. K. Baker. 1,627,369; May 3.
Vehicle wheel. F. W. Ranter. 1,627,406; May 3.
Vehicles, Coupling for. T. Franks. 1,627,430; May 3.
Vehicles, Endless supporting and driving flexible belt for motor and other. A. Kegresse. 1,627,287; May 3.
Vehicles, Shifting jack for motor. A. Schnitzler. 1,626,630; May 3.
Vehicles, Snubber for. G. C. Pearson. 1,627,113; May 3.
Vending machine. J. B. Watling. 1,626,896; May 3.
Vent for full-lined garments and making it. R. A. Feiss. 1,626,799; May 3.
Vessels, Channel and plate construction for. W. G. Bartenfeld. 1,626,716; May 3.
Vessels containing liquid under pressure, Automatic safety system for. C. S. Messler. 1,627,399; May 3.
Vine lifter. G. S. Agee. 1,626,712; May 3.
Visual annunciator. W. T. Dippel. 1,626,795; May 3.
Wagon. J. T. Norman. 1,627,109; May 3.
Wall plate, Corrugated. H. L. Ingersoll. 1,627,392; May 3.
Wall pocket or similar article. R. De Boer. Des. 72,548; May 3.
Warper attachment. W. P. Hornbuckle and R. F. Craig. 1,626,829; May 3.
Washers on upstanding pins, Machine for placing. W. H. Brown. 1,626,914; May 3.
Washing and wringing machine. J. Hutchinson. 1,627,438; May 3.
Washing machine. F. B. Morehouse and F. Haase. 1,627,053; May 3.
Washing machines, Power-operated wringer for. W. K. Howe. 1,626,831; May 3.
Washtub-cover-holding device, Stationary. J. H. Barrett. 1,627,467; May 3.
Water heater, Electric. B. Midulla. 1,627,335; May 3.
Wear-compensating bolt. G. C. Monckmeier. 1,627,401; May 3.
Weighing machine. M. H. Starr. 1,627,124; May 3.
Weeding implement. J. J. Kearns. 1,627,038; May 3.
Welding and product thereof. W. G. Allan. 1,626,774; May 3.
Welding apparatus, Electric. E. J. von Henke. 1,626,769; May 3.
Wheel: *See*—
Car wheel. Vehicle wheel.
Resilient wheel.
Wheel. E. J. W. Ragsdale. 1,627,202; May 3.
Wheel assembly, Fifth-. G. C. Henderson. 1,627,176; May 3.
Wheel-equalized traction unit, Four-. E. H. Babel and R. L. Owen. 1,627,225; May 3.
Wheel mechanism, Detachable. W. V. Gilbert. 1,627,499; May 3.

Wheels of motor vehicles, Antisplash device for the. E. W. Haward. 1,627,033; May 3.
Wheels, Runner for automobile. J. H. Haynes. 1,627,507; May 3.
Winding machine. D. Stone. 1,627,213; May 3.
Window bracket. W. H. Johnson. 1,627,241; May 3.
Window-cleaning device. H. M. Davis. 1,627,318; May 3.
Window construction. H. B. Stein. 1,627,419; May 3.
Window sashes, Stop for sliding. G. E. Wood. 1,627,300; May 3.
Window stop and weather strip, Combined. W. Friedman. 1,626,674; May 3.
Windshield. E. W. Saunders. 1,626,758; May 3.
Windshield. L. M. Wragg. 1,626,997; May 3.
Windshield wiper. G. B. Sayre. 1,626,629; May 3.
Wire, strip, and the like, Apparatus for the electric heat treatment of. H. Alexander and A. Imbery. 1,626,713; May 3.
Wreath. M. Nadolleck. Des. 72,563; May 3.
Wrench: See—
Open-end wrench. Socket wrench.
Pipe wrench. Speed wrench.
Wrench. J. L. Abernethy and L. E. Mumbower. 1,627,003; May 3.
Wrench. H. C. Jahn. 1,627,035; May 3.
Wrench. W. S. Lawyer. 1,627,441; May 3.
Wrench. J. Zilliox. 1,626,906; May 3.
Wringer: See—
Mop wringer.
X-ray-tube radiator. M. Morrison. 1,626,687; May 3.
Yarn or thread feeding mechanism for spring-needle machines. G. P. Bosworth. 1,626,781; May 3.

CLASSIFICATION OF PATENTS

ISSUED MAY 3, 1927.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 16: 1,626,868
2— 10: 1,627,121
18: 1,627,382
24: 1,627,497
93: 1,626,799
169: R. 16,609
1,626,846
278: 1,627,543
4— 8: 1,627,475
195: 1,627,504
263: 1,626,689
5— 31: 1,626,801
8— 19: 1,627,059
1,627,347
9— 21: 1,627,521
22: 1,626,714
25: 1,627,128
10— 86: 1,627,207
130: 1,627,236
12— 38: 1,627,358
136: 1,627,272
15— 50: 1,627,263
56: 1,627,112
98: 1,626,742
104.16: 1,627,045
1,627,122
195: 1,626,816
203: 1,627,200
220: 1,627,318
255: 1,626,629
263: 1,627,383
16— 33: 1,626,819
42: 1,626,946
80: 1,627,329
86: 1,626,955
1,627,190
140: 1,627,274
1,627,275
17— 3: 1,627,479
18— 1: 1,626,914
48.8: 1,627,206
52: 1,626,800
55: 1,627,209
19— 66: 1,627,037
175: 1,626,954
20— 1.13: 1,626,602
11: 1,626,674
16: 1,626,844
20: 1,626,764
22: 1,626,882
52.1: 1,627,419
22— 1: 1,627,348
111: 1,627,165
153: 1,627,098
23— 3: 1,626,664
53: 1,626,942
91: 1,627,068
126: 1,626,623
151: 1,626,848
1,627,144
207: 1,627,325
284: 1,627,043
24— 19: 1,627,172
61: 1,626,937
72.5: 1,627,008
102: 1,627,460
129: 1,627,244
153: R. 16,610
205: 1,626,873
230: 1,627,476
232: 1,627,470
241: R. 16,613
1,626,865
1,626,866
242: 1,626,642
263: 1,626,826
25— 1: 1,626,619
1,626,972
14: 1,626,675
70: 1,626,860
131: 1,627,116
1,627,171
1,626,897
131.5: 1,626,823
1,627,009
154: 1,627,266
185: 1,627,222
25— 157: 1,627,245
26— 1: 1,627,339
28— 35: 1,626,829
29— 33: 1,627,093
86.3: 1,627,477
89: 1,626,923
90: 1,627,152
103: 1,626,598
160.6: 1,626,720
30— 3: 1,626,806
13: 1,627,197
31— 25: 1,627,007

Milk, Pasteurized. J. D. Roszell Company. 227,910; May 10.
Oleomargarine. Jaburg Brothers, Inc. 246,289; May 10.
Sandwiches, chili, and hot tamales. Henry Leroy Lane and Fred Lee Bowles. 244,159; May 10.
Sirups, Cane-sugar. Godchaux Sugars Inc. 245,544–6; May 10.
Sirups, Cane-sugar. Godchaux Sugars Inc. 245,548; May 10.
Vinegar. Roanoke Apple Products Co. 218,778; May 10.

CLASS 48.

Malt extracts and sirups. United Malt Company. 246,517; May 10.
Malt extracts for food purposes. G. Onorato. 243,773; May 10.
Malt sirup. Ben-Burk, Inc. 246,731–2; May 10.
Malt sirup. Ben-Burk, Inc. 246,731–2; May 10.
Malt sirup. Pabst Corporation. 246,563; May 10.
Malt sirup. Philadelphia Malt Warehousing Corporation. 245,808; May 10.
Malt sirup. St. Louis Products Company. 245,166; May 10.
Malt sirup. Sunnyside Malt Syrup Co. 241,072; May 10.

CLASS 50.

Wind vanes. F. Luipersbek. 245,278; May 10.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 10TH DAY OF MAY, 1927.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

A/S Norsk Kjelerensningsmiddel Ideal. (See Lillejord, Hans, assignor.)
Abbott, William E., Rochdale, and J. R. Elgey, Littleborough, assignors to George Spencer Moulton & Company, Limited, London, England. Automatically relieving the pressure on pressure members when the same are subjected to undue stress. 1,628,297; May 10.
Abreu, Joaquin S., San Francisco, Calif. Aeroplane. 1,628,098; May 10.
Adkins, John J., Southport, N. C. Back brush. 1,628,023; May 10.
Adlake Company, The. (See Hamm, William S., assignor.)
Adsit, George, assignor to B. Eastwood Company, Paterson, N. J. Quilling machine. 1,627,820; May 10.
Advance Machine Company. (See Antoine, A. D., and Gebert, assignors.)
Ainsworth, Chester D., Wollaston, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Electromagnet. 1,627,821; May 10.
Akron Standard Mold Company, The. (See Greer, William E., assignor.)
Akron Standard Mold Company, The. (See Reichard, Harold D., assignor.)
Aldis, William J. (See Mallett, C. S., and Aldis.)
Alexander, Verne P., assignor of one-half to O. L. Herron, Chicago, Ill. Home savings bank. 1,627,822; May 10.
All American Radio Corporation. (See Weibler, Carleton T., assignor.)
Allen, Arthur W. (See Herman, J., Allen, and Newitt.)
Allen, George W., assignor to R. F. Sturtevant Company, Hyde Park, Mass. Blower. 1,628,216; May 10.
Allinger, Albert A., Richmond Hill, assignor to American Game & Toy Corporation, Brooklyn, N. Y. Game apparatus. 1,628,446; May 10.
Allis-Chalmers Manufacturing Company. (See Feind, Robert F., assignor.)
Allis-Chalmers Manufacturing Company. (See Newhouse, Ray C., assignor.)
Allis-Chalmers Manufacturing Company. (See Powell, William H., assignor.)
Allis-Chalmers Manufacturing Company. (See Sprado, Carl G., assignor.)
Allis-Chalmers Manufacturing Company. (See Steen, Carl W., assignor.)
Allis-Chalmers Manufacturing Company. (See Taylor, Charles B., assignor.)
American Couch & Body Company, The. (See Larsen, Niel P., assignor.)
American Dressler Tunnel Kilns, Inc. (See Dressler, Conrad, assignor.)
American Game & Toy Corporation. (See Allinger, Albert A., assignor.)
American Gas Machine Company. (See Green, Andrew, assignor.)
American Multigraph Company, The. (See Bates, Albert H., assignor.)
American Multigraph Company, The. (See Chisholm, Clifton, assignor.)
American Multigraph Company, The. (See Morse, Lawrence H., assignor.)
American Multigraph Company, The. (See Osborn, Henry C., assignor.)
American Paper Goods Company, The. (See Cooley, Henry B., assignor.)
American Steel and Wire Company, The. (See Busey, H. S., and Hallstrom, assignors.)
American Telephone and Telegraph Company. (See Cory, Samuel L., assignor.)
American Telephone and Telegraph Company. (See Hall, Merton C., assignor.)
Anchor Cap and Closure Corporation. (See Durkee, Chauncey H., assignor.)
Anderson, Carl L., et al. (See Swenson, Carl E., assignor.)
Anderson, Edward V., Belle Vernon, assignor of one-half to C. E. Golden, Crafton, Pa. Automatic control valve. 1,627,628; May 10.
Anderson, Gustaf A., Baltimore, Md., assignor, by mesne assignments, to The Symington Company. Car truck. 1,628,298; May 10.
Anderson, John W., Hamilton, Ontario, Canada. Refrigerating device. 1,627,629; May 10.
Anderson, Thomas H., assignor to M. E. Bernhardt, New York, N. Y. Cigar cutter. 1,628,570; May 10.
Anderson, Walter S., assignor to E. Holley, Detroit, Mich. Vent plug for permanent molds. 1,627,879; May 10.
Angell, Chester M., assignor to Vesta Battery Corporation, Chicago, Ill. Battery-plate-filling machine. 1,627,763; May 10.
Angell, Chester M., assignor to Vesta Battery Corporation, Chicago, Ill. Battery-plate-pasting machine. 1,627,764; May 10.
Anthony Company. (See Benedict, Charles H., assignor.)
Antoine, Alfred D., Chicago, and A. E. Gebert, Wilmette, assignors to Advance Machine Company, Chicago, Ill. Vending machine. 1,627,547; May 10.
Antonette, Joseph B. (See Underwood, Jesse J., assignor.)
Aridor Company, The. (See Brown, A., and Peck, assignors.)
Aridor Company, The. (See Peck, R. G., and Brown, assignors.)
Arkell Safety Bag Company. (See Goodlett, Nicholas M., assignor.)
Arrowood, Milton W., Wilmette, Ill. Coal-grinding mill. 1,628,099; May 10.
Asmus, Charles R., Columbus, Ohio. Laundry appliance. 1,627,948; May 10.
Atlas Powder Company. (See Wilcoxon, F., and Grotta, assignors.)
Attaway, Elisha, Logansport, La. Rafter gauge. 1,628,447; May 10.
Attridge, Oliver H. (See Harris, H. M., and Attridge.)
Atwell, Harold V., assignor to Standard Oil Company, Whiting, Ind. Seal. 1,628,348; May 10.
Atwood, Winfield A., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,628,448; May 10.
Aufsesser, Gates B., assignor to Mohawk Brush Company, Albany, N. Y. Hairbrush. 1,628,299; May 10.
August, Ralph M. C. R., Great Kills, N. Y., assignor, by mesne assignments, to L. A. Florence, Teaneck, N. J. Radiojack. 1,627,823; May 10.
Auld, D. L., Company, The. (See Auld, Fredrick H., assignor.)
Auld, Fredrick H., assignor to The D. L. Auld Company, Columbus, Ohio. Sign. 1,628,349; May 10.
Automatic Electric Inc. (See Richardson, Rodney G., assignor.)
Automatic Electric Inc. (See Wicks, John, assignor.)
Automatic Electric Inc. (See Willis, Bernard D., assignor.)
Ayers, Joseph G., W. H. Chapman, Montclair, and M. E. Berlowitz, Belleville, N. J., assignors to General Motors Corporation, Detroit, Mich. Gauging machine. 1,627,683; May 10.
Azamber, John, Pittsburg, Kans. Fly swatter. 1,628,486; May 10.
B. & S. Manufacturing Products Corporation. (See Stern, C., and Braden, assignors.)
Bachmann, Frank, assignor to The Dorr Company, New York, N. Y. Separation of solids from liquids. 1,627,550; May 10.
Bacon, Byron R., assignor of two-fifths to W. N. Bacon, New York, N. Y. Internal-combustion engine. 1,628,100; May 10.
Bacon, Wilber N. (See Bacon, Byron R., assignor.)
Badura, Benedict S., Lincoln, Nebr. Granary door. 1,627,548; May 10.
Bailey, Rufus W., Kansas City, Mo. Automotive vehicle. 1,628,350; May 10.
Baker, Edgar N., assignor to The Robbins & Myers Company, Springfield, Ohio. Electric motor. 1,627,949; May 10.
Baker-Raulang Company, The. (See Hertner, J. H., and Remde, assignors.)
Baldwin, Elnora E., Rand, Colo. Marcel hair waver. 1,627,590; May 10.
Baldwin, William A., Haiku, Hawaii. Pineapple stump-shredder and harrow. 1,628,101; May 10.
Ballard, John L., Denver, Colo. Typewriting-machine attachment. 1,628,102; May 10.
Balston, Clyde C., New York, N. Y. Photographic camera. 1,627,722; May 10.
Bancel, Paul A., Nutley, assignor to Ingersoll-Rand Company, Jersey City, N. J. Surface condenser. 1,628,487; May 10.
Banzet, Paul J., assignor to Bruyere Banzet & Co., Societe Dauphinoise de Materiel Textile, Bourgoin, France. Dobby for looms. 1,627,950; May 10.
Barbaron, Marius J. B., Paris, France. Control of carburetors. 1,627,951; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lamp-post or similar article. Des. 72,583; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lighting-standard capital. Des. 72,584; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lighting-standard capital. Des. 72,585; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lighting-standard capital. Des. 72,586; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lighting-standard capital. Des. 72,587; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lighting standard. Des. 72,588; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Lamp-post or similar article. Des. 72,589; May 10.

Barkschat, Henry, assignor to Marbelite Corporation of America, Los Angeles, Calif. Combination post and lighting standard. Des. 72,590; May 10.

Barrows, Donald S., Rochester, assignor to The Symington Company, New York, N. Y. Truck side frame. 1,628,300; May 10.

Bates, Albert H., Shaker Heights, assignor to The American Multigraph Company, Cleveland, Ohio. Latch for embossing machines. 1,627,684; May 10.

Bates, George T., assignor to Illinois Watch Case Company, Elgin, Ill. Watch case and making same. 1,627,765; May 10.

Bauer, Bruno, Vienna, Austria. Casing or mold box for concrete beams or ties. 1,628,385; May 10.

Baum, Ernst O., Jungenthal, near Kirchen, Germany. Compressed-air locomotive. 1,628,217; May 10.

Bausch and Lomb Optical Company. (See Flodin, Oscar H., assignor.)

Baxter, William E., Louisville, Ky. Automatic handle. 1,627,880; May 10.

Beach, Clarence E., Binghamton, N. Y., assignor to The Gamewell Company, Newton, Mass. Signaling system. 1,627,685; May 10.

Beach, Riley F. (See Johnson, Kirk A., assignor.)

Beanish, John T. (See Prichard, Channing, assignor.)

Beaty, Bruce F., assignor to The Universal Milking Machine Co., Waukesha, Wis. Dairy-Equipment cleaner. 1,627,824; May 10.

Beauchamp, Dora F., Forest Hills, N. Y. Adjustable reflector. 1,628,218; May 10.

Beaumont, R. H. Co. (See Hale, William E., assignor.)

Bebry, Percival P., West Roxbury, Mass., assignor to Englander Spring Bed Company, Brooklyn, N. Y. Tufted-mattress button. 1,627,723; May 10.

Beck, Kenneth H., and E. H. Blackburn, Pittsburgh, Pa. Door catch. 1,627,825; May 10.

Becker, Dean B., Fort Atkinson, Wis. Jacketed casing. 1,628,524; May 10.

Becker, Heinrich, Kiel-Hassee, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Cylinder for internal-combustion engines. 1,627,549; May 10.

Beers, William C. (See Hunt, Clarence T., assignor.)

Beery Shocker, Incorporated. (See Dickinson, Harry S., assignor.)

Bell, Charles E., Charleroi, assignor of one-half to T. H. Robinson, Donora, Pa. Mine-car check lock. 1,628,525; May 10.

Bell, Elmer, et al. (See Blackmore, William, assignor.)

Bellone, Alfred F. S., Lyons, assignor to Societe Chimique des Usines du Rhone, Paris France. Reduction of halogenated hydrocarbons. 1,627,881; May 10.

Beloit Iron Works. (See Berry, Earl E., assignor.)

Bendix Brake Company. (See Cantley, John R., assignor.)

Benedict, Charles H., assignor to Anthony Company, Streator, Ill. Clutch mechanism. 1,628,219; May 10.

Benfonti, Salvatore, et al. (See Pagano, Gaetano, assignor.)

Benner, Raymond C., Bayside, assignor to The Prest-O-Lite Company, Inc., New York, N. Y. Making separators and separator stock. 1,628,104; May 10.

Berg Manufacturing Company. (See Berg, Nanstad, assignor.)

Berg, Nanstad, assignor to Berg Manufacturing Company, Cleveland, Ohio. Pulley. 1,628,220; May 10.

Bergloff, Andrew E., assignor to Wolfe Improved Rotary Rod Weeder, Cheney, Wash. Underground gearing. 1,628,022; May 10.

Bergman, Lars H., assignor to Raymond Bros. Engineering Co., Chicago, Ill. Method of and apparatus for preparing, feeding, and burning pulverized fuel. 1,627,766; May 10.

Bergstein, Samuel, assignor to The Interstate Folding Box Company, Middletown, Ohio. Device for moistening adhesive tape. 1,628,221; May 10.

Berliner, Emile, Washington, D. C. Wall. 1,628,351; May 10.

Berlowitz, Max E. (See Ayers, J. G., Chapman, and Berlowitz.)

Bernhardt, Max E. (See Anderson, Thomas H., assignor.)

Bernhardt, Max E. (See Greene, David W., assignor.)

Berry, Earl E., assignor to Beloit Iron Works, Beloit, Wis. Paper-making machine. 1,627,882; May 10.

Berth, Arthur, Sheboygan, Wis. Automatic switch for electric lights. 1,628,222; May 10.

Best, Frank E., Seattle, Wash. Multiple-station automatic machine. 1,628,103; May 10.

Bichell, Ernest A., et al. (See Smith, Charles F., assignor.)

Biernat, Carl, Glasford, Ill. Railway tie and rail fastener. 1,628,449; May 10.

Bigger, Andrew F. (See Rost, Robert W., assignor.)

Bildstein, Paul, and E. Seidel, Elberfeld, Germany. Device for stopping railway trains independently of the driver. 1,627,724; May 10.

Bird, Edward S., and F. B. Cockburn, assignors to The Lodge & Shipley Machine Tool Company, Cincinnati, Ohio. Lathe. 1,628,598; May 10.

Blackburn, Edward H. (See Beck, K. H., and Blackburn.)

Blacker, Earl, Everett, Wash. Bag-delivering machine. 1,628,301; May 10.

Blackley, William R., Hamlet, N. C., and R. M. Meredith, Savannah, Ga. Driving-box mounting. 1,628,223; May 10.

Blackmore, William, assignor of one-third to E. Bell, Sharon, Pa., and one-third to W. C. Blackmore, Cleveland, Ohio. Snubber attachment for vehicle springs. 1,628,386; May 10.

Blackmore, William C., et al. (See Blackmore, William, assignor.)

Blair, Robert S., et al. (See Dieterich, Ludwig M., assignor.)

Blair, Robert S., Sound Beach, Conn. Humidor. 1,627,883; May 10.

Blair, Robert S., Stamford, and B. D. Wells, Danbury, Conn., said Wells assignor to said Blair. Shipping container for sound-reproducing records. 1,628,105; May 10.

Blaisdell Pencil Company. (See Weis, George G., assignor.)

Blake, C. C., Incorporated. (See Fernald, Mark E., assignor.)

Blake, Charles C., Brookline, Mass. Metallic fastening inseam. 1,628,599; May 10.

Blanchard, Harold L., Millbury, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Intermittent feeler in transferrer. 1,627,826; May 10.

Blanchard Machine Company, The. (See Spencer, Henry K., assignor.)

Blanchard, Walter P., Winthrop, Mass., assignor to General Electric Company. Telemetric apparatus. 1,628,450; May 10.

Bleecker, George W., et al., trustees. (See Pendleton, Pyam L., assignor.)

Blocki, Herbert J., Sheboygan, Wis. Packing pad. 1,627,827; May 10.

Bloss, Richard R., assignor to The International Derrick & Equipment Company, Columbus, Ohio. Bearing. 1,628,577; May 10.

Blue Point Tool Company. (See Seidemann, William A., assignor.)

Blunt, James G., Schenectady, N. Y. Cylinder cock. 1,628,024; May 10.

Bolonski, Felix, Pinckneyville, Ill. Ribber-machine attachment. 1,628,572; May 10.

Bonazzi, Ettore, Montpelier, Vt. Stone-dressing tool. 1,628,352; May 10.

Booty, Philip C. P., assignor of one-half to M. T. Daley, Chicago, Ill. Box for face powder and the like. 1,628,100; May 10.

Boudin, Louis, St. Gobain, assignor to Société Anonyme des Manufactures des Glaces & Produits Chimiques de Saint-Gobain, Chauny & Cirey, Paris, France. Process and apparatus for making sheet glass. 1,628,353; May 10.

Bourgord, Edward, and A. Leitl, Park Falls, Wis. Operating apparatus for safety guards on roll winders of paper machines. 1,628,488; May 10.

Boving, Jens O., London, England. Hydraulic air-compression plant. 1,628,025; May 10.

Boving, Jens O., Westminster, London, England. Hydraulic air-inspiring plant. 1,628,026; May 10.

Bower, Frank A. (See Welsher, Samuel I., assignor.)

Bower, William M., C. S. Burdon, and C. L. Stern, assignors to Linotype and Machinery Limited, London, England. Method and mold for casting type bars. 1,628,573; May 10.

Boyce Thompson Institute for Plant Research, Inc. (See Denny, Frank E., assignor.)

Boyd, Ellis J., Oak Park, Ill. Combination hack and scroll saw. 1,628,526; May 10.

Boyer, Fernand, Paris, France. Thread-feeding device for tufted-fabric looms. 1,628,387; May 10.

Braach, Paul, Siegen, assignor of one-half to H. Rosenberger, Augsburg, Germany. Saucepan and the like. 1,628,107; May 10.

Brach, Leon S., East Orange, assignor to L. S. Brach Manufacturing Co., Newark, N. J. Electric lamp. 1,627,551; May 10.

Brach, L. S., Manufacturing Co. (See Brach, Leon S., assignor.)

Braden, Richard W. (See Stern, C., and Braden.)

Bradley, Charles E., Montclair, N. J., and W. A. Gibbons, New York, N. Y., assignors to The Naugatuck Chemical Company. Combining halogen-containing materials with rubber or similar substances and products resulting therefrom. 1,627,725; May 10.

Bradshaw, Harry, Kansas City, Mo. Paper feeding. 1,628,224; May 10.

Bradshaw, Harry, Topeka, Kans. Paper feeding. 1,628,225; May 10.

Brady, John D., assignor to Brady Process Company, El Dorado, Ark. Apparatus for the treatment of impure petroleum oils. 1,628,574; May 10.

Brady Process Company. (See Brady, John D., assignor.)

Braecklein, Ferdinand, H., Baltimore, Md. Milk-bottle receptacle. 1,628,575; May 10.

Brand & Oppenheimer, Incorporated. (See Zoline, Orrin B., assignor.)

Brandt, Edgar W., Paris, France. Projectile for smooth-bore guns. 1,628,527; May 10.

Braunstein, Simon, Brooklyn, N. Y. Knitted blouse. Des. 72,591; May 10.

Bray, Norman C., Portland, Oreg. Coupling sleeve for dredging pipe. 1,628,302; May 10.

Breese, James L., Jr., assignor to Oil Devices Corporation, Chicago, Ill. Furnace. 1,627,591; May 10.

Brendel, Fred G. (See Olinger, T., and Brendel.)

Bridgwater, Ernest R., Wilmington, Del., and D. H. Powers, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Age-resisting rubber compound and making same. 1,628,528; May 10.

Briggs Manufacturing Company. (See Marshall, William, assignor.)

Bright, Martin C., Indianapolis, Ind., assignor to B. B. Carlin, Chicago, Ill. Venturi-vacuum fuel-control system. 1,628,529; May 10.

Brillouin, Léon N., and E. M. F. Fromy, Paris, France. Transmission by electric oscillations. 1,627,767; May 10.

Bristol, William H., Highland, assignor to California Fruit Growers Exchange, Los Angeles, Calif. Molding fruit-juice extractors. 1,627,884; May 10.

British Dyestuffs Corporation Limited. (See Cronshaw, C. J., T., and Naunton, assignors.)

Bronco Buster Pipe Company, The. (See Homan, Walter A., assignor.)

Brookby, Harry E., Evanston, assignor to United States Gypsum Company, Chicago, Ill. Plastic cementitious material. 1,627,952; May 10.

Brown, Albert. (See Peck, R. G., and Brown.)

Brown, Albert, and R. G. Peck, assignors to The Aridor Company, Chicago, Ill. Display receptacle. 1,628,108; May 10.

Brown, Ladura A., Uniontown, Pa. Automatic safety breaker. 1,627,828; May 10.

Brown, Maurice E., Marinette, Wis. Method and apparatus for preserving posts. 1,627,829; May 10.

Browning, John, administrator. (See Browning, John M.)

Browning, John, executor. (See Browning, John M.)

Browning, John M., deceased, Ogden, Utah; J. Browning, administrator. Automatic firearm. 1,628,226; May 10.

Browning, John M., deceased, Ogden, Utah; J. Browning, executor. Firing control for automatic machine guns. 1,628,227; May 10.

Brust, Charles A., Memphis, Tenn. Cotton and hull separator. 1,628,451; May 10.

Bruyere Banset & Co., Societe Dauphinoise de Materiel Textile. (See Banzet, Paul J., assignor.)

Bryant Electric Company, The. (See Thomas, George B., assignor.)

Bryant, George F., assignor to Electrograph Advertising Service, Inc., Chicago, Ill. Printing press. 1,628,109; May 10.

Bryce, James W., Bloomfield, N. J., assignor to Dayton Scale Company, Dayton, Ohio. Scale. 1,628,110; May 10.

Bryson, Tandy A., Troy, N. Y., assignor to Tolhurst Machine Company. Safety guard for centrifugal machines. 1,628,303; May 10.

Buckley, Joseph W., Springfield, Mass. Valve construction for automatic hotwater heaters. 1,627,830; May 10.

Budd, Edward G., Manufacturing Company. (See Ledwinka, Joseph, assignor.)

Budd Wheel Company. (See Trout, W. M., and Des Jardins, assignors.)

Bullard Machine Tool Company, The. (See Petersen, Carl M., assignor.)

Bunker, Carl H., Arlington, assignor to Mellins Food Company of North America, Boston, Mass. Wrapping machine. 1,628,111; May 10.

Buquet, Edouard W., Montrouge, France. Constructing metal wheels. 1,627,953; May 10.

Burch Plow Works Co., The. (See Kime, Charles G., assignor.)

Burdett, Horace H., assignor to Draper Corporation, Hopedale, Mass. Intermittently-operable take-up mechanism for looms. 1,628,489; May 10.

Burdette, Richard S., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Sectional air bag. 1,628,304; May 10.
